What is perhaps insufficiently realised is that the Bishops in their present resolutions are, as the Bishop of Winchester said, legislating for posterity. It is not merely to get the present generation out of the perilous pass into which it has fallen, but to guide aright the Churchmen of the next century. When, therefore, one considers the historical nature of the present affair, it is easier to see how largely it revolves around the question of another historical affair—the Reformation. Anglo-Catholics, who were stated in the *Outlook* last week to be "by far the strongest body in the Church, both in numbers and in energy," look for the most part unkindly on the Reformation, whereas other Churchmen regard it almost as their bed-rock foundation. Each year, each month even, brings nearer to a fight the respective holders of these two views.

ALTER EGO.

THE DUKE OF CONNAUGHT.

We regret that, acting on the advice of his medical advisors, the Duke of Connaught, who left last Monday for the South of France, will not be able to be present at the formal opening, next January, of the Makwar Dam. It is hoped that his place will be taken by the Duke of York.

THE CENTRAL ASIAN SOCIETY.

Under the auspices of the Central Asian Society, Lt.-Colonel W. G. Grey will lecture on November 12, on "Recent Persian History"; and on November 26, Captain F. Kingdon Ward will speak on "Through the Gorge of the Tsang-Po." Both these lectures, which are to be illustrated with lantern slides, will be given at the Royal United Services Institution, and will begin at 5 p.m.

THE ROYAL ASIATIC SOCIETY.

Under the auspices of the Royal Asiatic Society, Mr. C. Skrine will, on November 10, at 4.30 p.m., read a paper on "Folklore and Poetry at Kashgar." The lecture, which will be illustrated with lantern slides, will be given at 74, Grosvenor Street.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscriptions £1 per annum. Further particulars may be obtained of the Hon. Secretary, 74, Grosvenor St., W.1.

BOOK REVIEWS.

ARABIA UNDER AMERICAN EYES.

"THE ARAB AT HOME." By Paul W. Harrison. Illustrated. (London: Hutchinson, 15s. net).

The fact that the author of this book, Dr. Harrison, was for fourteen years the medical missionary representative in Arabia of the Trinity Reformed Church of Plainfield, N.J., may or may not induce one at once to read his description of the peoples for whom missionary work in Arabia is being done, but any possible hesitation will, fortunately, be dispelled immediately when it is seen that the dedication of the book is to "Abdul Aziz bin Saoud, Abdullah bin Selouee, and Abdur Rahman bin Sualim, *three of my best friends.*" For it is impossible that any writer who can boast of the friendship of the ruler of Nejd, of the Governor of Katif, and of the Governor of Hasa, does not know what he is talking about, and has not something of value to communicate to a world all too ignorant of the first home of one of the world's greatest religions.

We would not imply that Dr. Harrison has written a great book: he has not. His extraordinarly interesting volume is really neither one thing nor the other; it is neither a book of travel, nor of pure description, nor of religious or political or social survey. It is a jumbled, rambling, at times repetitive work, with little common thread but that of patent love of his task: it is at once elementary and unique. But we would also say, and more gladly, that it is in effect an indispensable work to the student of Arabian affairs, an extremely useful work to the general student of Islam, and of very certain interest to the ordinary intelligent reader. Quite surely it merits a large sale among discerning readers in the West.

Dr. Harrison's most informing chapters concern the eastern side of the Arabian Peninsula, which he knows better than most Europeans can know it. From Basrah to Oman, in fact, he has enjoyed, and benefited from, experiences that can have fallen to the lot of few white men. He has, moreover, penetrated into Mesopotamia, and, more valuably, into the Wahhabi State of Central Arabia. Upon such journeyings he has built up his very considerable knowledge of "the Arab at Home."

In part he succumbs to the temptation of regaling, for the instruction of the American reader, some ordinary stories of the prowess and amazing ways of the Arab, but he generally falls into describing his actual experiences. First, he pictures the Bedouin of the desert, for whom he has a most laudable admiration. Yet he does not fail in being judicial. After explaining the magnificent hospitality of the Bedouin, he points out that the natural beauties of the desert make no appeal to the Bedouin. The beauty of their life springs from the absolute equality that reigns among them—and elsewhere he remarks justly that of all rulers in the world a tribal sheikh is, for all his absolute powers, probably the most responsive to the popular will. This—his writing upon the Bedouin Arab—is really the core of his book, so that one may quote his estimate of the lineal descendants of those who flung wide the line of conquering Islam:—

> If the Bedouin were a symbol-loving Oriental, he would worship the desert. Being rather a practical and materialistic Semitic, he worships the God of the desert. Mohammedanism is little more than the Bedouin mind projected into the realm of religion. The Arab faces God as he faces the desert.

GREEK (MODERN) SELF-TAUGHT

(In Greek and Roman Characters.)

From which it will be seen how widely accepted among Western observers of Islam are Servier's notions of its essence.

The oasis community, which is naturally the centre of desert life, is then described. Naturally here the raising of dates and alfalfa is the main concern, but Dr. Harrison has written very interestingly upon the weavers, the tailors, the coppersmiths, and so on, of the oasis towns. And the respective advantages of desert and of oasis life are admirably summed up. The chapter upon the pearl divers of the East coast is, again, fascinatingly made, full of out-of-the-way knowledge, and written with no avoidance of unpleasant fact. It is gratifying to note that the author can say of these unfortunate divers that they "have much for which to thank Great Britain, although they do not realize it, much less appreciate it." Even more informative than this, however, is the chapter upon "The Mountain District of Oman." Most of the Omanese are date producers settled in the irrigated valleys and the land between the mountains and the sea, and their prosperity when all commerce depended upon Arab sailing vessels must have been great indeed—which fact is sufficiently illustrated by the history of Muscat. That prosperity appears to have left its mark in the easy-going nature of the people of Oman, for, as the author humorously remarks:—"There is more obesity in Oman than in all the rest of the peninsula put together." The place has certain interesting peculiarities. For instance, the women here have mosques of their own to worship in, and many of them can read. Altogether, there appears to Dr. Harrison to be more hope for future progress in Oman than anywhere else in Arabia.

In dealing with places like Mesopotamia and those parts, e.g., the Hejaz, of Arabia which he has not visited, Dr. Harrison lets slip certain generalisations which will not be universally accepted. One wonders, for example, whether he forgot the neighbourhood of Medina when saying that Shiah ideas have never penetrated deeply into inland Arabia, and on what grounds he states that all the British officers in Iraq are Tories, and that in Iraq the British ruler is loved by the rich and disliked by the poor. For the most part, however, he is obviously fair to the British experiment in Iraq, and pays a splendid testimony to the work of the British in the Middle East. And there is certainly no need to quarrel, even if one does not wholly agree, with his explanation of what the Turk might have done for Mesopotamia and of what he may yet do if the alien system that at present dominates Mesopotamia does, as the author suggests, in time fall away.

It is when writing upon "The Arab Sheikh" that Dr. Harrison explains the character of his three dedicatees. One likes his keen admiration for men whose fanaticism against his own religion must at least be as strong as fanaticism can be. Of Ibn Saoud he says:—"A man who can unite the warring tribes of Arabia as they have hardly been united since the days of Mohammed himself, and who can administer his country so well that property has trebled in value, is a real leader. He is more than that. He is one of the world's born kings." Of Ibn Sualim, Governor of Katif, he relates that when he returned to Riyadh after an absence of several years, he begged Ibn Saoud to let him stay there. "He actually broke down and wept in his ruler's presence as he thought of leaving again his much-loved city and open desert that is part of every inland Arab's life. But when his chief told him that there was no one else to send, he returned without a murmur." And another lieutenant whose loyalty to the great Wahhabi leader is amazing is the powerful Ibn Selouee, Governor of Hasa. This utterly pitiless and completely devoted man has an entire sway over Eastern Arabia, and "is the embodiment of an ideal Arab ruler devoted to the interests of his chief and to those of the community he rules."

We have indicated, in something of the disjointed and meandering fashion of the author of this book, some of the points to which he makes special reference. With his capital object, however—the exposition of the Arab Society for the benefit of Western Christianising opinion—we do not propose here to deal. It is a controversial subject. Inevitably there will be two opinions about the desirability of bringing the Arabs within the orbit of Christendom, and possibly more than two about the possibility of it. Dr. Harrison, indeed, although his faith is strong, appears to have his doubts. One of the passages which do much credit to his lucidity and to the breadth of his view is as follows:—

> If it is true that Mohammedanism is a mixture of a powerful religious system and a weak political system, we shall probably discover that the removal of its political elements by the suzerainty of alien Powers, far from being a hindrance, will eventually prove to be the painful amputation of a serious handicap and will greatly increase its potency as a religious system.

But, as is right, the author ends upon a note of Protestant optimism. He believes that by the force of Christian example in Arabia, a sufficient proportion of Arab society will be converted as to provide for the whole Peninsula "a new ideal of personal and family and community life." And of his very American dream, we would without comment record it:—"Arabia will take her place in the great brotherhood of nations, one of the most richly endowed of them all." To those who would cynically rub their eyes at this we would say: "Go read the book, and after that, if you will, disagree. At any rate, you will be a much wiser man."

INDIA IN STORY.

"SCENES AND CHARACTERS FROM INDIAN HISTORY." By C. H. Payne. (Oxford University Press. 6s. net.)

In this pleasant, and pleasantly cheap, little book, Mr. Payne gives us a selection of sketches of India made by a variety of writers, ranging from Plutarch to Tavernier, with enough notes to enable modern readers to understand the text. The ground covered by the book is thus extensive, and it is characteristic of the conditions of Indian historical study that all the authors are foreigners. To read the experiences of Alexander the Great, we must turn to the Greeks; for Harsha of Kanauj, we depend on a Chinese pilgrim; for Vijayanagar, the last of the great Hindu empires, we are given the artless narrative of a Persian ambassador. Portuguese writers tell us of Calicut; Babur describes one of his own military operations; while Du Jarrie and Tavernier are the sources for Mogul affairs, along with Firishta, the one writer who might possibly be classed as an Indian, though he was born on the shores of the Caspian. Finally, an Englishman describes a visit to Sivaji, and describes it very badly indeed. The weakest point of the book is the tendency to rely on translations of translations. The Chinese narrative comes through French, and that of Babur through Persian, a process which involves misspelling the hero's name as Babar, while Du Jarrie's French is based on missionary reports, most of which are extant, in Latin, Italian, or Portuguese. Translation is in any case a difficult art, and re-translation has pitfalls of its own, so that we think it would have been fairer to readers to go direct to the originals, particularly in the case of the missionaries, whose first-hand descriptions, naive as they often are, have a much finer flavour than Du Jarrie's compilation. As regards the general effect of the book, we should say that, taken by itself, it presents a picture of India so partial as to be misleading. It shows us, indeed, the India of tradition, the captains and the kings and the saints: we hope Mr. Payne will see his way to give us a companion volume showing how Indians in the mass lived and suffered through the centuries, and that in doing so he will make use of the Dutch narratives which the present selection ignores.

SCHOOL OF ORIENTAL STUDIES. LONDON INSTITUTION
(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS

Instruction is givn in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

Indian Affairs.

THE NATIONALIST COALITION.

About three weeks ago, cabled news from India said that the agreement between the Swaraj and Independent Parties in the Legislative Assembly, to resign their seats *en bloc* and to seek re-election, as a protest against the rejection, by the Council of State, of their joint amendment to the Government resolution on the Reforms, bade fair to become an accomplished fact. In accordance with a rather irritating practice that is not uncommon, the fact that this agreement had broken down, does not seem to have been thought worth cabling; but newspapers to hand by this mail show that this is what has happened. More than a mere failure to reach agreement, in fact: for the breakdown of the agreement has led to spirited recriminations between the leaders of the two parties.

Mr. Jinnah, the Independent leader, is credited with having persuaded Pandit Motilal Nehru, the leader of the Swarajists, to father the Nationalist amendment, though this, in fact, advocated the programme of the Independents rather than that of the Swarajists: indeed, in the course of his speech when moving it, the Pandit said that, had the amendment been drawn so as to express the Swarajist view alone, it would have been different. Mr. Jinnah, having got the Swarajists to accept, and to assist him to pass, his own amendment, proposed to the Swarajists that they should demand the dissolution of the Assembly, or, as an alternative, offer the wholesale resignation of the members of both parties, as a means of showing that "the country" approved of their programme and disapproved of the action of the Council of State in rejecting it. The Independents, whose influence with the electors had been, and remained, a personal one, felt sure of re-election; but the rank and file of the Swarajists, whose influence was, in most cases, not personal, but merely consisted in the fact that they stood as candidates accepted, or rather nominated, by the Swaraj Party, began, after the first flush of enthusiasm had passed, to feel doubtful of their prospects at the polls. Thus, as the Simla correspondent of the Calcutta *Statesman* phrases it, seeing that their attempted heroism had already been aired and discussed in the Press, they needs must find a way out of their difficulty, and that without loss of prestige. Accordingly Pandit Motilal Nehru has stepped into the breach with two explanations, either of which the public is at liberty to accept. The first is, that he agreed to follow Mr. Jinnah if the latter could assure him that all the Independent members were unanimous in consenting to resign: and that Mr. Jinnah had been unable to give him such an assurance. The second is that, having thought the matter over, he had decided against immediate resignation: preferring "to give the Viceroy and the Secretary of State two or three months' law, lest blame should rest on the members of the Legislative Assembly on the ground that they did not give the authorities time enough to mend." The Swarajist Press appears to have ignored the second explanation and to have concentrated on the first: asserting that the Independent leader made the proposal and, when it was accepted, then backed out. The Independents, including Mr. Jinnah himself, declare that it is the Swarajists who, after accepting the proposal, have fallen victims to an attack of cold feet and have refused to fulfil their promise of support. The *Bombay Chronicle* attacks the Independents on the ground on which they feel themselves most secure, and warns them of wrath to come: "if they follow their old policy of middle-bargains and expediency, they will have as little chance of soaring up at the next General Election as a crippled sparrow in a sand-storm": a threat at which they are not in the least dismayed.

The dispute is only another example of the difficulty experienced by the Nationalist combine—a difficulty common to all coalitions—of avoiding differences when the dust of action clears away sufficiently to allow for sober reflection. Differences may be patched up over and over again, but their fundamental existence remains: and the ill-assorted union of Swarajists and Independents, which has lately suffered two such severe blows as the capture of the Congress by the former, to the virtual extinction of the latter, and the present interchange of rather acrimonious recriminations between the two leaders, is unlikely to persist for long. If it were not so, the outlook would be a good deal darker than it is; for, so long as the union exists, the Government of India is faced by a solid opposition able to defeat it at will, and determined to use its power on every occasion of importance. It is true that the Government pursues the even tenour of its way, apparently quite unconcerned at its constant defeats in the Assembly and at the prospect of the ultimate stale-mate which must result from their continuance; but this detached attitude, which is ascribed, by the Indian Press, to the bureaucracy's supercilious readiness to "flout the demands of the country," is probably really due to the realisation that the Nationalist coalition is already showing evident signs of impending disruption, the final occurrence of which cannot be much longer delayed. The next general election is only a year off; and, when it comes, there is good ground for thinking that a number of the undistinguished Swarajist members of the Assembly, whose sole claim on the continued suffrages of the electors will be the prestige of the Swaraj Party, may find themselves doing the "crippled sparrow in a sand-storm" act, rather than the Independents. The Swaraj Party's lavish promises at the last election remain unfulfilled: and its prestige is likely to prove a broken reed to candidates who have nothing else on which to lean. It may well be that the rupture in the coalition will occur before then; but, if not, it seems pretty certain that it will take place, and irremediably, at the next general election.

CURRENT TOPICS.

Civil Service Examinations.

The "list of acceptances" which, in last week's issue, we expressed a desire to see, reached us too late for inclusion in that number. It makes encouraging reading. In the original announcement by the Civil Services Commissioners, it was stated that the number of candidates who offered themselves for the I.C.S. alone was 64, 47 of whom were Indians: and that 55 others (Europeans) had included the I.C.S. among their choices, as alternative to the Home or Colonial Service, or both. There was also at least one—there may have been more—who entered for the I.C.S. as well as the Consular Service: for one such name appeared in the list of the first 20 who passed for the I.C.S. Thus, according to that announcement, at least 73 European candidates offered themselves for the I.C.S., 17 of whom gave it as their sole choice. Some wizard seems to have taken three (or more) rabbits out of one hat and put two into the other; for the present announcement is that the total European entry was 70, of whom 19 entered for the I.C.S. alone.

However this may be, the increase in European candidates is not less striking than that in European recruitment. The statement shows that, during the years 1921-24, the average number of Europeans who included the I.C.S. among their choices was 21, and the average number appointed was five. The numbers this year are 70 (or more) and 21, respectively. The statement also speaks of candidates who selected "the Home Service or an Eastern Cadetship as the second or third strings to the bow"; but here it is, perhaps, not on such firm ground. Under the old dispensation, candidates were invited to specify their choices in order of preference: and, in those days, among the hundreds of candidates who sat for the Civil Service Examination, the great majority used to write down I.H.C.—Indian, Home, Colonial. Later, the sequence became H.I C.: and, still later, H.C.I.: until, of late years, it threatened to become exclusively H.C. One may hope that, in years to come, it will revert to I.H.C.; but there will be a long way to go before India becomes the "first string." This is to be seen from a comparison of the final list with the original list of the first twenty

Digitized by Google

successful candidates. Of the twelve Europeans who figured in the latter, eight had also passed for the Home or Colonial Service—or both; and, of these eight names, only two remain in the final list. Of those who had alternative choices, therefore, three rejected the I.C.S. for one who selected it: so that one is justified in supposing that, though the threatened stage of H.C. has been saved, that now reached is only H.C.I.

But the detailed list of the schools and colleges at which the successful European candidates were educated certainly justifies the statement, made in the present announcement, that the large increase in recruitment has been secured without any reduction of the high pre-War level of academic attainment. Of the 21 successful Europeans, eight were educated at well-known public schools; and the Universities from which they entered the Service were Oxford and Cambridge (eight each), Dublin (two), and one each from London, Aberdeen, and Birmingham.

Lord Reading at the United Service Club.

The United Service Club dinner to a retiring Viceroy is a well-established Simla function. It always used to be an entirely informal gathering, at which the guest of the evening was able to speak his mind among friends, with "no reporters present." The lengthy report of Lord Reading's reply to the toast of his health shows that this pleasant custom has, like many others, now passed: and that the occasion served for a Viceregal oration addressed to the world in general. The United Services, in the person of the military President of the Club, paid a public tribute to the Viceroy's work: and the Viceroy returned the compliment to their civil element. "And a right good Captain too." "You're very very good, and be it understood, I command a right good crew." Lord Reading's speech followed familiar lines. The wave of pessimism, which had led to the introduction of the proportionate pension scheme, had passed; untimely resignations had ceased, and recruitment was looking up: having definitely embarked on a policy of extensive Indianisation, the Government of India needed fewer Englishmen, but the need for quality was more insistent; and, if England could be got to understand the work that lies before Englishmen in India, her appeal would be as effective now as it had been in the past. In paying a tribute to the work of English members of the Indian Civil Service, Lord Reading made one point that has, perhaps, been insufficiently stressed before. He said that he was profundly impressed by their capacity to shoulder responsibility and to come to important decisions on their own initiative: so successfully was this done that it often passed unnoticed—not only was superior authority not invoked, but it often remained unaware of what had been done.

The President of the Club—described, in all the reports appearing in England, as Sir Edward Atkinson, though a man whose Christian name is Edwin is doubtless used to that—must, like Rawdon Crawley, and possibly for a similar reason, have been quite amazed at his own facility of composition: and his audience probably shared his amazement. The first time that General "At" was elected President of the Club, he fled away on tour rather than face the ordeal of a set speech at some similar function; but his audience must have been more than patient and no less than wakeful as they listened to the rounded periods in which he expressed the gratitude of "lesser folk" to the man whom he epigrammatically described as "our patient and wakeful Viceroy."

The New Congress President.

A cable from India announces that Mrs. Sarojini Naidu has been elected President of the next annual session of the Indian National Congress, which is to be held at Cawnpore during Christmas week. This is the second time, during the forty odd years of its existence, that the Congress has elected a woman as President—Mrs. Besant held the office in 1917. Mrs. Naidu is a poetess of some distinction, who has, for a long time past, been prominently identified with the extremer form of Indian politics. Her maiden name was Chattopadyaya—a modern "Nationalist" variant of the more familiar Chatterjee—and she is sister of a notorious Indian revolutionary who has lately been dividing his activities between Scandinavia, Russia, and Germany.

The latter—familiarly known as "Chatto"—was the chief rival of the even more notorious M. N. Roy, at the time that the Bolshevists started their Indian organisation. All the prominent Indian revolutionaries in Europe were summoned to Moscow, where an attempt was made to combine them into a united party—the "Communist Party of India"; which, though it would at first necessarily be "in partibus," would, it was hoped, eventually extend its activities to India itself. But the "prominent Indian revolutionaries," realising that there was money in the business and that the lion's share would fall to the man put in charge of it, were all ready to accept the role of leader, but not that of follower. Roy was finally elected, whereupon "Chatto" started a party of his own, the chief feature in which was an Indian Students' Bureau in Berlin, which—though not the names of its organisers—was extensively advertised in the Indian vernacular Press. It professed to be a sort of inquiry office for Indian students coming to Germany, where they could receive assistance in the matter of finding lodgings, obtaining entrance into German universities, and so on; but it also included—a feature not mentioned in the advertisements—a meeting-room in which lectures were delivered by prominent Indian revolutionaries in Germany. At the time that the first great depreciation of the mark took place, Chatto's Bureau backed its appeal for recruits by ingenious calculations showing that an Indian who arrived with a thousand rupees, could, by changing his capital into marks on his arrival, live comfortably during the years of his University training and, at their conclusion, by which time the mark would "inevitably" have regained parity, still have enough left to return to India at least a hundred times richer than he started. When the mark went to over eighteen billions, and packets of newspapers, posted in Germany, began to reach India franked by not one, but several, stamps overprinted "ten milliards of marks," this appeal was somewhat discounted: and the Bureau got into financial difficulties.

Mrs. Naidu is credited with disapproval of her brother's more extreme activities; but, among extremist politicians in India, she ranks with the most advanced. She is a particularly strenuous advocate of communal unity, of which cult she is herself a practical exponent, since the catholicity of her personal friendships embraces all creeds alike.

The Lawrence Statue.

A cable from Lahore reports the mutilation of the statue of Lord Lawrence—an unexpected recrudescence of an agitation that caused a momentary sensation a year or so ago. After the annexation of the Punjab in 1849, it was at first governed by a Board of Administration, which was abolished in 1853 by the appointment of a Chief Commissioner in the person of Sir John Lawrence who afterwards, in 1859, became its first Lieutenant Governor and finally, in 1864, Viceroy, being raised to the peerage after his return to England in 1869. After the annexation of the Punjab, Sir John Lawrence, in a public speech, asked his hearers whether they would prefer to be governed by the pen or the sword: and his statue, holding a pen in the right hand and a sword in the left, has that question inscribed on it. It is this fact that led to an excited agitation on the part of modern Punjab Nationalists, after the statue had stood for half a century without exciting unfavourable comment. They discovered that the inscription was insulting, and declared that their answer to the question contained in it was "Neither." The statue stood on municipal ground, and the Lahore Municipality demanded its removal; threatening, if this was not conceded, to arrange for its removal, or even demolition, by force. Volunteers were called for, to undertake this patriotic duty: and a certain number of men offered themselves for the purpose; but, as they were careful to advertise their intentions, nothing actually resulted beyond the placing of a police guard over the statue, that compelled the would-be wrecking gangs to confine their efforts to putting in an appearance, armed with hammers, and explaining what they would have done had it not been for the unsporting interference of the police. In these circumstances, the

Digitized by Google

Municipality, in order to save their faces, announced that they had started negotiations with the Governor with a view to the statue being removed and set up again in the grounds of Government House; and they even succeeded in persuading a number of people in Lahore that this had actually been agreed to. However, a prompt contradiction from the Government exploded this tale: and the malcontents had to fall back on a renewal of their demonstrations against the statue, which gradually became less and less popular and finally faded away altogether.

An agitation of a somewhat similar nature took place, about the same time, in Calcutta: its object being the Black Hole memorial, erected by Lord Curzon during his Viceroyalty. Nationalist historians discovered that the Black Hole tragedy was a British invention: no such occurrence had ever happened at all—at the most, its only foundation in fact was the action of a patriotic Indian ruler, who had confined a few pestilent European interlopers in prison. In this case, the wreckers came singly: not, as they had done in Lahore, in gangs: the volunteer carrying a small hammer concealed in his clothes. He approached the memorial in the guise of an innocent sightseer: and, having got within range, produced his hammer and gave the memorial a tap—thereafter promptly surrendering to the police guard and being marched off, a happy martyr, to enjoy a few days' detention in jail.

INDIAN MUSLIMS AND THE HEDJAZ.

The Central Khilafat Committee held a conference at Patna on September 22, immediately after that of the All-India Congress Committee: some of whose members, including Mr. Gandhi himself, attended it. At this meeting Shaukat Ali made a determined attempt to regain his lost position: first, by an attack on the British Government: secondly, by attempting to prove the financial purity of the Committee in general, and of himself in particular, as a prelude to a further appeal for funds. On the former point, he said that "if they looked round they would see that, whether it was the Hedjaz or Mosul or Iraq or Persia, or whether it was India, there was but one Power which was, as it were squeezing the life-blood of them all and fattening herself on the skeletons of their people. The only way to deal with that Power, in order that the world might be free, was to make India free." He said that the Central Khilafat Committee had been able to collect from 75 to 80 lakhs of rupees from the Mohammedans of India, a large proportion of which was subscribed for dispatch to Angora: and all of the money so subscribed had been so dispatched, though he admitted that there had been delay in completing the transaction; but the temporary default had been due to another, while the final completion was due to his own persistence. The Working Committee of the Central Khilafat Committee had decided to send a delegation to the Hedjaz in order to confer with Sultan Ibn Saud with regard to the convocation of a Moslem World Conference: and he appealed for funds to enable them to fulfil this intention, since the Committee had no money left "for carrying on the great work it is doing in India and abroad, and particularly in the Hedjaz." All Khilafat organisations should immediately set about collecting a Khilafat Purse Fund, and should remit without fail, to the Central Khilafat Committee, the first instalment by October 13 at latest.

Immediately after the appearance in the Press of the report of this conference, a largely attended meeting of the Mohammedans of Bombay took place on September 24, at which the proceedings of the Conference were denounced as "the voice of a few interested propagandists of Ibn Saud and not the united voice of Muslim India": which, it was declared, could only be heard at the All-India Muslim Conference, whose meeting had been arranged for September 27 and 28, at Lucknow. This Conference was duly held, and passed a resolution declaring that "whereas even the short possession and control of the Holy Land by Ibn Saud had been the occasion of desecration and sacrilege, this Conference asserts, on behalf of the Indian Muslims, that Ibn Saud's authority over the Hedjaz can never be tolerated." It was also resolved to send a deputation to the Hedjaz, to be headed by a prominent Indian divine who had previously shown himself to be a partisan of King Hussain: and therefore presumably continues to support his son and successor, King Ali.

There are here the makings of a very pretty quarrel. The All-India Muslim League, once a powerful body, that suffered eclipse during the heyday of the Khilafat campaign, is now reasserting itself: and will certainly find no difficulty in fianancing its deputation to the Hedjaz, whither it will apparently go in the interests of King Ali —certainly to combat the pretensions of the Ibn Saud. The Central Khilafat Committee, through whose hands great sums of money have, according to Shaukat Ali's own admission, passed during the last few years, is driven to making an appeal to the Mohammedans of India to find the money for its deputation; which is confessedly intended to serve the interests of Ibn Saud.

It is most unlikely that any such appeal can succeed. Apart from the fact that Indian Muslim opinion appears —certainly to combat the pretensions of Ibn Saud. the reputation of the Central Khilafat Committee, as a manager of funds subscribed by the public, has been badly blown upon. Of the 75 or 80 lakhs of rupees, mentioned by Shaukat Ali as having passed through its hands, 57 lakhs were subscribed for the Angora Fund and the Smyrna refugee fund; besides a considerable sum for a fund for the presentatien of aeroplanes to Mustafa Kemal. Of the two former, about 38 lakhs were remitted, and then remittance ceased: it being finally admitted that the Secretary of the Committee (who had explained the cessation of remittances as being due to the difficulty of getting money to Angora) had invested the balance in his own business, and that the latter had failed. The amount so utilised was about twenty lakhs of rupees: sixteen of which were due to Angora, three to Smyrna, and the balance to the aeroplane fund. After prolonged wrangling, the Secretary made over property, consisting of some saw mills and a stock of iron and wood, the total value of which was declared to be about 15½ lakhs: and he was given an acquittance in full, the missing balance of the Smyrna and aeroplane funds being conveniently forgotten. It was proposed to sell the property; but, times being bad, the Central Khilafat Committee took over the sawmills as a going concern, to be administered to their own advantage, until business improved and they would be likely to fetch a better price. Their attempt at management, however, resulted in a heavy loss, averaging 4,000 rupees a month: and, when the Angora Government's Red Crescent Mission (the Mohammedan equivalent of the Christian Red Cross) came to India to collect subscriptions, the Central Khilafat Committee decided to hand over to them the whole of the late Secretary's surrendered assets, to do with as they would. This offer appears to have been accepted—doubtless because it was a choice between that or nothing: and the Committee claimed to have obtained a receipt in full, though the actual amount of cash—if, indeed, any—realised by the Mission has never been stated. Having thus, like Mr. Micawber when he handed his I.O.U. to Mr. Thomas Traddles, recovered their moral dignity and shown themselves able once more to walk erect before their fellow men, the Central Khilafat Committee turned their attention to the raising of more money: for its members, having lived in great comfort on their share of the sums subscribed for the general upkeep of the Committee—the difference between Shaukat Ali's 75 or 80 lakhs and the 57 or 58 lakhs specifically subscribed for Angora—for several years, thought it an unkind suggestion that they should rely on their own resources in future. But, to their pained surprise, Muslim India showed itself slow to subscribe again: and it does not seem probable that their present appeal will produce any better result.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, October 8.

Lord Reading's Advice.

Although Lord Reading's term of office in India does not expire until April of next year, the first of the series of farewells took place yesterday with a dinner in his honour at the Hotel Cecil, Simla. In proposing the health of the Viceroy, Sir Mohammed Shafi reviewed the work of the past four and a half years, eulogistically referring to the wise legislation which has piloted India through many difficult channels. Dealing lastly with the present political situation, the speaker said that, in his considered opinion, the present was the psychological moment for His Majesty's Government to make a generous gesture which, while satisfying India's legitimate aspirations, would, he was convinced, strengthen the political connexion between India and England to the benefit of both; he prayed that such a gesture might be forthcoming ere the expiry of the present Viceroyalty. In his reply, Lord Reading spoke in the frank, human manner which is characteristic of him. He acknowledged the encomiums of Sir Mohammed Shafi and said that, lest he should be tempted to take these too literally he would devote the following week to reading the comments of the Extremist Press. His remarks on the present political situation were full of significance. The generous gesture, he pointed out, had already been made by Lord Birkenhead: and he wondered that the political sagacity of India had not rushed to grasp this offer. England was awaiting evidence of sincere co-operation and goodwill from India, and she would be "no niggardly bargainer" when this was forthcoming. By co-operation he did not mean the relinquishing of India's plea for more rapid advance. He admitted that the political atmosphere was more serene at the moment than it had been before during his term of office, but there still remained room for improvement: the Swarajist transformation was proceeding only gradually, and too slowly. The speech has given Indian political leaders the advice which is the key to the situation, and the note of warning which it strikes is worthy of their careful attention. India must realise that, if her national hopes are to be fulfilled, her progress must be constitutional, a term which apparently conveys to the leaders of extremist opinion the idea of passing irresponsible resolutions by overwhelming majorities, and other political jobbery of this kind. It must be obvious to all, despite the recent unanimity of the Legislative Assembly regarding the Muddiman Report, that India is not yet prepared for self-government. One of the first principles of statesmanship is a realisation of a nation's strength, of the compelling power which can be exercised if negotiations fail—a point which Pandit Motilal Nehru overlooked in his recent bluster in the Assembly. No one was frightened, but it was a demonstration that a "change of heart" is a vital necessity.

A New Leader?

The session of the Indian National Congress will take place in Cawnpore during December, and the Reception Committee have already elected Mrs. Sarojini Naidu as its President. The choice of a lady to guide the deliberations of the Indian Congress would have been surprising even in more normal times, but it is more so with India's political future in its present state of transition. The career of Mrs. Naidu is one of exceptional interest. She is on the shady side of forty, comes of an old Brahmin family of Eastern Bengal, and is the daughter of the late Dr. Aughore Nath Chatterjee, one of the first Indian D.Sc.'s to graduate from Edinburgh University. Dr. Chatterjee has spent most of his life in the service of the Nizam of Hyderabad, where he has held high posts in the Educational Service of that State. Mrs. Naidu is a brilliant scholar, who, after passing the Matriculation examination in India at the age of twelve, went to England and the Continent for the completion of her education. At the age of sixteen, against the wishes of her family, she married a non-Brahmin, Dr. Naidu, now Surgeon-General of Hyderabad State. Not long after her marriage, Mrs. Naidu went to England again, and gained considerable attention by the publication of her first volume of poems. Some sixteen years ago, during the floods in Hyderabad, she assisted in relief work, and her services were recognised by the Indian Government in the presentation of the Kaiser-i-Hind gold medal, and also by the Nizam. Her first appearance in politics was made in 1916 when, at the Lucknow Congress, she made a strong appeal for the revision of the Arms Act, claiming this as a reward for India's services in the War. Having been in close touch with Mohammedans practically all her life, she next set herself out to bring about Hindu-Moslem unity, and the existence of the first Pact owes much to her personality and sympathy. Following her success in this direction, she joined the Home Rule League and carried out a tour of Northern India, protesting against the internment of Mrs. Besant. In later years her sympathies have gradually gone over to the extremist side, and she took a leading part in the *Satyagraha* and Non-Co-operation movements under the leadership of Mr. Gandhi. In 1923 she toured South Africa in an attempt to effect a compromise in regard to the Asiatic Repatriation Bill. She was well received throughout the Union, but the campaign was unproductive. In accepting the Presidency of the Congress, Mrs. Naidu practically becomes the leader of the Swaraj Party. Her task is no sinecure; Mr. Gandhi failed to maintain his hold when in the same position, but it is possible that the charming personality and bewitching oratory of Mrs. Naidu will tell with Indian politicians more strongly than did the appeals of the *Mahatma*. She will have the opportunity of exercising her uniting influence between the Hindus and Mohammedans, and will have to face an equally difficult proposition in gaining the Congress objective of bringing under one head the various political creeds of India. The experiment of a lady President will be watched with much interest; saintliness has failed; sacrifice made an impression which did not last: and the *intelligentsia* now resort to a trial of woman's wit to assist them over the rough patch.

Markets.

In spite of a further curtailment of business owing to holidays, the jute market has continued its upward tendency of the previous week to such an extent that record prices were eventually reached, and there is every indication of even higher rates in the near future. At the close buyers were less inclined to transact at the increasing prices, but sellers were firm in their demands. Gunnies have shown a steady advance, primarily due to heavy shipment and to the extraordinary strength of the jute market. Mills have met the demand fairly freely but show reserve at the close.

The tea market has been slightly quieter here this week, the sales not being up to the standard, either in price or quality, of those held at the end of last month. With the exception of the best, almost all descriptions have sold at lower rates, and this seems to be in conformity with the London market which, however, finally provided a better appearance. With the anticipated reduction in surplus stocks of about ten millions maunds, which is nearly one half the total surplus, the position of the market generally may be looked upon as favourable. Piece goods continue to attract little attention, though a few orders are reported for the forward position.

The Calcutta Stock Exchange does not re-open until the 12th instant.

The money market opened steady after the holidays, but the forward market has been quieter since, owing to the lowering of the Bank of England rate to four per cent. There is a fair demand for short loans at from two to three per cent. Exchange remains very steady.

THE "INDIAN SANDHURST" COMMITTEE'S QUESTIONNAIRE.

(By Our Simla Correspondent).

Simla, October 7.

For the purpose of obtaining the opinions of qualified persons of all classes of society on the problems which confront them, the Indian Sandhurst Committee have recently issued a long and comprehensive questionnaire, to which they invite replies from public bodies and private gentlemen. In it the fact, that the comparatively few candidates, who at present offer themselves at each entrance examination for Sandhurst held in India, are mostly of poor quality, is accepted from the start: and the questionnaire concerns itself mainly with the various causes which may possibly underlie this state of affairs and the means by which they can be remedied.

The suggested causes relate, inter alia, to the lack of publicity, the inadequate rates of pay, the dislike of parents for a system which necessitates their sending their sons to England for training, the high cost of that training, and its uselessness to a boy who, having failed to obtain a commission, is forced to choose another career. But anyone who reads between the lines will certainly be led to the conclusion, that the point to which the Committee attach the highest importance is connected with the earlier education of would-be candidates for the army. Thus we find one question as to whether there are any defects, inherent in the system of education in India, which contribute to the present unsatisfactory state of affairs: and another regarding the possibility of finding a substantial number of boys in India, within the prescribed age limits, who could pass an examination of the standard of the entrance examination set in England for candidates for Sandhurst, and who would, at the same time, possess the other qualities necessary for an army officer, such as good physique, independence of character and capacity for leadership. At present the standard of the Indian examination is probably somewhat lower than that of the English, and the upper age limit is higher by a year in India than in England. No one in India can possibly desire this difference to continue, but, up to date, these concessions have failed to produce an adequate supply of boys capable of passing the Sandhurst examination.

There is a general consensus of opinion that the education, obtainable in the ordinary Indian schools to-day, is directed solely towards cramming for particular examinations, and does not encourage boys to learn intelligently with a view to applying their knowledge to practical uses. Moreover, education in India starts, as a rule, at a higher age than in other countries: and, as a result, the standard of the examinations which an Indian boy can pass at the age of nineteen is equivalent only to that which an average English boy would reach two years earlier. Thus, for example, the questionnaire lays it down that "the standard of the entrance examination for Sandhurst (set in England) is approximately the standard of the school leaving examination in England, which is considered by educational authorities as being slightly lower than the Pass B.A. of an Indian University."

But these are not the only serious defects of the Indian educational system. Just as the Indian boy is rarely taught to use his mind intelligently, so also he receives, as a rule, little encouragement to develop his body; while the training of his character is almost wholly neglected. The residential system, which plays such an important part in English public school training, is much too rarely adopted in this country: and where it exists, it is not developed to any great extent as a definite help in the formation of a boy's character. The public school system has, it is true, been adopted to some extent in the case of the Chiefs' Colleges; but, even there, its full advantages are, for a variety of almost insurmountable reasons, unattainable. In such circumstances, it is certainly difficult to expect that many Indian boys, possessing all the attributes of mind, body, and character which are held to be necessary in army officers, can be drawn from the normal educational institutions of India. This fact was realised by the military authorities after only a few years' experience of the qualities of the average Indian candidate who presented himself for the Sandhurst examination: and, to meet this difficulty, there was founded in 1923 the Prince of Wales' Royal Indian Military College at Dehra Dun, the primary object of which is to secure boys at about the age of twelve and to train them up specially for the Sandhurst test. Here it has been possible to introduce the nearest approach to the English public school system which has ever been seen in India: and the results, too, to judge by the lists of successful candidates at the last few examinations, have entirely justified it. If the questionnaire is any guide, the Committee have fully realised this fact, and have even been led to consider the possibility of the extension of this system, by the starting of this form of education at an even earlier age; for, among their final questions, they ask whether it would be advisable to found still further institutions on the lines of the existing Dehra Dun College in other parts of India, or, as an alternative, to create a number of preparatory schools in different parts of the country which would give boys an early education on suitable lines to fit them to enter the Central College at Dehra Dun.

The crux of the matter is, of course, that these Indian lads, when they get their commissions, will have to compete, for some years to come at any rate, on equal terms with British boys who have been trained and disciplined at preparatory and public schools: and the more nearly their early education can be made to approximate to that of their British comrades, the easier it will be for them to do so. By this it is not to be understood that it is essential to anglicise them in any special degree; but that they should be given the advantage of an education as nearly as possible equivalent to that of the English public schools, which, as a means of forming character and developing the power of leadership, are acknowledged to be without a rival.

THE INDIAN MAIL.

The Mosul Dispute.

It was only to be expected that Indian extremist newspapers would accept, as conclusive evidence that Great Britain is in the wrong over the Mosul dispute, the finding, by the League of Nations Boundary Commission, that Mosul belongs historically to Turkey. But it is surprising to find responsible Anglo-Indian journals apparently taking the same view. The *Statesman*, for instance, in an article that speaks of "continuous wrangling" between "the high-pitched voices of Mr. Amery and Rushdi Bey," says that the Commission's report declared that "while Mosul belonged to Turkey by right, as a matter of expediency it should be mandated to Britain upon condition that we bound ourselvs to hold it and Iraq for a further period of 25 years": and adds that the only justification that could be offered for the acceptance of an extension of the mandate "is that we are bound by treaty to protect the Arab kingdom from the Turk. But Mosul is not part of the Arab kingdom."

One does not look for political or historical sense from ill-informed Indian vernacular or Anglo-vernacular newspapers: and one is resigned to their insistence that Great Britain's desire for the incorporation of Mosul in Iraq is solely due to the belief that oil is to be found there—a prospective asset of which they are prepared to rob the rightful owner in order to serve their own passion for "exploitation." But one does expect, from the sober English journalist, comprehension of the meaning of the Commission's finding. At Lausanne, Turkey formally relinquished her claim to a large amount of territory in favour of the various "succession" States to whom it had been decided to hand it; but the Mosul question was left to be decided later, by direct agreement or, if that should prove impossible, by a reference to the League of Nations. The Mosul Vilayet admittedly formed part of the pre-War Turkish Empire—a fact that no one has ever disputed: and, until it was formally ceded to another, it therefore remained a part of Turkey. This is all that the Commission's finding stated—that, until Turkey formally divested herself of the sovereignty of Mosul, it must

Digitized by Google

historically be treated as still part of her dominions. If Turkey had not formally ceded her former Mesopotamian Provinces, south of the Vilayet of Mosul, to the "succession State" of Iraq, the whole of the territory of Iraq would be in the same position, and would still remain historically part of Turkey. What has now to be decided is merely where the new boundary is to be drawn: whether south or north of the Mosul Vilayet, or somewhere in between.

The "Indian Sandhurst" Committee.

In the last issue of The Near East and India it was stated that the personnel of the "Indian Sandhurst" Committee had saved it from the attacks of the extremist Press, ordinarily directed against any Committee appointed by Government. The present mail brings a reasoned and, on the whole, temperate statement of the extremist view of the Committee's value, in the shape of an article in the *Bombay Chronicle*, one of the most influential—and, it may be added, usually one of the most intemperate—of the Anglo-vernacular journals of India.

The writer of the article, though he is unable to refrain from the usual digs at British "disinteredness," does put forward an argument that is worthy of attention, as an intelligible—however "extreme"—statement of the ideas of advanced Indian politicians regarding the military future of India. The theme of the article is, that the Committee is to be welcomed, not because it will result in any substantial benefits, but because it will direct increased public attention on the vital and pressing problems of Indian defence. "The issue is nothing else than that of Indian self-defence, without which freedom can neither be attained nor, once attained, be retained." But the most important point of the problem of Indian defence is not dealt with by the Committee: one that "cannot be solved until a genuine and substantial beginning is made towards the creation, by definitely marked and rapid stages, of a truly national army, independent, self-contained, and entirely controlled by India." India is told that she cannot expect to govern herself until she is able to defend herself: and "it is quite in accordance with England's disinterested mission of training Indians in the art of governing themselves, that they have not been permitted to learn to defend themselves." A real beginning must be made in releasing the Indian Army from the control of the War Office, by the abandonment of the Army Amalgamation Scheme of 1859: under which "disinterested and beautiful scheme England is able to raise a reserve of many thousand soldiers for her own Army, equipped, trained, and fed at India's expense." The Army for which India pays is not an Indian Army, but an Imperial Army, maintained and used for serving Imperial interests.

It is certainly something gained that a newspaper of the very extreme views of the *Bombay Chronicle* should be brought to admit that civil self-government in India must follow, and not precede, a demonstration of her ability to defend herself: and it is interesting to note that the paper's ideas, as to how India should set about attaining this ability, point to the introduction of something analogous to the Company's Army, maintained before the assumption of government by the Crown. That Army, of course, included not only British officers (and non-commissioned officers) of Indian regiments, but British battalions as well: and, though the *Bombay Chronicle's* remarks may be read to mean, not a self-governing India as a Dominion of the British Empire, but a separate independent nation owning no one's sovereignty but her own, it is not necessary to read this meaning into them. Even the most extreme of Indian politicians will always privately, and not infrequently publicly, admit that, for a long time to come, British assistance will be needed by India: even more on the military than on the civil side of the Government. If the increased public attention, which the *Bombay Chronicle* expects the Committee's report to focus on the problem of Indian defence, includes evidence of an increased desire, on the part of young Indians of the right class and of the right stamp, to offer themselves for commissions in the Indian Army, all sections of opinion in India, including the most extreme, will have cause to bless its labours.

INDIAN EXCHANGE.

London, October 26.

Last week we reported a firmer feeling in Exchange in Calcutta, where business has shown more animation. The T.T. rate has been steady at 1s. 6 5-32d. to 1s. 6 3-16d., with the higher rate offering fairly freely for cash during the week. Banks, however, were not able apparently to fill their selling orders and had to have recourse to Government, whose purchases cannot be less than £500,000 T.T. at 1s. 6 3-16d. Withdrawals from the Imperial Bank for trade purposes have again been heavy according to their last weekly statement.

Those Jute mills which purchased their supplies early in the season have good reason to congratulate themselves. The phenomenal rise within the past fortnight which has carried the price to well over £60 per ton, has possibly caught some operators short, but it may be taken as a clear indication that there is not sufficient jute in sight to meet trade requirements.

Three months' credits in Calcutta have been called 1s. 6 7-16d. for early delivery, although some gilt edged paper has been done at 1s. 6 13-32d. This rate has been more easily obtainable in Bombay, where market conditions are quieter and money is in less demand. Forward rates in both markets are quoted for T.T. 1s. 6 3-16d. November-February, 1s. 6 5-32d. March, 1s. 6⅛d. April 1s. 6 3-32d. May-September: with buyers for any position at 1-32d. higher.

We hear good accounts of the quality and quantity of the cotton crop, but it is rather early yet to speak with any certainty. Local prices will, however, show a falling off compared with previous years, influenced by the large American crop which is now said to be close upon 15 million bales.

The Rupee market in London has been quiet, with good buyers for near delivery at 1s. 6 3-16d. T.T., and few sellers under 1s. 6 7-32d. Several cargoes of wheat have reached India from Australia, and we hear that others have been contracted for.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K., Continent and India.

NOTES AND NEWS.

170, *Strand, London, W.C.2,*
Tuesday Morning,

The Trade Position.

There is no gainsaying the fact that for some time now signs have not been wanting that the trade position as a whole is on the up grade. Between the present stage and the prosperity which will enable the absorption of the unemployed there may be, it is true, a long road to travel (though personally I doubt it, for it is much more probable that in a little time something approaching a real trade revival will come upon us like a flash), but at any rate we have the practical certainty now that we have left the worst of the depression behind us. There are still some who say the position is worse, but it is the whole of trade that we have to look at, and not the position of a few industries which are affected to an exceptional degree by the prevailing conditions. The rapidity of the trade revival can only be affected by adverse political developments, but while the sky is far from clear at the moment, it would be absurd to make too much of the various crises abroad which have come into being in the last few days.

An Improving Outlook.

Of the signs of improving trade nothing could be more significant than the contracts that British firms are now beginning to obtain from abroad and particularly from the Near East. Apart from these contracts there are orders in view for work within the Empire which will help to make the iron and steel trade more active than it has been for a long time. For one thing there is the plant and machinery that will be required for the Great Indian Peninsula Railway electrification scheme which is to cost £5,000,000. Then there is the extensive work in connection with the great development scheme in East Africa, and there are other projects on the tapis, so that it is not surprising that iron and steel shares, after their great depression, should be showing signs of improvement. The outlook for Lancashire, too, is distinctly on the up grade. Cheap cotton is essential if the demand for cotton goods is to expand, and it is now practically certain that cotton is going to be much cheaper during the next year. The American crop, which is still unfortunately the keynote to the position, promises this time to be of record dimensions; it is now estimated at between fifteen and sixteen million bales, and as other crops are also extremely good, it follows that the supply of cotton will be ample for all probable requirements. It is again stated, I see, that the Egyptian Government proposes to intervene to support the price of Egyptian cotton. I can only repeat that in the circumstances any such move would be most unwise, for the commodity must be allowed to find its level, and the price of Egyptian is still far too high.

Greek Finances.

A lengthy exposition of the Greek financial situation by M. Diomedes, Governor of the National Bank of Greece, made in reply to criticisms directed against the recent financial policy of the country, contains certain points that call for comment. He points out that the increase in the note circulation since 1923 is principally due to the issue of banknotes fully covered by foreign exchange of equal value. As regards the charge of inflation, he cites the statement of the British representative on the International Financial Commission that while the pre-War note circulation varied between 42 and 48 gold drachmæ per head, to-day it is only 39 gold drachmæ per head. This argument is naturally open to the criticism that the continuance of the issue of paper money must so depreciate the value of the drachma that the equivalent value in gold drachmæ must fall instead of rising, but on the actual figures at present it cannot be said to apply. At December 31, 1923, the note circulation amounted to 4,681,000,000 drs. paper for an estimated population of 5,500,000, or 851 paper drachmæ per head, while at September 10, 1925, the note circulation was 5,383,000,000 drs., which, if the population is 7,000,000, would mean 769 drs. per head. As regards the charge that the cover against the additional circulation is not real because of the £4,146,747 held against it £1,625,000 is derived from the money raised from the Refugee Loan, M. Diomedes points out that in accordance with the agreement of March 6, 1925, made with the Refugee Settlement Commission the sterling balance of the Loan was deposited with the National Bank, and out of this balance such a sum as in the opinion of the Commission would be spent in Greece in drachmæ was placed at the disposal of the bank, which was entitled to issue notes against it. Finally, M. Diomedes expresses the view that the cause of the decline of the value of the Greek currency is in a great measure due to payments for imports.

Soviet Coal Competition.

I referred recently to the strenuous efforts that the Bolsheviks have been making to obtain a solid footing in the Near Eastern markets with their surplus coal, which they have been selling it appears at ridiculously low rates in order to deprive Great Britain of its outlets in those regions for this product. It now appears that the Soviet authorities are so satisfied with the preliminary efforts of their campaign that they are concentrating their energies on increasing the production of the Donetz coalfields, and it is reported that the September output was a record for the year, while the export figures for that month amounted to over a million tons. If, however, they are able for a time to continue underselling this country with coal, it is extremely improbable that they will succeed in obtaining an extensive outlet for their produce, because quality is also a thing that counts particularly where fuel is concerned, and their customers will find in the long run that the best economy is to stick to British coal. But for the threatened coal trouble here it is doubtful if the Bolsheviks would have found much of an opportunity in the Near East, and it is to be hoped that their commercial activities will be thoroughly appreciated by British labour for whom the Soviet authorities profess such sympathy. But, of course, the whole thing is only part of the anti-capitalist campaign that the Bolsheviks are endeavouring to pursue throughout the world. And coal is not the only commodity that they are offering at uneconomic prices.

THE ROUMANIAN HARVEST.

The Statistical Bureau of the Ministry of Agriculture in Roumania publishes a report to the effect that the weather for the autumn sowings was remarkably good throughout Roumania. Less satisfactory than the weather conditions is the situation in regard to agricultural labour. Labourers in most districts are exceptionally dear, while the scarcity of animals presents another difficulty. The harvest results for the five main cereals are as follows:—

Wheat, 3,333,887 hectares under cultivation produced 2,894,688 tons for an average of 8.7 quintals per hectare. There are 270,481 hectares under rye, and the harvest amounted to 213,336 tons, or 7.9 quintals per hectare. Barley acounted for 1,704,061 hectares, with a harvest of 1,068,041 tons, or 6.2 quintals per hectare. Under oats 1,148,847 hectares produced 786,681 tons, or 6.6 quintals per hectare. The area under maize was 3,930,780 hectares with a production of 4,456,953 tons, i.e., 11.3 quintals per hectare.

The sugar harvest is estimated at 14,000 wagons of 10 tons each, as compared with 9,500 wagons in the previous year. An available export of from 3,000 to 4,000 wagons is anticipated, as compared with the surplus of 1,000 wagons in 1924.

IVORY IN GOOD DEMAND.

Messrs. Hale and Son's report on the quarterly ivory sales which were held on October 20 and 21, states that they comprised 48½ tons, viz., 14¾ tons Zanzibar, Bombay, Mozambique, East African, and Siam, 2¾ tons Abyssinian, 9¼ tons Egyptian (Alexandrian description), 20 tons West Coast and Central African, and 1¾ tons land carriage. Of the above quantities 3¼ tons consisted of lots previously offered or indirect import, viz., 1 ton East Indian and Abyssinian, ½ tons West Coast African, and 1¾ tons land carriage.

The following was the assortment of the East Indian description: 10¼ tons soft tusks, ¾ ton hard and Siam, 1 ton billiard ball pieces, ½ ton bagatelle pieces, ½ ton cut points for balls and cut points off large tusks, ¼ ton under-size and defective points, etc., ½ ton billiard ball and bagatelle scrivelloes, ¼ ton scrivelloes and few cores, and ¾ ton cut hollows. During the progress of the sales 2¼ tons were bought in, viz., ¼ ton East Indian, ½ ton Egyptian, ¼ ton Abyssinian, and 1¼ tons West Coast African.

There was the usual attendance of buyers and a good demand throughout. The quantity catalogued was rather more than at the previous auctions, owing to Congo description being in larger supply. The Continent, America, and the Home trade competed and nearly all the ivory offered was disposed of. Prices were generally well maintained. Hard tusks in some instances were higher, Soft were a little irregular but were generally steady, although the extreme prices of last sales were not reached.

Abyssinian.—Soft large and medium tusks steady. Ball scrivelloes unchanged. Scrivelloes and bangle tusks brought previous rates.

Egyptian.—Alexandrian description. Soft, steady. Hard, firm to rather higher. Ball scrivelloes unchanged. Soft scrivelloes steady. Hard rather lower.

Sir George Lloyd, the new British High Commissioner, arrived at Port Said in the Morea on October 20, and was met by Mohamed Bey Rifaat, the Governor, representatives of the Residency, Teal Bey, the Police Commandant, the British Consul and the Diplomatic Corps. He was received informally at the Navy House, where the Royal Irish Fusiliers mounted a Guard of Honour. He travelled to Cairo by special train. Sir George had an audience of King Fuad at Alexandria last Saturday.

GREEK TOBACCO PRODUCTION.

Tobacco is grown in Greece in Thessaly, in central Greece, in the islands of Samos and Mitylene, in the Peloponnese, and in particular in Macedonia, where the finest tobacco is produced. The crop in 1923 was particularly plentiful, amounting to about 60,000 tons, of which 26,000 tons were produced in Macedonia and Thrace. In 1924 this region accounted for 17,000 tons out of a total of about 43,000 tons. The diminution in the production of Macedonian tobacco (says Mr. R. F. H. Duke in his report on Greece) was due to the dryness of the season which, however, considerably enhanced the quality and consequently the value of the crop. Agrinion and Peloponnese tobacco, the production of which was greatly developed during the War, when Turkish and Bulgarian leaf were not available for export, amounts to about 11,500 tons, of which the German and Dutch markets are the chief consumers. Thessaly, in 1924, produced about 10,000 tons and fresh areas are still being brought under cultivation, while large new depots for manipulation have been erected at Volo, Trikkala and Carditsa.

In Macedonia the Turkish planters have been replaced to advantage by refugee settlers; so that, whereas in 1923 233,000 stremma were planted, in 1924, after the Turks had left the country, 9,000 more stremma were brought into cultivation, making a total of 242,999 stremma.

The tobacco industry of Macedonia and Thrace has for a long time been in the hands of Greeks working for their own account or for the account of foreign companies, but the export trade is largely confined to American companies representing various manufacturers in the United States. The value of the tobacco exported in 1923 from Macedonia amounted to some Drs. 3 milliards.

The aromatic and choice quality tobaccos, representing a third of the total tobacco production of Macedonia and Thrace were, up to the Great War, bought at good prices by American and European manufacturers. But since the War, owing to the general economic collapse in Europe, and especially in Germany and Austria, good quality tobacco has been bought by American firms alone, to whom are now exported 5 to 6 million okes a year. In consequence of this falling off of the European market and the great increase in the production of choice tobacco, the Macedonian and Thracian industry might have had to face a very grave crisis had it not been, it is said, for the wide extension since the War of the habit of tobacco smoking among women. The best of the inferior qualities of tobacco are bought by the Swedish and Italian State Monopolies, whilst the cheapest qualities of all are exported to Germany, Austria, and Poland. Insignificant quantities are shipped to Great Britain, Switzerland, and Belgium.

Apart from the high cost of manipulation of Macedonian tobacco, there is another contributory cause of the crisis through which the export trade is now passing, namely, the excessive taxes imposed on tobacco in Greece as compared with other Balkan countries. In 1922 taxes were levied on Macedonian tobacco up to 65 per cent. of its value. These taxes have since been considerably reduced, but even to-day the State tax, together with communal and municipal taxes, port dues, etc., amount to 23 per cent. of the value of the tobacco, not including the export duty.

NEW COMPANY.

The Vaghamon (Travancore) Tea Company has been registered as a public company with a capital of £100,000, in £1 shares. The first directors are:—T. McMorran, Frithwood House, Northwood, Middlesex, merchant; W. A. Duncan, 53, Cadogan Square, W., merchant; J. R. H. Dinekley, C.B.E., Hidden Cottage, Hungerford, Bucks (director of Travancore Tea Estates Company). Walter Duncan and Co. are the first managing agents. Registered office, 149, Leadenhall Street, E.C.

Monthly Supplement of "The Near East" : No. 9.

MEDICINAL PLANTS.

Yugoslavia, a land of wide plains and dense forests, possesses, besides other natural riches, an abundance and variety of medicinal plants. Slovenia and Bosnia, with their Alpine flora, Dalmatia and South Serbia with southern Mediterranean vegetation and finally Voivodina with a Continental flora produce a considerable variety of such plants, and make the country worthy of the interest of those occupied in the exploitation of this important branch of economic life. Unfortunately, although trade in medicinal plants shows better results each year, the organisation of the industry and the rational collection of the plants are, so to speak, in their infancy. The drying methods employed for the plants are also quite primitive. Nevertheless the interest displayed in the Yugoslav industry and trade in medicinal plants both by individuals and societies gives hopes of their proper economic exploitation in the near future. As a proof of this we may mention that just recently at the September Congress at Belgrade of the Economic Chambers and Organisations of the S. H. S. Kingdom a resolution was passed which will certainly not remain without practical effect. It demanded that for the study of medicinal plants a special committee comprising official and unofficial members should be set up by the Ministry of Trade and Industry; that freights on the railways for such plants should be lowered; that the forest tax paid for the collection of plants should be abolished, and in general, that their cultivation should be encouraged by all possible means.

Before passing to a detailed statement of the position of the industry in the various provinces, we give the figures of the export of medicinal plants for the last few few years. Special mention must be made of fleabane, because of the exceptionally large quantities and the special use made of it.

According to the official statistics of foreign trade, the following amounts of medicinal plants, excluding fleabane, were exported:

	Quantity	Value in dinars
1923 ...	2 019.007 kgs. ...	15 639.722
1924 ...	1,866.280 kgs. ...	16 994.434

The larger part of these exports goes to Italy 9.9 million dinars in 1923 and 15.7 million in 1924), the U.S.A. (two million), Austria, Switzerland and France.

Fleabane was exported as follows:—

	Quantity	Value in dinars
1923 ...	504.040 kgs. ...	18 267.038
1924 ...	545.982 kgs. ...	29,933 207

The greatest part of this product also went to Italy, 16.7 million dinars in 1923 and 27.9 million in 1924). The figures of export for the current year are not yet available.

Although medicinal plants are both abundant and general throughout Yugoslavia, they are not gathered everywhere, In Serbia, for instance, practically no plants are gathered for industrial purposes, whereas in Bosnia, Herzegovina, Dalmatia, Montenegro, Slovenia, Croatia and Voivodina the industry is more or less organised.

The main plants collected (there are many which are not used at all) are:—henbane *(Hyoscianus niger)*, gentian (*gentiana lutea*), elecampane (*Inula Helenium*), lime flowers, *Cortex frangulae*, laurel (*laurus nobilis*), rosemary (*rosmarinus officinalis*), camomile (*matricaria chamomilla*), wormwood (*artemisia absinthium*), mallow (*althea officinalis*), myrtle (*myotis communis*), juniper (*juniper communis*), ergot (*secale cornulum*), Hellebore (*veratrum album*), sage (*salvia officinalis*), Mountain Tobacco (*arnica montana*).

The industry as a whole is best organised in Dalmatia and Bosnia. Dalmatia deals mostly with four kinds of plants:—fleabane, rosemary, sage and laurel. The annual production of fleabane in Dalmatia amounts on the average to 125-150 trucks of dried flowers. The centres of industry are Shibenik, Split (Spalato) and Dubrovnik (Ragusa). About one-third of the crop goes to five home mills, and the rest to Trieste, whence it is exported to England, America, Germany, and elsewhere. Fleabane, as is well known, is used for the destruction of domestic insects and plant pests. As the Dalmatian variety is particularly efficacious for this purpose, its price has risen considerably, so that it now fetches on the Trieste market 12,500-15,000 dinars per 100 kgs., a quantity representing about the yield of one acre.

The second plant in importance is rosemary. Of 150 truckloads of dried leaves, about 15-20 are exported, the rest being manufactured into oil of rosemary in Yugoslavia. Three co-operative societies have been formed in Dalmatia for the preparation of this oil. These produce about 10-12,000 kgs. of oil, while Dalmatia as a whole does not produce more than 20,000 kgs. About the same quantity of sage, which is exported mostly to America, England and Germany, is produced. In addition there is an export of about 40 trucks of laurel leaves and berries, which are also used for the preparation of etheric oil.

Bosnia produces mostly henbane and gentian, 150 trucks in all, about 200 trucks of elecampane, and 20 of lime flowers. Besides these there are 20 other kinds of roots and leaves which might prove of economic use.

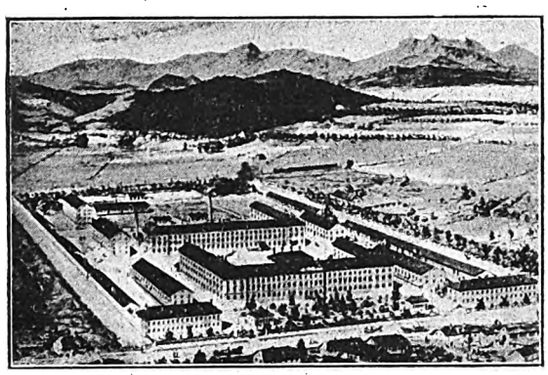
State Monopoly Administration of the Kingdom of Serbs Croats & Slovenes



State Tobacco Factory in Liubliana.

Tobacco Culture

The 1924 harvest will yield about 27.000.000 kgs. of leaf. Of this amount about 10.000.000 kgs. will be set aside for export. The tobacco is from Serbia, Macedonia, Herzegovina and Voivodina.

Fermentation and preparation of the crop will be completed in October, when negotiations for sale will begin.

All information can be obtained from:—

The State Monopoly Administration, — BELGRADE —

The other provinces are of less importance, but only from the point of view of collection, not in respect of quality. The Montenegrin fleabane is considered the best variety. In Croatia, the plants most collected are mallow, henbane, gentian and laurel. In Slovenia there are numbers of varieties of arnica, while the juniper exported is chiefly from Voivodina, which also produces the best camomile in Yugoslavia. Serbia grows the poppy and produces opium; other plants of excellent quality are grown, but are not collected for industrial purposes.

From this short survey it is evident that in its medicinal plants, Yugoslavia possesses a source of considerable wealth, which is at present allowed to lie dormant. The main drawbacks are lack of organisation, and absence of capital. Concentration on a sound financial basis must take the place of primitive organisation, if the industry is to command the best markets and avoid dependence as hitherto on middlemen. The cultivation of medicinal plants could provide a good source of gain to the poorer classes. Fortunately this aspect of the question has been realised, and work has seriously begun in a practical and organised manner. But the problem of capital still remains a grave difficulty.

M. PILJA.

YUGOSLAV CUSTOMS REVENUE.

I.—Movement of Foreign Trade and Customs Receipts.

Yugoslavia's Customs receipts reflect very considerably her Customs policy and fluctuations in foreign trade. During the Great War many provinces, and Serbia in particular, which was almost devastated by the enemy, were exhausted of goods and food, and in the two years which followed the cessation of hostilities, Yugoslavia was obliged to encourage imports and impede exports. In proportion to the progress of reconstruction and the improvement of the means of communication, exports have increased. The harvests of 1921 and 1922 were poor, so that it was only in 1923 that the country at last succeeded in attaining an active trade balance, which such an exceptionally favoured agricultural country ought naturally to have. In 1925 Yugoslavia's foreign trade entered upon its normal course of development, and an autonomous commercial and Customs policy was abandoned for commercial treaties with other countries.

The following tables show the development of foreign trade:—

Paper Dinars.

Year	Imports	Exports.
1919	2.982.067.276	686.815.049
1920	3,465,819.272	1,320,606,055
1921	4.122.097.642	2,460.737.652
1922	6,441,876.189	3,691.166.163
1923	8.309.635.472	8,048,843.930
1924	8,221,743.552	9,538,774.482
1925 (first half)	4.602,941.563	4,506,486.074

Gold Dinars.

Year	Imports.	Exports.
1919	712.263.038	164,052 078
1920	746.943.808	284,613,373
1921	538,132.851	321,246.112
1922	452,373.945	259,211.106
1923	495,446.286	477,959.893
1924	578,588.568	671.271.951
1925 (first half)	388,559.154	379,699.815

The amounts in paper dinars have been converted into gold values at the mean rate of Belgrade-Geneva-Zürich cheques at the Belgrade and Zagreb Bourses. Customs receipts in the same years were as follows:—

Paper Dinars.

Year	Imports.	Exports.	Total
1919	68,698.820	20,885.373	89,594.193
1920	160,081.203	165,439.131	325,520.334
1921	427,050.496	172,315,932	599,366.429
1922	760,453.907	123,542.314	883.996.221
1923	1,079,051.416	353,075.266	1,432.126.682
1924	1,153,714.295	217,599.881	1.371.314.176
1925 (first half)	676,183.845	111,598.879	787,782.724

Gold Dinars.

Year	Imports.	Exports.	Total.
1919	16.435.124	4 996.500	21,432,624
1920	34 500.259	35.654.985	70.155.244
1921	55 750 717	22 495.552	78.246 269
1922	53,402.062	8,675.724	62,078.386
1923	64.076.687	20 966.464	85.043.151
1924	81,190.307	15.313.148	96,503.455
1925 (first half)	57,013 814	9,409 686	66 423.500

Customs receipts under the régime established by the new Tariff Law and the conclusion of new commercial treaties should show a considerable increase, as the duties as a whole are raised.

Digitized by Google

II.—Revenue of the Customs Administration.

In Serbia before the War all Customs dues had to be paid in gold or silver together with an agio. Since their institution after the War, however, export duties were fixed in paper dinars, because, as a result of the devaluation of the dinar, silver dinars no longer circulated. Later on, however, it was decided that State and monopoly duties should be both estimated and paid in silver. In the new law which came into operation on June 30, 1925, export duties were fixed in gold. This will give the Customs receipts henceforward a stable and permanent value.

The following table shows the Customs revenues from the various classes of goods and the money in which they are payable, and actually paid.

REVENUES.	A. Estimates. From Imports. dinars	From Exports dinars
1. Regular		
a. Chief revenues		
1. Customs duties: Gold:	112,905 150	—
Paper:	677.717	215,527.320
2. Luxury Duty, in gold	12,854.251	—
b. Other Duties.

2. Sale of Goods: Paper:	723.981	
3. Under earlier control regulations: Paper	1,058 951	
4. Agio: Paper	1,020 398.871	
Total—Paper	1,025,780.495	
Altogether, in gold	129,325 421	
in paper	1,241,988.755	

B. Actually Paid in.

Total Customs Receipts ... 1,371 314.176 paper dinars.

During 1924 all Customs receipts were paid in paper dinars, and nothing in gold, as was the case in former years also. This is explained by the fact that the agio fixed by the Customs was considerably lower than the actual agio at the Bourse.

Besides the Customs receipt shown above, the Customs service also charged certain duties to the accounts of other authorities, viz., State toll on goods paying the same in the country (Indirect Taxation Management Account), monopoly duties on the import of monopolised articles (Autonomous Monopoly Control Account), and certain other less important charges. The receipts from these other accounts in 1924 amounted to 301,965,081 paper dinars, which, added to the total of the other Customs receipts, gives a total Customs revenue of 1,673,279,257 paper dinars. The Customs service also enforces certain other municipal duties: the paving tax on the carrying in and out of goods, the weighing tax, and municipal tolls wherever such exist. These brought in during 1924 15,190,050 dinars.

The new Customs tariff law has made some changes in the kinds of Customs receipts, the luxury tax being abolished and the carriage and statistics taxes being changed into an administrative tax, 25 per cent. of the receipts from the last-named being allotted to the Customs officials.

III.—Revenue of Customs Stations.

Statistics have not yet been published showing the amounts and kinds of good passing the different Customs stations. An idea, however, of the activities of these various stations can be formed from the following table showing the receipts of the Stations in 1924 (including revenues from the accounts of other authorities):—

	From Imports. Dinars	Per cent.	From Exports. Dinars	Per cent.	Total Dinars	Per cent.
Belgrade ...	331 780 690	22.9	9,042.124	4 0	340 822.814	20.4

This table shows that most of the foreign commerce of Yugoslavia passes through the stations of the north and north-west frontiers, as a result largely of the fact that Yugoslavia does not possess adequate connections with her Adriatic coast, and that the question of her Customs zone at Salonika is not yet satisfactorily settled. J. P.

CROP REPORT: SEPTEMBER 1-15.

General Conditions.

General conditions through the Kingdom, not reckoning winter and spring field crops which have been harvested, threshed, and prepared in all parts of the Kingdom, were considered almost very good in the first half of September. In the Valjevo and Vranje districts the condition was *excellent*. *From very good to excellent* in Travnik and Bihatch districts. *Very good*, Srem, Podunavlje, Porrinje, Morava, Timok, and Nish. *From good to very good* in Liubliana, Maribor, Osek, Belgrade, Posharevats, Kossovo, Skoplje, Bitolj, Krushevatz, Zeta, Tuzla, Serayevo districts and costal Krajina. *Good* in Zagreb, Shumadija, Batchka, Bregalnitza, Rashka, Uzhitze, Split, Dubrovnik, Mostar, and Vrbas.

Atmospheric Changes.—In the first half of September the weather was very changeable. In the northern parts there were frequent cold autumnal rains which unfavour-

Capital Paid up - £14,372,956 | Deposits, &c. - - £338,371,355

EASTERN DEPARTMENT:

77, LOMBARD STREET, LONDON, E.C. 3.

LLOYDS BANK now has the following Offices in INDIA, BURMAH and EGYPT, and can offer special facilities to merchants and others for transactions with those countries. It issues Drafts, Mail and Telegraphic Transfers and Letters of Credit, negotiates and collects Bills of Exchange, conducts Exchange operations, and transacts Banking and Agency business generally.

INDIA & BURMAH.—BOMBAY, CALCUTTA (2 Offices), KARACHI, RANGOON, DELHI, SIMLA, RAWAL PINDI, MURREE, SRINAGAR (Kashmir), GULMARG.

EGYPT.—ALEXANDRIA, CAIRO, TANTA, BENHA, MEHALLA KEBIR, BENI SUEF, FAYOUM, MINIEH.

Full particulars can be obtained from any of the Bank's Branches.

Digitized by Google

ably affected the ripening of grapes and maize. In the Maribor district the first snow fell in the mountains. In the south there was drought, quite keen in parts. Throughout the country there was insufficient rain, and it was feared that all crops which were in the final ripening stage would fail. In the middle of this fortnight rain began to fall locally, and by the middle of the month had soaked the earth sufficiently. Except in the south the rain was cold. There was local hail in some parts, but not enough to do any great damage to the crops.

Maize.—The harvest of early maize is in full swing, and showing good yield; the later maize in the plain is in the last stage of ripening, and that in the hilly districts in the first stage. In the north frequent rains are preventing ripening. In the Bitolj districts constant drought kept back the maize, but the rains just before the middle of the month, which have well soaked the ground, have improved prospects.

Vines have borne well. Blight has done some local damage, but not enough to spoil the vintage. In the north some fear is felt that many of the vines may rot on account of the bad weather. Cold rains are preventing ripening and causing rot. In the parts where rot has not set in the grapes are ripening so slowly that e.g. in Osek the vintage is not expected till October.

Potatoes are in some parts already dug; in others digging is going on. The yield is good, satisfactory both in quantity and quality.

Sugar beet is now being dug and dispatched to the factories. The yield is good.

Field Work.—The chief field work going on is the preparation of the ground for the autumn sowing, and manuring. The harvesting of autumn rye, wheat, peas and turnips has begun locally.

Pests.—Of cryptogamous pests, maize blight and mildew on the vines have appeared in some places. Of the insect kinds the maize caterpillar and some smaller garden pests have done some local damage.

Cattle.—Condition good. The chief food is green fodder and pasture. Of infectious diseases, anthrax, swine fever, sheep pox, and fever and cholera among poultry have all broken out in places.

September 15-30.

General condition of crops still in growth is very good practically everywhere.

Atmospheric Changes.—Weather in the second half of September was constantly changeable. In the north rain fell frequently and the weather was cold. There was local frost and snow on the higher hills. The cold has badly affected the ripening of some crops. In the south the weather is warmer, and aiding ripening. The only inclemency otherwise was hail in the Vrbas and Nish districts.

Cereals.—Harvesting of cereals is almost complete everyhere. The only part where it still continues is the Vrbas district, where bad weather held up the ripening of corn for some time.

Maize.—The harvesting and preparation of maize are in full swing, but it is not yet being gathered in those parts where the cold has made it late in ripening. In those parts harvesting will begin later. Where the maize has been carried, its yield is very good.

Vines.—Where there has been cold weather the vintage is late, but where it has been warmed it has already begun, with satisfactory results. In Croatia, Slavonia and Bosnia many growers fear the effects of the cold, for the grapes are beginning to rot in considerable quantities.

Other Crops.—The harvesting and preparation of all fodder crops is coming to an end. Most of the sugar beet is now being dug and sent off to the factories. The yield is good. Hemp is being fibred, soaked, and prepared. The yield is good. Vegetable sowings are completed.

Field Work.—The chief work going on is ploughing, with manuring and preparation for the autumnal sowing.

UNITED
CIGARETTE MACHINERY
KNOWN AND USED THE WHOLE WORLD OVER.

Pests.—Of fungus pests the maize blight has appeared in some parts, and rot on the vines to a larger extent. Of insect pests there is the maize caterpillar and some smaller pests on other crops.

Stock.—Condition satisfactory. Of infectious diseases have been notified locally: anthrax, swine fever, sheep pox, and cholera among poultry. In the district of Podrinje there have occurred two or three cases of glanders among horses.

YUGOSLAV EXPORTS IN AUGUST.

Exports from Yugoslavia for the month of August amounted to 371,180 tons, valued at 70,506,980 gold dinars, as compared with 389,674 tons, valued at 55,935,070 gold dinars, in August, 1924, representing a diminuation of 4.74 per cent. in tonnage and an increase in value of 26 per cent. During the first eight months of 1925 exports amounted to 2,808,011 tons, valued at 501,594,906 gold dinars, as compared with 2,310,553 tons, valued at 389,138,658 gold dinars for the corresponding period in 1924, or an increase of 21.52 per cent. in tonnage and of 28.89 per cent. in value. The chief articles of export during August of this year were:—

Article	Unit	Amount	Million paper dinars

All others	,,	98 205	161 6
Total	Tons	371.180	765 0

The most important of these articles went to the following countries:—

Maize.—Down the Danube and via Braila, 119.0 mill. dinars; Austria, 20.1; Italy, 14.9.

Wood.—(a) *Building:* Italy, 73.5 million dinars; Greece, 4.8: Algiers, 3.8. (b) *Fuel:* Italy, 4.3 mill. dinars.

Corn.—(a) *Wheat:* Down Danube via Braila, 32.9; Greece, 10.1; Austria, 5.6. (b) *Other:* Greece, 3.2 mill. dinars; Austria, 2.6.

Eggs.—Switzerland, 26.8 mill. dinars; Germany, 16.1; Austria, 12.8.

Horned Cattle, live.—Austria, 31.8 mill, dinars; Italy, 17.3; Czecho-Slovakia, 5.8.

Meat.—(a) Fresh: Austria, 16.3 mill. dinars; Italy, 5.1. (b) Meat products: Austria, 1.2 mill. dinars; Italy, 0.6.

Opium.—Greece, 17.2 million dinars.

Raw Copper.—France, 16.0 mill. dinars.

Calcium Cyanimide.—Austria, 7.5 mill. dinars; Italy, 6.9.

Live Horses.—Italy, 8.5 mill. dinars; Austria, 2.1; Greece 1.9.

In August maize was again the chief article of export. Of the last crop, from November 1, 1924, to September 1, 1925, 96,448 trucks of maize were exported. valued at 2,039.6 mill. dinars. From January 1 this year to September 1 the maize exported totalled 81,782 trucks, worth 1,728.1 million dinars.

YUGOSLAV SHIPPING DEVELOPMENT.

The Jadranska Plovidba (Adriatic Maritime Navigation Company) is reported to have entered into negotiation with certain English shipbuilding yards for the purchase of two steamers of 4,500 tons each. It is expected that the steamers will arrive in Yugoslav waters some time in November, when they will be placed in the Mediterranean-Levant service.

THE GRAIN TRADE OF THE PERSIAN GULF.

We give below the text of a very interesting lecture on "The Grain Trade of the Persian Gulf," given by Mr. C. Wills, of the Mesopotamia-Persia Corporation, Limited., at the City of London College on October 22.

When I promised to speak on the grain trade of the Persian Gulf, I had in my mind that of Mesopotamia or, as it is now called, Iraq, and that any observations I had to make must necessarily be rather on the general capabilities of the country than its present actualities in grain growing. I, consequently, find it somewhat difficult to make the position, as I see it, clear, unless I visualise the past history of this very classic land and enter with considerable detail into that as well as into its present state. In my opinion we can only get some idea of its possibilities when we realise what its position was in this and other respects in ancient times. Grain growing will undoubtedly always be the most important product, but if we think of that and nothing else we are not really helping in bringing peace and prosperity to that land. Irrigation in the past was the foundation of its prosperity, and will be in the future, and, therefore, I consider this question requires serious consideration in dealing with the subject.

Grain which is now classed as Persian, can, from a trading point of view, be considered as from Mesopotamia and "Persian" barley is a misnomer. Only about one year in five are shipments of wheat and barley exported from Bushire and the Karun (a river running into the Shatt-el-Arab at Mohammerah). Crops from these parts are small, and are dependent entirely on good rains, and are only exportable where it is grown within a very short distance from these ports. There are no means of transport in Persia excepting by caravan, and last year, although there was a surplus of wheat at Shiraz, about 120 miles North of Bushire, it could not be exported owing to the heavy cost of transport.

I understand that the pre-War Karun and Bushire wheats were for strength and colour as fine as can be obtained from any part of the world. It is said, however, that the quality of Karun wheat has somewhat deteriorated since the War owing to the importation by the military authorities of seed from India and Iraq.

Grain Exports.

It can be estimated that the pre-War exportable surplus of grain from Iraq was about 125,000 tons per annum of which 100,000 tons was barley. In 1923 the quantity exported was roughly 250,000 tons, and can be taken as composed of:—barley about 125,000 tons, wheat 100,000 tons, and dari and millet 25,000 tons. Paddy is also grown in large quantities. This year's crops have been a failure, and large imports of wheat have been, and are still being, made from India.

The crops of Mesopotamia are extremely variable in quantity, and are dependent to a very great extent on the rainfall owing to the want of the irrigation schemes of ancient days. From the deliveries of the grain at home it is clearly shown that there is a great absence of organisation in seed distribution. The methods of farming and threshing are most primitive, and little or no attempt is made at putting the grain on sale in a marketable state. Parcels of barley arrive in Busreh from the districts with as much as 20 per cent. to 25 per cent. of dirt, which is not only expensive, but impossible to winnow out. Wheat has also been shipped with as much as 18 per cent. to 20 per cent. of barley. The Iraq Government is most anxious to inprove the quality of the grain, but it must be realised that the Government is handicapped, and is entirely dependent on a small number of British officials as experts—the Turks had none, and took no interest in agriculture, and left the farmers to their own primitive resources. During the War and the British Occupation, a great deal of spade work was done, but naturally this was only taken up by the British authorities as a side issue. When the Iraq Government came into being it took over the British technical staff, but owing to the necessity of economy has had to dispense with a large number of them, and is now only left with a handful of men to deal with an enormous problem, which is far greater than they can possibly control in all its details.

Last year a scheme was on foot to put the area of the Yusifa Canal under wheat cultivation of really good quality and to endeavour to arrange for the best grain in the country to be exported and the poorer quality to be used for local consumption, which at present is the reverse. Further, the Government has also been considering the question of taking action by legislation to stop the mixing of barley with wheat and quantities of dirt in consignments from up country.

Many years ago, similar troubles were the rule in Indian wheats, but owing to the energetic action of the Government these have been got over, and now very little difficulty is experienced in the way of admixture and the mixture of various classes of wheat. It is hoped that the Iraq Government will also find some satisfactory solution to this problem.

Owing to the threshing of barley and wheat on ground which has been irrigated, and which, when dry, forms a hard skin, lumps of hard mud are always to be found to a small percentage in most shipments, and it is impossible to eliminate these by winnowing.

Primitive Methods.

The Arab farmer still uses hand-made tools which are probably much the same as those used in the Babylonian days. They consist of a wooden plough with an iron point, a spade, a hoe, and a sickle. No deep ploughing is done—in fact, one can say, that the ground is merely scratched to the extent of two, and to the utmost three, inches. The ground is never manured, but is sometimes allowed to lie fallow for a season.

Threshing is also carried out in a primitive way by blindfolded donkeys and bullocks going round in a circle, treading out the seed from the grain and straw. The Government and British firms are trying to educate the Arabs to take up modern appliances, but little or no headway has been made, although various types of machinery have been demonstrated. In the district a breakdown of complicated machinery results in delays for the want of a mechanic or the replacement of spare parts.

Mosul is really the only part of the country which has taken up agricultural machinery, and that is due to the absence of irrigation canals in that part. There are, however, a very large number of oil engines and pumping sets which commenced to be introduced into the country about 20 years ago. These are taking the place of the old-fashioned lifting apparatus which one still sees, and is made of a pole tied across another with a lump of mud tied up in a basket acting as a weight at one end and a skin which receives the water at the other and a similar irrigating contrivance which is used where the water is very much below the river bank, when the skins are hauled up by a wheel which is worked by oxen or donkeys.

Locust troubles in the Mosul district are often a serious handicap to cultivators, and some years, such as last, the damage done to grain crops is considerable. The Agricultural Department is studying this question, and

has given the necessary instructions to farmers as to their destruction. From a report recently published it is stated that over 11,000 acres of breeding grounds have been located, and experimental work has elicitated the fact that each acre may be expected to contain at least half a ton of eggs.

Varying Qualities of Crops.

The variation in the qualities of the crops are most noticeable, firstly as the district in which they are grown, and also seasonally.

The wheat exported from Mesopotamia is generally very mixed in quality. The Department of Agriculture has found about 70 different kinds. While some of the flour millers at home are willing to purchase such adulterated wheat, many more have not the facilities for cleaning it. However, some of the wheat is as good as can be obtained in any part of the world. Its great dryness is much liked, for, as I understand, it is customary to mill wheat here containing up to 14 per cent. of moisture, whereas Mesopotamian wheat will usually have not more than 10 per cent., and water is cheap. A small percentage of barley in the wheat, say up to 4 per cent. to 5 per cent. is not considered extremely detrimental in the manufacture of flour since that quantity is manageable in the cleaning plant, but, as mentioned elsewhere, percentages of barley are considerably higher than this in almost all parcels.

The opinion of brokers is that if Mesopotamian wheat were of 100 per cent. purity it would appeal to a very much wider market. The present price is fixed by buyers to allow for the heavy cost of removing barley and dirt. Therefore if this was unnecessary the market price would be so much higher, and over and above this the brokers consider that a 4s. per qr. premium or about 12 per cent. according to present market prices would be obtainable, as it would meet with a much greater demand.

Growers should be taught that exporters only pay the price of barley for the quantity of such grain mixed with wheat, and that the premium which would be paid at home for pure wheats would go into their pockets, instead of as present, into those of the millers here.

I have little to say as regards barley. It is used here for feeding purposes entirely, and has the usual drawback of Persian Gulf grain, having too much admixture. Wild oats are also a very prevalent feature. The barley generally contains a great deal of dirt, but if only 4 per cent. or 5 per cent. this is immaterial. Generally speaking, however, this percentage is exceeded. A better class of barley comes down from Mosul. It is black and rather a heavy dry grain, but it usually contains small stones.

Dari is a spring crop, and is generally shipped during November-December. Millet is primarily a catch crop, and only comes down in small quantities in exceptional seasons, when it is planted to take the place of barley which has proved a failure. Paddy as a rice is of poor quality and brittle. Only a few mills entertain it as rice. Large shipments were made before the War, but in recent years owing to the high prices ruling for wheat the stocks available have been consumed locally.

To come to the various qualities of wheat, those principally known are:—Jassanieh, Busreh (mixed wheats from up-country), Garaff, Baghdad, Koolah, Mosul, and Nasarieh.

Mesopotamia to-day as a grain growing country is at present one of the smallest as compared with the other grain producing country of the world, but one knows that in Babylonian days it was the chief granary of the world and the country at that time was immensely rich. Early civilisation was centred there and more advanced in those parts than elsewhere.

Mesopotamia is bounded on the north by the Kurdistan mountains, which includes the Mosul area; on the south by the Persian Gulf; on the west by the Arabian and Syrian desert; and east by Persia. Its area is about 120,000 square miles, and its population just under three millions, of which Mohammedans number about 2½ millions.

The principal towns are Baghdad on the Tigris, 500 miles by river and 350 as the crow flies from Busreh; Busreh, the port of Mesopotamia on the Shatt-el-Arab, 80 miles from the Persian Gulf; Mosul, on the Tigris, 220 miles north of Baghdad; and other minor towns, viz., Kerballa, Nejef, etc.

I must now touch at some length on the historical side of this once classic country covered with a network Nineveh and later Ctesiphon, Busreh, Baghdad, and others to-day would be proud of and would find it difficult to improve on. These were the source of the country's great wealth and attracted its once large population.

Large and well known cities, Kish, Ur, Opis, Babylon, Ninevah and later Ctesiphon, Busreh, Baghdad, and others were surrounded by villages and the country fully cultivated by the waters of the Euphrates and Trigris. All these cities, including Baghdad and Busreh which have since been rebuilt have been entirely destroyed. Excavations of Nineveh, Ur, Kish and Babylon give one some idea of the enlightenment of those days, and also the extent of these once large cities. The remains of the Arch of Ctesiphon still stand to-day. It is an architectural wonder in itself, but there is no sign of the town of Ctesiphon, once the capital of the Sussanian Kings which was said to cover an enormous area of ground.

From the earliest days up to 538 B.C., the Elamites and the Semites alternatively conquered Mesopotamia, and discovered records show continued prograss in irrigation and canal making.

In B.C. 538 the Persians conquered Babylon and Cyrus was proclaimed King of Babylonia and dominated the world. Then came the conquest of Alexander the Great, followed by the Seleucids, under Greek influence—and after these the Parthians, conquered the whole of Mesopotamia and Persia. The Romans met the Parthians on the Euphrates in B.C. 54 and history relates that a continual warfare was carried on by them without any result for about 280 years. The expansive and waterless desert between Mesopotamia and Syria was undoubtedly the difficulty. In the end, however, the Romans captured the whole of Northern Mesopotamia when Seleucia and Ctesiphon were completely destroyed in A.D. 254.

Since A.D. 254 Persian, Roman, and Bedouin raids and invasions were carried on and continued until the spread of Mohammedanism which reached Mesopotamia by its conquest by Khalid in about A.D. 630. It is recorded that up to this date although the country had been subject to lengthy invasions and revolutions, the canals and irrigation schemes in Mesopotamia were not seriously damaged, after which, Mesopotamia was a scene of war between Moslems and Persians and during these times the canals and irrigation schemes of the country were damaged to a small extent due to the tactics of the Moslem conquerors. Dissensions amongst the rulers of the Moslems stirred up rebellions and civil wars in Mesopotamia and elsewhere. This brings us up to A.D. 749, the end of the first Moslem Empire.

Shipping Intelligence.

NEW GREEK STEAMER.

The launch took place recently at the Wallsend shipyard of Swan, Hunter, and Wigham Richardson, Ltd., of the passenger and cargo steamer, Patris II., which the firm has built for the National Steam Navigation Company of Greece. The Patris II., whose dimensions are 335 ft. in length between perpendiculars, 47 ft. 6 in. beam, and depth moulded of 26 ft. 3 in. to upper deck, will provide accommodation for 138 first-class passengers, and about 176 third-class passengers.

CORINTH CANAL CONDITION.

The Corinth Canal has now been cleared to the full depth of eight metres, and has been declared open for navigation at all hours, subject to the Corinth Canal Company's rules. The tariff of dues issued on April 1, 1923, is still in force.

BULGARIA AND DANUBE NAVIGATION.

The conference which has been considering the question of the establishment of a Bulgarian steamship company for Danube navigation has appointed a special commission to settle the details of the creation of the company, to determine the amount of capital that will be required, and what steamers will have to be purchased.

SAFETY OF THE VOGSLAV.

The Lutine Bell was rung at Lloyds on Saturday for the announcement that the Vogslav, a Yugoslav steamer, had arrived safely in Tor Bay. The Vogslav had been reported to be in distress off Land's End, and subsequently news was forthcoming that a vessel which was accompanying her to Falmouth had lost sight of her in a torrential downpour, and had been unable to find any trace of the steamer after a search lasting several hours. As much as 90 per cent. was quoted for the re-insurance of this vessel which of course indicated that there could be small prospect of her having survived the storm.

The steamer Hound has been sold by the Burns, Laird Line to a Greek shipping company.

An order has been placed by Cammell, Laird and Co. with Lightalloys, Ltd., of London, for 2,500 railway-carriage doors for service on the roling-stock used in connection with the electrified portion of the Bombay Baroda and Central India Railway.

(The last steamer of the season for Sulina, Galatz, and Braila); m.v. Sycamore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, November 21).

P. and O. Line.—S.s. China for Bombay (London, November 13); s.s. Nellore for Colombo, Madras, and Calcutta (London, November 14).

COMPANY NOTES AND REPORTS.

BENGAL-NAGPUR RAILWAY.

The report of the Bengal-Nagpur Railway for the year ended March 31 states that the gross earnings were Rs.8,26,70,742, while the working expenses were Rs.5,32,34,801. There was an increase in the gross earnings of Rs.47,69,845, or 6.12 per cent., while there was an increase in the working expenses of Rs.22,26,696 lakhs, or 4.33 per cent., and the ratio of expenses to gross earnings has fallen from 65.48 to 64.35 per cent. The increase in expenses is due partly to larger operating expenses to work the increased traffic and partly to heavier renewals of permanent way and larger outlay on ordinary repairs and maintenance of tracks. The results of working for the year are: Net earnings, Rs.2,94,35,941; add outstandings of the previous year realised, Rs.26,537—Rs.2,94,62,478; deduct: interest on Secretary of State's capital, Rs.1,66,93,409; interest on share capital and debentures, Rs.51,25,932—Rs.2,18,19,341—Rs.76,43,137; less adjustments, Rs.4,88,533; surplus profits, Rs.71,54,604. The company's share of the surplus profits of the year amounted to Rs.5,23,577 after payment of Indian income-tax, to which must be added a sum of Rs.53,647 on acount of increased surplus profits for the two preceding years, arising out of the refund by Government of Customs duties paid, making a total of Rs.5,77,224. This sum, when remitted to this country, produced £43,215 2s. 9d. The shareholders have received as guaranteed interest for the first half of the year under report £1 15s. and an interim dividend of 15s. per cent., less tax. In addition to the second half of the guaranteed interest at £1 15s., less income-tax at 4s. in the £, the directors recommend an additional payment of a further dividend of 15s. per cent., less income-tax at 2s. 1½d. in the £. This will necessitate the withdrawal of about £1,000 from the reserve. With this payment the whole return for the year on each £100 stock will be 5 per cent., less income-tax.

Sir Atul Chatterjee, High Commissioner for India, delivered an address on "The Working Classes of India" at the Working Men's College, Camden Town, last Saturday evening.

M. Lucas Roufos has been appointed to the Ministry of Education in Greece. He will retain the portfolio of of Education for 15 days, after which he will take over the Ministry of the Interior.

Motors and Motoring.

By G. B. B.

The Outlook.

There is more than an indication of a revival in trade, and, as I said last week, the British light car has now come completely into its own. The home market is good, decidedly good, and the huge market overseas, which British manufacturers have hardly tapped as yet, is daily becoming more and more insistent in its demand. Especially is this true of the Near East, Middle East, and India, where the British light car has only to be known to be bought eagerly. The trouble is the old trouble; a troubie one hardly likes to mention again, so frequently has one mentioned it before. It is this, in a nutshell. The average man in the Near East and India does not know anything, comparatively speaking, about the British light car. The reason he knows so little is because the manufacturer has never troubled to tell him about it. It is the old story; when our home trade is good we never bother about the overseas buyer: we can do without him! As soon as our home trade is bad, we say we cannot afford to tell the overseas buyer about our goods. That is one of the reasons—probably the only reason—why Buicks, Chevrolets, Maxwells, Oaklands, Studebakers, and other cars hailing from the same quarter of the globe are to be seen in the streets of every British Dominion.

The Medium Power Car.

I understand that a leading authority in the motor trading world has expressed the view that a very large number of motorists to-day have "graduated"—a terrible word—from the small car class to the cars of medium horse power, and he does not think that they are likely to return. Well, why should they? The more who "graduate," the better for our makers of cars of about 20 h.p. Those cars are thoroughly well made in every way, and they speak as highly as do the smaller cars of the excellence of modern British motor design. But the light car is still the car *par excellence* for the average man, and the busy state of our motoring industry to-day is largely due to the praiseworthy efforts of the designers and makers of the small power unit, coupled, of course, with the high-class work of the British body builder. The same authority whom I quoted above has had something to say about the question of a revision of motor car taxation. In his opinion this question is soon likely to come into prominence. It is readily admitted, as he says, that there are inequalities in the present system and further inquiry has been promised. How taxation will be revised has not yet been made clear, but from statements made in the House of Commons a reversion to the petrol tax seems hardly likely. The Ministry concerned has said that it is intended to go into the subject of the reorganisation of the taxation of motor cars from top to bottom, and of course this conveys the idea that some change will shortly be made. What this change will be cannot be surmised. One only hopes that there will be no alteration in the present method of calculating engine horse power for taxation purposes.

The A.C. Again.

I have received the following letter from Mr. S. F. Edge:—"On Monday, October 12, Mr. J. A. Joyce, driving a 4-cylinder 12 h.p. A.C. car, broke the Brooklands hill climbing record. His time was 7.748 seconds, the speed being 30.998 m.p.h. Truly a remarkable performance considering that the record for this hill is open to cars of any size, but the 12 h.p. A.C. racer has beaten the world's cars on this test." It is a wonderful achievement; but then one expects great things, by this time, from this famous car whenever it appears on the track.

A £5,000 Motor Car.

One of the most luxurious cars ever constructed for an Eastern ruler was exhibited at Olympia during the last few days of the Motor Exhibition, viz., a 40-50 h.p. Rolls-Royce "New Phantom" chassis with a specially designed body by Messrs. Windovers, Ltd., of 104, New Bond Street, W., and supplied to the order of the Raja Kumer of Vizianagram.

The body is of pure aluminium with gold and silver fittings, three windscreens, one front, one centre and one rear, also two concealed hoods. In addition to the usual dashboard fittings, the car is provided with a gold cigar box, walnut and gold companions, a barometer, a thermometer, a gradient meter, cigar lighters, an ice chest, a fresh water tank, a canteen for four people, three decanters, a champagne holder, a syphon holder, and numerous inlaid cabinets, polished aluminium discs, also a silver-plated luggage carrier, and the car forms a striking example of British craftsmanship. I am informed that owing to the very large clientele Messrs. Windovers have in India, their experience in catering for the requirements for the Indian market is unique.

Commercial Motors.

The seventh Exhibition of Commercial and Public Services Vehicles at Olympia has been excellently organised this year, and as it remains open until November 7, all my British readers will have an opportunity of seeing for themselves the excellent productions turned out by this busy branch of our motor trade. The commercial transport vehicle will be largely in evidence, every variety of van and lorry being represented, and a section which is of great and growing importance and one which will attract more than usual attention will be that of the municipal vehicles. Wagons for refuse collection, street watering vehicles, road rollers, ambulances, tipping wagons, and fire-engines will be shown in great variety, and in the public service vehicle section will be shown some of the very latest and most luxurious coaches, omnibuses, and "charabancs," fitted with special springing and exceptional braking; vehicles which are noiseless in running, weatherproof, well-lighted, and the last word in automobile luxury. During the continuance of the Show I shall be paying a special visit to every stand for the purpose of collecting information for the benefit of our overseas readers, but without going now into any details of exhibits and without pretending to mention more than a few of the chief exhibitors, I should say that the stands of the following firms will amply repay inspection, viz.:—

INDIAN AFRICAN SERVICE.

Regular Passenger and Freight Service from

RANGOON, CALCUTTA, and COLOMBO

To **BEIRA, DELAGOA BAY, DURBAN, EAST LONDON, PORT ELIZABETH, MOSSEL BAY, and CAPE TOWN.**

Excellent Passenger Accommodation.

Petrol and Petrol Electric Vehicles: Albion Motor Co., Ltd.; Associated Equipment Co., Ltd.; Austin Motor Co., Ltd., where the wonderful Austin "Seven" should be closely inspected; Bristol Tramways and Carriage Co., Ltd.; H. G. Burford and Co., Ltd.; Crossley Motors, Ltd.; Daimler Co., Ltd.; Dennis Bros., Ltd.; Fiat (England), Ltd.; Guy Motors, Ltd.; Halley's Industrial Motors, Ltd.; Maudsley Motor Co., Ltd.; Scammell Lorries, Ltd.; Star Engineering Co., Ltd.; Tilling-Stevens Motors, Ltd.; Vulcan Motor and Engineering Co. (1906), Ltd.; and Willy's Overland Crossley, Ltd.

Electric Vehicles: Clayton Waggons, Ltd.; Richard Garrett and Sons, Ltd.; Ransome, Sims and Jefferies, Ltd.

Steam Wagons: Clayton Waggons, Ltd.; Fodens, Ltd.; Richard Garrett and Sons, Ltd.; Mann's Patent Steam Cart and Wagon Co., Ltd.; Sentinel Wagon Works (1920), Ltd.; W. Tasker and Sons, Ltd.; and the Yorkshire Patent Steam Wagon Co., Ltd.

In addition to these there will be a number of interesting exhibits of body work for all purposes.

SUDAN TRADE PROGRESS.

The figures are now available for the external trade of the Sudan for the first seven months of this year. For that period there was an increase in the total trade as compared with the corresponding period of 1924 of £E449,619, the figures being £E6,349,819 as against £E5,900,200.

Government imports amounted in value to £E1,002,442, a decrease of £E174,516, but public imports at £E2,068,892 have increased by £E139,459. The total for the import trade shows a decrease of £E35,057, which is to be accounted for by the smaller imports during the period on account of public works.

The export trade has continued to be brisk throughout the year. For the seven months exports totalled £E3,028,343, at which they show the substantial increase of £E381,683. Re-exports rose from £E116,397 to £E173,127, while transit trade amounted to £E77,015 as compared with £E30,752.

In public imports the most important item has continued to be cotton piece-goods, the imports of which for the seven months totalled £E738,320 as compared with £E558,658. Considerable increases are also shown in imports of flour, tea, and petroleum. On the other hand, decreases were recorded in the imports of tobacco and cigarettes, machinery, iron and steel ware, sacks, coffee, and timber. Imports of machinery, it is to be noted, fell from £E115,363 to £E81,538. With the notable exceptions of gun and cotton-seed there was an increase in the value of the principal exports. Ginned cotton totalled £E1,519,914 as compared with £E1,352,139, though the quantity exported fell from 170,045 kantars to 153,693 kantars. Exports of dura have been more than double the quantity exported in 1924 at 22,428 tons as against 10,544 tons, while the value has increased from £E68,081 to £E188,279. Other notable increases are shown in the case of sesame and ground nuts. The exports of gum declined to 12,830 tons as compared with 14,449 tons, and the value was £E546,162 as compared with £E595,218.

The Austin Motor Company has supplied to H.M. King Faisal of Iraq an Austin Seven and an Austin Twelve, "Clifton" model, for his personal use in Baghdad.

SUDAN COTTON REPORT.

The report of the Central Economic Board of the Sudan Government for September gives the following particulars:—

Bahr El Ghazal Province.—90,000 rottles of cotton seed have been issued in the Eastern District. The cotton round Wau shows an amazingly strong and rapid growth.

Kassala District.—Southern District.—Up to date 1,080 sacks of cotton seed were issued at Gedaref, 648 at Mafaza and 84 at Gallabat. Prospects depend very much on rainfall in the first three weeks of September, especially in the areas round Gedaref Town, but a production of 28,571 kantars may be anticipated unless there is a total failure of rain. Gash Delta, August.—The Gash continues to flow, with occasional flushes, but is below normal, and it is improbable that more than 10,000 feddans of cotton will be sown, with another 3,000 feddans incompletely irrigated but suitable for dura.

White Nile Province.—In the Southern District 2,000 feddans of American cotton have been sown and the crop is showing well. In the rest of the Province over 2,000 feddans have been sown, but shortage of rainfall is affecting the crop adversely.

Upper Nile Province.—Cotton in the Northern District (Dinka) is looking well. At Kodok it is in good condition.

Berber Province.—Pumping Stations Reports.—Gendettu: The cotton crop is healthy and is all in flower. The majority of it is carrying large bolls. Picking should begin about the end of September. Kitiab: Cotton planting, 1,000 feddans, was completed on August 6, and the crop promises well throughout the station. The absence of rain during the last 20 days of August has greatly assisted the cleaning of cotton. Bouga: The cotton crop promises well.

Dongola Province.—Pumping Stations Reports.—Ghaba: Cotton, approximately 480 feddans, is looking well. Gureir: Cotton, estimated at 400 feddans, has germinated well. Nuri: Cotton is coming on well. The area is approximately 700 feddans.

The Bulgarian Cabinet has decided to reduce the export dues on cereals by 50 per cent.

An Albanian delegation will shortly visit Belgrade to negotiate a treaty of commerce and "other conventions interesting both countries."

The Prime Minister has accepted the resignation of M. Rendis, the Minister of Foreign Affairs. Admiral Hadjikyriakos, the Minister of Marine, will take charge of the Ministry of Foreign Affairs ad interim.

It is announced that the Rockefeller Foundation intends making Budapest the centre for its work in Eastern Europe. From Budapest operations will be directed in Austria, Yugoslavia, Czecho-Slovakia, and Roumania.

The Air Ministry regrets to announce that as the result of an accident at Abu-Sueir, Egypt, to a D.H. 9a of No. 4 Flying Training School, Abu-Sueir, on October 21, Pilot Officer Geoffrey Walter Cripps, the pilot and sole occupant of the aircraft was killed.

Sir Patrick Dalreagle Agnew, K.B.E., of Northmoor Road, Oxford, late Indian Civil Service, and managing director and vice-chairman of the Central Prisoners of War Committee, 1916-1919, who died on September 9, aged 57, left estate of the value of £8,175.

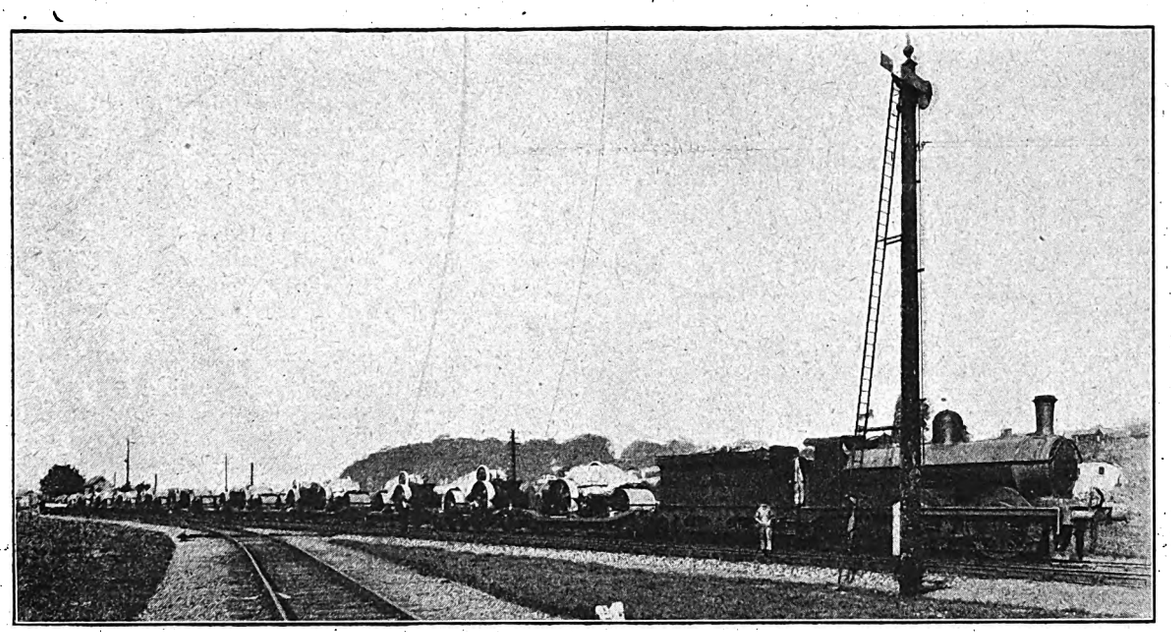
(By Our Engineering Representative.)

Steam Rollers for Greece.

Reference has already been made in these columns to the very important contract obtained by Messrs. Marshall, Sons and Co., of Gainsborough, for the supply of 100 steam road rollers to the Greek Government. We give on this page a photograph of the first consignment of these steam rollers leaving Gainsborough for shipment to Greece. Details of the engines, which are of the "Marshall" latest class "S" series, have already been given, but it may be of interest to recapitulate their main features. The engines have compound cylinders, with piston valves and radial valve gear, while the boilers incorporate the "Marshall" patent anti-incrustation firebox with cambered crown-plate, and every road wheel will have its hub and spokes combined in one steel casting.



A train-load of 20 "Marshall" Steam Road Rollers leaving Gainsborough for shipment to Greece.

Each engine crank-shaft will have ring-oiler bearings, while an "Allen" three-tine scarifier will be attached to each engine. Messrs. Marshall, Sons and Co. specialise in the construction of steam road rollers, and their latest catalogue of this branch of their production shows a large variety of their Class "S" model. In producing this engine, which represents an entirely remodelled design, the firm has aimed at an engine which is not only highly economical in the consumption of fuel and water, but is also of great strength and durability. A feature of the engine of special importance to overseas buyers, is that every part is made to strict standard gauges, and thus can be readily replaced.

The "Gloster-Napier III."

The "Gloster-Napier III.," which Captain Hubert Broad piloted into second place in the Schneider Cup race this week, is manufactured, of course, by the famous aircraft designing and constructing firm, the Gloucestershire Aircraft Company, Ltd. It is a racing seaplane of the biplane type, and it is stated that it is probably the smallest machine for its horse-power yet produced on floats. The seaplane has a Napier "Lion" engine with a direct drive action. Its body is oval-shaped, the type of construction known as monocoque, with wooden longitudinal members and an outer covering of three-ply wood. Everything possible has been done to make the resistance of the body as small as possible, and the space for the pilot is only just sufficient to enable him to be seated with comfort. The wings are of spruce spars and ribs, and the fabric has been specially fixed to stand the suction resulting from a high speed. There are only two interplane struts. The propeller is made of solid duralumin, while the radiators, of a special type, are built into the leading edge of the wings near the body so as to give the least possible resistance. The floats are constructed of duralumin, and are attached to the body by special steel streamline struts and wires. The designer of the "Gloster-Napier III." is Mr. H. P. Folland, R.Ae.S., M.B.E., M.I.Ae.E. He joined the company in 1921, and designed the famous "Bamel," and has since produced the "Gloster I." the "Gloster II.," and the "Gloster Grebe." Recently he has designed two high-speed scouts, the "Gamecock" and the "Gorcock."

Varying Tenders.

The tenders of the various firms in connection with the contract for deepening and improving the port of Alexandria have a special interest on account of the great differences between the estimates. One is for £E1,500,000, another is for £E1,900,00, while a third is for £E3,141,000. It illustrates, I think, very plainly how far we are still removed from normal conditions.

A factory for the manufacture of plywood is being constructed at Hedera, in Palestine.

Contracts have been obtained by the Cleveland Bridge and Engineering Company, Darlington, for the manufacture and erection of mooring masts at the aerodrome at Karachi, and for steelwork at the aerodrome at Al Maza, Egypt.

Cotton and Cotton Goods.

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Ottoman Bank for the week ended October 24 states:—

There has been a noticeable decrease in activity this week, for which it is difficult to account except on the ground that still lower prices are anticipated.

Yarn.—The turnover has not been up to expectations, and such business as has been secured has been mostly for small lines. Medium counts in particular have been neglected, but a fair business has transpired in low qualities and in the finer counts made from Egyptian cotton. In the latter section the raw cotton position is still a very detrimental factor.

Cloth.—The larger Indian demand recently noted has not been maintained, although there is still a good inquiry for "dhooties" generally for early delivery. The position in China has changed for the worse and comparatively little business has transpired for that market. Trade with Egypt has improved and quite a fair business still comes forward from the Continent.

Raw Cotton.—There have been no wide fluctuations but prices have shown a falling tendency throughout the week. Reports from America were not good during the early days, but improved later.

The crop continues to come forward rapidly and exports from the United States so far this season amount to 1,951,000 bales, as compared with 1,577,000 bales last year.

Conditions in Egypt are said to remain very good and spinners are buying sparingly in the expectation of lower prices in the near future. Closing quotations yesterday were as follows:—American Middling, 11.27; Egyptian Fully Good Fair Sakellaridis, 23.35.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company in their report for the week ended October 15 state:—

Since our last report, the future market has been very active but prices have been rather weaker; the net changes on the week are as follows:—Sakellaridis, 2.62 dollars down for November, 2.36 dollars down for January, 2.22 dollars down for March. Ashmouni, 1.15 dollars down for October, 1.32 dollars down for December, 1.37 dollars down for February.

The drop in prices may be attributed to the heavy hedges put out by the interior merchants following on the break of New York when the last American Bureau Report was published estimating the crop at 14,759,000 bales. This figure was altogether unexpected and reversed the calculations of many people as regards the probable course of cotton prices this year. The demand from abroad has continued moderate; however, we think that the volume of business put through has been slightly larger than last week. From the inquiries received, it looks as if, should the market remain steady at about the present level of prices, a certain amount of business may result. Rumours have been circulated from time to time that the Government was about to intervene in the Sakel market, but so far there has been no official action on the matter. Although this intervention becomes more probable now that prices have broken the 40 dollars level, nevertheless we do not expect that it will have more than a temporary steadying influence on prices. The necessary support must come from the trade, and at present this is adopting rather a bearish attitude; the production will be larger than last year, and consumption probably smaller owing to the comparatively lower prices of the staples which are used as substitutes and which are extraordinarily plentiful this year. With regard to Ashmouni, there too the position is somewhat bearish, owing to the record production of Upper Egypt and that of the American staple crop. Our opinion is that Ashmouni will for the time being more or less follow the fluctuations of the New York market, but later on in the season the weight of the arrivals, coupled with the success of this year's American staples of competing qualities, may cause a narrowing of the present difference.

Spot: Minet el Bassal has only been open five days this week but a fairly good business has been done and sales amount to about 24,300 bales, of which we estimate 9,900 Sakel, 10,800 Uppers, 2,500 Zagora, 900 Pilion, 100 Brown, and 100 White.

Sakellaridis: A good business has been done, Good grades have absorbed most of the business and a very fair Continental inquiry for Extra qualities has appeared, but there has only been a fair demand for the medium grades, which are not as yet offering very freely. Low grades are not in much favour. Spot differences are distinctly easier for Fully Good Fair Ashmouni and the grades above, but for the grades below are unchanged.

Ashmouni and Zagora: Have been in good demand for all grades, the medium qualities especially being sought after. Spot differences generally are steady and unchanged.

Pilion: Has been in far request for medium and good qualities. Spot differences are distinctly cheaper for Good and better but firm for lower qualities.

Brown: A small business has been done. Spot differences are generally easier.

White: A small business has been done in the better grades. Spot differences have eased a lot except for Good Fair, which is in very limited supply.

Crop, 1925: Regarding the new crop, we have very little to say; the yield of the second pickings, however, has been quite satisfactory owing to the warm weather.

An order has been placed by Cammell, Laird, and Co., with Lightalloys, Ltd., of London, for 2,500 railway-carriage doors for service on the rolling-stock used in connection with the electrified portion of the Bombay Baroda and Central India Railway.

Lieutenant-General Sir Charles Richardson, General Officer Commanding the Poona District, is returning to India in the Kaisar-i-Hind, which left Marseilles last Friday for Bombay. Other passengers by the boat include Sir Lancelot Sanderson, and Major-General Sir Walter and Lady Leslie.

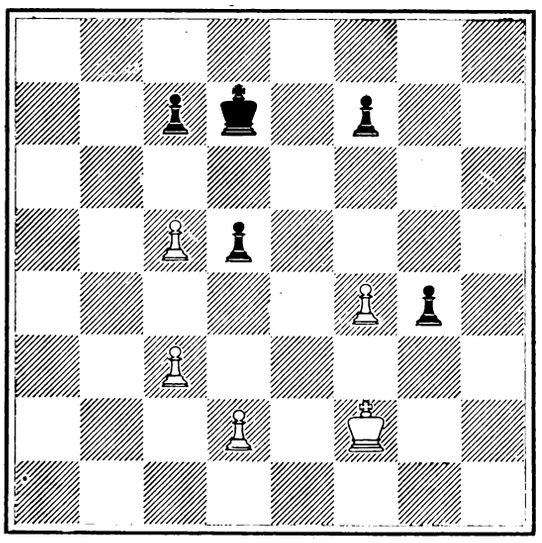
BY "CARO-KANN."



PROBLEM No. 19.

Black to play. What result?

Solution to Problem No. 18:—1, P—B5, K—K2; 2, P—Q4, P—Q3; 3, P—Kt4, K—Q2; 4, P—Kt5, K—B2: 5, K—K3, P—Kt3; 6, PxQP or P—B6, and draws. If Black plays 3 . . . P—Kt4 he loses.

The tournament season is at last upon us, and this week the first rounds of all the competitions at the City of London Chess Club are being played. Sir G. A. Thomas, Bart., is not playing in the championship this year, as he is captaining the badminton team which is going to Canada. In his absence the competition looks to be very open, and a keen struggle may be anticipated. I shall hope to give a game from the first round next week.

November 5 will see the commencement of the Moscow-International Tournament, in which there will be 22 players, including J. R. Capablanca, Dr. Emanuel Lasker, Dr. M. Vidmar, Dr. S. Tartakower, R. Reti, F. J. Marshall, A. Rubinstein, R. Spielmann, F. Samisch, E. Grunfeld, E. D. Bogoljubow, and J. L. Rabinowitch. It will be interesting to see whether Dr. Lasker will be able to repeat his recent triumph in New York. If he does no doubt the question of a return match with Senor Capablanca for the championship will come to the fore.

ROYAL SOCIETY OF ARTS.

The 172nd session of the Royal Society of Arts will be opened on November 4, at 8.30 p.m., when the inaugural address will be delivered by Sir Thomas H. Holland, K.C.S.I., K.C.I.E., F.R.S., Chairman of the Council; the subject being "The Organisation of Scientific Research throughout the Empire" The following week Sir Cecil Harcourt-Smith, C.V.O., will deliver the Trueman Wood Lecture on "The Modern Note in Industrial Art," the Earl of Crawford and Balcarres presiding. Other meetings before Christmas include "The Furniture of Hampton Court," by Mr. I. C. Goodison, "Colour Printing," by Mr. David Greenhill, "The Future of the Motor Car," by Sir Alan Burgoyne, M.P., "Recent Progress in Indian Forestry," by Professor E. P. Stebbing, and "The Imperial College of Tropical Agriculture," by Dr. H. Martin Leake, Mr. L. S. Amery, M.P., presiding. A course of three lectures under the Cantor Trust will be delivered by Dr. R. Lessing on "Coal Ash and Clean Coal."

At meetings after Christmas the following papers will be read:—"Investigations in Agricultural Science at Rothamsted," by Sir John Russell, F.R.S.; "Religions and Races in the Punjab," by Sir Michael O'Dwyer, G.C.I.E., K.C.S.I., (Sir George Birdwood Memorial Lecture); "The Work of the Imperial Institute," by Sir Richard Redmayne, K.C.B.,; "Women and Children in Indian Industries," by Lady Chatterjee; "Some General Problems of Fruit Preservation," by Professor J. McLean Thompson; "The Propagation of Electric Waves," by Mr. J. E. Taylor; "Problems in Paint and Varnish Technology," by Dr. H. Houlston Morgan; "Domestic Heating," by Dr. Mary Fishenden; "Modern Views of Vitamins," by Professor J. C. Drummond; "Horse Traction," by Mr. James Paterson; "Indian Maps and Surveys," by Colonel W. M. Coldstream, C.I.E.; and "The New Delhi," by Mr. Herbert Baker, A.R.A., F.R.I.B.A.

Courses of lectures will also be delivered by Mr. H. P. Shapland, A.R.I.B.A., on "Ornament in Furniture"; by Dr. G. W. C. Kaye, on "The Production and Measurement of High Vacua"; by Mr. W. F. Higgins on "Thermometry"; and by Mr. C. R. Peers, C.B.E., Director of the Society of Antiquaries, on "Ornament in Britain."

NEWS IN BRIEF.

It is announced from Tirana that Hussein Bey Vrioni has been appointed Albanian Foreign Minister.

King Faisal of Iraq, who had been staying at Nice for a fortnight, left last Sunday for Paris.

The Meshed Correspondent of the *Pioneer* says rumours are current that Persian forces have begun operations, intended to be decisive, against the Turkomans.

A decree has been issued, fixing March 7, 1926, as the date of the elections to the Greek Legislative Assembly, and the date of the meeting of Parliament as March 24.

It is now learned authoritatively that in the great storm in the Persian Gulf at the beginning of October, 1,000 lives and 40 boats were lost. It was the worst storm in the Persian Gulf in living memory.

The Commission for the reform of the calendar in Turkey has decided in favour of the adoption of the Gregorian Calendar, and a Bill for the adoption of the Christian Era will shortly be laid before the Grand National Assembly.

The Skupshtina re-assembled at Belgrade on October 20, when M. Marko Trifkovitch and M. Nicholas Subotitch were re-elected President and Vice-President respectively. M. Stanko Chibenik, a supporter of the Raditch Party, was also elected a Vice-President.

According to a Reuter message from Paris, newspapers there are publishing telegrams from Beyrout reporting that sums of money have been seized which had been sent out by Communist organisations to help the Druses against the French.

According to a Reuter telegram from Tirana, the President of the Albanian Republic has granted a general amnesty to all persons convicted of offences before and after the Revolution. It is added that all Albanian refugees abroad are now free to return to Albania.

The sentence of eight years' imprisonment recently passed on Mencia Carniciu, a Macedonian woman, for the murder of the Bulgarian bandit-leader, Todor Panitza, was cancelled last Saturday by the Austrian Supreme Court in view of the woman's physical condition, and the prisoner was immediately deported to Bulgaria by way of Hungary.

Dr. Gwynne, Bishop in Egypt and the Sudan, will remain in Cairo until December, when he will, as usual, proceed to Khartoum for Christmas. During the next few months the Bishop will attend the annual conference of the Fellowship of Unity in Cairo, the Anglican Church Council for Egypt, and the annual clergy conferences, held in November at Bishop's House, Cairo. He will return from Khartoum in February or March, 1926.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Græco-Bulgarian Incident.

Peace now reigns on the Greek-Bulgarian frontier. Under the auspices of Allied Military Attachés the injunction of the Council of the League of Nations that the two parties must withdraw to their own territory before an inquiry could be held into the incident has been carried out, and the frontier forces now face one another as before October 19. The Greek troops evacuated Bulgarian territory well within the time set for this operation, in spite of an official *communiqué* from Athens that the withdrawal had been delayed by a Bulgarian attack on the extreme right of the Greek Sixth Division at guardhouse 73 on the night of October 27. If it be true, as reported, that the Greek representative with the Allied Military Attachés subsequently admitted that this alleged attack did not take place, a further illustration is provided of the difficulty under which the Greek Government has laboured all along of securing reliable information from the frontier. As soon as the Council of the League of Nations had been notified that its orders had been obeyed, it adjourned to await the report of the Commission appointed to investigate the frontier incident on the spot. The President of the Commission is Sir Horace Rumbold, who signed the Treaty of Lausanne and was at one time High Commissioner in Constantinople; its other members will be a French and an Italian military attaché, and a Swedish and a Dutch civilian. This Commission is due to meet at Geneva on November 6 and will proceed at once to Demirhissar; its inquiry is expected to be finished in time to enable the Council of the League of Nations to meet again early in December. In the meantime a Bulgarian Commission has examined the damage done by the Greek occupation. It reports that little damage has been done to buildings, that all cattle and horses were taken and poultry killed, that all household furniture and domestic belongings were removed, and that the whole of the year's rich harvest of tobacco, rice and wheat was either taken away or scattered. In five villages, it is added, there were several instances of "atrocities." The question of the effect of the occupation will, presumably occupy the attention of the international Commission.

The League and the Dispute.

General satisfaction has rightly been expressed with the prompt action of the Council of the League and with the efficacy of its measures. Report has it that the Council took note of its powers under Article 16 of the Covenant, which binds all Members of the League to joint action of a drastic nature in the event of a resort to war on the part of any State, member of the League, in disregard of the undertaking to submit first to arbitration or to an inquiry by the Council every dispute likely to lead to a rupture. The Greek Government in the present instance claimed to establish a distinction between the invasion of a country and war; but the only consideration that weighed with the Council was the readiness with which Greece agreed to withdraw her troops and to leave her case in the Council's hands. This correct attitude, it is to be hoped, implies that, after the first military excitement which led to the Greek advance, wiser counsels have prevailed in Athens.

Prevention Better than Cure.

The most significant part of the Council's proceedings in connexion with the Graeco-Bulgarian dispute was the remark let fall by Mr. Austen Chamberlain at the penultimate session that the Council had a still more important duty, and that was to discover some means of preventing similar incidents from recurring. It is clear to anyone with knowledge of Balkan conditions that it is putting a premium on incidents to have all along the frontier small military posts on each side confronting one another, within rifle-shot and often earshot. Such a state of affairs ought to have been avoided by the good sense of the countries concerned; but now that attention has been

Digitized by Google

called to it by the anomaly of the Greek claim that an invasion of Bulgaria for ten miles was necessary, in order to dislodge a handful of Bulgarians occupying a Greek post less than fifty yards from the frontier, there will be no excuse for a perpetuation of the foolish custom. Difficulties will, no doubt, be encountered in finding a solution of the problem. If a neutral and demilitarised zone be established, its convenience as a nursery for *komitajis* is obvious. On the other hand the "will to peace" has only to be carried a few steps farther to eliminate *komitajis*, who in this part of the world are mainly patriotic Macedonians fighting for their independence as Serbians, Greeks and Bulgarians have fought during the last century. The pacification of South Serbia, that part of Macedonia which has been incorporated in Yugoslavia, is now engaging the attention of the Belgrade Government, and may shortly become the special task of M. Stefan Raditch. Nothing would suit Bulgaria better than to be rid of the danger that continually threatens her of complications with her neighbours as a result of the presence of implacable Macedonians within her borders. If Greece in consequence of the mishandling of a frontier incident should find herself called upon to pay a substantial indemnity, yet a third country would have a strong inducement to listen to proposals for making Macedonia if not an abode of peace, at least no longer a cockpit for the neighbouring States. An autonomous Macedonia within the orbit of Yugoslavia or a Slav federation would probably find her own internal troubles come fast and thick, but they would have an educative value; for Yugoslavia, Greece, and Bulgaria nothing but benefit would accrue from this solution.

The Syrian Revolt.

The recall of General Sarrail, High Commissioner in Syria, became inevitable after the bombardment of Damascus. His contempt for French public opinion, and indeed for the French Government, as shown by the studied brevity of his communications, was a matter that concerned the French alone; but his handling of the mandated territory of Syria, culminating in the bombardment of Damascus, brings France, whether she will or no, before the bar of the world's opinion, and her offence was aggravated every moment that she allowed General Sarrail to remain at his post. Whether the responsibility for what has happened is his or whether it attaches to the system that he was appointed to carry out is for France to determine. The world at large has no interest in General Sarrail personally, and regards him merely as the official representative of France in the execution of the French Mandate in Syria. The past week has produced the inevitable crop of sensational reports regarding the situation in the country, but it would be a mistake to regard them as being within fifty per cent. of the truth. The recall of General Gamelin from his expedition against the Jebel Druse for the protection of Damascus is evidence of the seriousness of the French position, and it remains to be seen what effect this withdrawal of pressure from the Druses will have in the insurrection as a whole.

'Tekel."

The inglorious reign of Shah Sultan Ahmed Mirza has been terminated by a vote of the Mejliss deposing the Kajar dynasty. The young man who succeeded to the Throne of Persia at the age of eleven, and was crowned Shah in 1914 at the age of sixteen, has never had his heart in his high office. For several years he has shown an unmistakable preference for the fleshpots of France over the responsibilities of Teheran, and after repeated invitations to resume his duties as Sovereign has finally intimated his decision not to return to Persia. In spite of the Persians' unhappy experience of the monarchical system in recent years, it is by no means certain that they would fare better with a republic. For the moment the form of government matters little. Reza Khan Pehlevi, as Prime Minister, is in control of the situation and Persia has at the helm the strong man whom she needs. It does not appear that he has been able to do much towards changing the Persian character or the traditions of the bureaucracy, which together offer such insuperable difficulties to good government in the country. While he remains in power, the worst abuses will be stopped and the whole administrative system will show a notable improvement. A recent report issued by Dr. Millspaugh, the American Administrator-General of Persian Finances, bears witness to the reforms that have been introduced under the government of Reza Khan—re-organisation of the Administration, establishment of law and order, restriction of expenditure, increase in revenue and improvements in the method of collection—but confidence in the future of Persia is hampered by the reflexion that a people cannot find salvation through the exertions of one man only. When last year an attempt was made to establish a republic in Persia the scheme was thwarted by the Shiah divines, and it is possible that they acted more wisely than Reza Khan and they themselves knew. With the deposition of the Shah there is bound to be a movement in favour of raising Persia's masterful Prime Minister to royal rank. As Sovereign or subject he will be equally useful to the country, but in one important particular his limitations will be the same; he will be unable to provide that an equally strong and able man shall take his place when he has gone.

Jewish Colonies for the Crimea.

The Soviet Government appears to have revived its scheme for the establishment of Jewish Colonies in South Russia. When the proposal was made some two years ago, it was intended as a counter stroke to the Roumanian occupation of Bessarabia. The first suggestion was the creation of a Moldavian Republic to include the Russian province of Podolia, Kherson, of which Odessa is the capital, and Bessarabia. Then apparently Moscow toyed with the idea of a Jewish State in this region, which might be expected to arouse the envy of, and to unsettle, the large Jewish element in Bessarabia. Jewish colonies in the Crimea could hardly be expected to play the same rôle of pinprick for Roumania as a Jewish State just across the Dniester, and so far there does not seem to be any adequate explanation of Moscow's sudden solicitude for the Jews in the face of the general trend of Soviet policy which has been—in spite of the anti-Semitism of individual leaders—to eliminate Jewish segregation, apparently in order to assimilate the Jew. Opinion in Jewry outside Russia is divided on the subject, Zionists being strongly opposed to the scheme, while other Jews consider it more practical to provide for Jewish relief in Russia—it is part of the Soviet scheme that funds should be forthcoming from Jewry at large—than to transplant Jewish families to a foreign land.

FRANCE AND SYRIA.

The revolt of the Druses in Syria has now passed beyond the limits of a local rising, and may become merged in questions of first-class international importance. Comment is of necessity handicapped by the fact that Great Britain, in so far as she is a Mandatory Power, also lives in a glass house, and for this reason, as well as from sympathy with an Ally in her misfortune, has no desire to throw stones. France, however, has deliberately set her house on fire, and her neighbour cannot affect indifference. The Druse revolt in itself need not have been a serious affair; properly handled, it ought to have been possible to isolate it and to suppress it without difficulty. It found the French authorities, however, at a grave disadvantage. The Mandate had never been popular in Syria; it was, indeed, to all intents and purposes enforced at the point of the bayonet, in contradistinction to what had happened both in Palestine and Syria, where Great Britain had at least some claim on the good will of the inhabitants, because she had appeared first in the rôle of liberator. France, with her record of successful colonisation in other parts of the world, seems to have failed to understand adequately the difference between the Syrians and the subject people of her African or Asiatic colonies. Public opinion in the latter has been non-existent, or if it is discernible to-day, it is of very recent growth; France, accordingly, has carried out her administration, as it were, within a ring-fence, with the native inhabitants on the outside, looking on, but taking no actual part in the general scheme of things. In Syria she has realised that conditions cannot be the same and that the Syrians have to be taken into consideration, but she has not been able to invest them with any real power, remaining content herself to play the rôle of adviser and supervisor. It may be that the attitude of the Syrians themselves made it difficult for the French to meet them half way; but, whatever the cause, France has continued to administer Syria without the whole-hearted support of any considerable section of the population, and where a measure of autonomy has been instituted, it has proved in practice more of a shadow than the substance.

In the meantime the exigencies of home politics and the economic situation in France have prevented the French authorities in Syria from retaining in the country the forces necessary under prevailing conditions to convince the population of the hopelessness of agitation. If France's Syrian critics are to be believed, her representatives in Syria deliberately embarked on a policy of "the heavy-hand"—the Syrians call it terrorism—to disguise the inadequacy of the armed forces at their disposal in a frankly hostile country. The accusation would never have gained any credence, had it not been for the evidence that the Druse revolt has brought to light. It is charged against the late Governor of the Jebel Druse that he had the ex-prefect of Sarthad bastonnaded and that he sent, without any form of trial, the sub-prefect of another village to break stones on the road. When shots were fired at General Gouraud, the penalties inflicted by the French authorities, it is stated, included the razing of several villages. Only in the light of this alleged policy of the heavy hand and the attitude of mind behind it, betokening real fear, can the more recent Damascus tragedy be explained. The exposure in a public square of the dead bodies of insurgents killed at a distance from the city is not an act of which France can be proud. It often happens in the East, where self-deception and gullibility prevail, that those who have suffered the extreme penalty of the law are left exposed to public view to prevent there being any doubt as to their fate and, it may be, *pour encourager les autres*. To bring from a distance the bodies of those who have been killed in open fight in order to parade them in the capital is the act of men who have no confidence in themselves and certainly no thought for the moral responsibilities of a Mandate. With a large part of the country in arms against them, the French had no need to call attention to the fact that there were casualties on both sides, and more civilised means could have been found for impressing the Damascenes with France's might. Equally inexplicable, except on the ground of panic, was the wholesale bombardment of Damascus without due warning, merely because a body of insurgents had entered one section of the city and had started to loot.

Both the French people and the League of Nations will require a fuller explanation of the course of events in Syria than General Sarrail, the French High Commissioner, has seen fit to give up to the present. Failure on the part of France to live up to the position of Mandatory Power reflects on the League of Nations, under which she holds the Mandate. It is unlikely that what has happened in Syria will enhance the prestige of the French or fail to make their task in the country still more difficult. Unless there are to be both a change of policy and a radical change of attitude towards the Syrians, the French position can be maintained only at a heavier cost in men and treasure, and it remains to be seen whether France will consider that the saving of face is worth this burden. Her repudiation of the Mandate would embarrass the League of Nations and still more Great Britain. It would be a comparatively easy thing for the League to grant full independence to Syria; but such a course must inevitably lead to an intensified agitation on the part of the Arabs in Palestine. No feelings of false pride will ever cause Great Britain to hold on to the Palestinian Mandate; her rôle in the country is to safeguard it against a return of Turkish domination and to see fair play between Moslem, Christian, and Jew. It is noticeable that in the agitation against the French Mandate no thought seems to be given by the Syrians as to their ability to protect their country against the Turks, if the latter should entertain designs upon it. Many people contemplate the day when peace will be as firmly established in this part of the world as it is now in Western Europe; but that moment can hardly be said to have arrived yet, and the territorial integrity of an independent Syria would not be worth many weeks' purchase. Great Britain can have no desire for an extension of her commitments in the Middle East, but from the Syrian point of view there might be much to be said for a single mandate for Syria and Palestine, which could ensure as great a measure of independence and self-government as Iraq has, while safeguarding the country from any possible menace from the north. In such a State the bogey of the Jewish National Home, with which the unthinking Arab or Syrian allows himself to be scared to-day, would assume more modest proportions; for a united Syria would have nothing to fear from a small Jewish minority and might one day grow wise enough to appreciate the value of Jewish co-operation.

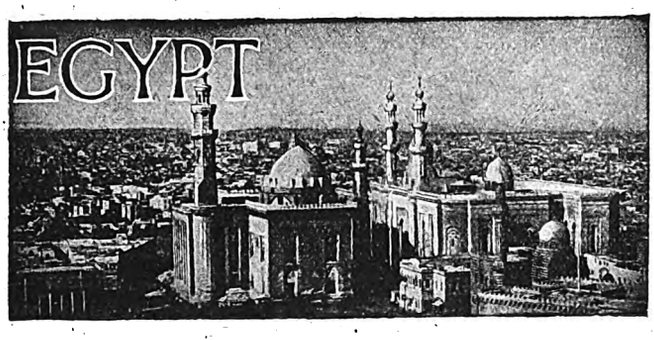
The Near and Middle East*

From Our Own Correspondents.



Cairo, October 24.

Exclusive Invitations.

At the inauguration of the Egyptian Parliament Zaghloul Pasha was much criticised for refusing to send invitations to the ceremony to any of his political opponenst. The exclusion of Yehia Pasha Ibrahim, the Prime Minister under whom both the Constitution and the Electoral Law had been promulgated, was regarded as a particularly flagrant piece of partisan spite. But on Wednesday, for the reception of Sir George Lloyd at Cairo station, the Government of which Yehia Pasha Ibrahim is the acting Premier confined its invitations to a few ex-Ministers and others who are supporters of the Unionist Party. That Zaghloul Pasha and his friends would not be invited was, of course, a foregone conclusion, but the failure to include Liberal Constitutional and other ex-Ministers who until quite recently have been the allies of the Unionists was much commented upon. And its result was that the handful of Egyptian notables who greeted the new High Commissioner were very far from being a representative group.

Under the High Patronage of *HIS MAJESTY THE KING OF EGYPT.*

The

Egyptian Agricultural and Industrial Exhibition

will be held in

— CAIRO —

20th Feb. /26 to 20th Mar. /26

ALL demands for exhibiting goods must be presented to the Royal Society of Agriculture, Cairo, before the 1st of December, 1925. All information as to goods to be exhibited, reduction of transport fees, exemption from customs duties, etc. can be provided by

The Royal Egyptian Legation.
7, Charles Street, LONDON, W.

The Government Reception.

In all other respects the reception was remarkably good. Egyptian crowds are habitually undemonstrative: there is, indeed, only one man living—Zaghloul Pasha—whose presence arouses enthusiasm among his fellow-countrymen, and it was not to be expected that the galabia-clad Cairenes who thronged Bab el Hadid Square on Wednesday would go into paroxysms of joy over the coming of a new British High Commissioner. But, if there were no tarboushes or turbans thrown into the air, nor any lusty cheering, there was at more than one point hearty handclapping. Not only foreigners were impressed and somewhat surprised by the applause. The *Kowkab el Shark*, one of the two principal Zaghloulist newspapers, after complaining that Sir George Lloyd was accorded an official reception such as even Lord Cromer never knew, and attributing this to the servility of the present Ministry, remarks, " . . . but what shall we say about the gathering of people to greet Sir George Lloyd and applaud his arrival? We make no mistake and do not exaggerate if we say that such a feeling on the part of the public is due to the fact that they are sick of the present state of affairs, for which they can find no remedy, and it seems that they imagine that the new High Commissioner's policy may allay their pains and allow them to live in peace . . . ."

Sir George Lloyd.

Of Sir George Lloyd everything, even the impossible, is expected, and rumour is rife regarding what he is going to do. At the moment he appears to be determined to get a thorough grip of the situation in the shortest possible time, and to that end is working like a horse, morning, noon and night. For the next few weeks he will be receiving a constant stream of visitors, for everyone in Egypt appears to be anxious to call on the High Commissioner to tell him just what he ought to do.

Political Activity.

Meanwhile, the various political parties are getting very active. The Unionist "drive" in the province continues, though it has received something of a check through the recent publication in an Opposition newspaper of a report by the Unionist Party's Director General recommending the fullest use of the administrative machine as a means of party recruitment. The report has been disavowed by some of the members, though not by the President, to whom it was addressed, but the repudiation seems a little thin. The Liberal Constitutionals, at last realising that their previous lethargy has been one of the principal causes of their lack of followers, are arranging to hold a series of meetings throughout the country, though it seems possible that the Government may prohibit these gatherings, as it did a meeting fixed by the Nationalist Party for the day of Sir George Lloyd's arrival. Zaghloul Pasha is stated to be contemplating issuing an invitation to all Opposition elements to meet in a general congress, "to decide how constitutionalism may be restored to the country." The Unionists are visibly frightened lest the Nationalists and Liberal Constitutionals may accept the invitation, which would open up the possibility of a very weak Government being confronted by a powerful and united Opposition.

Lake Hadra.

The draining of Lake Hadra, a scheme which has been debated for the last fifty years, and which is recommended on various grounds, among others that the Lake is one of the principal causes of Alexandria's notorious unhealthiness at certain times of the year, is at last on the

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Palestine, Iraq, and Persia.

Digitized by Google

way to realisation. On Wednesday the Acting Under Secretary of State in the Ministry of Public Works opened the sluice gates of the syphon from which the waters of Lake Hadra are now flowing into Lake Mariut, and in a month's time the four hundred acres of the Lake's bed will be completely dry and ready for conversion into the site of the garden city which is planned by the capitalist who has bought the lake area.

The Flight to Kano.

At dawn on Tuesday Squadron Leader Coningham and his companions will start in three D.H.9A aeroplanes from Helouan aerodrome on their flight to Kano and back. The flight is due at Kano on November 4, where a stay of about ten days will be made, the return journey being scheduled to begin on November 15. A short stay will be made at Khartoum on the return journey, the aviators being expected back in Cairo at the end of November.
[The safe arrival of the airmen at Kano is reported.—ED.]

The Western Frontier.

The Egyptian commission appointed to negotiate with the Italian delegates regarding the Egypto-Tripolitan frontier, and notably about the future status of Jaghbub, had intended to leave for Sollum to-morrow. But now information has been received that the Italian negotiators are coming straight to Alexandria, where the preliminary discussions will be held. The Arabic Press, which was at one period much excited over the possibility of Italian claims to Jaghbub being recognised, has latterly shown little interest in the matter, but Jaghbub will doubtless again come into the news as soon as Ismail Sidky Pasha, who heads the Egyptian commission, and his colleagues get round a table with the Italian envoys.

ALBANIA.

Tirana, October 27.

Cession of Sveti Naum and Vermosch.

The reluctance of members of Parliament to present themselves in sufficient numbers to form the necessary quorum to enable a legal session to be held for the purpose of ratifying the cession of Sveti Naum and Vermosch to Yugoslavia, has after many delays been overcome. Parliament has met and after a fortnight's business on other matters, screwed up its courage to face the unpleasant task. Thus at length the cession of the above territories has come to be ratified, not, however, without a somewhat acrimonious debate and in the absence of many members.

The Foreign Minister.

The Ministry has been reinforced by the appointment of Hassan Bey Vrioni (cousin of the Minister accredited to Great Britain and France) as Minister of Foreign Affairs.

Efforts at Reconciliation.

The negotiations between the President and M. Fasli Frasheri with a view to effecting a reconciliation between the President's party and those in America and elsewhere forming the entourage of M. Faik Konitza, head of the Albano-American Association known as the *Vatra*, are still continuing. Meanwhile the Government has issued a general amnesty, without exception, to all those who were concerned in the armed opposition to the establishment of the present régime. This is an earnest of the President's desire to heal the wounds which at present rend the Body Politic and to broaden the basis of consent to the present régime. It is not expected, however, that more than a minority of those now in exile will avail themselves of the amnesty to return to Albania. So far only about 50 persons have returned and among these there figure no prominent members of the Opposition. Nevertheless the measure has had one good result—it has led to the return of several ecclesiastics who will thus be enabled to resume their religious duties. Monsignor Mjeda, Archbishop of Scutari, to mention the most prominent of them, will be returning to his diocese before the end of the year.

"The National Union."

The efforts of M. Eshref Frasheri to reconstitute the "clique" and thus to unite those of its members adhering to the present régime and those who were driven into exile, has had a grave setback. The group with whom he was in contact has evidently decided to burn its boats. This group, as already reported, had constituted itself under the leadership of the ex-Regent M. Petsi, M. Ali Klissura, M. Suma and M. Bushati representing all four religions in the State—e.g., Orthodox, Bektashi, Catholic and Sunni—into an Association known as the National Union. They have now issued a manifesto which makes any present reconciliation with Ahmet Bey Zogu quite out of the question. The latter is stigmatised as a viper and a traitor. He is compared with Essad Pasha, whose assassin Avli Rustem is extolled as a national hero. Moreover, to Ahmet Zogu is attributed the murder of Avli Rustem, as well as that of Gurakuqi, Bairam Tsuri, Zia Dibra and others who met their death by violence either during or subsequent to the recent revolutions.

The programme announced in the Manifesto is couched, in contrast to the above, in very moderate terms, It is framed to satisfy the Catholics, whose chief planks are a wide measure of devolution and a fairer distribution of State funds towards the maintenance of the Catholic schools, and the big landowning Beys of the South, who hitherto have had a heartfelt distrust of the Opposition in consequence of the latter's programme of land reform as advocated by Monsignor Fan Noli. Monsignor Fan Noli in fact has been altogether thrown over by the National Union.

It is to be feared that the effect of the Manifesto will only be to make the task of reconciliation more difficult. In fact the two main groups of the Opposition, namely that of the National Union and that of Monsignor Fan Noli, seem to have made up their minds to refuse to treat on any terms with a view to a *modus vivendi* with other groups except on the condition of Ahmet Zogu's elimination.

CYPRUS.

Nicosia, October 28.

The Elections (Legislative Council).

No elections since the establishment of an Elective Council in 1883 have caused so much interest and excitement as those just carried out for the elective members of the new Council, in which the numbers of Greeks is increased from 9 to 12, in consideration of the preponderance of Greeks over Turks in the population. The number of Turkish (or Moslem) representatives remains, as before, three, and three non-elective members have been added. The Cyprus Council will thus consist of the Governor, 9 non-elective members, 3 Moslems, and 12 non-Moslems.

In spite of the plain answers that have been given to the Greek party that agitates for "union with Greece," the

leaders have done all in their power to secure the election of members who will place their political aims before all other considerations. All who support such candidates are called by the Press "Nationalists," or Unionists, while all others are regarded—with worse than questionable taste—as "Government" supporters. Seven out of the nine non-Moslem members who sat in the late Council have incurred the displeasure of the "Nationalists," apparently because they placed the cause of the rural classes and general progress before that of politics, and every endeavour has been made to prevent their candidature or election to the Council. It was thought quite possible from indications during the canvassing period, that there might be trouble in some of the electoral centres. A proclamation of the Governor prohibited the carrying of firearms or offensive weapons in Nicosia between 6 a.m. on October 8 and 6 a.m. on October 10. In one locality a candidate was warned by the police that he had better not enter certain villages to speak, as trouble might arise. The police were thereupon accused by the Greeks of showing partiality to one side. An indignation meeting was forthwith held, and a resolution of protest passed which three leading persons were deputed to present to the Governor. The party opposing the Nationalist candidate —branded as "the party of disorder"—was aided by a monk of the well-known Monastery of Machara, in the Larnaca District. The brothers of the monastery, with their abbot, regarding this as a reflection on the place, held a meeting, at which the monk was ordered to take no part in electioneering matters, and his confinement within the monastery was ordered.

Rural Interests.

An impartial onlooker, acquainted with Cyprus and the history of the Council, would not hesitate to conclude that it would be well if there were a larger representation of the rural classes and interests. Hitherto the elected members—chiefly advocates, merchants, and perhaps moneylenders, have subordinated loyal efforts for progress in the island to political efforts, and have offered captious opposition to many Government measures, involving serious waste of time. The elections have been carried out without disorder and most of the Nationalist candidates have been elected. Two of the foremost champions and speakers of the "Union with Greece" party will, however, not sit in the Council. One failed to be elected: the claim of the other—who had previously posed as of Hellenic nationality—to be a British subject, and therefore eligible, was rejected.

Possibility of Progress.

It now remains to be seen whether the Greeks will co-operate with the Government. If so, the coming session should mark a turning point. There are many important matters that press for consideration, and there are movements on foot which promise well for island development, if properly encouraged. All well-wishers of Cyprus will hope that the newly elected Councillors will perceive in clearer perspective in what direction lie the true interests of the Colony. Should the leading men fail to work wholeheartedly for the people they represent, it is to be feared that progress will be as slow as in the past. And it may be added that in taking the line they have hitherto adopted, not only has a great deal of money been wasted, but probably far more harm than good has been done to the cause they have advocated.

Liubliana, October 28.

The Prime Minister's Speech.

The political event of the past week was unquestionably the speech made by the Prime Minister, M. Pashitch, in the Radical Deputies' Club. This speech had been long expected, and demanded, because the veteran Radical leader had kept on delaying his clear pronouncement upon the Understanding *(sporozum)*, as the present agreement between Serbs and Croats is called. Meantime, the Opposition, and especially the Pribitchevitch group, tried to make capital out of this delay by endeavouring to prove to the electorate that the Agreement between M. Pashitch and M. Raditch would be short-lived, and that M. Pashitch at the bottom of his heart was against this policy. By the Prime Minister's speech, however, all these manœuvres have been checkmated, because the speech was a clear and unequivocal proof that the present Coalition Government has come to stay.

The substance of M. Pashitch's speech is as follows:—

You cannot fight a man who will not fight but does want to come to an agreement. The Raditch Party desires no intensification of the struggle, for fear that the State itself might break up over it. They desired agreement and therefore took up their stand altogether upon the Constitution. There is to-day no difference between the Raditch and Radical parties as regards their views upon the State. Therefore an agreement between these parties was bound to follow, and the logical conclusion of this agreement was the Coalition Government of the two. This understanding between the Radicals and the Raditch Party is necessary to State and nation, and therefore of primary importance.

It is true that, on account of the work of consolidation now begun, it is to be desired that the whole nation should take part in this work. For this reason the Radicals sought to draw the Independent Democrats into the Government. But the Raditch Party were emphatically opposed to this. This left the Radicals with the choice, either to decide for the Raditch Party and an understanding between Serbs and Croats, or to take the Independent Democrats into partnership and decide against the understanding. As the understanding was an exigency of State, and the inclusion of the Independent Democrats in the Government a secondary question, the Radicals could not find the decision difficult.

All the same, the Radicals were anxious to do their best for their old allies. M. Pashitch urged the Independent Democrats not to take up a hostile attitude towards the new policy of understanding; but the Independent Democrats would not take his advice and thereby so injured their own position that their power to-day is comparatively insignificant.

M. Pashitch's speech was perfectly clear and has put an end to the speculations upon fresh party combinations. Yugoslavia's position in internal politics is cleared up and the durability of the present Government established beyond discussion.

Digitized by Google

The Slovene Difficulty.

But, however strong the present Government, it has one flaw. The Slovenes are not represented in it, and therefore the national understanding is incomplete. Those in authority are exceedingly anxious to remedy this defect, but for the moment the matter is not easy.

The first party to come into consideration would be the Slovene People's (Koroshets) Party, which commands twenty out of Slovenia's total of twenty-six mandates. This great electoral victory the party owes in the main to its plank of Complete Autonomy for Slovenia. But such autonomy is not compatible with the Constitution, and as the understanding with M. Raditch is based upon the Constitution, the Koroshets Party would likewise have to jettison the autonomist part of its programme. But this it dare not do, for fear of future elections. The party certainly realises that the economic interests of Slovenia categorically demand its taking a share in the activities of Government, and the question of autonomy is largely one of party strategy; yet in view of vacillation observable among the electors the Slovene People's Party cannot summon up courage for a change of policy. So a different solution is being attempted. In place of the People's Party the so-called progressive parties in Slovenia are to enter the Government. And these parties are very anxious to secure the reins of government *en miniature*. There is only one difficulty. They are all badly at feud with one another! On one side stand the Slovene Independent Democrats, and the rest are all ranged on the other. The Independent Democrats are making every effort to get into one or other of the Government parties, preferably the Radical, and to that end ask permission from the Independent Democrat party leaders for themselves to join the Radical Party. Permission was given, but the union has not yet been effected, because the Radicals made certain conditions, the principal one being, that the Slovene Progressive Parties should first come to an agreement among themselves. This condition the Slovene Independent Democrats have so far not been able to fulfil, and the question is still open.

The problem of this flaw in the Government is the chief feature of the present situation. It may be remedied shortly, and then there will remain but one unsolved problem, viz., the reconstruction of the Cabinet. But there is no doubt that M. Pashitch will show himself equal to dealing with this also, and then there will be nothing to hinder the Government from assuring profitable parliamentary work. There can be no more startling developments, and for the present phase of consolidation in Yugoslavia this is of decisive importance.

GREECE.

Athens, October 25.

Contracts Signed.

The contract for the drainage of the Vardar having been signed after long delays, surveying has already begun in the district of Lakes Amatovo and Ardzan, where operations will start as soon as the severe Macedonian winter is over. Other contracts which have been signed are that with a Belgian company for the extension of railways, and that with the English Power and Traction Co., Ltd., for the lighting, electric railways, and tramways of Athens-Piræus and district. The latter company, which will be known as the Hellenic General Society, undertakes to erect a power station within two and a half years which will provide the necessary current for lighting, traction and industrial purposes; the existing installations will be provisionally reinforced. Within the same period seven of the present tramway lines will be extended, and the circulation increased. Services of motor-'buses will supplement the trams along the same routes and with the same fares. An immediate improvement will be effected by the supply of fifty new trams and fifty new 'buses. The railway to Kiphissia will be electrified and connected up with the existing electric railway to the Piræus by a tunnel passing under Homonia Square, where a large underground station will be built.

Position of the Government.

The signing of the above contracts reflects great credit on the Pangalos Government (which has had the reputation of being hostile to foreigners), and should influence the elections, which are definitely fixed for March 7, in its favour. The Government has certainly lost popularity of late, on account of its repressive attitude towards some of the newspapers and some of the party leaders, notably M. Papanastassiou, the violence of whose language, however, invited it. The dramatic appearance of Col. Plastiras, the leader of the 1922 revolution, who had been living in retirement at his home at Karditza, and his still more dramatic disappearance from a hotel at Phaleron a few days afterwards, caused a great sensation. This morning's paper announces that he has been arrested at a private house in Athens. It is devoutly to be hoped that nothing incriminating will be found against a man of such high character, and whose services to his country are admitted even by his enemies to be inestimable. Otherwise the political situation seems, for Greece, not abnormal. Though an onlooker cannot hope to follow the currents and cross-currents of internal politics, perhaps the appointment of a Royalist, M. Rouphos, as Minister of Education is significant. M. Rentis, Minister for Foreign Affairs, who represented Greece at Geneva, has suddenly retired, and his successor has not yet been appointed.

The Refugee Commission.

The friction between the Refugee Settlement Commission and the Government is at an end. It was a happy conception of Mr. Howland, President of the Commission, to form an Information Section, which will keep the public informed of the work which the Commission is doing, and to inaugurate it by a dinner to which the representatives of the Press were invited. The death of M. Bonzon, who has twice temporarily filled the position of the President of the Commission, is a great loss both to the Commission and to Greece, to whom he was a real friend.

External Politics.

With regard to external politics, the negotiations with Yugoslavia have been postponed till after the March elections. A more than usually serious frontier incident, which occurred at Demir Kapou on the Græco-Bulgar frontier at a spot which will be remembered by many who took part in the campaign in Macedonia, has called forth the prompt intervention of the League of Nations and should prove its usefulness. To try to get at the truth about such incidents is, at this stage, obviously futile, but, on the face of it, neither Greece nor Bulgaria would seem to have much to gain, and the creation of it must

provisionally be attributed to "persons unknown." At the moment of writing the Bulgars are stated to have withdrawn from Greek territory, while the Greeks are still occupying Bulgar territory near Petritch. The ultimatum of Greece and the claim of six million drachmæ compensation are perhaps not unreasonable, if she is the aggrieved party.

The American Invasion.

From the dawn of history, Greece has been subject to invasions at fairly regular intervals. Dorian, Persian, Roman, Goth, Slav, Frank and Turk in turn have come into the country and left traces, fleeting or permanent, of their coming. The latest invasion is the American. Every year, about the time when nightingales are beginning to sing in the Palace gardens, and in the pine-woods of Penteli the turf is bright with scarlet anemones, these, her latest invaders, begin to converge by steamer, train and car upon the sacred soil of Greece. This wealthy and energetic race has marked out Greece for its own. A permanent memorial of their devotion to learning, the stately building, which is to contain the library of M. Gennadios, is rising on the slopes of Lycabettus. And now comes the news that the great scheme to excavate the area north of the Acropolis is about to be carried out. Work will begin in the spring in the triangle between the Theseion, the Areopagus, and the Acropolis. Forty universities, one is told, are to take part in it. The president of the American committee formed for the purpose is Mr. Capps, and the American School of Classical Studies will collaborate. The value of the results for archæology and learning in general is sure to be great; the devotion of wealth to this object cannot be too highly praised.

Consumption in Greece.

Disquieting details of the spread of consumption in Greece are published in the current number of *Hygieia*. In the towns, on an average 34 deaths in every 10,000 are caused by consumption, outside the towns 14, as opposed to an average of 18 and 10 respectively in other countries; and it is estimated that in the ten years between 1915 and 1924, 12,000 out of 52,000 deaths were due to the same cause. To combat this state of things, there exist in Greece only three Institutes for diagnosis, all of which are also used as sanatoria. An Anti-Tuberculosis Society has been formed to awaken public interest in this serious problem.

Dissolution of Monasteries.

Those who have travelled much in Greece, especially in the out-of-the-way parts, and enjoyed the courteous hospitality of Greek monks, will learn with regret that 50 of the smaller monasteries are to be compulsorily closed or secularised. Next to her classical remains, Greece has nothing more attractive than her monasteries, whose romantic setting and historic associations add so much to the charm of the country. No economic gain can ever compensate for the sentimental loss which will ensue, if these buildings are allowed to fall into decay or to lose their special character, as, if they are secularised, is bound to happen. Ideas of progress lie at the back of much hasty legislation, and too often ideas, like fashions in hats and clothes, reach Greece only when they are being abandoned elsewhere.

ROUMANIA.

Bucharest, October 26.

M. Yorga and the Government.

Parliament opened on October 15, and the proceedings were without incident but for a violent attack made upon the Government by M. Yorga, leader of the United Opposition party. Apparently the Opposition expected that, in view of their signal defeat in the elections for the Agricultural Chambers, the Liberals, would resign in deference to the will of the electors thus expressed. M. Yorga's violent indignation was directed against a party so devoid of conscience, he said, as to force itself upon the country when it is obviously not wanted: for the speech from the Throne made it clear that the Liberals have every intention of remaining in power to carry out the remainder of the programme they have laid down for themselves.

In the House itself there was no debate upon the speech of M. Yorga, but the violence of its terms has aroused the usual Press vituperations, which serve no useful purpose.

Liberal Schemes.

The remaining programme of the Liberals includes a number of important measures, e.g., a law for the co-ordination of the Orthodox Church of old Roumania and the annexed provinces, an Education Law, a new Tariff Law, and other economic measures, a law for the organisation of the Postal, Telegraphic and Telephone Services, and of the Sanitary or Health Service, and other measures rendered necessary by the New Constitution, and last but not least the electoral law, to which in his speech the King invited the particular attention of the Members of the Chamber. M. Yorga stated in his speech that his party would take part in the debate on the Electoral Law, but would not trouble about the other "dying efforts" of the Liberals. After three days' session Parliament closed again until the 28th.

Official Salaries.

In the couse of last week a Royal Decree was issued endorsing the proposals of the Minister of Finance for the distribution of the sum already earmarked for providing increased salaries to State functionaries, a much-needed measure, for the present rate of their pay is far short of what would be required to enable them to live with the smallest degree of comfort in view of the greatly increased cost of living. It is true that they have many advantages, such as canteens where meals are exceedingly moderate, dormitories, cheap firewood, and so on. Nevertheless, the new measure will be greatly appreciated.

Roumano-Hungarian Litigation.

According to the French edition of the *Argus* the Minister of Finance has given instructions to the Roumanian delegates now on their way to the Conference at Washington, to settle while in Paris certain questions still pending before the Arbitration Tribunal there in connection with the liquidation of Hungarian properties which were under sequestration in Roumania.

Birthday of King Ferdinand.

On the occasion of the sixtieth birthday of King Ferdinand, the Government laid a Bill before Parliament for the dedication of a sum of 200 million lei to a fund to be called the "Ferdinand Foundation." Half the revenues from this fund are to be used for the encouragement of the education of the young and for scientific research, and the other half is to be devoted to the education of the families of army officers.

THE HOLY LAND IN WATER-COLOUR.

Two years ago Mrs. P. A. F. Stephenson held in London an exhibition of water-colours of Palestine. Those pictures, the result of a two months' visit, were in themselves sufficient to stamp the artist as one who had to an unusual degree the facility to wrap herself in the subject of her art: it was patent that she went to the Holy Land with no preconceived ideas, but simply to saturate herself in its historical spirit, and then to reproduce various of its scenes. This year she revisited the Holy Land, making a stay of six months. The result of her sojourning and journeying (she has work of places as far apart as Gaza and Jerablus) were to be seen in the short exhibition, closing to-day (November 7), at the Alpine Club Gallery, Conduit Street, W. Here there is even better work than Mrs. Stephenson did two years ago, though her interiors of churches done at that time could not be excelled. The present exhibition is at once more various and compact; she both includes and excludes more—in other words, her art has both deepened and been more swift in seizing the essentials.

One of the most remarkable features of this exhibition is the denoting of the historical nature of the Holy Land: Mrs. Stephenson has pictures which show to the discerning spectator the successive glories of Rome, of Christendom, of Islam, and, finally, of British arms. Unconsciously, at it were, she makes one feel the universal reference of Biblical prophecy and comment to which the Holy Land is susceptible—partly by the deliberate use of scriptural quotations (though this device weakens with repetition), but in greater part by the purposeful beauty of her brush. Her "Sunset at Palmyra," for example, is in effect the sunset of Græco-Roman civilisation, her "Dead Sea Morning" (done from the northern end) a morning of immemorial and possibly endless gloom, her "Making Straight the Desert" a real straightening of purpose in Palestine. She has, in fact, seized wherever it is proper upon the essential qualities of the scene, whether it be in Jerusalem, Lydda, Damascus, Aleppo, or by Haifa, the Jordan, or the Lebanon. Nor does she confine her attention to things built by man's hands: the loveliness of Nature in a lovely country she also strives to convey. The Oak Tree by Lydda (*el Jumaizi*), the barren flotsam of the Dead Sea, Galilean flowers—in all things such as these she delights. But perhaps her most notable drawing of all is of a subject that one does not remember to have seen done before: "In the Cave of the Nativity," a rich and pregnant study. This, together with her "Church of the Nativity, Bethleham" irresistibly call up, as I think, the immortal words of Mr. G. K. Chesterton, who, when he caught sight of those crushing red columns of Constantine and of that "dark stairway that descends under canopies of rock to the stable where Christ was born" felt the bridge between the pre-Christian Romans and our own time. "I can never," he wrote, "recapture in words the waves of sympathy with strange things that went through me in that twilight of the tall pillars, like giants robed in purple, standing still and looking down into that dark hole in the ground. Here halted that imperial civilisation, when it had marched in triumph through the whole world; here, in the evening of its days, it came trailing in all its panoply in the pathway of three kings. For it came following not only a falling, but a fallen star, and one that dived before them into a birthplace darker than a grave."

It is something that Mrs. Stephenson's water-colours can stir feelings something like these. She intends, one understands, to make reproductions, in the form of Christmas post-cards, of her "Cave of the Nativity": an excellent and worthy idea. Quite certainly her industry in the Holy Land has been balanced by unusual perception, skill, and sympathy.

HUNGARY AND THE NEAR EAST.

Hungary in 1919 and her subsequent relations with the Near East formed the main themes of an interesting address given by Admiral Sir Ernest Troubridge at a meeting of the Near and Middle East Association, held on October 27 at 63, Queen's Gate, the residence of Sir Edward and Lady Boyle. Explaining the conditions that paved the way for the events of 1919, Admiral Troubridge, who commanded the British Naval Brigade on the Danube and was subsequently President of the International Commission of the Danube, pointed out that the great Italian victories on the Piave had resulted in a large and disorganised army drifting homewards without much discipline but with great discontent, *en route* for Budapest, the seat of a Government itself disorganised and insecure. When the union with Austria was dissolved on October 17, 1918, Count Michael Karolyi, leader of the Socialist Opposition, placed himself at the head of all the revolutionary elements and demanded a new Government. His planks were universal suffrage, complete disarmament, and a republic. His first act on assuming power was to demand the abdication of the King. On November 13 he proceeded to Belgrade, where he drew up a Convention with the Allied representatives for the dismemberment of Hungary in accordance with the Allies' understandings with her neighbours, and Allied armies started to occupy nearly two-thirds of Hungary. The Magyars will never forgive Karolyi for this Convention, which he is credited with having accepted without demur in order to procure the Allies' recognition of his Government and of the new Hungarian republic with himself as head of the State. Count Karolyi's party included a large number of Communists, and it was immediately after the declaration of a "Republic of the People" that Bela Kun arrived from Russia ostensibly on a mission connected with the exchange of Hungarian and Russian prisoners. The steady diminution of Hungarian territory by successive demands of the Paris Conference played into the hands of Bela Kun, who had set himself deliberately to oust Karolyi from power. The last straw came in March when all Hungarian forces were required to withdraw from the territories finally taken from Hungary and allotted to her neighbours. Karolyi handed over to Bela Kun. The four months of Bolshevist régime culminated in the occupation of Hungary by a Roumanian Army. Summarising the reasons for Hungary's collapse into Bolshevist hands, Admiral Troubridge mentioned the alien population, the inflammatory propaganda among the wretched and poor, neglect on the part of the rulers to remedy housing and feeding conditions, indifference on the part of the aristocratic and bourgeois classes to what was going on, the clever and systematic evolution of the situation by determined men acting under instructions from Moscow. When the Roumanians withdrew, Admiral Horthy took command of the situation, and Count Bethlen had now held office as Prime Minister for three years, during which time steady progress had been made in Hungary.

In conclusion, Admiral Troubridge said, "Whether any nation ever accustoms itself to the loss of territory that has, for long periods, been included within its frontiers, is a question. Whether it is wise, upon the successful termination of a war, to sever whole provinces from a nation, is another question. The answers to these questions are in the hands of time which, we know, brings its revenges. With the examples in the past hundred years of Alsace-Lorraine, of Silesia, of Poland and of the

Baltic Provinces, of Russia, of Lombardy, and of Venice, I, at least, do not care to prophesy and do not propose to. Too much depends on the degree of justice, of equity, with which the peoples of ravished provinces are treated by the new rulers; to judge by that we must look into the future, and that, fortunately, we are unable to do. All I am prepared to say is that I believe it were advantageous to Europe that the Hungary of to-day should remain as a valuable make-weight in the equilibrium of Europe and, at least, should be maintained in its present integrity. I am prepared, not as a propagandist or as a partisan, but on a purely objective survey of its past and present, and a certain knowledge of its people, to wish it every success and that its people may enjoy the blessings of the land with the fruits of their labours and a happy issue out of all its afflictions."

Other speakers at the meeting included Sir Maurice de Bunsen, Sir Edward Boyle, who urged the importance, for the rehabilitation of Central and Near Eastern Europe, of the removal of tariffs, and the Hungarian Chargé d'Affaires. Answering an inquiry as to the present status of Hungary, the latter said that Hungary was a Monarchy under a Regent, a state of affairs which had been accepted by all parties alike, and that the question of a King did not arise and would not arise until Hungary could appoint her own Sovereign without fear of interference from outside.

THE WEEK AT HOME.

London, Tuesday Morning.

The End of Wembley.

On Saturday the great British Empire Exhibition at Wembley came to an end. It was great, even though it was a financial failure; nor did its finish come without the accompaniment of a certain national emotion. Admittedly it was in the main a parade of the material riches or potentialities of the Empire, but it also, and in perhaps in a more valuable way, showed to the insular Englishman a glimpse of wider vistas, and a strange sympathy with distant horizons.

There are more people at the end of 1925 than there were at the beginning of 1924 who realise the splendour of the ideal under which men of the Far East and the Far West can beneficially be gathered: the Exhibition did impress unmistakably the function of the ubiquitous Briton as one essentially of service. And now that it is all over there is a gratifying disposition to underestimate the financial loss and to emphasise the national or imperial lessons that may have been learned therein.

Political Appointments.

The appointment of the Minister of Agriculture to the Viceroyalty of India will have been dealt with elsewhere in this journal; it will be sufficient here to indicate the probable successor to Mr. Wood. Lord Bledisloe, who is now Under-Secretary to the Board of Agriculture, has been supposed to desire the succession of the Cabinet post, and, indeed, his would be an excellent appointment. But it is stated that, on the plea that the Cabinet is already short of Commoners, Mr. Walter Guinness will become Minister of Agriculture. Whoever is eventually appointed will probably endeavour to show more activity than has been exhibited of late, for the Conservative farmers of the South and West and Midlands are still waiting for a definite policy.

The Political Levy.

Mr. Baldwin still stands with feet firmly planted upon common-sense in regard to the question of the Political Levy. As is known, many Conservatives and not a few Liberals would like to interfere, on behalf of the minority Conservative and Liberal Trade Unionists, into the domestic legislation of Trade Unionists, and, indeed, Mr. Macquisten, whose last effort in this sense was silenced in the House of Commons by the Prime Minister's now famous speech, "Give peace in our time," has again addressed a letter to the Cabinet pointing out to them their obvious duty. It was noted by him and by his supporters that a pious remark at the Brighton Conference on the part of Colonel F. S. Jackson that justice should not be sacrificed to expediency implied in effect that the Prime Minister was changing his mind. But it is very obvious, from the reply that Mr. Macquisten has received, that the Prime Minister's attitude is unaltered, and that, like Lord Oxford and Asquith, he intends to distinguish severely between national and domestic questions. Whereat there is in the Conservative camp much gloom, but in the country at large, much rejoicing.

The Shaping of the Parties.

There appears to be a speculation on the part of some Liberal leaders that if the Conservatives burn their fingers over this Political Levy question the Liberals, going to the rescue of the Labour Party, may once more enjoy the fruits of office. To intellectual Liberals of the type of Professor Gilbert Murray this conception of a coalition between Liberal and Labour, so often thought to be dead, still makes a strong appeal.

The trouble is, however, that in whatever degree certain Liberals would wish to join with the Labour Party, the Labour Party have shown no inclination whatever to join with the Liberals. It is the story repeated in politics of the Anglo-Catholic Party and Rome: nothing short of complete conversion is countenanced by the larger institution. And of this fact the most considerable men in the Liberal Party are probably well aware—it is mostly to the academic theoreticians that the idea yet presents itself as a possibility.

A Welsh Wales.

After Ireland, Scotland—possibly; and after Scotland, Wales—perhaps. At any rate there has sprung up in Wales a new "Sinn Fein" party, which intends, not indeed to have "Wales for the Welsh," but to have "a Welsh Wales." From "Y Plaid Genedlaethol Cymru" (The Welsh National Party) has emanated a demand that the English name of Holyhead should be changed into the Welsh name of Caergybi. And it appears that the fate of the proposal is being watched with considerable interest by the Welsh nation.

Anglesey is claimed as supporting the change, and it is said that the argument that such a change in nomenclature would tell financially against Holyhead falls off Welshmen's shoulders like water off a duck's back. In quite the correct "Nationalist" way, these Welshmen are demanding complete independence, not Home Rule under another Government. They insist that the Welsh language have its place in all the schools of Wales, and in the courts and councils: in fact, that Welsh shall be the only official language.

Digitized by Google

According to the Party that I have mentioned, an attempt is to be made to concentrate on securing control of the local authorities and, on the ground that Parliamentary elections involve the recognition of the right of a foreign nation over Wales, to boycott Parliament and all English political parties. At the same time a free invitation is given to all aliens to visit and to dwell in Wales—on the condition that they accept the language, customs, and ideals of Wales.

Lord Rothermere's Ultimatum.

Whether Lord Rothermere, the proprietor of the *Daily Mail*, himself wrote his much-heralded ultimatum to Mr. Baldwin's Administration which was published last week, or whether it was a Lovat Fraser-cum-Marlowe effort supported by the Viscount's signature, I do not know, but there is no doubt that it fell on the *Mail's* millions of readers like a bomb. But the bomb was a dud. What it was all about I rather forget, though doubtless the unwearying scanners of this pseudo-Conservative journal's leaders know its points by heart. One seems to remember that the noble peer railed against part of Mr. Baldwin's Cabinet for being Socialists, against the Chancellor of the Exchequer for not reducing expenditure, against Mr. Amery for risking the bones of British soldiers in Mosul, and so monotonously on. As far as can be seen, its effect has been absolutely nil.

Mr. Baldwin has properly ignored it; but Mr. Churchill promptly answered it, and, from his own particular point of view, made short work of Lord Rothermere's vague recommendations. One would not go to the extent of saying that the policy of Lords Rothermere and Beaverbrook is as good for the Government as the existence of a genuine penny Conservative newspaper would be, but no discerning publicist doubts that these repeated personal and petty attacks on the Prime Minister are having the opposite effect to that intended.

The Press as Priest.

Mr. St. John Ervine is always, in spite of a tendency to speak with his tongue in his cheek, worth listening to, and an address that he gave last week on "The Press as Priest" has been widely quoted. He maintained that the influence of a newspaper decreases as its circulation grows—the *News of the World*, which has the largest circulation in England, had far less influence than the *Spectator*. In the provinces, e.g., Liverpool and Manchester, Liberal papers were read by hundreds of Conservatives who would never abandon in favour of the papers they read their Conservative principles. The Sunday newspapers had enormously increased their circulation and influence, and could now be regarded as the providers of spiritual food for the people, to some of whom, indeed, they had become a kind of confessional. The mind of the public was more and more being directed by the Sunday newspapers.

In these contentions there is obviously much truth. But surely the case was overstated? The Sunday papers are read, not for their political opinions, which according to my observation at any rate, are largely ignored—who ever read through the vast article in the middle of the *Observer*?—but for the literary and artistic and sporting features. And the informing of a person's literary and artistic tastes is hardly the same thing as the directing of his mind.

Armistice Day.

Into the controversy that has arisen over the proper nature of Armistice Day I do not propose to enter. It is obviously a fact that a vast number of purveyors of food and wine and dance would have it regarded merely as a celebration of victory; it is also obvious that there have grown up or survived a generation untouched by the War and a quantity of people to whom the War actually meant little but temporary inconvenience. But, most obviously of all, there are those men and women who know and cherish the fact that Armistice Day and the Silence were instituted as a Commemoration Day: and on the respective claims of the former crowds and the latter band I will not trust myself to dilate.

The Fall of the Year.

The year is now completely fallen, and from this time to the spring there will be in England that sucession of fog and mugginess and wet and cold which is so detested by the poet and so beloved of the sportsman. In London the change of the time is peculiarly apparent. Not only have the last few days been of unpleasant, unseasonable (as one says) closeness, but there has been considerable fog, and, above all, a showering down of plane leaves.

Everywhere the fall of the plane leaves is to be seen. The winds have whisked them, hurtled them, and huddled them into all sorts of quaint places; there are courts off the Strand, for example, which are completely covered by them. Gold and green they strew the highways, so that walking is by no means the safest form of exercise now. But the smell and the sight of these fallen leaves are worth the risk of a slip.

Book Reviews and Notes.

IN THE UNPAVED EAST.

"BELED-ES-SIBA." By W. E. D. Allen. (London: Macmillan and Co. 8s. 6d. net).

To readers of THE NEAR EAST AND INDIA, Mr. W. E. D. Allen will need no introduction, for included in this little book of sketches and essays in history and travel is one picturesque chapter that appeared originally in these pages. The author of this work has indeed visited many of the remoter parts of the East, having an obvious and a delightful sympathy with *Beled-es-Siba*, the free country, as opposed to *Beled-es-Makhsen*, the "government" country. He loves the out-of-the-way places of the Near East, such as the outposts of bygone or present Empires, whether they be in Morocco, Yugoslavia, Transylvania, or the Caucasus. And in the communicating of his delight he has ready for his purpose a style that is at once purposeful and vivid.

Of all his chapters probably that on his travels in Morocco is the best. In Morocco he does not like the "starch-cuffed hand of progress," but he is very willing to pay testimony to the French colonial administration. One of his most characteristic passages, indeed, concerns this very point:—

> The Frenchman is in North Africa for his own good and for the greatness of France, not soaped over with high-minded tags of soft city-folk that think in circles—and the *indigène* knows it and respects him for his honesty and for the interested good he brings, in relief from *Kaids'* oppression, equal-handed justice, better agriculture, roads and sanitation. He does not rise up to use the vapoured platitudes of transatlantic professorial persons against the Frenchman, for the Frenchman has not pretended that life is run on fourteen points. So in Morocco the white man is neither spat upon nor shot at in the streets. Nor is the voice of the *baboo* heard in the land, unless he happens to be yelping to the thwackings of the bastinado, wielded by the sturdy countrymen upon the orders of His Sherifian Majesty.

Mr. Allen never endeavours to wrap up his views upon things, and in this respect resembles the violent and vivid Leo Africanus, whose sixteenth century book, "History and Description of Africa" he quotes with so much gusto.

Other subjects on which the author touches, and always illuminatingly, are the Banat of Temesvar, the Geography of the Treaty of Trianon, the languages of the Caucasus; and his historical essay upon the operations of the Allies in the Caucasus in 1855 is particularly useful at the present time, when the question of the fortress of Kars is likely so soon again to be in the limelight.

Altogether Mr. Allen has written, not only a very readable book, but also one that is of considerable importance to the student of the Near East. With all his ideas one may not agree, but with what traveller worth his salt can one wholly agree?

THE INDIAN SECRET SERVICE.

"CARAVANS BY NIGHT." By Harry Hervey. (London: Thornton Butterworth, Ltd.)

This is a lurid tale of adventure, "featuring" a member of the Indian Secret Service who, to one who knows something about that service, is a more grotesquely improbable figure than its members usually are in fiction. Persons with some knowledge of India will not be surprised to meet, in the pages of this book, a Mohammedan whose name is Guru Singh; nor a servant who greets his English master with "Burra Salaam, O Presence." Persons not acquainted with India, or with the Secret Service, will not find anything of value in the story: but may not improbably enjoy a tale of breathless adventure whose inherent absurdities will not be apparent to them.

That Book you Want!

Foyles can supply it. Immense stock (second-hand and new) on every conceivable subject, including Commerce, Industries, Oriental Languages, Sport, Tropical Medicine, etc., etc.

GOVERNANCE OF THE HOLY PLACES.

Signor Romolo Tritoni writes:—

"The writer of your review of my book 'Come Va Risolta la questione dei Luoghi Santi' (in your issue of October 1) has not always understood my Italian, because he seems to attribute to me the idea that the Mandate for Palestine ought to have been given to Italy. I have never said that or anything like it, because I know very well that Italy has loyally agreed to the English Mandate.

"Another gratuitous affirmation is to let the readers believe that I am a mouthpiece of others with whom I have never had the least connexion.

"I have explained all the historical precedents of the question, for the most part Latin, and I have deduced the logical conclusion from these precedents. I have spoken objectively and my point of view is Italian, but without Chauvinism.

"If the persons responsible for this question will not esteem of any account these precedents, they will make a mistake and will leave the question unsolved, because a limping solution is not a solution in a matter like this."

Our Reviewer replies:—"In stating that Signor Tritoni seemed to wish that Italy had been granted the Mandate for Palestine I had in mind his remarks on p. 284 of his book, which in my opinion bear that construction. I excluded the possibility of their being pure Chauvinism, and in this I am supported by his letter to you. He cannot have it both ways. Signor Tritoni has also read into my statement that he was *not* the mouthpiece of the Vatican an accusation that he is. The learning shown in displaying the Latin historical precedents was fully acknowledged by me. I merely deplored what seemed to me its one-sidedness, as well as the author's insistence on the opening of this terrible Pandora's box."

Sir Lucas White King, C.S.I., LL.D., J.P., of Abercorn Place, St. John's Wood, N.W., and of Craigveigh, Aboyne, Aberdeen, formerly Professor of Oriental Languages in Dublin University and Commissioner of Rawalpindi, who died on August 23, aged 68, left property of the value of £5,575.

PERSONAL AND GENERAL.

TO-DAY

November 5, 1925 (New Style).
October 23, 1925 (Old Style).
Rabia II, 18, 1344 A.H., of the Moslem Calendar.
Sheshvan 18, 5686, of the Jewish Calendar.

The Bulgarian Minister left London last week for a fortnight's visit to Paris.

Colonel Yovanovitch, the Yugoslav Consul-General, left London last Friday for Belgrade.

The Aga Khan left the Ritz Hotel, London, last week for Paris *en route* for the South of France.

Lieutenant-Colonel and Mrs. Charles Waley Cohen left for Athens on October 26, and will be away until early in December.

Lord and Lady Cable left 44, Grosvenor Square last Friday for Lyndridge, where they will remain until Christmas.

M. Constatin Laptew is acting as Chargé d'Affaires at the Roumanian Legation in London during the absence of M. Titulesco.

Lady and Miss Coutts-Trotter left London last Thursday by the P. and O. special train to join the s.s. Narkunda at Marseilles for Bombay.

The Government of Afghanistan has purchased the freehold of 31, Prince's Gate, which will be the permanent offices of the Afghan Legation.

The Minister in London of the Kingdom of Serbs, Croats, and Slovenes, Dr. Georges Jouritch, left last week for Switzerland to take a cure.

Mrs. Henry Morgenthau (senior) and Mr. and Mrs. Henry Morgenthau were among the passengers in the Leviathan, which arrived at Southampton last Friday.

The following appointment in the Consular Service is notified in the *London Gazette*:—
Mr. Bernard Joseph Gilliat-Smith, Consul at Tabriz.

Colonel Giles, the British Military Attaché in Athens, left on October 27 for Petritch to join the French and Italian Military Attachés from Belgrade, remaining to watch the execution of the League of Nations' orders.

Madame Venizelos was present at the marriage of her niece, Miss Margaret Schilizzi, to Mr. Massingbred-Mundy, which took place at Guilsborough, Northamptonshire, last Thursday. M. Venizelos was kept away by indisposition.

The following appointments to the Colonial Service have been made by the Secretary of State for the Colonies:
Cyprus.—Captain H. G. Mountain, to Inspector of Mines.
Ceylon.—Mr. W. W. Williams, Mr. J. K. Clegg, and Mr. H. A. S. Smith, to Survey Probationers.

The Roumanian Minister in London, accompanied by Madame Titulesco, left Liverpool last Saturday on board the Aquitania for New York, at the head of the Roumanian Financial Mission charged with the negotiations for the funding of the Roumanian Debt to the United States.

The Earl of Ronaldshay has accepted the invitation of the literary executors of the late Marquess Curzon of Kedleston (Dr. F. W. Pember, Warden of All Souls, and Sir Ian Malcolm) to write Lord Curzon's Life, in which will be incorporated one or two chapters by Sir Herbert Warren, President of Magdalen College, Oxford, on Lord Curzon's Chancellorship of the University. The arrangements for the publication of the book are in the hands of Messrs. A. P. Watt and Son.

ANNIVERSARY OF THE TURKISH REPUBLIC.

In celebration of the anniversary of the foundation of the Turkish Republic the Turkish Ambassador in London and Mme. Ferid Bey held a reception last Thursday afternoon at the Embassy in Portland Place. This was the first social event to take place at the Embassy since the War. Among the guests were:—The Afghan Minister, Lady Huntly, Lord Headley, Lord and Lady Inverforth, the Master of Elibank and Mrs. Gideon Murray, Commander and Mrs. Kenworthy, the Dowager Lady Boyle, Sir Henry Burt, Sir George Armstrong, Sir John and Lady Henniker-Heaton, Sir Hamar and Lady Greenwood, Sir Thomas and Lady Comyn-Platt, Lady (Charles) Henry, Sir Denison Ross, Admiral Sir Edmund Fremantle, Count Grixone, Mr. and Mrs. L. S. Cobham, Mr. W. E. Eyre, Mr. and Mrs. Bowring Hanbury, and Mr. J. B. Monck.

VICTORIA HOSPITAL, DAMASCUS.

Dr. Percy Brigstocke and Mrs. Brigstocke, together with two nurses, left London last Saturday for Damascus, where Dr. Brigstocke is superintendent of the Victoria Hospital of the Edinburgh Medical Mission. He stated that he had no fresh news about the happenings in Damascus, except that the staff of the hospital were safe and well. Five hundred Armenian families sought the protection of the hospital and its grounds during the recent bombardment.

THE DESERT MAIL SERVICE.

A correspondent in Iraq sends the following notes on the journey from Jerusalem to Baghdad—the route now being followed by the Nairn Transport Service:—

"We left Jerusalem at 6 a.m., on the 15th, and reached Baghdad on the evening the 18th. Our route lay through Jericho, Es-Salt, Amman, Rutba, Ramadi and thence to Baghdad. The first 200 miles of this route are so rough and broken as to prohibit high speeds, but the going was not uncomfortable. The road from Jerusalem to the Jordan valley is extremely rough. At Amman hot lunch was ready, and after half-an-hour we were off again. Towards 5 p.m. of the same day we came in touch with armoured cars from the R.A.F. at Amman, which remained with or at a short distance from us until near midnight, and two hours later we encountered R.A.F. armoured cars from Baghdad. These cars had accompanied a West-bound convoy. At Rutba Wells we found the work on the police post and rest-house in hand, and were informed that shortly Nairn passengers will be enabled to break the journey there. From Rutba the cars received an additional armed guard from the Desert Camel Corps, who went with them as far as Ramadi."

NOTES OF THE WEEK.

(Continued from page 546.)

The Palestine Mandate.

The questionnaire of the Permanent Mandates Commission addressed to Great Britain on the Mandatory Power, is an illuminating document, and as published by the Stationery Office (Price 1s.), with the brief replies of the British Government, deserves to be read by all who are interested in Great Britain's commitments overseas. For a more searching cross-examination of a prisoner at the bar one would have to pass many court records in review. The Mandates Commission has studied its subject well and is bent on taking its duties seriously. Great Britain is not allowed to escape with platitudes and generalities; every aspect of her authority in Palestine and every responsibility placed upon her by the terms of the Mandate are set forth and an account of her stewardship in regard to each item is demanded. Mr. Ormsby-Gore on behalf of the Palestine Government faced his examiners of the Mandate's Commission last week and obtained full marks. It was decided to postpone his examination on the subject of Iraq until the Mosul question has been settled. France in regard to Syria was granted an *ægrotat* by the Commission.

Indian Affairs.

THE VICEROY DESIGNATE.

The appointment of Mr. Wood to succeed Lord Reading has been hailed with a chorus of praise by English newspapers of practically every shade of opinion; while even the most extreme of Indian papers profess to regard it as "unobjectionable." Mr. Wood will certainly take up his task with many advantages: and perhaps—as all reports agree in describing him as an exceptionally modest man—with only one disadvantage: one which is likely to be more apparent—especially to himself—than real. It is never an enviable task to take up an appointment that has just been laid down by a man of commanding intellect: most men faced with such a task will admit, if only in their heart of hearts, the diffidence with which they undertake it. To one who is described as "always seeming to hold office rather as a matter of duty than as an object of ambition" this consideration must necessarily be very apparent. But, among the many qualities that Indians admire in their rulers, modesty holds a high place. A few years ago, when a rather specially "prancing Proconsul" was succeeded in the government of an Indian Province by one of less spectacular gifts, a highly placed Indian voiced the approval of his kind by saying that the new Governor appealed particularly to him and to his friends "because he was modest." But Mr. Wood has no cause for modesty: he has a solid record of service behind him: as *The Times* says, "his record is precisely of that kind which should win him welcome from the outset from the people and the Services of India. He is known in this country as a man of the highest character, a popular administrator, a soldier who has rendered valiant service in the field, a scholar, a good sportsman and a great gentleman in the truest sense of the word." It is not so very many years ago that a Scottish newspaper wrote, of a compatriot appointed to the same great office that Mr. Wood has been selected to fill, "His Lordship's experience as Chairman of the Dunfermline Local Board will stand him in good stead when he assumes the Governorship of India." Mr. Wood's modesty will not, one may hope, take alarm at the thought that the manifold activities of his public life hitherto have provided him with even more valuable experience that that of this particular member of his distinguished predecessors. The *Yorkshire Post* has, perhaps, more solid ground for patriotic approval of the appointment of a Yorkshireman when it declares that "Mr. Baldwin has discovered in the cultured and patient Minister of Agriculture a balance of mind and a sobriety of judgment which are qualities most needed in the Viceroy at the present time. His sincerity may get nearer to the heart and mind of India than the brilliance of Curzon or the urbanity of Reading."

One special item of Mr. Wood's distinguished record in English public life is likely to be of particular value in India just now: the fact that he has not only been Minister of Agriculture, but is himself a practical farmer, imbued with "a genuine zeal, based on personal association, for the advancement of the interests of agriculture." He has described his own agricultural policy as one of "inculcating effort and determination on the part of the industry itself, wisely encouraged by the State": and this is exactly what is so greatly needed in India at present. As Lord Reading said a few weeks ago, India's most pressing need just now is the improvement of her premier industry—agriculture: and Mr. Wood, who will find the foundation of such an improvement laid by his predecessor, may be trusted to build on it a firm and lasting edifice for which the Indian peasant will have cause to rise up and call him blessed long after his tenure of office has expired. The passivity of the "ryot," always accustomed to rely on a paternal Government instead of on himself, needs the introduction of a changed angle of vision, and the realisation that Government, while ready and anxious to help, can only help those who help themselves: and, for such a need no choice could have been more fortunate than that of Mr. Wood. Another fact in the record, that many will hold—though certainly wrongly—to be even more important, is Mr. Wood's visit to the West Indies while holding the appointment of Assistant Secretary for the Colonies, and the recommendations that he made with regard to the autonomous development of the Islands. For the fateful Parliamentary inquiry into the Reforms, even if it occurs at its latest possible date in 1929, will take place during his term of office: and it cannot be questioned that the considered opinion of the Viceroy will have great weight in determining the effect of its conclusions. Nor can it be questioned that, when that time comes, his opinion will be authoritative. He is described, by those who know him well, as one whose constant endeavour it is to be scrupulously fair to opponents and to their point of view: who can be trusted to keep to a set and sane course without disheartening or antagonising those who endeavour to persuade or bully him into deviation, and to temper with tact and understanding a fixed and unmistakable determination to rule India for India's good in the name of the British Raj: who, if a sympathetic attempt to understand, and a courteous way of approaching and being approached, can solve a difficulty, is the man to do so: who is able to converse freely and frankly with the enthusiast and the fanatic, even with the enemy: who is able to reach points of view that are entirely different from his own: and, above all, to give to all races and all creeds the sense of the moral superiority of a thorough English gentleman.

The last point in this appreciation is perhaps the most important of all. Indians are as quick as any nation in the world to recognise a "Sahib"—a born gentleman: they may admire great gifts, and recognise high endeavour, in men less fortunately placed; but the trust and honour that, when they give them, they give so freely and generously, are reserved for the man whom they know to be a "Sahib": and no British official, however greatly endowed, can really reach their hearts by any other road. Another personal advantage that counts for much in the East is presence: and Mr. Wood is fortunate in this respect. He is described as notable for his great height, standing some inches over six feet: rather handsome, with the most charming manners, and altogether a dignified and pleasing personality. One, not the least, of his distinguished predecessors, whose personal and moral nobility was freely recognised later, had the misfortune to be of small stature and rather insignificant appearance: and, on the occasion of his first great durbar in the North of India, a ribald Indian Prince remarked to an English friend, "I suppose it's the depreciated rupee that prevents the Government from buying a better Viceroy." Two final advantages may be claimed for Mr. Wood: the first, that he is the grandson of that great Secretary of State for India who recast the constitution of India, reconstituted her finances, reformed her judicial system, developed her railways, laid the foundations of Western education, reorganised the Indian Army, opened high official careers to India, established the first Legislative Councils, abolished patronage and introduced the principle of competition: the second (to quote *The Times*) the fact that he "has an unconcealed preference for his own country, has had no experience whatever of Oriental problems or administration and, so far as is known, has never displayed any special interest in Indian affairs." This, which might at first sight appear as a disadvantage, is, in the circumstances, certainly the reverse: to continue the quotation, "it may be no small advantage, at a time like the present, to set out with a record in which the bitterness of Indian controversies of recent years has no place at all." This not only may be, but certainly is, a great advantage: and to its existence is due to the attitude of extremist Indian politicians, as reflected in their newspapers, of readiness to await Mr. Wood's arrival and to judge him by results; so that his Indian career begins hopefully—with the active approval of all Englishmen and at least the passive approval of even the most extreme among Indians.

CURRENT TOPICS.

The Khyber Railway.

The opening of the Khyber Railway marks an important step forward in the Government's plans for the pacification of the Frontier tribes. The policy, which has been tried for so many years but has now been discarded, of keeping the tribesmen within their borders and answering raid by counter-raid, has now given place to one of "peaceful penetration"—as peaceful, that is, as the tribesmen will allow it to be. Living in the midst of inhospitable mountains whose valleys, fertile though they be, do not produce more than is required for a bare subsistence, the tribesmen have been, almost of necessity, driven to supplement their incomes by raiding their more prosperous neighbours in the plains: and the Government subsidies that they receive are given with the object of enabling them to avoid this necessity. A second source of income was found by the enlistment of Pathans in the Indian Army—a source that was entirely cut off, towards the end of the War, by the stoppage of recruitment across the border. A third, though temporary, source was provided by the construction of the railway, the necessary manual labour for which was provided by the tribes. With the completion of the railway this last source has come to an end: and many people expect that the result will be a recrudescence of raiding, of which the railway will form an attractive object; not only for the loot that may be expected from passengers and goods carried by it, but also because damage to the line will require repairs; the labour for which, as well as the payment for it, will be the perquisite of the tribesmen.

But roads and railways have a wonderfully civilising influence: and, though it cannot be expected that the railway will remain permanently immune from attack, the fact that it runs along one of the great trade routes of Asia will certainly tend to an increase in the material prosperity of those who live near it: and this, in turn, will not only reduce the incentive to raids in general, but will bring home to the tribesmen the fact that it is the railway that is mainly responsible for the improvement in their condition, and that its interruption will therefore be against their own interests. Further, the frontier tribesman is a born tactician, with a perfectly sound appreciation of the danger of being taken in flank or rear: and a few experiments in raiding the railway will convince him of the uncanny ability of the modern engineer to deal adequately and swiftly with what looks, to the amateur, a hopeless break in the line: so that the tribesmen's best efforts will only result in a few hours' delay, before the threat to their flanks and rear is again in full working order, with their outbreak as an added incentive for translating it into action.

In the years to come, the railway may also be expected to exercise a civilising effect on Afghanistan. The railhead at Chaman, on the Kandahar frontier, has been for many years past an object lesson to Western Afghanistan of the advantages that railway lines bring to a country that makes use of them: and this will now be reinforced by a fresh object lesson of the same sort in the near neighbourhood of Kabul. Afghans are among the most suspicious people in the world of the effects of European penetration; but the present Amir is credited with the desire to introduce railways into his country, and with having suggested a beginning by the construction of a short line from Kabul to the new summer capital now being built a few miles to the west of that city. Such a suggestion, if it was ever seriously made, was put forward in vain, in face of the stubborn conservatism of the Afghan "elder statesmen" and the mass of the people; but, if the Khyber railway attains the practical success which it is reasonable to expect from it, it should further familiarise the Afghan trader, and eventually the Afghan "man in the street," with the advantages of railway transport, and may well lead to the disappearance of the prejudice against internal lines. Once these are constructed, their linking up with the Indian lines would only be a matter of time, to the great advantage of both the countries concerned.

The Khyber Railway, which is of the standard Indian gauge of 5 feet 6 inches, is 26½ miles in length, from the previous rail-head of Jamrud, ten miles north of Peshawar, to its terminus at Landi Khana, close to the Afghan frontier. It includes 32 tunnels, most of which are short, the longest being just over a quarter of a mile in length. Its highest point—at the well-known fortress of Landi Kotal—is 2,000 feet above Jamrud and 1,000 feet above Landi Khana. It has taken five years to build, and cost nearly two million pounds—about £70,000 a mile. All the stations are, to all intents and purposes, forts: and block-houses guard the approaches to the line at all vulnerable points between stations.

Magna Charta for India.

Several English papers have copied, from the *Chicago Tribune*, a paragraph under the above heading: in which it is stated that "important developments towards self-government are expected as the result of an important conference now being arranged to be held shortly in Delhi, over which N. C. Kelkar, the prominent Swarajist leader, will preside. The object of the conference is to adopt a Magna Charta for the Indian State, which it is hoped will form the basis for essential independence."

This rather puzzling announcement has been explained by a later message, which shows that the singular "Indian State" should have been a plural: and that the object of the conference is to discuss the constitutional status of the subjects of Native Indian States.

The *Chicago Herald* is, of course, entitled to its own opinion about the important developments that may be expected to follow such a conference; but it is quite certain that no one in India—not Mr. Kelkar nor another—expects anything of the sort. This is not the first time that a similar conference has been held: and its composition will, no doubt, be what it has been before: a gathering of discontented persons—in many cases, professional agitators who have entered various Native States from British India and have promptly been expelled—professing to speak on behalf of the subjects of the Indian Princes. That anything they can say will deflect by a hair's breadth the internal policy of any Indian Prince is not only unthinkable but preposterous. Among the demands that are to be put forward are an elected Representative Assembly in each State, to which the Executive of the Government shall be responsible and subordinate: and an Executive Council at least half of whose members are to be elected by the Representative Assembly. That is to say, that the personal rule of Indian Princes is to cease and is to be replaced by constitutional rule.

The force of example offered by the progress of the Reforms in British India has already led a few of the important Indian Princes to make a tentative start in the direction of constitutional government; but this is in its infancy where it exists at all, and in the great majority of States it is entirely non-existent. It cannot be denied that the subjects of some of the Indian rulers have good cause for complaint against their methods; but these are, at least, methods that they understand and, indeed, sympathise with whenever it is only their friends, and not themselves, who are affected. If it were possible to take a plebiscite on the question of transferring their allegiance from their native rulers as they are, to the British Government as it is, there can be no possible doubt that the subjects of the former would be practically unanimous in voting in the negative. If British India should ever achieve the sort of independence that the extremist politicians profess to desire, the voting might quite possibly go the other way; but, in such a case, if the extremist politicians were there to hear the result—one has belief enough in their intelligence to expect that they would make themselves scarce "while the going was good"—they certainly would not remain to enjoy the fruits of it.

As time goes on, no doubt more and more of the Indian Princes will think it advisable to take steps towards assimilating their form of government to that which prevails in British India. As things are at present, there is no possible method by which the "Magna Charta" of Mr. Kelkar and his friends can be achieved except by a violent upheaval that they themselves certainly recognise as not only undesirable but impossible. If their conference were

Digitized by Google

in any way representative of the interests that it professes to champion, the result would be the same: as it is, their proceedings are worse than ineffective—they are merely ridiculous.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, October 15.

A Gesture.

Signs are not lacking that India is waking up to her responsibilities, perhaps the most important indication having come from the Central Provinces, in the acceptance by Mr. Tambe of the Home Membership of the Provincial Executive Council when it falls vacant next December. He is the first Swarajist to acept office under the Crown.

Mr. Tambe was a Swarajist Member of the Central Provinces Legislative Council and was elected to its Presidency as the result of Swaraj votes. Prior to his election in this capacity, he was a strong supporter of the creed of obstruction, but one of Mr. Tambe's characteristics has been a propensity for thinking for himself. In July last, he advised the Berar Legislative Committee to follow a policy of responsive co-operation, which did not add anything to his popularity, particularly as his rulings in the Legislative Council did not always favour the Swarajists; but his independence of thought has brought about a very healthy respect for him from all shades of political opinion.

Motilal Nehru and Sen Gupta have both expressed their astonishment at Mr. Tambe's breach of one of the fundamental principles of the Swaraj doctrine, the latter petulantly remarking that, at the next general meeting of the party, he will move that no Swarajist shall accept any appointment from Government which carries with it a remuneration. It is doubtful what reception such a proposition will receive; even among the most ardent Swarajists the Rupee still has a very real value. It is not so much the fact that they have lost one of their stalwarts which is causing trepidation to the extremist leaders: it is the fear of the unknown, before which the most experienced politicians have quailed. Surprise tactics have always been a *forte* of the Swarajists: and, with their own weapon turned against them, they do not find the position a pleasant one. Mr. Tambe has undoubted influence and courage, and it will not be surprising if, as a result of his acceptance of office under Government, a Cabinet of Swarajists comes into being in the Central Provinces—Swarajists who reserve the right to think for themselves and, in thinking, to make the gesture which England awaits.

(As this letter goes to post, it is learnt that certain Central Provinces Swarajists have called a meeting to consider the situation which has arisen, and that Motilal Nehru has been invited to attend.)

Indians in South Africa.

Sunday last was observed throughout India as a day of protest against the Asiatic Repatriation Bill now before the South African Parliament. Devout Indians are reported to have spent the day in prayer, and protest meetings were held in all the large towns. Although Gandhi, in a press message, stated that the question was not one of party politics, political speakers could not resist the opportunity the occasion offered, and did their utmost to make party capital out of it. Sen Gupta was in the van with a statement to the effect that the cruelty and dishonesty of the South African measure was directly attributable to the unbending bureaucracy of the British Cabinet, the whole policy of British administration in India and the die-hard and irresponsible British Press. If it had been his intention to do this just cause the greatest amount of harm, this effort would be difficult to improve upon. The general tone of speakers who confined themselves to their subject was one of helplessness; retaliation, in the shape of a boycott of South African imports, the chief of which is coal, was advocated, but was found to be futile: and general opinion tended to follow the finding of Gandhi, who said, "Let me however say that retaliation will be no remedy, if only because there can be no effective retaliation." He went on to say that the only remedy was diplomatic pressure. This had been successfully applied before by Lord Hardinge, and he asked whether the present Government would repeat "that performance."

The demonstration should make a real impression on South African feeling, but its effect would have been greater had the extremists refrained from their suggestion that opinion was divided. This is not the case; but it is the sole achievement of dragging in party politics which, in this question, are irrelevant.

Protection for Coal?

Government has announced its intention of referring the question of protection for the Indian coal industry to the Tariff Board. This arises out of an undertaking given by Sir Charles Innes in the Legislative Assembly last year, after that body had passed a resolution calling for a countervailing duty on South African coal coming into India. Ostensibly, the resolution was made on economic grounds, as it was argued that the South African industry was already in receipt of a rebate on coal supplied to the railways of the Union. At the time, it was explained to the Assembly that, in fixing this rebate, which amounted to a bounty, there was no intention to attack the Indian coal industry; it was merely an economic adjustment to prevailing local conditions. It was further pointed out that a saving of three rupees per ton could be effected on Bengal coal sent to Bombay, if a part sea route were utilized in place of the current practice of direct railway transportation.

Reviewing the conditions prevailing in the coal trade in India, the *Pioneer* shows that in 1922-23 India imported 881,000 tons of foreign coal but, in 1924-25 ,coal imports had fallen off to 448,000 tons. Again, in 1922-23, India exported only 98,000 tons of coal, whereas last year's figures show that exports had risen to 228,000 tons. In comparison with India's total production of twenty million tons, the imports of Natal coal, which is the bone of contention, amount to only one per cent., and it may well be asked what useful purpose protection will serve. So far as foreign markets are concerned, no benefit could be derived from it: and the tendency would be for the price of coal to rise in India, which would immediately have its reflex in other Indian industries. The absurdity of the situation becomes apparent when the statement of the Tariff Board in connexion with the steel industry is considered. They state that they anticipate a reduction in the cost of steel production of Rs. 15/8 per ton in 1926-27, Rs. 9/- of which would be the result of the reduced cost of coal. The taxpayer would welcome such a large saving; but what becomes of the optimism of the Tariff Board in the event of the cost of coal rising?

The case for giving protection to the Indian coal industry cannot be said to be a good one from any point of view; which is perhaps not surprising when the suggestion comes from those whose aims are purely political.

Markets.

The Jute market continues to pursue its course of steadily increasing prices, and it is considered that the limit has not yet been reached. The crop is expected to fizzle out at the end of next month, and it is the almost universal opinion here that a general shortage of the commodity is inevitable. Gunnies close steady but register a small fall on the week. The Tea market has been firm, and shows every appearance of going better; sales here this week indicate a small increase in rates for most qualities and, with the latest report from London that the market there is strong and advancing, the outlook may be said to be considerably more promising. A further decline in stocks of about ten million maunds is anticipated, and on this assumption the surplus will have dropped to the comparatively small amount of one million maunds. There has been a slight hardening tendency in the piece goods market, but operators have been nervous since the receipt of the report from Manchester of a sharp decline in the price of raw cotton.

The Share market reopened officially at the beginning of the week and, apart from a certain amount of excitement over Rubber shares, there has been no outstanding

Digitized by Google

feature; it is rumoured that a considerable business in these shares has been done privately during the holidays: and, though the demand still continues, the turnover has been more restricted of late. Jute shares have fluctuated within narrow limits and close firm: and, in sympathy with the better position of the commodity market, teas have hardened and, with more buyers in evidence, are being talked higher. Of Government securities the long-dated issues have been most in request.

Money has been tighter, the latest rates being quoted at $2\frac{1}{2}$ to $3\frac{3}{4}$ per cent. and $3\frac{1}{2}$ to $3\frac{3}{4}$ per cent. for one and three months respectively. Exchange has been steady for the near position and quiet forward.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay October 14.

The Mill Strike.

All textile mills within the area of Bombay are now closed down, and the strike has extended to Kurla, which is technically outside the city, though there is no reason why the mill hands there should be actuated by any other motives than those working a mile or two away.

Two aspects of the strike appear on the same page of Tuesday's *Times of India*. On one side it is stated that the cessation of work has already had a remarkable effect on stocks of both cloth and yarn, and that the position has changed so much for the better that it is very probable that the owners will be able to restore the reduction in wages in a few weeks: and, in a parallel column, there is recorded a violent attack in the Municipality on the Government in general, and the Governor himself in particular, for weakness and incompetence in failing to intervene in the crisis. Eventually a very mild resolution was substituted and carried, but not until several of the members had taken advantage of this opportunity of talking nonsense.

It is difficult to see how any sensible man can hold the view that the time has come for Government intervention. If it were possible for any unprejudiced Committee to review the whole position of the mills, it would almost certainly come to the conclusion that the market was overstocked and that the prime need was, in one way or another, to restrict output for a time; which, after all, is a very sound cure for the diseases of most industries, from the production of rubber downwards. No doubt a sudden strike is far from being a scientific way of bringing this about; but it is more effective than any amount of delay spent in argument. As has been shown, the present time of year is a very convenient one for the coolies to return to their villages; and it is very doubtful whether the great majority of the working classes look upon the present situation as anything but an unusually good opportunity for visiting their own country. They ought to have sufficient savings to make them very welcome guests at home: and, at the moment, there seems to be very little of a problem to solve: at any rate there has never been a strike like this one, with no sign of any crowds of unemployed in the bazaars.

This is obviously to take a very rosy view of the situation, and it may of course eventually take an ugly turn. At the best, there will have to be a readjustment of the whole situation when the mills reopen: and it may be as well for the Government to take a hand and see fair play all round, when that time comes. But it is hard to conceive a moment less suited to intervention than the present when, except for a few zealous and self-appointed Labour Leaders, all parties concerned appear to have come to a tacit agreement to treat the cessation of work as a sort of extended Whit week: and when, as a matter of fact, Bombay is subject to the most oppressive heat wave within the memory of man. The thermometer is not, of course, recording anything spectacular. It never does in Bombay: but October at its best is quite trying enough: and, when we have it five degrees above normal for a week on end, there are many better places in the world than the loom-sheds.

The Currency Commission.

Mr. Phiroze Sethna has been expressing himself very strongly on the suggestion that India as a whole should boycott the Commission, and that Sir Purshottamdas Thakurdas in particular should be called upon by his fellow countrymen to resign his seat on the Commission. And as Mr. Sethna is the present Chairman of the Indian Chamber of Commerce, it is sincerely to be hoped that his views will prevail. The opposition to the Commission is based on the assumption that it is certain to report adversely to the wishes of the Indian people, whatever they may be: for, in a matter of exchange, it does not follow that the most consistent of us will adhere to the same views for many months at a time: and it seems at least conceivable that the present cry, that the 1s. 6d. rupee is the ruin of India, may be entirely altered before very long; for arguments on exchange are a delicate business and the problem is not one that can be solved by vague generalities. But, as matters stand to-day, a certain block of Indian opinion has made up its mind, first that a reversion to 1s. 4d. is necessary for the salvation of India, and secondly, that the majority of the Commission is pleged to oppose such a reversion without listening to argument. Both these views are probably equally wrong; but the average Indian mind is not yet capable of conceiving the attitude of people who can listen to argument: and they are also quite unable to hold their own in argument, unless they are supported by the shouts of their adherents.

It is much to the credit of both Sir Purshottamdas, and Mr. Sethna that they both enjoy arguing on the side that is not certain to have support; and it is most earnestly to be hoped that, with their help, it will be realised throughout India that the Commission is not sitting on a foregone conclusion, but will do its very utmost to clear up scientifically one of the most difficult international problems of the world, on which nobody with any degree of sense would be unwise enough to dogmatise.

THE INDIAN MAIL.

Indian Coal Industry.

In the course of a lecture recently delivered at the Rotary Club, Calcutta, Mr. George Millar gave some very interesting facts and figures. He said that the capital invested in coal mines in India amounts to over nine crores of rupees, or nearly seven million pounds.: and that the annual output of coal, which was only five million tons in 1901, had reached 25 million tons in a recent year, though it had since fallen to 22 million. In spite of this fall, the chief reason for the present depression in the trade was over-production: and the root cause of trouble was the great increase in cost. Capital expenditure, involving heavy overhead charges and interest, had recently much increased: and care was necessary to ensure that expenditure should be strictly limited to what was necessary to obtain higher working efficiency: otherwise the Indian coal industry was likely to follow the example of the over-capitalised iron and steel industry "which had now to be kept tottering on bounty stilts."

Mr. Millar's remarks about the Indian miner were far from complimentary. He described him as perhaps the lowest producer of coal in the world, his average production (with his wife to load the tubs) being only just over half a ton a day. That he could do much better than this was proved by an experiment, in which an average Indian miner by no means a Hercules: his "record" is given as 25 years of age, 5 feet 4 inches in height, and 7 stone 10 pounds in weight—worked, under supervision, on a seam of moderately hard coal, for eight hours and five minutes: during which period he cut, and his wife loaded into the tubs, 7 tons 18 cwts. of coal. From these facts the lecturer deduced that the Indian miner's effective day's work is really less than one hour a day: "the balance of his time underground is spent in playing the flute, talking bazaar gossip, or waiting for an empty tub—which he has a great dread of getting." It is true that he is paid on production, but the rate per tub, which was only $3\frac{1}{2}$ annas twenty years ago, is now $10\frac{1}{2}$ annas about a shilling. A tub holds about three-

Digitized by Google

quarters of a ton of coal. The increase in his wages has not improved his efficiency as a workman, for its only effect has been to reduce the number of his working days per week, and to make his already irregular attendance even more so. The Indian miner comes to work and leaves when he chooses, and does as much work as he thinks fit: if he takes offence at anything, not only himself, but his whole gang, clears out at a minute's notice, to be received with open arms at the next colliery.

The remedy put forward by the lecturer was the elimination of the miner as a coal cutter, and the substitution of machinery. A crew of four men, properly trained to work a modern coal cutter, could produce 150 tons of coal in a working day of eight hours. Machines should be worked two shifts of eight hours each, the third shift being occupied in fitting spares and doing small repairs. If this were done, it would be possible to engage a better and more intelligent type of workman, and to pay him a much higher wage; for one machine, properly manned and efficiently worked, would produce in one day 300 tons of coal, the equivalent of the work of 600 miners.

If, as the lecturer declared, an Indian miner does about one-eighth of a day's work in his day, his average is about that of the ordinary Indian labourer. A common sight in India is a gang of road-menders at work, usually consisting of about eight men. One of these wields a shovel, to which a rope is attached which is held by another, the combined efforts of both directing the spadefull into a wheel-barrow. A third sits waiting for the barrow to be filled, in order to wheel it away: during which process the first two cease from their labours and take a pull at the family pipe, which a fourth has been assiduously keeping alight for the purpose. A fifth sits on the roadside and warns the workers to stop work whenever a passer by looks respectable enough to be likely to suffer in dignity from a shower of stones: a sixth is the "Shabash Karnewala"—the professional encourager of the toilers, whose life's work is summed up in Brer Rabbit's promise to the cow who had asked him to help her pull her horn out of the tree: "You do de pullin', Sis Cow, and I'll do de gruntin.'" A seventh keeps a small fire alight, and does the gang's cooking: while there is generally an eighth somewhere round the corner, where he has gone to drink water or for some similar purpose. And the total output of the gang would make a British navvy laugh: certainly with scorn, and possibly also with envy.

The Bombay Cotton Mills.

There has just appeared a report by the Bombay Labour Office on wages and hours in the cotton mill industry. The report—as such publications often are—is very much out of date, for it is based on facts and figures collected in August 1923, while the industry was still flourishing. The number of persons employed in the cotton mills of the Bombay Presidency was then 190,000 men, 46,000 women and 12,000 children: the latter—boys and girls between the ages of twelve and fifteen—being already a diminishing quantity. The daily working hours for mill employees are limited by law to eleven (with a weekly maximum of sixty) for men and women, and six for children: and no woman or child may be employed at night, or at more than one factory in the same day. In Bombay the hours actually worked were 10 by men, 9½ by women and 4¾ by children. The average monthly earnings of all persons employed were almost exactly double those of the period immediately preceding the War: being £2 10s. for a man and £1 5s. for a woman or child, exclusive of overtime pay and the money value of the concessions made to employees in the matter of housing, clothing and food.

Absenteeism is rife, and the average earnings would be increased by about twelve per cent. if it did not exist: the figures given above take it into account. The report says that it is a common thing for a worker to absent himself because he has earned enough for subsistance and lacks the will to increase his wages to the maximum: and that the ascertainable percentage of absenteeism is really less than the actual, since a weaver who absents himself because he has earned enough for subsistence and the man in charge of the next loom to look after his own as well. In most mills the man, to whom the loom is assigned in the pay-roll, receives his earnings on the output of his loom, irrespective of whether he actually tended it himself during the month or not.

Thus the report, belated though it is, adds a further piece of evidence to the Indian side of the controversy about "underpaid Oriental labour": that any increase in the standard of living of the Indian workman must originate with himself. At present, he is deliberately content with his existing standard and deliberately declines to try to improve it: if he would exert himself to do so, higher wages would necessarily follow on increased effort and improved output.

Cotton Mill Profits.

In a recent issue we suggested that the Bombay mill owners were themselves largely to blame for the position in which the industry now finds itself, owing to the fact that when, during and immediately after the War, they were making enormous profits, they made no attempt to use even a reasonable part of them as an insurance against a rainy day. The present mail brings some figures that support this contntion: and remarkable figures they are. Specially outstanding cases are those of two mills which, in the four years ending with 1923, paid out, in ordinary dividends, nearly 270 lakhs of rupees on a capital of 47 lakhs, and 60 lakhs on a capital of 8 lakhs, respectively.

One does not know whether these and similar figures were quoted in the Legislative Assembly when that body passed their recent resolution in favour of the suspension of the Excise Duty: though, if not, they well might have been. Not that, if they had been, their quotation would have produced any effect on the champions of the mill owners: for it is quite obvious that the resolution was put forward as a political manœuvre, not as a serious economic proposal. On the face of it, the strike is due to an attempt by the owners to reduce wages: they profess to be driven to such a reduction by the handicap of the Excise Duty: therefore owners and strikers alike can throw the blame for their action on Government, on whom the odium remains, while they divest themselves of all responsibility.

The Belgian Royal Visit.

The flying visit of the King and Queen of the Belgians to India has proved a great success, and their Majesties have won golden opinions wherever they have gone. Considering the shortness of their visit, and the amount of ground that they covered, it was inevitable that railway travelling should form a large part of it. A letter from an official of the Bengal-Nagpur Railway, which we have been privileged to see, says that the King showed a great interest in railway matters, and displayed a quite astonishing knowledge of railways in many parts of the world. On the journey from Nagpur to Calcutta, His Majesty alighted at most of the stations where the train stopped: and, besides making very favourable comments on railway management and control in India, expressed himself as particularly struck with the neatness and tidy condition of the little wayside stations.

The Mineral Wealth of Burma.

The report on the mineral production of Burma in 1924 contains some striking figures. The total output of petroleum was over 270 million gallons, valued at nearly 100 lakhs of rupees: and, among the other important productions are—refined lead, 50,500 tons, valued at 232 lakhs: zinc concentrates, 18,650 tons, 21 lakhs: copper matte, 3,000 tons, 16 lakhs: tin ore, 2,400 tons, nearly 28 lakhs: antimonial lead, 1,200 tons, 3 lakhs: silver, 5¼ million ounces, over 112 lakhs: jadeite, 2,630 cwts., over 8½ lakhs. It is noted that the depression in the wolfram market continued throughout the year, the ore only being extracted in mines where it occurred, and had to be worked, along with tin. The production of precious stones—rubies, sapphires and spinels—was much smaller than the previous year, declining from 187,000 to 101,000 carats: but it is noted that the ruby market was satisfactory and that there was a good demand for stones of good quality.

The total value of all mineral products exported from Burma during 1924 was 1,410 lakhs: of which 867 lakhs —mostly bar silver and mineral oils—went to India, and 543 lakhs to other countries. The report mentions that the royalty collected on petroleum was nearly 37 lakhs of rupees.

INDIAN COMMERCIAL NOTES.

The prospects of the export season just about to reopen are problematical. On the whole the monsoon, on which so much depends, has tricked the pessimists and has turned out better than was expected. Gujerat and Kathiawar are short, and badly short, of rain; but the general crop position in India is not unfavourable. The wheat crop of last spring was poor, and exports for the five months April to August, 1925, are low at 162,293 tons, as compared with 406,444 tons for the same five months of 1924. There is even talk of imports. But high prices will undoubtedly stimulate sowings this autumn, and there is no reason why, if all goes well, exports should not be in full swing again by February or March. Rice exports are nominal at 1,167,000 tons for the five months, Germany taking less and the United Kingdom more, than last year. Jute exports are well maintained, especially to America and the Continent. For the five months April to August, 1925, 125,000 tons were exported to a value of Rs.6½ crores; whereas, for the same period of 1924, exports of 110,000 tons were valued at only Rs.3¾ crores, showing the phenomenal rise of prices in 1925. It is doubtful how long exports can be maintained this season in view of the known shortage of the crop.

Tea exports are satisfactory at over 109 million pounds for the five months, as compared with less than 90 million pounds this time last year. The cotton position is of considerable interest at the moment. India's cotton season runs from September 1 to August 31, and the statistics for the season ended August 31 1925, just published, show total exports of 4,245,000 bales out of a total crop of 6,058,000 bales. Of the exports, 2,340,000 bales went to Japan, 1,245,000 to the Continent, and 200,000 to the United Kingdom. The prospects for the new season are on the whole fairly good. Sowings, as reported so far, have advanced from 21¾ to 22¾ million acres. If all goes well, it is quite on the cards that last year's record output of over six million bales will be exceeded this year. Purchases by Japan have been particularly heavy. In fact, the demand for Indian cotton has been so keen during the past few years, when American has been scarce and dear, that the margin between the two has shrunk considerably. Before the War, when middling American was quoted at 7¾d., the best grades of Broach could be purchased at Liverpool for less than 6d.—a margin of nearly twopence. To-day, even after the slump, with American middling in the neighbourhood of 10¾d., Broach is quoted at nearly 10d.—a margin of less than a penny.

On the import side, India's purchases of cotton textiles have fallen off during the five months, from 700 million yards in 1924 to 637 in 1925. The British share of this yardage has fallen from 654 to 537, while the Japanese share has increased from 51 to 82 million yards. In coloured goods especially, Italy and Japan have made considerable strides in the Indian market during the last three years. In iron and steel goods and machinery the British share of the trade is fairly well maintained. During the eight months January to August, 1925, India imported iron and steel girders, plates, bars, etc., to a total value of nearly eleven crores of rupees, of which the United Kingdom provided over 7¾ crores and the Continent 2¾. In machinery, out of total imports to the value of 9¾ crores, the British share amounted to eight crores, the American to 84 lakhs, and the Continental to 74 lakhs.

In general, if prices can be further reduced, the prospects of British trade with India during the coming season are distinctly good. The slump in cotton will help Lancashire, by bringing cotton textiles nearer to the purchasing capacity of the Indian cultivator, who is getting high prices for his jute and wheat, fair prices for his rice and, in spite of the slump, a still handsome price for his cotton.

INDIAN EXCHANGE.

London, November 2.

Less activity has characterised the Indian Markets during the past week and Rupee Exchange has been a shade quieter. This has been particularly so in Bombay, where business appears to be on a restricted scale. T.T. in Calcutta and Bombay is quoted at 1s. 6 5-32d. to 1s. 6 3-16d. with business done for cash at the higher rate, to a moderate extent, and rates showed no tendency to fall away until Monday, when a fair amount of inter-bank T.T. was reported at 1s. 6 11-16d. for delivery this month. It is said that the buyers were the Japanese Banks, so that it may be assumed that they do not anticipate any early pressure upon their resources to finance cotton shipments to Japan.

Three months' credits are on the same level at 1s. 6 7-16d. for delivery within the next three months, and there is less inclination this week on the Bombay side on the part of the banks to make any concessions. The last weekly statement of the Imperial Bank of India shows that the withdrawals for trade purposes have diminished, and this is further borne out by the shrinkage in Government purchases of sterling for immediate delivery, which for the week are reported to be £250,000 only.

Forward rates are unchanged at 1s. 6 3-16d. T.T. for the next three months, but that rate is now available for March delivery, at which a moderate business has been done in Bombay, while some April fixtures are reported at 1s. 6 5-32d.

The money market in India is inclined to be easier, and short deposits for a month or two have been fixed at 2½ to 3 per cent. Rupee rates in London are stationary at 1s. 6 7-32d. T.T. for delivery to the end of February, with occasional opportunities of obtaining 1-64th lower for cash, which merchants readily take advantage of when the rate is offered.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K., Continent and India.

The engagement of land transport for Cargo to towns in the interior of Mesopotamia and Persia undertaken on behalf of Shippers of Through Cargo to BAGHDAD and AHWAZ.

NOTES AND NEWS.

170, *Strand, London, W.C.2,*
Tuesday Morning,

The End of Wembley.

The passing of Wembley at the end of last week was hailed by most people with considerable regret. But as I pointed out recently the Exhibition could scarcely have carried on indefinitely, even in an altered form, and the figures for the attendances this year showed quite plainly that Wembley was outliving its usefulness. The Exhibition had, in fact, done its work as an educative influence and as an instrument for the development of trade within the Empire, and in both directions has more than justified the high hopes that were entertained on the initiation of the project, and, if Wembley is no more, its results will be more and more in evidence with the passing of the years.

The B.I.F.

After Wembley the British Industries Fair, of the prospects of which I hear the most encouraging reports. Already the number of applications received for the White City section constitutes a record, and I understand that this is also the case with regard to the Birmingham section. Besides testifying to the value of the Fair as a trade medium, the increase in the number of exhibitors indicates very plainly the widespread belief that we are at length on the verge of a great trade revival. It is a fact worth noting that a very large number of the firms who will exhibit at the White City and Birmingham have been represented at every fair since the commencement of the series in 1915. On the Continent and particularly in the Near East fairs are regarded as a most important medium of trade development, and it is evident that the same view is now beginning to gain ground here.

P. and O. Dividend.

The reduction in the dividend on the P. and O. Deferred stock reflects the difficulties that the shipping industry has continued to meet. Last April an interim dividend of 6 per cent. tax free was announced, and this very naturally led to the belief that the dividend would be maintained at 12 per cent. Since then, however, we have had the shipping strike, which affected the company's Australian services, and the proposed final dividend of 4 per cent. ought not therefore to have come as a surprise to the stock markets (though it evidently did so), especially in the light of Lord Inchcape's suggestion at the last general meeting of a possible dividend reduction on account of the continued trade depression.

Anglo-Persian Oil Report.

A most satisfactory report is forthcoming from the Anglo-Persian Oil Company for the year ended March 31 last. After providing for depreciation, debenture interest, etc., the profit was £3,571,967 as compared with £2,507,867 for 1924 and £2,689,143 for 1923. £393,000 is allocated for extra depreciation, while the various reserves receive £800,000, and it is proposed to pay an ordinary dividend of 12½ per cent., less tax, as compared with 10 per cent., leaving £2,073,000 to be carried forward as against £1,747,000. Obviously the great increase in the profits would have justified a larger dividend, but no one is likely to criticise the conservative financial principles pursued by the company, and it is obvious that the extremely sound progress made will mean increased distributions in the future. Most favourable accounts are given of developments in the Persian main fields. The area of oil-bearing territory has been greatly extended, while a large additional area of productive territory has been proved. In the Argentine production continues to increase, and the company's property is now being worked at a profit. Finally, test drilling has been started on the concession recently acquired in Albania.

Empire Cotton Growing.

The meeting of the Sudan Plantations Syndicate has been awaited with more than ordinary interest this year on account of recent developments in the Sudan and the desire to know something of the immediate outlook for cotton growing in that region. Important speeches were made at the meeting by the Chairman, Mr. F. Eckstein, and Lord Lovat, and what they had to say with regard to the company's operations will be read not only with the keenest interest but with the most justifiable satisfaction at the record of the achievements of the company in the cause of Empire development. Twenty-one years ago—for the undertaking has just come of age—cultivation was started at Zeidab with a few hundred acres of cotton. To-day, including the Kassala Cotton Company, in which the concern is largely interested, nearly 100,000 acres are under cotton, and next year it is hoped to add a further 20,000 acres in the Gezireh alone. Mr. Eckstein, it may be noted, stated that negotiations have been begun for a considerable further extension of the Syndicate's operations in the Sudan, and he indicated that if they reach a satisfactory conclusion it will probably mean a further increase in the capital of the concern.

The Rubber Position.

As I expected, November 1 came without any modification of the restriction scheme. There was the usual ten per cent. increase making the percentage 85, and three months hence we shall have a further increase of 10 per cent., bringing the suspension of the operation of the scheme within sight. It shows how sensitive the market is that the approach of November 1 should have brought about a decline in the shares, and that to-day sees a firmer tendency in evidence. It will be remembered that writing two weeks ago I suggested that a further upward movement in the shares was not to be looked for before this week. I expect now, provided no unforseen factors intervene, that we shall see a sustained period of activity, as we have three months before the date for a further increase in the percentage, though there will doubtless be fluctuations from time to time as holders take their profits.

A Challenge to the World in Quality & Price!

TRADE BUYERS

throughout the world are cordially invited to attend the great national

BRITISH INDUSTRIES FAIR

Organised by H.M. Department of Overseas Trade and held at

LONDON WHITE CITY **and BIRMINGHAM** EXHIBITION BUILDINGS, CASTLE BROMWICH

from February 15th to 26th 1926

THIS enormous exhibit of British Goods will constitute a challenge to the whole world in quality and price. Make your plans *now* to attend both at London and Birmingham. Practically every kind of British manufacture will be on exhibit. Admission is free to Buyers and full particulars and Invitation Ticket can be obtained from

ANY BRITISH LEGATION, CONSULATE or TRADE COMMISSIONER,

or write to

The DEPARTMENT OF OVERSEAS TRADE
35, Old Queen St., Westminster, London, England,

or the

SECRETARY, CHAMBER OF COMMERCE,
Birmingham, England.

THE GRAIN TRADE OF THE PERSIAN GULF.*

(Continued from page 537.)

Between A.D. 775 and 809 El Mahdi and Harun el Rashad became Caliphs, and during the period of the latter the extent of the Empire enveloped Persia, Arabia, Syria and Egypt, and prosperity took the place of revolution and war. Baghdad then became the centre of trade, and amassed great riches.

The decline of this vast Empire commenced after the death of Harun el Rashid in A.D. 809. Baghdad was again the scene of rebellion, and its rulership changed hands no less than five times up to A.D. 865. Mesopotamia, however, continued under the Abbasid Caliphate to prosper until the time of the Crusades in 1127, when Northern Mesopotamia fell into the hands of a Turkish leader.

In 1258 the greatest disaster to Mesopotamia took place, and its complete destruction was carried out when the Mongolian invasion took place under the leadership of Hulagu who set out from Turkestan on a gigantic raid. His sole object was plunder and destruction. His forces consisted of hordes of Chinese, Georgians, Afghans, Persians, and Turks whom he captured and collected en route. They besieged and captured Baghdad, massacred its inhabitants, razed the town to the ground, and carried away all its riches. It was during this raid that the canal and irrigation schemes North and South of Baghdad were completely destroyed and 5,000 years of progress was obliterated in one year. The whole country became a waste and desolate land, and so it has since remained.

Mesopotamia thereafter became part of an Empire governed by the Khans of Persia and Timur, and ultimately on the advance of the Ottoman Empire was annexed during the years 1514 and 1517.

Up to the time of the Hulagu Raid, it would appear that all Mesopotamia's wars, excepting, perhaps, the Moslem and Persian wars, resulted in no irreparable damage to the irrigation and cultivation of this country. The early rulers boasted of the irrigation works which they initiated or restored before they spoke even of foreign wars. Later conquerors undoubtedly realised that the protection and the continuance of the wonderful schemes which they acquired was for their own benefit as well as as that of the population.

The Tigris in those days ran between Baghdad and North 34 degree latitude in a westerly direction to that of its present course. The carrying away of the weirs during the Hulagu period was undoubtedly the reason for the Tigris altering its course and breaking into the Nahrwan Canal and the devastation of the country.

Iraq Under the Turks.

Since the Ottoman or Turkish occupation in 1514, nothing was done to restore these canals and irrigation works or to reclaim the land until 1910. Although the Turkish Government had conquered Mesopotamia and held it for 400 years they never actually conquered the tribes, nor could they obtain regular tribute from them. The Government kept sufficient troops to control Baghdad, Busreh and Mosul and to keep open the Tigris, but on the Euphrates and other outlying districts the country was unsafe and generally in a state of tribal warfare, which the Turks themselves encouraged for their own safety.

During the time of the "Young Turk" Government, say 1908, a change took place and a progressive policy was adopted. The system of bribery and corruption amongst officials was to a certain extent minimised by the appointment of Nazim Pasha as Governor of Baghdad. During this period Sir W. Wilcocks was asked to advise and report on irrigation schemes for Mesopotamia. The only sign of any irrigation works then were the useless old Hindia Barage which was undermined by the Euphrates and the silted up canals which had not been used for centuries. This was the state of the country when Sir W. Wilcocks, with a staff of capable engineers whom he brought from Egypt, surveyed the whole country.

Busreh at the outbreak of war was a thoroughly undeveloped port. There were no roads outside the town worth mentioning. The streets were narrow and practically impossible for vehicular traffic. Lighting was carried out by badly trimmed oil lamps very far apart. There were no wharves, and steamers discharged and loaded their cargoes in mid-stream.

This was all revolutionised during the years 1914-1920 when a vast expenditure was incurred by the British authorities. Concrete metalled and other roads were built, and extensive reclamation work was carried out. A large power station was installed at Busreh, sufficiently powerful to provide electric light for the military camps and stations in Busreh and its neighbourhood, and also the wharves. Also telephone systems, water supplies and fire stations, with modern engines, were installed.

Wharves were built at Maaghil, four miles up river, and it is estimated cost the British Government something in the neighbourhood of four million sterling. There are a continuous permanent wharf to berth six ocean steamers and temporary wharves to accommodate six more. The permanent wharf was constructed on up-to-date lines and with all modern conveniences such as electric cranes, etc. Many railway sidings were laid down to these wharves from the railway station of Busreh. The wharves probably dealt with a traffic of 700,000 to 800,0000 tons a year during the war, and as a war measure they may have been necessary, but they are far beyond the present and future needs of the port, so far as one can judge.

Since the war the Port Authorities have provided five wharves north of the permanent wharf for the grain export trade, a progressive move as grain can now be brought down from up country and delivered alongside steamers berthed by railway or river. Before the War grain was stored on the Kunduk Creek, and necessitated a great deal of handling. This site was inconvenient as loaded lighters of grain could only navigate this creek at high water. The country is well served by ocean transport. The British India Co. maintain a regular weekly fast mail service of steamers, also a weekly subsidiary service to and from India, the latter calling at Persian Gulf ports. The Strick and Ellerman Lines have a regular service to and from the United Kingdom. On the Tigris and Euphrates and Tigris S. N. Co., has frequent sailings between Busreh and Baghdad.

Baghdad is a larger and better built city than Busreh, and remains to-day very much the same as in the British occupation. The Military Authorities arrived too late in the War, and had no time to wield their gilded brush to the same extent as they did at Busreh. They, however, erected Government offices and dwellings and also a Cantonment south of Baghdad for the troops. A fine bridge known as Maude Bridge was built across the Tigris.

Climatic Extremes.

The climate of Baghdad and Busreh is of the two extremes. During the summer, from April till the middle of October, there is no rain and the thermometer rises to as high as 120 degrees in the shade, but during the winter the rainfall is only about 4 to 5 inches and frosts are to be expected during December and January. The winter is more to be compared with a fine English spring or autumn. In the Mosul district the climate is different from that of Baghdad and Busreh, and the hills to the north and east, about 30 miles away, are covered with snow every year from November to April; the rainfall in these parts is heavier.

It is generally thought that the climate has changed considerably since Babylonian days. There was then probably a greater rainfall and a less trying summer, and it may change again with the extension of irrigation, cultivation, and possible afforestation. The country is flat, and there are no hills except north of Mosul.

The country's resources are entirely dependent on the produce of its land, which, owing to its small rainfall, is dependent on irrigation. Of mineral wealth it has none, excepting the possibility of oil in the Mosul district, for which the Turkish Petroleum Co. have been granted a

*A lecture given by Mr. C. Wills, of the Mesopotamia-Persia Corporation, Ltd., at the City of London College.

Digitized by Google

concession and are now about to explore its possibilities. There is no coal of any commercial value.

One of the principal exports from Mesopotamia other than grain and wool, is dates. There are grown around Busreh along the banks of Shatt-el-Arab to the entrance of the river at Fao, also to a small extent around Baghdad. The export can be estimated at 80,000 tons, and the dates are shipped to all parts of the world.

From Busreh to Fao there are numerous large canals which were specially built and intersected by other canals for these date plantations, and Sir W. Wilcocks states that in order to protect them, when his irrigation schemes are completed, it will be necessary to run a sweet water canal down the banks of the Shatt-el-Arab as the sea water will then come up as far as Busreh.

Before the war the only transport routes were the Euphrates and Tigris. On the former river, between Busreh and Baghdad, steamers towing barges and vessels drawing not more than three or four feet, according to the season, could be navigated.

From Mosul only kileks or rafts of inflated skins were used to bring down the produce of that district. These rafts were composed of 300 to 500 skins with poles and brushwood, the latter two from the forests north of Mosul and in the lesser Zab district. The skins are whole goat or sheep skins, and are returned after the voyage to Mosul. The poles and brushwood are sold in Baghdad. The carrying capacity of a kilek can be based on 25 skins to the ton.

On the Euphrates only native craft can be navigated, and have to tranship cargo at the Hamar Lake owing to the shallowness of the water there. Since the British occupation the British Government have built a metre gauge railway which runs between Busreh and Baghdad, and has since been extended to the Persian frontier at Khanikin, and is being further extended to Mosul. The present mileage completed is 733 miles. This railway benefits the country greatly, and taps the grain growing districts of Mosul and the Euphrates area, and grain can now be brought down to Busreh in a little over twenty-four hours.

Before the War grain from Mosul used to be sent down by kilek or camel, and the journey occupied by the former to Baghdad was from 3 to 13 days and by the latter 24 to 30. On the Euphrates grain used to be sent down by boat to Busreh and occupied about two months.

As I have said before, in 1908 Sir W. Wilcocks was asked to advise and report on irrigation schemes in Mesopotamia. He stayed with me when in Busreh, and was most optimistic on the possibilities of the country, and said it could be restored to its riches of ancient days. He was of opinion that its potentialities were even greater than those of Egypt and that the exportable surplus of grain could be increased 100 times.

In his report published in 1911 he states that the irrigation system of Mesopotamia cannot be carried out on the same lines as that of Egypt, as the former is basin irrigation and the latter perennial. The Nile is in flooding from August to October, while the Tigris and Euphrates are in flood in March, April, and May which are followed by the burning and rainless months of June, July, and August, and irrigation must be practised if any summer crop is to be brought to maturity.

As regards the extent of irrigation which will one day be possible, Sir W. Wilcocks mentions that the water supply of the two rivers will permit of over 7,000,000 acres of winter crops, wheat, barley, etc., while the summer discharge will permit of 950,000 acres of rice and 3,000,000 acres of millet, sesame and cotton.

Schemes which he recommends should be carried out with as little delay as possible will allow for 3,500,000 acres to be put under cultivation. He estimates on the basis of his experience in Egypt that this acreage which at the time lay waste will have an intrinsic value after his schemes are put into effect of £91,000,000, on which a revenue of nearly £8,000,000 can be expected and is made up of net rents less tithes) 6¾ million and tithes less maintenance 1¼ million. These schemes on a pre-War basis he estimates would cost £26½ million. Most of the land is Government property. In his report, he states that, as is well know, the population of Mesopotamia is insufficient to carry out the agriculture of the vast track of country, and he points out that although a certain number of people can be expected to come from the countries around, it will be necessary to encourage some of the surplus population of India to settle down in Mesopotamia. The question of population is a serious difficulty, especially as the infantile mortality recorded at the present time is about 80 per cent.

The Government of the "Young Turk" showed great keenness in the schemes, and one of the first it authorised was the building of a new Hindia Barage and the Hindia Canal, which was completed by Sir John Jackson and Co. in 1913. The estimated cost of this scheme was £300,000.

But for the War I think the Turks would have carried out further schemes, and probably the Habbanyeh Escape and Regulator scheme, north of Hindia on the Euphrates, would have been the next one to be put in hand. The cost of this has recently been estimated at £400,000, and it would hold up 255 milliards of gallons of water for use in the dry season, estimated to be sufficient for the annual cultivation of a million acres. Now this water escapes through the Hindia Barrage during the flood season in the spring of the year.

During the War and the British Military occupation, the Military Authorities carried out the necessary work of flood protection and river conservancy, and also made the Yusufia Canal and completed the Sakliwa Canal, besides carrying out a great many improvements and the extension of the then existing canals.

Since Mesopotamia has been handed over to the Iraq Government, owing to the finance of that country being in such an impoverished condition, only 32 lacs (= £200,000) has been spent on irrigation schemes. The Iraq Government continues the Rustrum Experimental Farm started by the British Military Authorities about 10 miles due east of Baghdad on the Diala. The estate has an area of 650 acres of which 100 acres are reserved for experimental work. An agricultural college has also been erected on the estate.

Cotton Growing.

I would mention that the growing of cotton has been recently seriously started. At present it is in its infancy, and was only experimented on during the latter part of the War. To-day the crop only amounts to 3,000 to 4,000 bales.

I understand that the best district for cultivation of cotton is on the Hindia Diala and north of Baghdad. Progress would be slow and if all Sir W. Wilcocks' schemes were carried out the crop would probably not exceed one million bales of 500 lb. From experiments on a small scale the production of cotton is 1,250 lb. per acre.

While on the question of irrigation schemes, a serious point has recently arisen as to the Iraq Government's rights to the Euphrates waters owing to the French in Syria in the Muskana and Kabow districts carrying out large irrigation schemes at these places, which, if completed, will take away a very large quantity of water. This, of course, would affect the scheme of the Habbanyeh

Escape, but it has still to be decided if the Syrians have a prior right to all surplus water though the Euphrates in the first instance runs through their territory. Similar cases have arisen between the Egyptian and the Sudanese Governments over the Nile waters.

To give you some idea of how large is the Iraq Government's landowning interests, I find it stated in official reports that it owns approximately 75 per cent of all land under cultivation. The revenue given last year as that collected on agricultural profits was 109 lacs, approximately £880,000. The export duty on grain is 1 per cent. ad valorem.

Now to review the position of Mesopotamia to-day and the hopes raised of those interested from the time the Turks appointed Sir W. Wilcocks and seriously started to carry out his schemes.

The Turks were in a position to find the capital required, and concessions would easily have been made acceptable to the financial houses of Germany and Great Britain who were at the time, i.e., before the War, in very keen competition respectively to secure or maintain their important interests in this country. The former having secured the concession of building the Baghdad Railway from Constantinople to Busreh with a kilometric guarantee made it all the more important to the Turkish Government to re-establish the resources of Mesopotamia. The War intervened, and the conquest of Mesopotamia by the British still strengthened the hopes that the British Government would continue these irrigation schemes, but at the time it was never expected that after the conquest of the country the new system of Mandatory Power would be established.

Mandatory System Unsatisfactory.

This Mandatory system is not conducive to the progress of the country as its period of control is so indefinite. Mesopotamia, which is now known as Iraq, has its own Government, and the British Government under this benevolent system of mandates has pledged itself to help and protect the country for only a short period of years until August 1928, with a probability of renewal for a further restricted period. The Iraq Government is unable to-day to balance its budget after paying its share of the Ottoman Debt, and there is no hope that it will be able to do so for some time to come. When the British Government withdraws, the expenditure of the Iraq Government will be increased as the Army which the Iraq Government at present employs is only 7,000 men and would have to be considerably augmented to replace the British Air Force and troops which now cost Britain £4,000,000 a year, which is incidentally approximately the figure of the country's present total revenue. I also doubt if the Iraq Government could possibly raise the necessary troops for its own protection as the Arabs look down on a military career. It is also asking too much to expect the Arab to govern and control the finances of their country without some experience. They are a proud and intelligent race, but have been subject to centuries of oppression and misgovernment by a power whose policy was based on extortion, bribery and corruption and the education of its people has been neglected.

With the Iraq Government in this unsatisfactory and unstable condition no financial houses are likely to sink capital in the country for irrigation and agricultural works which the Iraq Government could not protect if the British withdrew. Had the British Government after its conquest of Mesopotamia been in the same position as it was in Egypt, there is no doubt that continual development would have taken place and the country would be gradually restored to its ancient prosperity. A further point is that in all probability the British Government would have been able to recover ultimately a very material portion of their heavy post-War expenditure that they have incurred and are still incurring there.

The policy of the Iraq Government according to an official report is that "Indian labour will not be admitted to the country on any account, at any rate for agricultural purposes. This alone will result, owing to the small population, in the prevention of any speedy development.

The question of Mosul being retained by Iraq is also vital to its interests, as without it not only would its expenditure increase owing to the necessity of larger forces to protect an unnatural and open frontier on the north.

At the time of the signing of the Anglo-Iraq Agreement, it was, of course, well known to both parties that the country would not be able to carry on by itself in 1928 and, therefore, that a renewal of this agreement would be necessary. The policy advocated by some parties that the British should clear out from Mesopotamia "bag and baggage," would result in chaos, and the alternative proposal that the Turks should return, though most undesirable, would then in the natural course of events take place.

The people of Busreh were not in favour of the country receiving self-government and the notables of Busreh, when the decision was arrived at to form the present Government, petitioned the British authorities to annex the vilayet of Busreh and to leave Baghdad vilayet to form their own Government, which they were so keen on doing.

The Iraq Government have in land and water valuable assets which are worthless to-day, but only want capital labour and security to make once more a "land flowing with milk and honey," to use a Biblical expression.

Without support the Iraq Government would be in a parlous state, and the only solution to the extraordinary deadlock which prevents Mesopotamia's valuable resources being developed is for the British and Iraq Governments to come to some permanent understanding.

ROUMANIAN NOTES.

(From Our Own Correspondent.)

Bucharest, October 26.

International Congress of Oil Engineers.

The meetings of this congress have been taking place for some time, and the foreign delegates have been conducted over the Roumanian oilfields. The congress has been organised under the chairmanship of Engineer T. Metzianu, formerly technical manager of the Steaua Romana Company, and several of the large oil companies have placed important sums at his disposal for this purpose. In connection with the congress an exhibition of oil well machinery and appliances has been opened in the Parc Carol since September 27 and will last till October 31. The exhibitors include French, English, German, Austrian, and Swiss firms beside all the important Roumanian manufacturers of oil well appurtenances.

Roumanian Trade Balance.

The trade balance for the first six months of this year shows a considerable excess of imports over exports. The Government Press, however, is still hopeful that the deficit may be made up by the end of the year, in spite of the falling off in grain exports during the usually busy autumn season.

Miscellaneous.

Owing to the loss of several registered letters from abroad a special office has been opened at Timisoara to deal with all registered mails coming in over that frontier station.

The export of salt has just been made free from restriction as to quantity, etc. The selling price at the salt mines, free of export tax, is from £9 to £13 3s., according to quality.

The Egyptian Ministry of Communications has decided to enlarge the Kafr Sakr railway station at a cost of about £E6,000.

For the first six month of the current year Roumania's oil production amounted to 1,602,051 tons, compared with 857,535 tons in the same period last year. The pre-War output was passed last year, with 14,300,000 barrels, of which the State concerns accounted for 33 per cent., and those in private hands for 67 per cent.

Shipping Intelligence.

LIGHTING AND BUOYAGE IN PERSIAN GULF.

H.M. Government has decided, in consultation with the Government of India, that the cost of the service of lights and buoys in the Persian Gulf shall in future be defrayed from light dues to be collected at Basrah. The dues will be levied, with certain exceptions, on vessels which will derive benefit from the service, and will for the present be at the rate of 3 annas a ton, both on entry and departure. The shipping interests concerned have been consulted, and have agreed to constitute an advisory committee for the purpose of advising the Government of India, who will manage the service, on certain questions connected with it. The date from which the dues will be levied has been provisionally fixed as November 1, 1925.

CONGESTION AT BOURGAS.

The necessity for undertaking at once the development of the port of Bourgas is emphasised by M. G. Kanazirsky in a recent article in the *Slovo*. He points out that the port is no longer equal to dealing with the available trade. The port was constructed in 1903 to deal with a quarter of a million tons of merchandise annually, but since 1909 the traffic has outstripped the available facilities. Thus in 1911 the total volume of goods that passed through the port amounted to 385,000 tons. When the port was first built the average length of the vessels calling there ranged from 70 to 80 metres, and as the quay is 597 metres in length only 7 or 8 ships could be loaded or unloaded simultaneously. During and since the War, however, the average length of the vessels has increased to 105 to 110 metres, so that now only 5 ships can be dealt with at one time. The introduction of the eight-hour day has further aggravated the congestion which is a periodical occurrence. Three times during the present year there has been delay. For instance, in May five ships had to wait five or six days outside the docks before accommodation could be provided for them. The development of the railway service has now gone ahead of the port facilities, and only too frequently truck loads of grain are held up. As regards imports, Bourgas is now becoming more important than Varna. In 1924 104,787 tons of goods were imported through the former port as against only 51,535 tons through the latter. Owing to a series of poor harvests, however, the volume of exports through Bourgas has been inferior to that through Varna, but as Bourgas is the natural outlet for the south of Bulgaria the congestion is bound to become much more pronounced after a good harvest. The writer urges that the work of extension should be undertaken at once, and states that quays of a total length of 300 metres are required.

ANCHOR LINE,
48, FENCHURCH STREET, LONDON, E.C.3.

NEW B.I. STEAMER.

The steamer Quiloa, which has been built by Messrs. William Gray and Co., Ltd., West Hartlepool, for the British India Steam Navigation Co., Ltd., ran her official trials successfully last month. The vessel's dimensions are as follows:—Length over all, 502 ft.; breadth, 60 ft. 9 in.; depth moulded, 32 ft. 8 in. The vessel is provided with accommodation for a few passengers, and has 18 derricks fitted on masts and derrick uprights, one 25-ton derrick, and 19 steam winches exhausting into a winch condenser. The propelling machinery, which has been supplied by the Central Marine Engine Works of the builders, consists of balanced quadruple engines having four cylinders, 28½ in., 41 in., 58½ in., and 85 in. diameter by 54 in. stroke, with five large multi-tubular boilers working at 225 lb. pressure.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Scindia for Bombay (Liverpool, November 23). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Matheran for Port Said, Colombo, Madras and Calcutta (London, November 14).

Bibby Line.—S.s. Lancashire for Port Said, Colombo, and Rangoon (Birkenhead, November 18).

British India Line.—S.s. Shirala for Bombay and Karachi (London, November 6); s.s. Morvada for Colombo, Madras, and Calcutta (London, November 7).

Cunard Line.—S.s. Cypria for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, and Sulina (Liverpool, November 14).

Ellerman "City" Line.—S.s. City of Manchester for Calcutta (Birkenhead, November 14).

Johnston Line.—S.s. Aviemore for. Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, November 6). (The last steamer of the season for Sulina, Galatz, and Braila); m.v. Sycamore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, November 21); s.s. Kenmore, for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, December 5).

P. and O. Line.—S.s. China for Bombay (London, November 13); s.s. Nellore for Colombo, Madras, and Calcutta (London, November 14).

Prince Line.—S.s. Sailor Prince for Malta, Alexandria, Famagusta, Jaffa, Haifa, and Beyrout (London, November 13).

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

EGYPT.

Miscellaneous Stores.—The Prisons Department, Ministry of Interior, Cairo, invites tenders for the supply of miscellaneous stores including white cotton yarn, khaki serge and drill cloth, tailors' marking chalk, harness backs, fire hose, packing and belting, helical pulley blocks, leg vices, twist drills, chuck plates for drilling machines and lathes, beading or swaging machine, injectors for boilers, etc. November 23. (D.O.T.)

INDIA.

Sub-station Equipment for Jaipur.—The Indian Stores Department invites tenders for the supply of miscellaneous sub-station equipment for Jaipur, comprising steel poles, pole brackets, shackle and pin type insulators, bare copper wire, trifurcating boxes, distribution pillars anchor rods, underground low tension cable, cable boxes, leading-in tubes, house service watthour A.C. meters, current limiters, one 30 K.W. transformer, extra high tension feeder panel, medium tension A.C. switchgear, galvanised iron wire and pole clips. November 30, but tenders for steel poles must be received by November 9. (D.O.T.)

Messrs. N. M. Rothschild and Sons have received information from Alexandria that, owing to the illness of Judge Vaux, the President of the Mixed Court of Appeal, and to the crowded state of the list, the hearing of the appeal in the Egyptian Tribute Loans case has been adjourned to December 31 next.

Motors and Motoring.

By G. B. B.

The chief topic of conversation just now in the motor world is the outstanding success of the Commercial Motor Show at Olympia. Special efforts have been made by manufacturers to cater for every industrial need from the heavy steam wagon to the light delivery van; from the passenger-carrying omnibus to the refuse-collecting tipping wagon used by municipal authorities. At the inaugural luncheon, Lt.-Col. the Right Hon. Wilfrid Ashley, Minister of Transport, told us that in the exhibition were 62 British and foreign commercial vehicle exhibitors, 124 accessory concerns, 27 exhibits by body builders, and 40 exhibitors who were classed as inventors. Of all these the great majority were British. To show the importance of the British commercial motor industry, Col Ashley pointed out that on the first of September last, England had on her roads about 325,000 commercial vehicles, of which about one-third were passenger-carrying omnibuses, taxi-cabs and hackney vehicles plying for hire. To my mind, considering the size of our towns and cities, and the number of active commercial and industrial enterprices which we possess the number seems ridiculously small, and there should be no difficulty in doubling or trebling it in a comparatively short time. It may be admitted and this total shows how active our manufacturers have been, but to my mind it shows far more than that: it shows the immense field before our industry and indicates how great the strides necessary in development and production are before we begin to dream of "flooding" the home market.

The Trade Abroad.

The one thing which will embarrass our somewhat complacent commercial motor manufacturers will be that if they continue to neglect, as they do at present and that so grossly, our overseas markets, they will never be able to get their production costs sufficiently low to compete, on a price basis, here at home with American and Continental makers. The production costs of every vehicle made in this country are swollen by a too high percentage of overhead charges. Overhead charges are practically constant no matter whether few or many vehicles are made. Obviously if our production is limited the proportion of overhead per car is high and the total cost such that we cannot compete, on a fair and square selling price basis with foreign markers.

A recognition of this fact is probably the reason why there was so much hinting about Protection at the luncheon and why Protection has become one of the chief —if not the chief—topics of conversation among people in the trade during the past few days. Col. Ashley, at the luncheon said that although he was optimistic regarding the future, it may be said that conditions to-day are not as they should be, and that he for one, would be glad to see the protection tariff already in force in connexion with private motors, extended to commercial vehicles. This remark, of course met with the cordial approval of most though not all of his hearers.

A Simpler Remedy.

The cases, I venture to say, are not on all fours. The McKenna duties stopped a flood of foreign imports which would otherwise have swamped our infant light car industry. Under the McKenna duties a fine virile industry has been built up which is catering splendidly for the home market. At one time it will be remembered, unintelligent legislation caused the McKenna duties to be taken off and the British light car industry had literally to fight for its life. The duties were re-imposed and all is well again. The industry is alive in every sense of the word and is one of which this country may justly be proud.

But had there been any other way of saving the light car industry probably it would have been adopted, but there was no other way.

With commercial vehicles the case is entirely different. It is true makers are exposed to foreign competition, but not to anything like the extent to which the light car industry was exposed. Our country is not being flooded by cheap American built char-a-bancs or omnibuses. There are no foreign makers of steam driven commercial vehicles to compete with us, and the import of cheap, Continental or American built road rollers or traction engines is practically nil. The truth of the matter is that the British commercial vehicle industry is not flourishing as it should because it has had several very lean years during which the Slough vehicles, scattered broadcast after the War, have been in use. Now these Disposal Board lorries are worn out and scrapped, and there is a fair market for new stuff. Our commercial motor firms are seeking to fill that demand in a manner that reminds one of a well-intentioned gentleman turning the other cheek to the bellicose footpad. They are trying with one market and that a comparatively small home market, to compete with firms who have two markets, their own and ours, in which to sell goods. The American can keep his own market against all comers for many reasons: he can make in his factories any number of vehicles for that market, confident that he will be able to sell them, and to keep his factories working at high pressure he turns out "over makes" of everything and assembles them into vehicles for the British market. The American may, and often does, sell his motor lorries or whatever it may be more cheaply here than he does at home, but even so he makes a bigger profit on it. His overhead expenses are spread over a stupendous production; our overheads have to be borne entirely by a few hundred vehicles a year. This is where the trouble lies. That is the burden that is pressing ominously on the shoulders of our manufacturers.

The Remedy.

I am not regarding this from a political point of view at all. I hold no brief for Protection; I do not propose even to begin to consider the relative merits of Protection or Free Trade, nor am I going to say whether I do or do not regard them both as moth-eaten palliatives. But I say this; that for the present position in the commercial motor trade, Protection would not be, could not be, a remedy. Nor can any far-seeing man do other than admit the fact. The solution of the problem, the way out of the difficulty, the path of salvation for our British commercial motor industry is to cater for and supply the immense

and ever-growing demand for commercial motors in India and Australia, the Near East, and New Zealand, in South Africa, and in the great neutral markets of Turkey, Bulgaria, Greece and China. I say advisedly, and with more than ordinary knowledge of the subject, that as a class our big motor firms are not seeking to make their goods known abroad in a through and scientific manner. The American, on the other hand, is as keen as can be on getting into these markets. The British Dominions and the great neutral markets I have mentioned, do not care unduly for American products; they would prefer in most cases, and in other cases have a favourable leaning towards, our British cars. They would buy them if they could. But how can they buy them if they are told nothing about them? How can they buy British products if our British makers do not let them know what there is to buy?

COMPANY NOTES AND REPORTS.

ANGLO-PERSIAN OIL.

The report of the Anglo-Persian Oil Company for the year ended March 31 last shows that the trading profit amounted to £4,599,676, the total revenue being £4,609,357. After allowing for depreciation, debenture interest, home charges, and royalty, the profit amounted to £3,571,967, and a net amount of £1,687,582 was brought forward, making £5,259,549. The following appropriations have been made: Extra depreciation, £393,000; debenture stock redemption reserve, £200,000; preference share reserve, £500,000; and amortisation reserve, £100,000, leaving £4,066,459, and after providing for the preference dividends and the proposed dividend of 12½ per cent. on the ordinary shares, there remains £2,072,799 to be carried forward, subject to corporation profits tax and excess profits duty, if any.

The report states that the results of the principal producing company, the First Exploitation Co., Ltd. (in which the Bakhtiari Oil Co., Ltd., is now incorporated), show a continued improvement both in production and profits, the output being over half a million tons in excess of the preceding year. The area of oil-bearing territory on the Persian main fields has again been greatly extended by the bringing in of a number of new wells in various directions. These wells all give the same high rates of yield as those from which the present production is being drawn. Drilling operations in other parts of the concession have been actively continued and a large additional area of productive territory has been proved. Further investigations at Kishm have led to the conclusion that the volume of oil obtainable in this field is not sufficient to justify commercial exploitation, and consequently operations there have been suspended.

Productions at the field in the Argentine continues to increase, and several new wells have been brought in during the year. This field is now being worked at a profit. Since the end of the year a concession has been acquired over certain areas in Albania. These areas have been carefully examined by the company's geologists, on whose recommendations test drilling has now been started.

The throughputs of the refineries at Abadan and at Llandarcy show a large increase over the previous year, and work has been conducted satisfactorily without interruption. The capacity of the plant at each refinery provides a satisfactory margin to meet any increase in trade in the near future. The refineries operated by the associated companies have also worked satisfactorily and dealt with larger throughputs. Continuous employment in carrying the company's crude oil and products has been found for the fleet of tank steamers operated by the subsidiary, the British Tanker Co., Ltd., and there have been no serious accidents. The marketing of the company's products through the various distributing organisations has been successfully conducted during the year, and sales of all qualities show a satisfactory increase.

ASSAM RAILWAYS AND TRADING.

The report for the year end March 31, 1925, states that the gross earnings show an increase of Rs.4,11,093 compared with 1923-24, and the expenditure an increase of Rs.59,851. The general revenue account shows a profit of £146,070, and after payment of debenture interest, and allowing for preference dividends, there remains a balance of £90,604. Out of this the directors have provided £50,400 for the service of the "A" stock, and they recommend a final dividend of 6 per cent. on the "B" stock, making 9 per cent. for the year, and that £10,000 be written off the discount on debentures, leaving £3,204 to be carried forward.

EGYPTIAN MARKETS.

A communication from the Egyptian Government has reached the Board of the Egyptian Markets, in effect authorising the continuance of the present cattle market tariffs until December 31, 1927. The continuance of these tariffs is subject to the Government's participation in the company's receipts, for the corresponding period, being increased by 10 per cent., viz., from 40 per cent. to 50 per cent. over the £44,000 allowed for expenses, with effect from January 1, 1925, with a reduction of the Government's participation by 10 per cent. in the event of receipts falling to such a figure that the company is unable to pay 5 per cent. to the shareholders. The directors have been reluctantly compelled to accept, under protest, the decision of the Egyptian Government. On the basis of the returns for 1924 the additional sum to be paid to the Egyptian Government would be approximately £6,500 a year.

Mr. Lewis Huth Walters has joined the board of the Indemnity Mutual Marine Assurance Company. Mr. Walters, who is associated with Fredk. Huth and Co., merchants and bankers, 12, Tokenhouse Yard, E.C., is a director of the Anglo-Egyptian Bank, the Midland Bank and the London City and Midland Executor and Trustee Company.

IMPORTS & EXPORTS

The financing of the world's commerce has become one of the most intricate of machines ever constructed, and under the banker's hands lie all the cogs and controls necessary for its efficient running. It is of the utmost importance that the merchant should clearly understand the working of its mechanism in order that he may make the fullest use of the bank's facilities, not only for his personal benefit, but also for the increased commercial prosperity of the country. To assist its customers, the Westminster Bank has now prepared a booklet explaining the many ways in which the commercial man may use the bank for the furtherance of his business, and how he should proceed so as to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and combine with progress and enterprise the necessary security and caution.

Copies will be issued on application to the Secretary, Head Office, Westminster Bank Limited

Company Meeting.

SUDAN PLANTATIONS SYNDICATE.

Large Increase in Cotton Area.

Mr. Eckstein's Speech.

The eighteenth ordinary general meeting of the Sudan Plantations Syndicate, Limited, was held on October 28 at Winchester House, Old Broad Street, E.C. Mr. F. Eckstein (the chairman of the company) presided.

The Secretary having read the notice convening the meeting and the report of the auditors,

The Chairman, who was received with cheers, said:—Ladies and gentlemen,—Before proceeding with the business of our meeting, I feel I must refer in a sentence of two to the loss the British Empire, and the Sudan particularly, has sustained in the death of Sir Lee Stack, Governor-General of the Sudan and Sirdar of the Egyptian Army.

Both the British Government and the Press generally paid unstinted and well-earned praise to the unselfish character and to the outstanding qualities of this distinguished administrator and gallant soldier. (Hear, hear.)

As chairman of our syndicate I had yearly opportunities of meeting Sir Lee in Khartoum, and of discussing with him the problems facing us.

On every occasion he showed intense interest in our work and progress and never forgot to impress on me the paramount necessity of fair and straight dealing with the native, whose welfare he had so much at heart.

It always has been and always will be our aim to carry out this part of his policy and so honour the memory of the man who devoted his best years and gave his life to the service of the Sudan. (Hear, hear.)

The commotion and rumours following upon the murder of Sir Lee Stack might have had more serious results in the Sudan but for the firm action initiated by Lord Allenby in Cairo, ably seconded in Khartoum by Sir Wasey Sterry, the acting Governor-General, and his council.

I take this opportunity of recording our syndicate's high appreciation of the courage, patience, and firmness displayed by all Government officials and officers in those difficult times now happily over. (Cheers.)

We extend a hearty welcome to the new High Commissioner for Egypt and Sudan and the Governor-General of the Sudan.

Sir George Lloyd's connexion with the Sukkor Barrage and Sir Geoffrey Archer's association with cotton development in Uganda, give promise of an energetic policy for the development of the Sudan's natural resources.

Twenty-one Years' Development.

As the director's report and the accounts have been in your hands for nearly a month, I presume you will take them as read. (Agreed.)

Our syndicate was originally formed in 1904 as a private concern, with a capital of £80,000. We have consequently reached our majority, which coincides happily with the completion of that great engineering work, the Makwar Dam.

The syndicate has at this moment an issued capital of £600,000, valued by the Stock Exchange at roughly £5,000,000. It has paid about 250 per cent. in dividends, which I admit at once is nothing to boast about, considering that we have been at work for 21 years, and have raised all our working capital at a considerable premium.

Our shareholders now number something like 2,500.

In 1904, we started at Zeidab cultivating a few hundred acres of cotton. To-day, including the Kassala Cotton Company, in which you are largely interested, we have nearly 100,000 acres under cotton.

This is not our limit, as we hope to add next year a further 20,000 acres in the Gezira alone.

In all we have to-day about 10,000 tenants, and if you take each tenant with a family say averaging five heads, we have working as our partners 50,000 people earning a very substantial livelihood. (Cheers.)

Past Season's Operations.

Turning now to the 1924-25 season, my comments must be almost exactly the same as those which I made last year. Zeidab again produced a good paying crop of American cotton, whilst the Gezira crop was unsatisfactory. Notwithstanding all precautions and special seed treatment, the cotton plants were again attacked by blackarm and thrips. Good luck, however, favoured us, as high cotton prices more than made up for low yields. In consequence of this unfortunate experience our managing director decided to take drastic measures, and ordered the whole new area to be planted with entirely new seed which we bought elsewhere.

An interesting example of the influence of local conditions on disease is furnished by the Kassala Cotton Company, which bought Sakellaridis seed from us which we knew to be infected with blackarm. Notwithstanding this fact, the seed proved to be entirely satisfactory and eminently suitable for the climate and soil conditions of Kassala. The young cotton plants, it is true, developed blackarm in the early stages, but soon outgrew this disease and eventually produced strong and healthy cotton.

I paid a visit to Kassala in January last and saw with my own eyes the best and strongest cotton I could wish for.

Whilst dealing with this important question of pests, I would mention that following on the report of Sir John Russell and Dr. Martin Leake, to which I referred last year, there has been a reorganisation of agricultural research work in the Sudan.

The Sudan Government, the Empire Cotton Growing Corporation, and our syndicate all contribute to this work and are all represented on the small supervisory committee which has been established in London to deal with the subject. It is to be hoped that the work undertaken in this all-important field may in time result in great practical benefit to all concerned.

Before passing from the subject, I must refer to the indebtedness of our company to Major Archibald, of the Welcome Research Laboratories, in Khartoum, for the progress which he has made in the scientific study of blackarm, and to the continued efforts of the Government entomologist staff in the study of the insect pests in the Gezira. We have acquired the services of Mr. Jefferys, whose success whilst under the State domains in maintaining the supply of pure Sakellaridis cotton seed in Egypt is well known. Mr. Jefferys has joined us for a time, and after rendering valuable services in procuring fresh selected seed for our present crop, is now helping us to establish in the Gezira a seed farm from which we hope to draw in future supplies of selected seed of best strain for sowing throughout our irrigated area.

New Issue of Capital.

Before analysing our balance-sheet, I venture to plunge at once into a subject which I know you are all anxious to hear about, viz., our capital account and its proposed increase. (Hear, hear.)

From the notice convening this meeting you have seen already that your board recommends an increase of capital from £750,000—our present nominal capital—to £2,500,000. From the circular sent to you you have also seen that we are to issue at once the remaining 150,000 shares of our old capital at £3, viz., £2 premium, payable in three instalments. At current quotations this issue involves a modest bonus to shareholders which I hope they may find satisfactory. (Cheers.)

When these shares are all taken up and fully paid up we shall close our books for a short time. Then we shall capitalise £750,000 of the share premium account and issue to every shareholder then on the register one new fully-paid share—I prefer not to call this a bonus share as it is created out of moneys subscribed by the shareholders—in respect of every old share which he holds. When this is done we shall have a paid-up capital of £1,500,000.

As, however, we are extending our operations, it appears advisable to be prepared for contingencies, and we have therefore decided to ask for authority to issue, as and when occasion arises, a further 750,000 shares, viz., one new share for every two old shares.

This would give us ample working capital and at the same time put us into a position to undertake any new great business that is offered to us.

I can assure you that the greatest possible care will be taken in its selection.

You would be surprised to hear how our experience in cotton-growing, capital, and staff are sought after and how many really good offers are made to us to acquire interests in other countries.

The Sudan, however, still ranks first in our affections, and, for the present at any rate—so long as there are opportunities there on satisfactory terms—we prefer to save our main efforts for the development of that country. (Cheers.)

To be quite frank, I think I must tell you that during the present month negotiations have begun having for their object a considerable further extension of our operations in the Sudan. These negotiations are bounds to be protracted for reasons which I need not go into at this moment. They may lead to nothing, they may come to a satisfactory conclusion. Should the latter be the case it would probably end in my proposing to you and recommending to you a further increase of our capital.

Let me say at once that I hope it would be the last time I should have to come to you for money. You, Ladies and Gentlemen, have been so extraordinarily good and loyal to us in accepting without a murmur every increase of capital we have had to come to you for, and for our part we have the satisfaction of knowing that we have not misled you, and that all the money you have been good enough to subscribe has been wisely spent and has proved a profitable investment to you. (Cheers.)

If we have to approach you again we want you to feel that we do so with a clear conscience and that we have been as careful in our estimates and calculations as in the past.

Digitized by Google

The Balance-sheet.

Now let us run through the balance-sheet. Share capital I have dealt with.

Share premium account will be increased by the premiums on the present issue of 150,000 shares to £1,313,223, and will be reduced subsequently by the issue of the 750,000 new shares to £563,223.

Hosh pumping station has been completely amortised, while the reserve for the Wad Nau pumping station has been increased by £70,000 to £140,000.

Staff Provident Fund.—The £22,500 standing to the credit of this fund will disappear from our next balance-sheet.

This fund has now been put on a proper basis and is in operation since July 1 last, and I am glad to say that practically the whole of our Sudan staff has joined and the Syndicate is contributing on £ for £ principle.

Creditors amount to £247,000, against £207,000 last year; most of this has been liquidated since the close of our books.

On the credit side you will find Zeidab station about the same as last year, and the same remark applies to the Gezira pumping stations.

General Development is increased by	£60,000
Canalisation	£66,000
Buildings and Furniture	£100,000

In connexion with the last item you will be glad to hear that our building programme for the 300,000 acres area is practically finished and our staff properly housed. (Hear, hear.)

It may be of some interest to you to learn that in completing these houses we have used over:—

13½ million bricks,
33,000 tons of sand,
13,000 ,, ,, broken stone,
2,600 ,, ,, cement,

beside large quantities of lime, homra, etc.

For the pumping stations of Hag Abdulla and Wad el Nau and the four new ginneries, including workmen's quarters, we used:—

9½ million bricks,
9,000 tons of cement,
35,000 ,, ,, broken stone,
30,000 ,, ,, sand, etc.

This will give you some idea of the work we have been doing and perhaps even more so when I tell you we made and burned these 23,000,000 bricks ourselves, and that the stone had to be brought up the Blue Nile by sailing boats to Wad Medani, and that all the other building material, such as woodwork, tiles, windows, doors, etc., had to be transported to sites scattered throughout our wide area, comprising about 500 square miles.

Agricultural implements and machinery figure at £103,000, against £66,000 last year. It may also interest you to learn that we are now in a position to plough something like 1,000 acres per day.

Our four new ginning factories were not quite completed when we closed our books and you will find next year an addition to the £222,000.

We have added to our report a few pictures of three of these new factories, and I believe I am right in saying that these installations are the largest and as well equipped as any in the world. I saw the No. 1 factory in full running order last season.

Light railways account is about the same as last year, but heavy additions will have to be made this year.

Stock of Cotton.—Most of our crop had been sold at the end of our financial year, but not paid for. As usual, we valued the cotton in hand, and I am happy to say that it has since been disposed of at prices in excess of the valuation.

In connexion with this, I would like to put on record the great indebtedness we owe to Mr. W. H. Himbury, the general manager of the British Cotton Growing Association, for the assistance he gave us in selling our cotton. (Hear, hear.)

Stores and building materials are £56,000 more than last year. The more extended our operations are becoming, the greater is the necessity for keeping large amounts of stores and spares of all kinds in the Sudan.

Debtors are £121,000—all good.

Kassala Cotton Company.

Now I come to our holdings in other companies. First and most important is our holding in the Kassala Cotton Company. You will notice that we have the same number of shares as last year, but to provide this company with further working capital we paid up 4s. on the preference shares, making them 5s. paid up.

At the annual meeting held in June, the chairman gave full information about the first year's work done by that company. At that time the crop had not been entirely picked, so I can somewhat supplement the information then given by telling you that the crop yielded in all 27,250 kantars. The gross proceeds, out of which the tenants and the Sudan Government will have to receive their shares will amount to roughly £300,000. To-day the entire crop has been disposed of.

During my visit to Kassala I was struck by the amount of work done by our very competent staff under at times most difficult circumstances, and it is with the utmost regret that I have to inform you of the great loss the Kassala Cotton Company sustained about two months ago by the death of their manager, Mr. Gray. Mr. Gray was a man of great ability, who never spared himself to make his company a real success.

As already mentioned, I was more than pleased with the healthy appearance of the cotton plants, and I am more than ever convinced of the suitability of the Province of Kassala for growing the best kind of Sakellaridis cotton.

Last year we had about 15,000 acres under cotton, and for this season we had prepared an area of 30,000 acres, but, alas, the Gash has left us in the lurch by an unusually poor flood.

In the past, from such records as are available, it appears that a bad flood of this sort has occurred about once in every five years. Anyhow, I do not expect to have more than 10,000 acres under cotton, which is less than last year.

Brazilian Interests.

Turning now to Brazil, I told you last year that I felt convinced that this enormous country would in time become one of the big cotton-growing centres of the world. I based this statement on what I had read in text-books dealing with that subject, and also on information I gathered from men who knew the country and knew what they were talking about. I had the privilege of accompanying my colleague, Lord Lovat, on a visit to that country this year, and from what we saw and from what we learned on that trip, I can truly say that the statement I made to you last year is correct in every way.

I feel sure from personal observation that Brazil possesses more wonderful natural conditions for cotton-growing than any other country I know. What is wanted in Brazil is a good, strong, stable Government, a sound financial policy, and a systematic and continued influx of immigrants. If I may venture to give an opinion, it is that Brazil offers to educated young men great chances, provided they are willing to work hard, learn the language, and accommodate themselves to the customs and manners prevailing in that rich and great country.

Our holding in the Brazil Plantations Syndicate is now fully paid up, and we have acquired a further 10,000 shares at par, likewise fully paid up.

This syndicate possesses three seed farms, two ginneries, and about 77,000 acres of first-rate land. I was much impressed by the cotton grown on these three stations, and the syndicate is to be congratulated on having a good and competent staff there. I am not exaggerating when I say that the cotton grown by the Brazil Plantations Syndicate looked better than any other I had seen in Brazil.

During the last few days we have decided to take a considerable interest in a new Brazilian undertaking to be formed and to be called the Parana Plantations, Limited.

The company has a capital of £750,000, of which £700,000 has been subscribed and £50,000 is held in reserve. It is essentially a land company which owns something like 3,000,000 acres of first-class land and has an option on a further 1,000,000 acres at a low figure. Both Lord Lovat and I visited these areas and we were struck with their potential value. It is more than likely that it will take some time to develop these areas, and before we attempt to effect sales to any extent.

We have also taken a small interest in the Cambuhy Coffee and Cotton Company. It is essentially a coffee proposition, and as such does not interest us, but it has also great possibilities for cotton growing which interest us greatly.

This is not the place nor the time to discuss in detail the prospects of this company, but having spent two days on the property and having had the advantage of being shown over it by their managing director, Mr. Davy, I would just like to say that this concern, with its 140,000 acres and 3,000,000 coffee trees, has impressed me much, and the more so as they also had some 2,500 acres under cotton which looked quite good.

Much more in this respect can be done, and we should not be averse to take a hand in this should the board of the Cambuhy Coffee and Cotton Company desire us to do so.

The Year's Profit.

To return to the balance-sheet, our financial position continues to be good, as the figures before you show.

Now please turn to the profit and loss account, from which you will see that our total gross profits amount to £304,000, against £250,000 last year, while our expenses are about the same.

As usual, we have again provided for a bonus to our very numerous staff, which I know you will approve of.

The net profit, therefore, for the year, after the customary writing off, is £163,000, against £113,000 last year.

Against this we paid you in June an interim dividend of £60,000, and now propose to pay you a final dividend of £90,000—in all, £150,000.

The amount carried forward is £189,450, representing a very considerable and useful reserve.

Current Season's Prospects.

Having dealt with the financial side of our syndicate, you will wish to hear something of the work done in the past year and of our prospects in the future.

As already said, our Zeidab Station has done well. We shipped in all from there 2,814 bales, which were sold at satisfactory prices.

For the coming year we have practically the same area under cotton—viz., 5,000 feddans—and the prospects are about the same as last year. We have already picked about 8,500 kantars of the new crop and shipped 500 bales.

In the Gezira the crop, as already mentioned, was the poorest we have ever had, but luckily compensated by high cotton prices. We had about 20,000 feddans under cotton and shipped 10,870 bales, against 14,591 bales the previous year.

In July the Makwar Dam was completed and began to furnish us with gravitation water.

As in every big undertaking, little mishaps occurred, and canals had to be repaired, etc., but as far as I can see we have accomplished what we set out to do, viz., to increase our cotton area this season from 20,000 feddans to 80,000 feddans, which will be further increased in the 1926-27 season.

I think you will agree that this large step forward from 20,000 to 80,000 acres in a single season is no small achievement and one of which we may be proud. (Cheers.)

We had no difficulty in finding tenants for this area, which is a healthy sign. There was one thing which struck me much during my last visit to the Gezira, and that was that I found the native population taking a keener and, if I may say so, a more intelligent interest in the cultivation of cotton and all the work connected with it.

All this augurs well and our prospects for a prosperous future look bright. (Cheers.)

Our reports concerning the present growing crop are so far quite satisfactory, the young cotton plants looking well, but it is too early to form a definite opinion as to yield, etc. In addition to the cotton we have also planted 33,900 acres of Dhura and 8,690 acres of Lubia, which crops we hand over entirely to our tenants.

Tribute to Staff.

Before concluding my remarks I wish to express the board's, and I feel sure also your, high appreciation of the wonderful work done during the past year by our staff, both in the Sudan and at home. (Hear, hear.)

I feel it to be my duty to mention specially the eminent services rendered by our managing director, Mr. Alexander MacIntyre, our manager, Mr. H. Poyntz-Wright, and our senior inspector, Mr. W. P. Archdale. (Cheers.) But for their devoted, loyal, and efficient labours and also the exceptional zeal and energy shown by practically every individual working under them, the great progress we have made during the past year could not have been realised, neither would I have been able to put before you such a satisfactory statement as it has been my privilege to do to-day. (Cheers.)

This finishes my review of the past year and I will now move:—

"That the report of the directors and statement of accounts to June 30, 1925, now laid before the meeting, be and that the same hereby are received and adopted."

I will ask Lord Lovat to second the motion.

Lord Lovat revisited at the beginning of the year all the fields of our operations in the Sudan, and I am sure you will be glad to hear from him the impressions he has gained of our work and the opinion he has formed of our future prospects. (Cheers.)

Lord Lovat's Speech.

Lord Lovat, K.T.—Gentlemen, in rising to second this motion I should like just to remind you for a moment that you are not only owners of a great agricultural enterprise, but you are also associated with probably one of the greatest Colonial development schemes going on at the present time. (Hear, hear.) This is not only a scheme, or series of schemes, which will be materially advantageous to Great Britain and the cotton industry, but one also which is adding very largely to the welfare of the natives in the areas with which it deals. It is quite unnecessary to develop the point of the importance of increased cotton cultivation inside the Empire, and also outside it, by British enterprise; but I would like to say just a word or two on the subject of the advantages which are accruing to the natives themselves through this development in the Sudan. Your Chairman has told you that we have 10,000 tenants and some 50,000 individuals who are directly partners with us in this concern. If you include all the transport men and the traders and those engaged in ancillary enterprises which come into connexion with it, I am quite sure I shall be safe in saying that some 100,000 natives, including children, share in the advantages derived from this great enterprise. (Cheers.) When I visited Wad Medani—which is the centre of our operations—for the first time, it was just at the end of the Mahdi Campaign, and there were still armed bands of natives through that country. Wad Medani itself was a wretched little village, in which the people lived in fear of their lives, raided by the Mahdi on the one hand and, just down the country by the Blue Nile, by the Abyssinians on the other. Upon this wonderful three-million-acre plain only barely enough grain was scratched up to supply food for the natives, and there was nothing else.

Magnitude of the Enterprise.

To-day this plain, to the extent of 300,000 acres, is already canalised and ready for cultivation, and we are growing, as the Chairman has told you, 80,000 acres of cotton, not to mention other crops. Only a few years ago, when this development was proceeding, we used to ride out on a camel in the morning and see the whole of our cultivation. To-day you go out in a motor-car, and it takes you the whole of the day to inspect a single one of the 20 divisions into which the area is divided. We are ploughing to-day in a single day four times as much as the big farmer in this country ploughs in the whole of the year. The ginneries, of which you have a picture in the directors' report, are situated 400 yards apart, and we hope that by February or March of this year, although they are 400 yards apart, the whole space between these ginneries will be covered with sacks of cotton which people will be busy sorting and classifying, and then carrying for ginning into the ginnery. The magnitude of this enterprise is really almost impossible to conceive unless you have actually visited it. I may say that when I was last in America I went to see a cotton farm of 15,000 acres, which I was informed was the largest enterprise of the sort under one management in that country. As the Chairman has told you, we shall very shortly be farming in the Sudan alone something like 120,000 acres of cotton, which speaks well for organisation, management, and British enterprise. (Cheers.)

Your Chairman has referred to our operations in Brazil, and I may say that the Chairman and myself have great confidence in the future of the cotton possibilities of that country. We have seen land there with cotton possibilities second, I believe, to none in the world. You can grow in that country, in those parts where we have selected land, certainly double the average crop that you can grow in North America, and at about two-thirds of the price. I do not think I can add more to show that the possibilities are very great. I trust that we shall go forward, overcoming the various obstacles which occur as we go along.

In all agricultural enterprise there are troubles arising from pests, parasites, bad seasons, absence of water, and all kinds of things; but, as you know, we have fought these now for something like 21 years, and on the whole we have been successful, and now that we have so thoroughly established ourselves in the Sudan and know so much about the various pests that we are likely to be up against, I think we can look forward with reasonable confidence to the future of this great enterprise. I have great pleasure in seconding the resolution. (Cheers.)

The Chairman, having replied to questions, the resolution was put and carried unanimously.

The Chairman next moved:—"That a final dividend of 15 per cent. (equal to 3s. per share), less income-tax, be declared for the year ended June 30, 1925, upon the issued shares of the company, payable to all shareholders registered at the close of business on October 20, 1925."

The Hon. Arthur M. Asquith, D.S.O., seconded the resolution, which was unanimously adopted.

The Chairman further moved the re-election of Lieutenant-Colonel S. H. Pollen, C.M.G., as a director of the company, which was seconded by Mr. D. M. Hannay, and agreed to; and on the proposition of the Chairman, seconded by Captain Bernard Eckstein, Sir Frederic Wise, M.P., was also re-elected to the board.

The Chairman's Services.

Mr. J. A. Hutton moved the re-election of Mr. F. Eckstein as a director of the company. In doing so he remarked that when they were entertaining the Governor-General and the Director of Agriculture of the Sudan in Manchester the other day, he (the speaker) had the opportunity of saying what they thought of Mr. Eckstein in that city, and he had very great pleasure in repeating it on the present occasion. He did not think anyone in that meeting could recognise how very much they owed to him. Mr. Eckstein had given up his time ungrudgingly to the cause they all had at heart—to the welfare of the company—and he had exercised all the ability he had at his disposal for the good of the company. He would like shareholders to recognise, however, that Mr. Eckstein was doing rather more than ably conducting commercial enterprises; he was really one of the builders of the Empire. (Cheers.) He was carrying on a work which was doing an immensity of good not only for the Sudan, but also for "us poor devils up in Lancashire"—(laughter)—and if he got all his deserts there would one of these days be a statue put up in his memory in the Central Square of Manchester. (Renewed laughter and cheers.) It was quite impossible for anyone either in that meeting or in Lancashire ever to thank Mr. Eckstein sufficiently for the wonderful work he had done. (Cheers.)

Mr. Hannay seconded the motion, which was carried with acclamation.

On the proposition of Mr. H. P. Peach, seconded by Mr. G. W. Schroeder, Messrs. Cooper Brothers and Co. were reappointed auditors.

The Chairman then moved the following resolution:—"That the capital of the company be increased to £2,500,000 by the creation of 1,750,000 shares of £1 each."

Lord Lovat seconded the resolution, which was carried unanimously.

Mr. E. Brooke Sewell proposed a hearty vote of thanks to the chairman and his colleagues on the board for the excellent way in which they had carried out this great enterprise.

Mr. Grant Hooper seconded the proposition, and said he hoped the mover would allow him to add the shareholders' appreciation of the services of the staff. (Hear, hear.)

The vote was unanimously accorded, and, the Chairman having briefly acknowledged the compliment, the proceedings terminated.

Cotton and Cotton Goods.

EMPIRE COTTON GROWING CORPORATION.

A meeting of the administrative council of the Corporation was held in London on October 28. In the unavoidable absence of the President, Lord Derby, the chair was taken by Mr. R. H. Jackson.

Mr. J. W. Dyson was appointed a member of council on the nomination of the Cotton Spinners' and Manufacturers' Association in place of Mr. Thornber, resigned. Mr. H. P. M. Rae, a former member of the Indian Central Cotton Committee, was co-opted a member, and it was reported that he had been appointed by the executive committee as a member of the Corporation's India sub-committee.

The Chairman reported that the Secretary of State for the Colonies had received a joint deputation from the Corporation and from the British Cotton Growing Association in July last, which had urged upon him the importance attached by both bodies to the recommendations of the East Africa Commission with regard to increased transport facilities in East Africa. He expressed the opinion that the council had every reason to be gratified at the statement which the Secretary of State for the Colonies had recently made, to the effect that the Cabinet had decided to ask Parliament to guarantee the loans of ten million pounds for transport facilities in East Africa, and at the fact that a certain percentage of that sum would be earmarked for scientific research.

The Director gave an account of the activities of the Corporation during the past three months, as summarised in the executive committee's quarterly report. Referring to the allocation of a percentage of the sum of ten million pounds to scientific research, he drew attention to the need for research, not only in relation to agriculture, but also to public health. He considered that this aspect of the matter was vital to the objects of the Corporation, and he was extremely hopeful of the possibilities that were opened up in consequence of the step that had been taken.

The report of the executive Committee was received and adopted. We give the following extracts from it:—

In the report on the organisation of agricultural research in the Sudan, by Sir John Russell and Dr. Leake, stress was laid on the importance of soil problems. The Committee are now gratified to be able to report that Sir John Russell has given permission for Dr. E. M. Crowther, a member of the Soil Physics Department at Rothamsted, to pay a visit of about five months' duration to the Sudan in order to collaborate with Dr. Joseph, the Government Soil Chemist, in the co-ordination of research work on soil problems.

Last year certain spinning tests were carried out on single bales of cotton from India, submitted by the Indian Central Cotton Committee. That committee have now expressed a desire that further and more comprehensive tests should be carried out on seven specified varieties of Indian cotton. Arrangements have accordingly been made for five bales each of the seven varieties to be tested by members of the Oldham Master Cotton Spinners' Association. The mills have agreed to undertake the tests without charge if one bale of each variety is presented to them, while the remaining four bales are purchased by them at an agreed price.

It is gratifying to report that all the holders of the Corporation's Senior studentships last year have already been appointed to suitable posts, with the exception of one man who had had an illness and has only quite recently been passed as fit for residence in the tropics. Of the men now at work, two have received appointments under the Corporation, one in Natal and the other in Southern Rhodesia. Three have received appointments in the Sudan, one as an entomologist and two as inspectors of agriculture. One has been appointed to Ceylon as an inspector of plant diseases, while two others have taken posts as agricultural officers in Sierra Leone and Nigeria respectively. Finally, an entomological student who has spent his studentship year in Nigeria has been temporarily attached as an entomologist to the Agricultural Department there until April next.

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Ottoman Bank, for the week ended October 31, states:—

The American Agricultural Bureau sprang another surprise on the market last Monday. Its estimate of the indicated yield of the crop, based on the condition at the 17th instant, was 15,226,000 bales, an increase of nearly 500,000 on the estimate of a fortnight before and of a million and a half bales within the last six weeks. The consequence was a sharp fall in prices to the extent of about ½d. per lb. Naturally all yarn and cloth quotations given previous to that date had to be revised, and the result has been a distinct pause in operations. Nevertheless a feeling of optimism prevails. It can hardly be doubted that when prices have stabilised on the lower levels which the assurance of a big crop necessitates there should be a considerably larger sale of yarn and cloth. For the reasons given above, business has been slow. Quotations naturally display considerable irregularity. Neither in the American or Egyptian qualities can the trade be described as anything but hand to mouth.

Cloth.—There has been much activity in giving out new quotations necessitated by the lower range of values, but actual business has been disappointing. Nevertheless the demand from India for "dhooties" has persisted and it is said that there is difficulty in arranging delivery earlier than February or March. There is nothing to report with regard to China and recent disturbances in Syria have adversely affected Near Eastern inquiry. A fair business has been done for South America, but that for the Continent and Home Trade has not been so good as recently.

Raw cotton.—As already mentioned, there was a sharp fall in prices on Monday last. For the next day or two changes were of no importance, but towards the end of the week there was again a substantial fall, which, since the weather reports have not been favourable, is probably due to the heavy movement of the crop.

Although there is now the certainty of an abundance of cotton it seems to be thought in some quarters that it consists mainly of low or only average quality and that for the finer descriptions a comparatively high price will have to be paid.

In the Egyptian section there is considerable uncertainty owing to the reported intention of the Government to purchase with a view to sustaining prices. Closing quotations yesterday were as follows:—American Middling 10.35, Egyptian Fully Good Fair 22.75.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company in their report for the week ended October 22 state:—

Since our last report the futures market has been very active, and although prices have again lost ground the undertone may be characterised as having been somewhat firmer; the net changes on the week as as follows:—

Sakellaridis 0.50 dollars down for November, 1 dollar down for Jaunary, 1.20 dollars down for March; Ashmouni 0.61 dollars up for October, 0.10 dollars up for December, unchanged for February.

This week the feature has been the strength of the near months; the November premium over January has widened to 83 points and October closed at 51 points over December. The strength may be attributed to the very

Digitized by Google

high premiums paid on the spot market for cotton round about Fully Good Fair Sakel and Ashmouni, and to the fact that the heavy decline in the premiums of the high grade cotton has made the receiving of dockets an interesting proposition. The demand from abroad, although still of moderate size for this period of the season, has been somewhat larger than last week. It has come from almost all consuming centres and has covered more or less all quantities. Nothing fresh to be reported about the projected intervention of the Government in the market. It is understood that the Ministry of Finance has decided to postpone the sale of the State Domains cotton for the time being.

The position judged on present indications may still be considered as bearish. However, should the next American Bureau report alter the present ideas of a record production, a reaction is probable. The week's receipts amount to 353,162 crs. against exports 150,341 crs.; the stock now stands at 1,476,880 crs.

Spot: A good business has been done at Minet-el-Bassal this week and sales amount to about 30,600 bales, of which we estimate 11,800 Sakel, 14,600 Uppers, 3,500 Zagora, 600 Pilion, and 100 various growths. Holders are not so ready to sell as they were last week.

Sakellaridis: A good business has been done. Good grades have been in good request and a persistent demand has sprung up for Good Fair and Fully Good Fair, which are well paid. Spot differences are without change except for Fully Good, which is a little easier.

Ashmouni and Zagora: have been in good request for all qualities. Spot differences are steady and unchanged but the higher grades are inclined to stiffen.

Pilion: has been in good request principally for the better grades. Spot differences are generally a little easier.

Other Varieties: White has been in very limited request, and spot differences are generally easier. Brown is neglected and quotations are easier. A few bales of a new growth called "Fouadi" have also changed hands. This variety is not sufficiently plentiful to be quoted.

Crop 1925: The weather was warm up to a day or two ago and the second picking must have benefited. The movement of the crop in the interior is not so heavy as at the corresponding time last year; as a result of the recent decline in prices farmers and merchants are not in a hurry to gin their cotton and send it down to Alexandria.

NEAR EAST MARKETS

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co., of Smyrna, report as follows for the week ended October 17:—

Sultanas.—The arrivals since the opening of the season are estimated at 15,300 tons and the sales to date are put at 14,000 tons.

Closing prices, Smyrna, per cwt. c.i.f. London-Liverpool: Type 12, 57s.; type 13, 59s.; type 14, 62s. type 15, 65s.: type 16, 68s.; type 17, 73s.

The market is dull with a downward tendency. Prices have declined about 2s. per cwt. on balance over the week. The increased import duty into Germany which has been raised from 8 gold marks to 24 now becomes operative, and, it is estimated will interfere with the demand from that market unless Smyrna prices rise to compensate the increased cost.

Figs.—The arrivals since the opening of the season are estimated at 158,026 bags, and the sales to date are put at 150,682 bags.

Prices during the week have advanced by 10 per cent. on last week's level. The demand continues active, while supplies are decreasing.

DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, in their report dated November 2, state:—

Currants.—The course of the market has been entirely dominated by the weakness of the Greek exchange, and with prices continually on the decline traders have taken a very bearish view of the situation. This, coupled with the lack of support from the consuming public, has caused the demand to continue during the month on a very limited scale, buyers being loth to operate and only purchasing when absolutely obliged to cover immediate requirements. The most severe drop in values has undoubtedly been experienced in the finest qualities of shade dried Vostizza, the fall representing a decline of 10s. per cwt. Other grades have also suffered, but not to the same extent.

S.s. Phrygia brought the first Vostizza, and these were actively competed for, a considerable portion having been previously disposed of on overland samples, prices realised being 52s. to 60s. for bold fruit, 52s. to 56s. for smalls. On the arrival of further supplies prices declined, and week by week values have receded, the closing range being 41s. to 43s. for good, and 46s. to 52s. for fine qualities. The response from the country to the attractive and coloury Gulf has been a disappointment. This grade opened at 42s. to 44s., and prices sagged to 36s. At this last-named figure fair sales were possible.

Quotations:—Pyrgos and Amalias, 31s .to 32s.; Patras, 34s. to 35s.; Zante, 32s. to 35s.; Gulf and Panariti, 34s. 6d. to 38s.; Vostizza, 41s. to 52s.

Australian.—The advertising campaign has focussed the attention of the consumer on this fruit, and with holders reducing their price in order to meet buyers, a fair trade has resulted at 29s. to 30s., a few special lots making 32s. to 34s.

Sultanas.—The high range of prices has certainly checked consumption, and buyers have displayed no inclination to operate on a free scale. With a decided falling off in the actual amount of business done, the attitude of the trade in the closing days of the month was one of extreme caution, and this has had the effect of reducing values. Closing quotations are:—Smyrna, fair to good, 68s. to 75s.; Smyrna, fine, 80s. to 92s. 6d.; Cretans, 75s. to 90s.

Greeks opened 80s. to 83s., Fine bleached 100s., but holders were unable to maintain these values, in face of pressure, and in order to make progress concessions had to be made. Final sales were:—Medium qualities, 70s. to 75s.; best bleached, 95s. to 97s. 6d.

Figs.—Large boxes have sold fairly well at 75s. to 97s. 6d., Small boxes 85s. to 105, Locoums 115s. to 130s. Bags Naturals are in short supply, selling at 38s. to 40s. for good average, Genuine 43s. to 45s.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Syrian Revolt.

The official report of the disorders in Damascus on October 18, 19 and 20, which the French Government received just a fortnight later and issued last week, must be read in connexion with Mr. Baldwin's Rectorial Address at Edinburgh University on truth and politics. The British Prime Minister was not thinking of Syria when he emphasized the need of truthfulness in politics and described a half-truth as worse than many lies; but his explanation of the politician's difficulties in the way of telling the whole truth and nothing but the truth will, no doubt, be cordially endorsed by General Sarrail, until he is reminded of Pierre Béranger's utterance: "Frenchmen like things to be clear. What is not clear is not French." General Sarrail states that the measures taken to repress the revolt were comparatively moderate in view of the strength of the movement. He challenges the evidence of photographs by declaring that material destruction was confined to the native quarters in which no Arab building of architectural or historical interest was injured. The Azm Palace is intact with the exception of a wing recently constructed to serve as offices, which was damaged. Some roofs of bazaars fell in. What may not seem clear enough to the French from this report is how it came about that insurgents after entering Damascus without hindrance and being subjected in the city to a "comparatively moderate" bombardment elected to make their surrender the following day by means of a delegation to the French command rather than to withdraw to the place from which they had come. These and other matters connected with this unfortunate episode will presumably be cleared up later. The speedy return of Damascus to a normal existence in part supports the attitude of General Sarrail in belittling the incident; at the same time it may be used by his opponents in France as evidence that the rioting in one quarter of the city supplied no justification for the withdrawal of French troops and an artillery bombardment from a distance.

France and the Mandate.

The New High Commissioner for Syria is M. Henri de Jouvenel, who held the portfolio of Public Instruction in M. Poincaré's Cabinet last year and was one of the French delegates to the League of Nations. At a meeting of the Foreign Affairs Committee of the Chamber both the Prime Minister and M. Briand dwelt on the duty imposed on France of keeping the Syrian mandate entrusted to her. Their insistence that France must pursue her civilising and educative work in the interest of the inhabitants themselves, and must lead the Syrians to self-government by a wide spirit of tolerance, holds out the prospect of the adoption of wiser methods in Syria itself. The demand of the Syrians for complete independence, the withdrawal of French troops and the scrapping of the Mandate does not take into consideration the question of the future territorial integrity of Syria. Discussions that are reported to have taken place between the notables of Damascus and the insurgent Bedouin suggest that there might possibly be some difficulty in the maintenance of internal order. In the course of a long appeal addressed to the League of Nations at the last session of the Council Emir Shekib Arslan dwelt upon French shortcomings and the unwillingness of the people to accept France as Mandatory Power, and declared that the Syrian people, as the Iraqis, were capable of governing themselves. He made no attempt, however, to show how the Syrians proposed to protect themselves from aggression if the French troops were withdrawn, and his whole appeal was stultified by the fact that the Iraqis have wisely recognised their limitations in this respect and have stipulated for a Treaty of Alliance with Great Britain. France, on the other hand, will realise in time that, whether she likes it or not, there can be no glaring distinction between the degree of independence enjoyed by the Syrians and that of Iraq. If M. Jouvenel can give early effect to this principle, it should not be long before Syria experiences a more peaceful order of existence than she has known since the handing over of her territory to the French by the British Army that liberated her from Turkish rule.

Digitized by Google

A Balkan Pact.

There is a tendency to interpret Mr. Austen Chamberlain's remarks at the recent Paris meeting of the Council of the League of Nations when he declared that it was the League's duty to take action with a view to remove causes of frontier friction in the Balkans, as a definite invitation to the Balkan States to subscribe to a Security Pact on the lines of the Locarno Treaty. The Greek Government, indeed, appears to have notified formally its anxiety to adhere to such a Pact, and criticism on the possible incongruity between this attitude and the refusal of any joint inquiry before the invasion of Bulgarian territory is anticipated by the remark that Greece is in a position to defend herself, if need be, as she has proved recently, but exactly because she wants to avoid in the future incidents like the last Græco-Bulgarian one she accepts wholeheartedly "the British proposition." It is obvious, however, that at the present moment there can be no precise British proposition. The mission sent to investigate the Græco-Bulgarian frontier incident has been charged to inquire into the possibility of introducing measures for eliminating these incidents in the future, and in due course its recommendations on the subject will be considered by the Council of the League of Nations. It would, however, be unduly optimistic to suppose that, if the members of the Mission are to keep Christmas in the bosom of their own families, they will be able to produce a cut-and-dried scheme for the consideration of the Council. Permanent pacification of the Balkans cannot be reached overnight. We should be sorry to see any proposal put forward with the weight of the League's authority which had not taken into consideration all the various ramifications of the problem. The final settlement, if it is to have any real value, must be one that satisfies a considerable body of Macedonian opinion. The Mission, therefore, should be able to place itself in communication with Macedonian leaders of all schools of thought, in addition to obtaining the views of the several Governments. If it should do this, it would not be surprising, if the members were to decide that a more thorough examination of the problem than they were able to give is to be recommended with a view to evolving a Balkan settlement with some prospect of permanency.

Political Parties in Egypt.

The telegraphic summaries of the new law on political associations promulgated by the Egyptian Government seem to challenge opinion as to whether the measure is justified by the situation that it is designed to meet. All associations of a political character, including Labour syndicates, are obliged to furnish to the authorities full details of their constitution; only those associations the statutes of which are approved by Royal decree will be recognised, and dissolution can follow by simple Ministerial decree, if the associations can be shown to have encouraged crime, propagated subversive ideas to change fundamental institutions by violence or other illegal means; if they have exercised activity tending to usurp parliamentary public authority; or if they have provoked in any other manner disturbances of the peace. Little wonder that the Wafd has taken this particular cap and fitted it firmly on to its own head. It is also in keeping with the practice of that organisation that an attempt should have made to identify the British Residency, and in particular the new High Commissioner, with this law of political associations. A litttle more knowledge of the world and a little commonsense, in both of which the Zaghloulists are lacking, would have convinced them that Great Britain has as much to do with a domestic concern of Egypt's of this nature as she has with a *communiqué* issued in Arabic on the work at Tutankhamen's Tomb. Egypt is now mistress in her own house, except in regard to four subjects which have nothing to do with everyday politics, and the constitution of the Wafd is not one of them. Some sympathy must be felt with the present Egyptian Government; the great majority of the people of Egypt are indifferent to politics and want only good government, and the Zaghloulist organisation, by being first on the scene, has roped in under its banner the larger section of the politically minded who refuse to look facts in the face and have shown themselves so far capable only of mob rule. An intimate mistake was made in breaking up the coalition and antagonising the Liberal Constitutionalists, at a time when it was not possible to gauge with any degree of accuracy the real extent of permanent defections from the Wafd. The main object of the Government must now be self-preservation, and if it has not the confidence that comes from the knowledge that the Egyptian people as a whole support it, it will feel obliged to resort to methods designed to consolidate its power. In dealing with political associations it will encounter many pitfalls; it can, for instance, hardly have been its intention to consolidate the opposition, as this measure seems likely to do.

The Position in Persia.

The position in Persia appears to depend very largely on the angle of vision of the observer. An American correspondent refers to Riza Khan as King Pahlavi, possibly in the expectation that his accession to the Persian throne will have taken place before his message can be published. More cautious and accurate chroniclers speak of a provisional régime, of which Riza Khan is naturally head, until such time as a Constituent Assembly can meet and determine the new status of the country. The use of the expression His Imperial Highness with reference to Riza Khan in the official communications announcing the depositions of the Kajar Dynasty indicates the lines on which the Constituent Assembly will be expected to work. An attempt will be made to revive the proposal for a republic; but, unless the veto of the Shiah divines has been removed and Riza Khan decides that His Excellency sounds better than His Majesty, Persia seems likely to adhere to a monarchy. During the lifetime of the present Head of the State the form of government will make no difference. His work of reform has probably been handicapped by the existence of a dynasty, with the reigning Sovereign absent from the country and with a Regent who could hardly fail to offer a rallying point for intrigue. If he has now obtained a free hand, it is to be hoped that Riza Khan will set himself not only to launch great undertakings for the material advancement of Persia, but also to eradicate corruption and inefficiency from the bureaucracy. He has already started to deal with the inefficiency in the public service and has himself set a useful example of energy. It is not apparent, however, whether his subordinates have received an equally explicit lead in regard to bribery and corruption. The ex-Shah has registered a protest from Paris against the happenings in Teheran. He explains that he has kept out of Persia, in order to avoid internal agitation and to show his disapproval of illegal acts, and that he is awaiting the moment for returning to his country in order to continue to serve his people. There are no doubt many of his subjects who sincerely regret that he has allowed himself to adopt a singularly ineffective way of showing his interest in Persia and its people.

ARMISTICE DAY IN THE BALKANS.

Wednesday of this week was the seventh anniversary of Armistice Day, and it is not without interest to take stock of the position in which the Balkan Peninsula finds itself after seven years of peace. The word, peace, it is to be feared, must in this connexion be used only relatively. Up to the last moment alarms and excursions have been numerous. In 1919 the Roumanian Army undertook an expedition against Hungary, and for three months was in occupation of that country; the Fiume controversy kept Yugoslavia under the necessity of contemplating the possibility of war, until on January 27, 1924, a treaty signed at Rome provided for the incorporation of Fiume in Italy and confirmed Yugoslav sovereignty over Port Barrosh and the Delta; in 1921 uncertainty regarding Albania's frontiers led to friction between her and Yugoslavia, and hostilities were stopped by the firm action of the League of Nations; the war between Greece and Turkey, it is true, was fought out in Asia Minor, but its repercussions have been felt in the Balkan Peninsula during this period, both in regard to the internal situation in Greece and in the readjustment of populations in Greek Macedonia which the influx of refugees necessitated; *komitaji* activities have repeatedly aggravated the relations between Yugoslavia and Bulgaria; there have been civil war and communist outbreaks in Bulgaria; finally, within the last few weeks a frontier incident of an insignificant character has led to an invasion of Bulgarian territory by Greek forces, which must have had even more serious consequences, if it had not been for the prompt action of the Council of the League of Nations. Officially, however, it has been a period of peace, following upon the seven years of war that between 1911 and 1918 brought about such notable territorial changes in South-Eastern Europe.

In spite of the alarms and excursions that have characterised this period, there is abundant evidence that some definite progress has been made in the Peninsula towards a better state of affairs. It is impossible not to believe that the real eruption is over; the volcano is settling down to a spell of quiescence, although every now and then in one part or another sudden spurts of the troubled mass prove that the process is not yet complete. In each country an increasing number of people deplore the old antagonisms, recognising that, whichever side may seem to gain a momentary advantage, material harm is done to both. For the most part, however, it is the old school of politicians who still hold the reins of power; they are so imbued with the traditional spirit of the Balkans that they do not easily remember that there are other ways of attaining national well-being than by intrigue and war. The recent Greek invasion of Bulgaria was undoubtedly the result of the spontaneous working of the primitive Balkan instinct; immediately after the Greek forces had received orders to advance, wiser counsels asserted themselves in Athens, although there may have been delay in giving effect to them on the frontier. Almost the first that Europe has heard of the capture of a Yugoslav prefect and priest by Albanian brigands is that, after ten days, the Albanian Government has secured their release, acting in correct co-operation with the Yugoslav Government, unhampered by the paralysing effect of an ultimatum and excessive demands. There may be some who will read into this satisfactory incident, after the frontier agreement recently arrived at by the two Governments, another proof that Ahmed Bey Zogu has delivered his country over as a vassal to Yugoslavia, but those with more vision will be less concerned with the methods by which peaceful solutions are reached than with the fact that increasing attention is being given on all sides to the wisdom of peaceful solutions when friction has arisen. That the cooling of all passions is not yet complete is shown by the course of the negotiations between Yugoslavia and Greece for a settlement of the question of the Salonika Free Zone. Yet in their prolongation it is possible to find evidence of the desire of both parties to explore all avenues for a peaceful settlement rather than to allow the disagreement to bring about a rupture of friendly relations. For an explanation of this improved state of affairs it is hardly necessary to look beyond the League of Nations. The existence of a tribunal which has authority to demand a cold statement of facts and reasons must exercise an increasingly depressing effect on any tendency to bully and to filibuster. Although the League, in the eyes of Western nations, may not yet have attained its full stature, it means much to minor Powers, and will mean still more, if the Council can act fairly and fearlessly in the two disputes now awaiting its judgment. In the meantime, while Governments are appreciating the necessity of keeping one eye on the League of Nations, the different peoples in the process of evolution are discovering that political controversy at best is but a hindrance to material prosperity and are beginning to require at the hands of their rulers a larger share of peace in their own time.

The Balkan equilibrium must continue for some time to come to be very sensitive. Its basis is more hopeful than solid. Greater effect will always be produced in the Peninsula by example than by precept. For this reason any tendency in the West to emphasise the importance of all that Armistice Day celebrations stand for is to be welcomed. Hitherto the last day of the Great War has meant little more to the Balkan peoples than the beginning of another chapter of ills. The peace that the West has learned to value has been associated in the Near East with too many ever-present drawbacks to be the object of much enthusiasm. With an improvement of economic conditions, however, and with a respite, born of sheer weariness, from political feuds, the Balkans will begin to understand that what has proved a blessing to the rest of the world need not necessarily be without its advantages to them. Even the West is tempted to dwell more on its Armistice Day obligations after the Locarno Pact than it was before. If it has required seven years to place the day in its true perspective, we need not despair of the Balkan States, because they take a longer time to reach a similar stage. There too a Security Pact may provide the means to the desired end. A chilly silence greeted the first proposal from within, and, as if disheartened by her ill-success, Greece proceeded to show by her invasion of Bulgaria what could still happen if things were left as they now are. There is no reason, however, why a Security Pact imposed from without by the authority of the League of Nations should not be accepted as readily or at least as completely as its decision in any specific dispute. It will remain, at best, a means to an end: for the only permanent solution of the Balkan question is a Balkan federation.

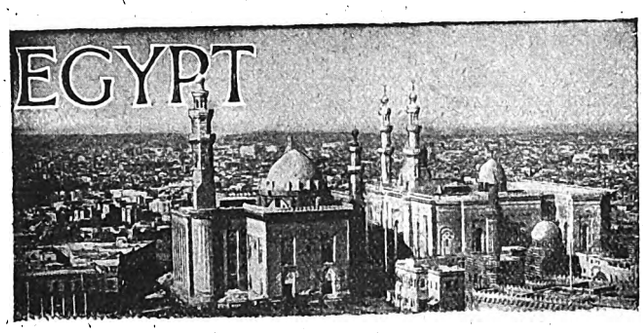
The Near and Middle East*

From Our Own Correspondents.



Cairo, November 1.

Opposition United.

Not often has the Opposition been able to sink its differences so completely as during the past week, when Liberal Constitutionals, Wafdists and Nationalists have had but one voice with which to attack the Government. The cause of the onslaught has been the new law regulating the formation of political associations, which, promulgated on Wednesday, has been described as the most reactionary and tyrannical measure since the days of the Khedive Ismail. And the criticism is not unjustified, for although several articles of the new ordinance are so vaguely worded as to leave great doubt regarding their real intention, this vagueness serves, in the light of past experience, as a cause for added apprehension on the part of the anti-Government parties. From that part of the law which can be comprehended it is clear that the intention, in suddenly producing this astonishing piece of legislation, has been to deal a final, and, it had been hoped, a fatal blow, at the power and prestige with the masses of the people of Zaghloul Pasha, who, despite such measures as surrounding his house with troops, loses nothing in popularity. Indeed, since the rupture of the Coalition, Zaghloul Pasha has probably gained considerably in his hold upon the masses. The Government is not unnaturally alarmed at the failure of its efforts to dethrone the popular idol from his place in popular affection, and has produced this new law as a master-stroke. If put into operation it would probably achieve, on the surface, its framer's intentions, for, designed as it has been to give the Government legal authority for dissolving the Wafd and breaking up the Zaghloulist organisation throughout the country, with a penalty of six months' imprisonment for anyone who dared henceforth describe himself as a Zaghloulist, the law, rigorously applied, could certainly bring about the apparent disappearance of Zaghloulism in a comparatively short time. But the result would certainly be to drive to far more dangerous underground activities the politicians who now openly profess and apply their Zaghloulist faith. Within a few months of such a law's becoming operative the country would be honeycombed with secret societies, in defiance of the law, and in such an atmosphere it would be astonishing if there were not in a very short time a renewal of political crime. However dispassionately this Political Associations' Law is regarded and however much allowance is made for the inexperience of its framers and the desperate straits in which they find themselves, with the certain Nemesis of an election in which they and their party will be swamped, even if they do not disappear altogether, approaching daily nearer, it is impossible to consider it as anything but a piece of preposterous and dangerous folly. Fortunately, there is little prospect of the country's having to face the very serious crisis which would almost certainly result from attempts to apply the law, for its authors are beginning to realise already that they have committed a blunder of the first order and that an early retreat from an untenable position is the only way to avoid disaster.

Government and Cotton.

The Government has come into the cotton market this week and purchased small quantities, without, however, having had an appreciable effect on price levels. The decision to speculate once more in cotton came as no surprise after the good fortune which has attended previous ventures of the same kind, for, if the avowed object of the purchases, the bolstering-up of prices, has not been attained, the Government has none the less made a handsome profit on its transactions. But this year, with Egyptian crop prospects excellent and reports from America of a record yield, conditions are very different, and it looks as though the Government may burn its fingers rather badly when it has to dispose of the cotton which it is now acquiring so light-heartedly.

Police and Crowds.

The Tantah disaster has provided the Government's critics with fresh ammunition. The mudir and commandant of police of Gharbia Province are bitterly attacked for allowing the crowd to be stampeded by the police merely because a Minister's car wished to force its way over a bridge packed with foot passengers. In this case the police are scarcely to be blamed so much as pitied, for convention in this country demands that when a Minister or senior Government official moves abroad he shall be preceded by police who force a passage, and very roughly too, if need be, for the great man. If not expressly encouraged in their brutality, the police must naturally assume, from the tacit approval it receives, that their behaviour is approved by those whose importance it is supposed to emphasise. The manner in which crowds are handled is often abominable, for the excited policemen, urged on by no less excited officers, ply their sticks on young and old, male and female alike, with unnecessary and usually ineffective brutality. In this matter conditions have become much worse during the last year or two, and it may almost be said of Egypt, as Hajji Baba remarked of Persia a hundred years ago, that the importance of a public man may be gauged from the zeal with which the *ferashes* hammer and beat the persons who chance to get in his path.

Sofia, November 4.

The Greek Invasion.

A fortnight after the Greek invasion of Bulgaria it is possible to take a dispassionate view of the events which nearly culminated in another Balkan war. Greek and Bulgarian versions of what actually happened at Demir-Kapu are so totally contradictory that it is better to disregard the rival points of view. It can, however, be definitely stated that frontier guards stationed on the top of a mountain became involved in a shooting affray which is no uncommon occurrence in the Balkans. Greece addressed a Note, practically amounting to an ultimatum, to Bulgaria wherein she claimed reparation for lives lost and other sanctions. Bulgaria suggested an impartial inquiry, but received no reply. The incident took place at Demir-Kapu on October 19, and a Greek division advanced into Bulgaria on October 22. The Greek troops occupied approximately 200 square kilometres of territory stretching eastwards from Petritch and including several villages. They aimed at occupying Petritch itself, but did not succeed, partly because of Bulgarian resistance during the night of October 22-23, and partly because the Greek command seems to have hesitated in pushing forward its advance. On the 22nd, Bulgaria appealed to the League of Nations who, anxious to repair the prestige lost over the Corfu affair two years ago, immediately convened a special meeting of the Council. Meanwhile the League requested Bulgaria and Greece to refrain from further hostilities. The Bulgarian Government sent stringent orders to its frontier troops forbidding them to fire except in legitimate self-defence. The Greeks continued to fire with artillery and other weapons.

For three or four days the situation remained stationary and danger of war was imminent. Fortunately the Greeks did not persist in their advance and the Bulgarians showed praiseworthy coolness under most trying conditions. On October 26 the Council of the League met in Paris and despatched the Allied Military Attachés at Belgrade to the scene of the conflict with instructions to supervise the Greek evacuation of occupied territory. Meanwhile the Council telegraphed to Sofia and Athens again reminding them that as members of the League they must keep the peace. In Paris a heated discussion took place between the Greek and Bulgarian delegates, the former alleging that Greece could not evacuate Bulgarian territory until Bulgarians had evacuated Greece. It transpired that according to Greece, Bulgarian troops were only a few hundred yards in Greek territory, while according to Bulgaria they never crossed over the frontier at all. Owing to the prompt and firm manner in which the League acted, the conflict was stopped and between the 28th and 30th the Greeks retired and the Bulgarians re-occupied their original frontier posts.

The League's Commission.

The League then appointed a Commission of five to proceed to the scene of the conflict, to investigate fully into the causes thereof, to assign responsibility, and to recommend how such matters could best be avoided in the future. Sir Horace Rumbold, British Ambassador to Spain, will be President of this Commission, and he will be assisted by one French and one Italian officer, as well as by a Dutch and a Swedish civilian. The Commission will meet in Geneva on November 6, and is expected to arrive at Petritch about the middle of November, as its report must be completed by the end of the month.

Propaganda.

There has been a mass of tendencious and misleading information published regarding this latest Balkan affray. The Athens Press Bureau has on more than one occasion found itself contradicted by its own organs notably in so far as the friendly intervention by Roumania is concerned. M. Langa Rascano, the Roumanian Minister in Greece, was wrongly reported in his statements and it is believed that the denial never reached the ears of the Council. M. Rascano was reported as having said that the whole incident was Bulgaria's fault because of the activities of Macedonian *komitajis*. In reality he said nothing of the sort. It is, however, evident, that a violent press campaign will now be conducted by both Greece and Bulgaria with the object of obtaining sympathy in Western Europe. Truth will not play a very important part in such a campaign, and public opinion abroad should be on its guard against any wild stories. So far Bulgaria has maintained a very correct attitude in this respect, but the stories of atrocities committed by Greeks and sensationally narrated by so-called foreign newspaper correspondents should be taken with a pinch of salt. Propaganda is and will be rife, and it is extremely difficult to know the actual facts.

For this reason it is satisfactory that such an influential Commission will carry out the investigation, but it is worth while mentioning that some surprise is felt at the Great Powers' being represented on this Commission. Rightly or wrongly, Greece is regarded as the *protégé* of Great Britain, while France and Italy are not thought to be altogether impartial. But the League should be able to rise above such suspicions, and in view of its rapidly growing authority should be able to render an entirely just decision.

Reparation.

An aspect of the situation which concerns Bulgaria is the reparation which Greece may be called upon to pay for the damage that she is alleged to have inflicted on the occupied territory. Some 8,000 to 10,000 Bulgarians fled from the Greeks and have suffered hardships. The Allied Military Attachés, who are still at Petritch pursuing an inquiry, were not allowed to report on this matter, but a Bulgarian Commission has stated that the material damage is very great. Besides the loss of livestock, the harvest is said to have been seized. It will be difficult to establish the truth of this, as when Sir Horace Rumbold's Commission arrives they will find that the inhabitants of the area in question have returned to their homes. It is perhaps, unfortunate that League officials were not able to visit the occupied territory during the period between the Greek evacuation and the Bulgarian re-occupation. However, the conflict has ended more quickly than was ever thought possible, and the League has certainly enhanced its prestige in Balkan eyes.

The Sobranye.

Last week King Boris re-opened the Sobranye, which immediately adjourned until to-day. There are no out-

standing matters of importance due to be discussed, but there is still a good deal of talk regarding Cabinet reconstruction. The Greek invasion had the effect of adjourning these discussions, but this week they are being resumed, and it is probable that some changes may yet take place.

News in Brief.

The Honourable W. A. F. Erskine, British Minister to Bulgaria, returned from leave on November 1.

Municipal elections were held in Bulgaria last Sunday, and the majority of the results were in favour of the Government.

CYPRUS.

Nicosia, October 27.

The New Legislative Council.

Now that the Members of the enlarged Council have been elected, they are faced with a new situation, and have to consider what line they will adopt in the Assembly. An entirely new era is opening, and there is a decided revolt against the old methods, when the party for "union" pulled all the wires. Country opinion has been educated to see things for itself, and there is a large body of village electors who are determined that henceforward there shall be some solid work by their representatives for agricultural and general progress. They recognise that hitherto little has been done for their interests in comparison with what might have been done, and disapprove of their subordination to a campaign of politics which has no results. They have contributed large sums towards deputations and missions to London, from which there has been no resulting benefit whatever. The new Council has to reckon with this newly aroused feeling.

The twelve new Greek members held a meeting on October 23, when a preliminary discussion took place. It was decided that there should be co-operation with the Government in a close examination of the estimates and other matters: that before assembling in Council they should submit a protest to the Government regarding the new Constitution of the Colony, and ask for further privileges or liberties; and that the estimates should be submitted to the Council before being despatched to London. It was also decided to claim that the Councillors should be *ex-officio* Members of the Educational Board. Also, that co-operation with the Ottoman members should be aimed at on all local questions. A proposal that mention should be made of the national aims was negatived in favour of postponed consideration; but outside the Council the struggle is to be vigorously continued, since union with Hellas "is the alpha and omega of national aspirations." The Greeks, however, may be spared that co-operation with the Turkish element which depends upon the attitude which they themselves may adopt. Hitherto that attitude has not commended itself to loyal persons. Now that Cyprus is a British Colony there must be a change. In the speeches of Greek members in late years, remarks have too often bordered on disloyalty. The patience of High Commissioners, when Cyprus was administered for Turkey, and not a British possession, has tolerated many observations which might well have been ruled out of order, and there should be an end to liberties or licence, which is not compatible with the oath of loyalty that members take.

Harbours of Cyprus.

Rumours are afloat that improvements are to be carried out in the island "harbours," and that a loan of £70,000 will be sanctioned for the purpose. The island possesses one harbour of insufficient size, at Famagusta, and a very small one on the northern (Kyrenia) coast, which is practically of little or no use. At the other three coast towns of Larnaca, Limassol, and Papho there are only open roadsteads.

General News.

A reported discovery of copper a few miles from a village called Aigialousé may lead to valuable results. A ton of ore has been sent for examination.

The Governor has been able again to suspend collection for another year from next March of the locust tax.

Carobs are being exported in considerable quantities. A Spanish steamer has taken 1,900 tons of the new crop to England. Glasgow is importing largely.

Mr. Charles E. Cox has been appointed Judge of the District Court at Famagusta.

THE ARAB HORSE SOCIETY.

A Council Meeting of the Arab Horse Society was held on October 28, at the Grosvenor Hotel, London, Brig.-Gen. F. F. Lance (Vice-President) being in the chair.

There were also present Mr. T. C. Armitage, Lt.-Col. T. R. Badger, Messrs. H. V. Clark, C. W. Hough, Edward Hurtley, Capt. the Hon. George Savile, Mr. R. S. Summerhays, Major C. B. Toms, Major-General Sir Hugh Tudor, and the Secretary, the Rev. D. B. Montefiore.

The following new members were elected:—Miss A. Disney-Roebuck, Hoo Meavy House, near Yelverton, S. Devon; the National Horse Breeding and Show Society, Simla, India.

The Council decided to have the same number of classes and prizes at the London Show, 1926, as were offered at this year's show, namely, Arab Stallions, Brood Mares, Colts and Fillies, and Arab-bred Colts, Stallions, Mares and Geldings, with a Riding Class for Arab Stallions, Mares and Geldings and one for Arab-bred Stallions, Mares and Geldings. Besides the prizes there will be two champion gold medals and three silver cups.

The Bath and West Society are giving Classes for Arab Stallions, Mares, and Young Stock at their Watford Show in 1926.

Three photographs for illustrations were submitted and accepted for the Arab-bred Register now shortly to be issued.

THE LATE PATRIARCH PHOTIOS.

A special service was held at St. Stephen's, Gloucester Road, S.W., under the auspices of the Anglican and Eastern Churches Association last Saturday. It was a Requiem for his Beatitude Photios, late Pope and Patriarch of Alexandria, and the preacher was Bishop Gore. The music was arranged by Captain Burgess.

Dr. Gore referred to the importance of the Alexandrian Church in past history, and to the events in connection with the Nicene commemoration of a few months ago. He also referred to the personal character of the late Patriarch, who had expressed himself as very friendly to the Anglican Church.

The Greek Church and the Russian Church were represented at the service.

THE EVACUATION OF MOSUL.

(From a Correspondent.)

I have often wondered how much the scare over the resolve on the part of the British Government to support the claim of Iraq to possession of the vilayet of Mosul really counted with the British public. One knew, of course, that certain interested newspaper proprietors were rolling their eyes in horror and abjurgation before their millions of readers, but one still wondered how their strange parade of fear really appealed to the British public, which, however great its admiration for Nationalist Turkey, has not yet forgotten that the Ottoman Empire was one of the institutions which crumbled owing to the Allied triumph in the late War.

It was in a mood of some doubt, therefore, that I went last Friday evening to the Essex Hall, Strand, where the Anglo-Turkish Society had arranged a meeting the subject of which (as might be gleaned from the handbills announcing the gathering, if not from the speakers themselves) was "Clear out of Mosul!" In fear lest the hall might be crowded by "Rotherbrook fans" I betook myself early to this scene of the British Government's condemnation. My anxiety for a seat was, however, early set at rest, for I found the most exiguous of assemblies. A handful of Indians—mostly of the student type, it appeared—a pacifist or two, and a sprinkling of ladies, these were the sum total who could be moved on a winter's night to oppose Iraq's claim to Mosul. I was told, after the meeting, that there were fifty-eight persons present in all, of whom thirty were ladies. And admittance was free.

Commander J. M. Kenworthy was in the chair. The paucity of the gathering and the absence of enthusiasm seemed to strike chill into the breast of the gallant Member for Hull. However, he tried his utmost to warm to his task. Even before the War—for the last thirteen years, in fact—he had, he said, denounced the policy of the British Government towards Turkey. He denounced the Treaty of Sèvres, had declared it unjust, unworkable, inevitably bringing retribution. He was right then: and in denouncing the present policy of the British Government towards Turkey, he was right now. To hold the frontier claimed by Mr. Amery for Iraq was impossible, for only in Canada and in India could a frontier hundreds of miles from the sea be successfully held. Mr. Bonar Law wished we had never gone to Mesopotamia, and in 1921 the late Sir Henry Wilson declared the mountain frontier to be an impossible strategic frontier. Coming to more immediate problems, the Chairman suggested, on the lines of the Græco-Turkish exchange of populations, an exchange of a people, to me I confess unknown, whom he called "Ottomans," south of the Brussels line, for Christians north of the Brussels line. It is true that the information was subsequently extracted from him, by means of a very pertinent question, that he referred to the 1,000 Turks and the 10,000 Kurds living south of the Brussels line. Another illuminative ray thrown upon the subject was the description of the possibility of an invasion of Iraq by Mustapha Kemal, by Ibn Saoud, and by Riza Khan! But perhaps the passage in Commander Kenworthy's speech which was least open to criticism was that in which he read to the meeting an extraordinarily verbose resolution, too long for me to reproduce here, which as far as one could see recommended nothing very precisely but generally that whatever the Turks were demanding in Iraq should be granted by the British Government, on the grounds that such a surrender was in the best national and international interests.

Upon the Chairman's resuming of his seat, the very slight emotion that had been politely indulged by a section of the audience disappeared altogether. Both heckler and supporter were restrained, not to say taciturn. After his effort, speaker after speaker pursued an uninterrupted and mostly an irrelevant course. For the greater part, they based their words upon either anti-Christian, or anti-imperialistic, or pacifist, or frankly pro-Turkish sentiment. Only one speaker appeared to have any close knowledge or actual experience of the Iraq problem.

Mr. Arnold Lupton spoke of the respective populations of Iraq and of Britain, the ruined cities of Mesopotamia, the bombing of Iraq's tax-payers, and, possibly, of other certain and uncertain things.

Mr. Arthur Field did not believe in the atrocities on Assyrian Christians. These massacres were, he said, always being attributed to Moslems whenever an important decision had to be made. The frontier which Turkey had proposed—the line of the Jebel Sinjar and of the Jebel Hamrin—was a perfectly good frontier. The British Foreign Office had once made a mistake in its allocation of Tekrit and of Kifri. The whole of the territory north of a point 60 miles south of Mosul city had been filched from the Turks in violation of the terms of the Armistice (one expected many errors, but this particular lie—for it is a lie, as may be seen by a reference to the terms of the Treaty of Mudros, under which indeed, the advance northwards of General Marshall's forces was made—one had thought long dead), and there was no reason, if these mad military advisers had their way, why the British should not be ordered to advance right into Anatolia, to occupy the sources of the Tigris.

Mr. Philips Price spoke of the Turkish-Kurdish-Christian relations. He stated that the feeling between the Assyrians and the Turks was in the first few months of the War perfectly good—the Patriarch Mar Shimun had assured him so: it was only upon the instigation of the Russians that the Christians became rebels against their rightful overlords. It seemed to him that this question of Mosul was all part of that vast imperialistic dream which Great Britain, with her armies in the Caucasus and Persia, and her schemes in Central Asia, had in the months following the War for the erection of a vast Middle Eastern empire between the Mediterranean and India. But such an empire merely meant to thrash the "niggers" under one's particular charge. This mordant speech was at any rate original: for Mr. Price appeared to regard the Bedouin of Iraq as part of the great fraternity of the international workers of the world.

Mr. Summers also spoke.

The resolution was then put to the meeting, and was carried by a majority which the Chairman declared to be "large." From the angle of relative values, no doubt he was quite accurate in his description.

After this a few questions were asked, which elicited from the Chairman his conception of his proposed exchanging of 11,000 Moslems for 100,000 Christians as "a good bargain," and, more strangely still, his assertion that such a proposal was officially made by the Turks at the recent Geneva Assembly, and, on the part of Mr. Field, the manifestation of a curious haziness on the difference between the Chaldean and Nestorian Assyrians.

To this meeting I went, as I have said, in a mood of some doubt; and from it I came still deeper in doubt. One wondered whether this was all the enthusiasm that those who support Turkey as against the British Government could raise, though, in justice to the Society under whose auspices the meeting was arranged, I ought to say that messages of regret at inability to attend were received from men who were described as "Professor" St. John Philby, Mr. Bernard Shaw, Mr. Ameer Ali, and others. But most of all one wondered of Commander Kenworthy *que diable allait-il faire dans cette galère?*

According to reliable information from Bahrein Island, says Reuter's Baghdad correspondent, the number of pearl fishers drowned during the recent cyclone in the Persian Gulf does not exceed 450. In addition, 160 persons are reported to have been killed near Katif by falling date trees.

THE WEEK AT HOME.

London, Tuesday Morning.

Armistice Week.

In the most splendid and gratifying way the nation has reasserted the emotion which the arrival of each Armistice Day should bring to it. It seems to be felt very widely that our observances of Armistice Day have in the past done us little credit, and there is an obvious desire this year to change all that. Armistice Week started last Sunday, Remembrance Day, when a mood which is perhaps higher than, and is certainly to the majority of Englishmen the nearest approach to, a purely religious sentiment, was created, and which will endure long after to-morrow, Armistice Day.

The Premier and Truth.

The solid reputation that Mr. Baldwin has made for occasional speeches is now manifest to all, but it is doubtful whether he has ever surpassed the quality of the two speeches which he last week delivered in Aberdeen and Edinburgh. Thre is a poise about his utterances, whether they be on national or foreign affairs, that immediately strikes one: he never overstates a case, and, if he errs at all, it is on the unusual side of generosity.

The Prime Minister has in his keeping, as he has just proved to Scottish students, the greatest need of our age—the secret of being a genuine Tory Democrat. There are Tories in this country who have a fine flavour of reactionaryism; there are Democrats who diffuse the most glowing and pertinent notions of democracy: but there is no one who combines in quite the same degree as the Prime Minister an awareness of the necessity for conserving what is good of the old and of scrapping what is bad of it for future improvements. He lives in restrained hopefulness: he is hopeful because he knows too much about the past of England to despair of the future, and restrained because he knows too well the frailities of human nature. Of whom else could a Liberal organ write these words (they appeared in the *Manchester Guardian* on Saturday):—"The violent attacks made upon Mr. Baldwin by some of his party's journals amount to this—that they find him too decent to be endured; that he refuses to commit acts of class-war; that he holds himself bound after an election by promises given before it, and so forth." It almost seems as if the Premier is more revered by his opponents than by many of his so-called supporters!

The Trade Union Alliance.

Those who had hoped that the great Trade Unions of this country would bind themselves together in perfect unanimity against the capitalists' wars that are said to be in preparation on them were rudely disappointed last week, when the National Union of Railwaymen refused to join, or at least postponed joining, the Industrial Alliance. The miners, naturally, are among the keenest to complete the alliance before the coal truce expires, but since the whole matter has been adjourned until next March or April, it would seem improbable that the Industrial Alliance will be able in time to usurp the functions of the General Trade Union Council.

The whole difficulty is, of course, that Trade Unionists are, in sentiment at least, much more syndicalist than socialist. The various unionists are as keen as any Oriental Nationalist upon "self-determination," and are not too ready to surrender their hard-won privileges in favour of a heterogeneous body. This is probably the oldest trouble of all in industrial organisation, and one which is by no means yet at an end. Undoubtedly, however, there is a definite trend towards a larger unity among Trade Unionists than exists at present, and the movement is engaging the closest attention of students of domestic politics.

Conservatives' Thirst.

Many hard things are said about the mentality and the outlook upon life of clubmen, but nothing could so have damaged whatever reputation for sanity they possess as the demand which a deputation under Sir Herbert Nield made last week before the Home Secretary for a modification of the hard conditions now attaching to the purchase and the quaffing of drinks in Clubs. So strongly do these thirsty souls feel about the matter, it seems, that they are ready to withhold their support from any Tory candidate who will not pledge himself to satisfy this demand of the Unionist Clubs. A positively amazing situation!

Now I am all on the side of liberty, and far be it from me to suggest that those who wish more often to assuage a decent thirst should not be allowed to do so. But obviously in this affair what is sauce for the goose is sauce for the gander; in other words, what a Scotch-and-soda is to the Club a pint of mild or bitter is to the Public House. What these Unionist clubmen, who in other matters, such as the allocation of the Trade Unions' levies, are so anxious for the liberty of working-men, should do is to concentrate upon the wholesale removal of the war-time restrictions in regard to drink. For as things are, they merely stultify themselves as democrats, and exhibit themselves as civic impotents. One feels, however, that many hundreds of Club members will resent the imputation that their politics are determined by such considerations as Sir Herbert suggested.

It was, therefore, good to see that the Home Secretary, who, if one may say so, is not usually shocked by indiscreet language, recoiled in teetotal horror before this Tory threat. Sir William Joynson-Hicks certainly gave the deputation food for thought; but it was their thirst, not hunger, which required satisfaction.

Already it is being said that the attempt on the part of ecclesiastical and temperance organisations to preserve the war-time restrictions upon drink has, through the inept action of these Clubmen, half achieved success.

The Bogey of Over-Population.

I have often referred in these columns to that fear of over-population in Great Britain which is entertained by many thinkers of different schools. Admittedly, there is a considerable amount of opposition to the pessimistic utterances of some of our leading sociologists, but not until I read yesterday an article by Professor A. L. Bowley did I realise that there is another approach to the problem than that made from the moral or expedient angle.

This eminent statistician points out that, in considering the future movements of population, not only must the actual birth-rate, death-rate, and net emigration be taken into account, but the age and composition of the population must also be reckoned with. And here he makes a

Digitized by Google

capital statement. Owing to the diminution of the birth-rate throughout this country, he says, the population of young people and children is diminishing and must continue to diminish, while the population of the adult and old is increasing and will increase. His conclusion is that "the present number of births (and the present death-rates) would ultimately result in a stationary population in Great Britain not far off 50,000,000."

That prospect seems to me intensely interesting, for, as far as is known, England has never enjoyed the advantages that a stationary State undoubtedly possesses. Whatever the population in the Middle Ages was—and it is now generally held to have been considerably higher than our Victorian historians used to reckon it—it is fairly certain that since the Black Death it has steadily increased, or at least, with but temporary interruptions. Now it need not be supposed that a stationary State implies a stagnant State—the experience of Continental countries, such as France, disproves that; and it would certainly make the enacting of domestic legislation much easier to our own sorely puzzled politicians.

The Lord Mayor's Show.

In more than one way we are getting back to the old pre-War habits: the fact was plainly manifest in the huge crowds which assembled for the Lord Mayor's Show yesterday. It had been thought that the War had killed the love of pageantry and the glamour of traditional events which were always distinguishing marks of civic functions, but, although those who in the years 1914-1918 saw sterner pageants may never recapture their first and innocent enthusiasms, English crowds do now undoubtedly love a show.

This year's Show was one of the longest on record, but was quite as coloured and various as usual. Its original feature was a miniature Wembley on wheels, displaying a "pageant of Empire Trade." Whether these things have any considerable effect I do not know, but it was pleasant to see once again, without the journey to Wembley, the resources of Australia, New Zealand, India, British West Indies, and British Guiana. The children at any rate were vastly impressed: and there were watching the Show thousands of children whose age was really past that of discretion.

Philistia.

Whether or not the public taste in artistic and intellectual matters is improving or degenerating is one of the most debatable questions. There are those who would have it that we are going downhill in every way: others assert that popular education has produced beneficent results. Mr. Israel Zangwill, who is known as possessing many other qualifications to speak on this subject than those of a comparatively unsuccessful playwright, has just depicted in most gloomy colours to the British Confederation of Arts the Philistines' occupation of England.

But this, one suspects, has been true ever since the Industrial Revolution befell England. In the progressive industrialism that has for the last hundred years been the dominant feature of our history, there has been little time for art, and it is not altogether a coincidence that those quarters which, speaking generally, are quickest to appreciate Art are either the remote agricultural districts of England in which the hand of Capitalism is less hardly felt or the "rebel" quarters of industrial cities.

Rugby Clubs' Quarrel.

Everyone will remember the famous quarrel that broke out between Middlesex and Yorkshire, owing to the unsportsmanlike attitude of some of the Yorkshire eleven. It was a disgrace to cricket, and, happily the matter was rapidly settled. Now, however, a similar thing has happened in Rugby circles. The Harlequins have determined, as a consequence of a match against Newport last Saturday, not to play the Welsh club after this season. Newport's forwards are accused of continually disregarding the rules, and certainly the referee was very severe on them.

Whether the Harlequins have acted in the wisest manner it is impossible for one who did not actually see the gravity of Newport's offence to say. Often enough in these cases—e.g., the last All-Blacks versus England match—there is blame to be attached to both sides. In the present instance this may not be so. But in any case it is extremely bad for the good name which Rugby has proudly and rightly held as the cleaner type of football that there should be this falling out between two of the most famous British clubs.

Oil Paintings.

Apart from an Orpen or two, and a few Olssons and Wilkinsons, the main interest of the annual exhibition of the Royal Institute of Oil Painters lies, unfortunately in the work of the Hon. John Collier, who recently gained (why does one say "gained"?) notoriety for his public attack on Epstein's "Rima." His ideal of feminine beauty is here to be seen in the most Victorian of pictures: it is called, after Tennyson, "Pallas Athene." Literally it must be seen to be believed. Were you to parody the literary decorators of last century you could achieve nothing so deadly as this.

But there is, happily, outside this academic institution an abundance of good, original English work being done in oils. Even here, at this exhibition, you can discover individuality poking out its unaccustomed nose. But for the majority of the exhibits—one's fountain pen dries up before the task of describing them. ALTER EGO.

NOTES OF THE WEEK.

(Continued from page 580.)

Assyrian Refugees.

Somewhere or other there is a frontier between Turkey and Iraq; the League of Nations is shortly to say where it is. Inseparably bound up with the question is the fact that its decision must affect for weal or woe the Assyrian people whose habitat is in that region. Now, the League of Nations was called into existence for the better ordering of the world, "by the prescription of open, just, and honourable relations between nations" and to achieve international peace and security. In arriving, therefore, at a decision regarding the frontier, the League of Nations may feel tempted to consider how its judgment is likely to affect the purpose for which it was itself called into being. In this connexion it will note the attitude of the two peoples to the care of one or other of whom the Assyrians will have to be assigned. Within recent years they have found themselves both under Turkish and under British jurisdiction. Their recent experience of the former has been that they have been turned out of their villages, subjected to terrible hardships or worse and left to a fate which they may or may not survive. Those who have escaped have taken refuge in Iraq under British protection, and an organisation has been formed in England under the auspices of the Archbishop of Canterbury to provide relief for these refugees. If the League Council decides that the Assyrians will be better off under Turkish rule, it has many lines to choose from for the Turkish-Iraqi frontier; if it considers that it would stultify in some measure the purpose for which the League of Nations was created to leave the Assyrians under the Turks, there is only one demarcation possible for the frontier, the one claimed by the British Government. In the meantime it is to be hoped that the Assyrian Relief Fund (Hon. Secretaries, 3 and 4, Memorial Hall, London, E.C.4.) will receive generous support, in order that Great Britain may discharge her obligation to these people who helped her to the limit of their capacity in the Great War.

SOME MACEDONIAN MEMORIES.

By W. F. S.

The recent assassination of Todor Panitza, almost the last of the good old pre-War *komitajis*, broke yet another link with the Macedonia of the past, and the advent of modern armies and instruments of destruction has, while not lessening the tale of murder, rape and arson indigenous to the Balkans, deprived these proceedings of much of the glamour with which they were invested of yore.

The travellers who ensconces himself in the direct Athens carriage of the Orient express at the Gare de Lyon might be surprised were he informed that, but twelve years ago, not only did no communication by rail exist between Salonika and Athens, but that it was the rule, rather than the exception, for the daily *conventionnel* from Nish to Uskub and Salonika to be delayed or actually held up by the only *force majeure* that the Balkans recognise—*komitajis*.

Bastardini's restaurant at Salonika, like many other once humble institutions, attained through the Great War fame and fortune beyond its proprietor's wildest dreams: but, to the old-timer, the chief call it makes on the memory will always be the fact that, when at the height of his notoriety, Sandansky, the Balkans' boldest and baddest brigand, was one of its most regular customers. The little, pale-faced, bearded man struggling with the intricacies of macaroni in a corner of the modest dining-room might well have been taken for an underpaid Armenian teacher in some Turkish school or a Jewish merchant from the bazaar, but never for the man who left a longer trail of blood and crime behind him than any other one person, even in Macedonia.

That Balkan landmark, the White Tower at Salonika, saw many a strange sight during the Allied occupation, but surely none stranger than the spectacle, some years before the holocaust, of the stage stormed by a mob of maddened Montenegrins, incensed at the ignoble caricature of Danilo in "The Merry Widow."

The first and second Balkan wars held their humours, not the least of which was the famous bottle of whisky presented to Abdulla Pasha, the Turkish commander-in-chief and a martinet of the old school, by a famous war correspondent, which was responsible for one of the most sensational pre-War journalistic "scoops." This correspondent was wiser in his methods than a now ultra-successful colleague who inaugurated what no one could have foreseen would be a brilliantly successful career by the rather tactless experiment of trying to drive a motor-car through a battalion of Turkish *Redif* on the march. Had it not been for the presence of a few fellow-countrymen (it happened in the streets of Galata) well versed in the intricacies of the Turkish tongue, one of the world's "largest circulation" dailies would have had to look elsewhere for its "stunt" articles.

In the average Macedonian winter the absence of sun is extremely wearisome. During the first three months of the first Balkan war, it rained solidly all day and every day: the streets of Salonika, never exactly a testimony to municipal efficiency, become one vast slough of semi-liquid filth, churned by the lumbering and rudimentary transport of the Balkan armies into an amalgam which had but one merit consistency. No wonder the long-suffering proprietor of the Olympus Palace Hotel caused notices to be posted up in every bedroom, of which the tenour, in half-a-dozen tongues, was: "Gentlemen are requested to remove their boots before getting between the sheets."

The urbanity of the late King George of Greece was proverbial, but, now and again, he let drop an apparently innocent remark well calculated to make the victim squirm. After the occupation of Salonika by the Greeks and Bulgarians in 1922, a camp for refugees was set up just outside the town, under the management of an International Committee, the Secretary of which was the leading local dentist, a Roumanian Jew who had once paid a visit to the United States. The King, who was being shown round the camp by this gentleman, had occasion to ask him what was his nationality. "American, your Majesty," came the prompt answer. After a slight hesitation, "Oh, I see, *German*-American," said the King. "No, your Majesty, just American," replied the unfortunate Jew. It is true that "one hundred per cent." had not been invented in those days!

The torpedoeing of the Austrian battleship Viribus Unitis in Pola harbour during the War was an exploit of remarkable audacity and organisation, but it is questionable whether it is entitled to take rank, as a daring feat, before that accomplished by the Greek torpedo-boat which sank the Turkish coast-defence vessel Feth-i-Bulend at Salonika during the first Balkan war. When it is considered that the Turkish ship was moored within fifty yards of the White Tower, and that Greek craft actually remained inside the Kara-Burun straits for seven or eight hours after discharging her torpedoes, this must rank, even taking into account the quality of Turkish artillery in those days, as a Homeric deed.

An exploit of a different character was realised by the Austrians when, in 1912, in an attempt to discredit Turkish handling of the Macedonian muddle, they deliberately placed a powerful bomb in their own Austrian post-office at Salonika. The engine of destruction duly exploded, but, marvellous to relate, apart from blowing the official inkpot through the ceiling, little damage was done. Another example of how innocuous the most ferocious of bombs can be is afforded by the attempt made by the afore-mentioned Panitza to blow the afore-mentioned Sandansky into smithereens by heaving a neat parcel of high-explosive into a café where the latter was sitting. It is even said that Sandansky finished his drink. These practical jokers, however, went rather far when they placed a large bomb under a seat in a tramcar running along the sea-front at Salonika. Yet something went agley again, and the car actually made two trips from the Olympus Palace terminus to the depot and was garaged for the night before the bomb eventually exploded, with a maximum of noise and a minimum of effect. Those were the days when Consulates had to handle carefully anything arriving by parcel post, and careful cavasses kept buckets of water handy.

The most immediate result of the Balkan wars, so far as the town of Salonika was concerned, was the influx of countless hordes of refugees, with which inadequate attempts to cope were made by the International Committee previously referred to, and by the Egyptian Red Crescent organisation, which dispatched the hospital ship Bahr-i-Ahmar to Macedonian waters. A certain repast partaken of on board that stout ship lingers in the writer's memory. As the only Giaour at the groaning board, he made a noble attempt to wrestle with the seventeen courses, ranging from pilaff to yaghourt through the nice gradations of *kadin bourdou* and *imam bayildi* and thence back again to the point of departure via *baklava*, green peppers, sweet boiled rice, roast lamb, and *taouk geuksi*. Seeing, however, that he was making very heavy weather of it all, a kindly Egyptian medico proposed an adjournment to the dispensary, reached by a deck-long promenade over the recumbent and odoriferous bodies of half the nationalities of Asia Minor. Incipient nausea was radically dealt with by a noble draught of crême-de-menthe, poured from a glass jar labelled *Nux Vomica* and partaken of in a medicine-glass duly graded in minims. So the American did not, after all, invent all the strategems for combating Prohibition.

The four French army aeroplanes, under the command of Major Dagneau, which are to attempt the flight from Paris to Teheran, left Villacoublay last Thursday.

PERSONAL AND GENERAL.

TO-DAY

November 12, 1925 (New Style).
October 30, 1925 (Old Style).
Rabia II., 25, 1344 A.H., of the Moslem Calendar.
Cheshvan 25, 5686, of the Jewish Calendar.

Prince and Princess Andrew of Greece visited the King and Queen at Buckingham Palace on November 4.

The Bulgarian Minister and Mlle. Haji-Mischeff have returned to London from Paris.

Lady de Courcey Wheeler sailed from London last Friday, in the P. and O. s.s. Chitral for Port Said.

Field-Marshal Viscount Allenby and Viscountess Allenby will leave on Nov 16 for a tour round the world.

Sir Hugh Clifford, Governor-designate of Ceylon, and Lady Clifford sailed from Liverpool last Friday for Colombo.

Prince Christopher, of Greece, who had been spending a few days in London last week, left the Berkeley Hotel for Wareham, Dorset.

Mr. Amery has appointed Mr. M. E. Antrobus of the Colonial Office to be his Assistant Private Secretary, *vice* Mr. W. C. Hankinson, M.C., promoted.

The Right Hon. Edward Wood (Viceroy and Governor-General Designate of India) had an audience of the King at Buckingham Palace last Thursday morning.

Mr. N. M. Samarth, of the India Council, who is proceeding on leave to India, left London last week, embarking at Marseilles in the P. and O. steamer Ranpura.

Viscount Inchcape left London for Paris last Thursday, to attend the Suez Canal meeting. He was accompanied by Viscountess Inchcape and the Hon. Elsie Mackay.

Mr. N. McLean, of Christ's College, Cambridge, has been elected by the Special Board for Oriental Studies as their representative on the General Board of Studies for four years.

The Hon. Harold Nicolson left London on November 4 to take up his duties as Counsellor of the British Legation at Teheran. The Hon. Mrs. Nicolson will remain for some weeks at Long Barn, near Sevenoaks.

The Foreign Naval Attachés in London gave a farewell dinner at Claridge's Hotel last Thursday evening to Captain G. Panas, the former Greek Naval Attaché, and Madame Panas, who are returning to Greece.

H. E. Dr. Georges Jouritch, the Minister of the Kingdom of Serbs, Croats and Slovenes, who returned to London on November 4 from Switzerland, had the honour of an audience of the King at Buckingham Palace last Saturday, when he presented his Letters of Credence as Envoy Plenipotentiary of the Serbs, Croats and Slovenes.

Major-General H. J. Huddleston (General Officer Commanding British Troops in the Sudan) had the honour of being received by his Majesty at Buckingham Palace on November 4, when the King invested him with the insignia of a Companion of the most Honourable Order of the Bath (Military Division).

Major-General Sir Hayward Reader Whitehead, K.C.B., F.R.C.S., of Whinfield, Cobham, Surrey, Colonel Commandant of R.A.M.C. since 1922, who saw service on the North-West Frontier of India and in the Great War, during which he was Director of Medical Services in the early part of the Salonika Expedition, who died on September 28, aged 70, left estate of the gross value of £11,235, with net personalty £9,102.

Book Reviews and Notes.

ISLAM AND CHRISTIANITY.

"THE LAW OF APOSTASY IN ISLAM." By Samuel M. Zwemer, D.D., F.R.G.S. (London: Marshal Brothers.)

Missionary endeavour among Moslems has had small visible result in comparison with the effort made. It is true that there are converts from Islam, the majority of them being found in the Dutch East Indies and in India; but in Persia there are fewer than 300, in Arabia barely thirty, and in the whole of North Africa, including Egypt, under five hundred. As the reason for this state of affairs in contrast to missionary successes in other fields, Dr. Zwemer adduces the formidable Islamic law of apostasy; a Moslem who abjures his religion courts death. The extent to which this penalty is based on the Koran or on the Traditions or on both is examined, and another chapter shows how the law has worked in practice through the centuries. The author enumerates many instances of the fate that has overtaken converts from Islam, and recognises that there are at least two sides to the question of the advisability of public baptism in Moslem countries. He is not prepared to advocate any relaxation of missionary effort with a view to sparing the converts from persecution and worse; but he considers that any restrictions placed on the activities of missionaries among Moslems in lands under British control ought to be removed. A student of psychology might be interested to analyse the motives behind revenge on apostates in Moslem countries of recent years, with a view to deciding how far it is prompted by a conscious obedience to the injunctions of Islam, and how far by more primitive instincts. In Christian America a crowd will lynch a man for certain crimes, and it is arguable that a Moslem may have in him, apart from any actual knowledge of the letter of the law, an instinct that prompts him to avenge what he regards as an insult to his religion. Dr. Zwemer, however, is able to end up on a happier note. Tolerance towards converts from Islam seems often to be in direct proportion to the proximity of foreign Governments and their influence, and the import of Western civilisation in breaking down fanaticism. Not only in Turkey and in Persia, but in Mecca itself, voices have been pleading for religious liberty. In these circumstances it may not be too much to hope that missionaries will see to it that no additions are made by their personal efforts to the long list of convert martyrs.

"TRADE LYES A-BLEEDING."

"THE ENGLISH FACTORIES IN INDIA, 1665-1667." By Sir William Foster. (Oxford University Press. 18s. net.)

For professed students of Indian History it would be sufficient to record the appearance of a new volume of Sir William Foster's monumental work: they know what to expect, and they will not be disappointed. But we are now definitely past the period when the Whitehall records could be described as of interest only to professed students, and the latest instalment can be recommended with confidence to a much wider circle. It is cast in the narrative form first adopted in the tenth volume, and it reads so easily that one is tempted to overlook the writer's remarkable skill. The basis of the book is the letters that passed between England and India, or between the various Indian factories. The letters constantly crossed, and they sometimes stopped short of their destination, for the overland route was by no means safe, and the Dutch did not scruple to intercept English correspondence when they got the chance, but Sir William goes steadily on, clearing up the tangle, and presenting a connected and readable narrative, with sufficient extracts from the original documents to whet the appetite for more. In itself, the period covers much of interest. At home, the Directors had to carry on through the Plague of 1665, the Great Fire that followed, and such incidents of the second Dutch War as the raid on the Medway. In India, the commercial operations of the factors were dominated by fear of the Dutch, who, as usual, were far superior in strength in Asiatic waters, and, with little doing in the way of business, the Englishmen might have had rather a dull time, if it had not been for the events in Madras and Bombay. For most of the period Madras was in the hands of rebels, for that very bad bargain, Sir Edward Winter, had imprisoned the Company's Agent, and was busily engaged in feathering his own nest, while the factors at Musulipatam further north were working gallantly but without success to promote a counter-revolution. Bombay was a royal possession, and the meagre garrison, unsupported from England, was trying to live on the country with the aid of some rather questionable expedients, while the island was inevitably a thorn in the side of the Company's regular establishment at Surat, "the receptacle of all those that abuse you and your servants," as it was described by Sir George Oxenden, much the most satisfactory figure in the book. The background of Indian politics stands out clearly in incidental references—the fanatical futilities of Aurangzeb, the squalid intrigues of the Deccan Courts, the systematic extortion practised by Shaista Khan in Bengal, and the meteoric figure of Sivaji, "a rebell and perfidious thiefe," as he appeared to the commercial community on the West Coast. There is thus plenty of human interest in the book, and there is, too, a delicate flavour in the letters of the period, carrying us back to the spacious times of Elizabeth. Here, for instance, is a sketch of the chaplain at Madras.. "The minister is to this deponents owne knowlidg and observation a very debached person, and druncke very frequently, topling with the meanest and worst of the souldiers, with whome he will play at tables and at nine pinns and will tipp for a bottle of sacke or a pagothy at a time: which is a great scandall to our nation and religion." Exactly.

"THE BLUE PETER."

That extremely well produced magazine, *The Blue Peter*, continues to illustrate the attractions and character of distant voyages. To the ordinary civilised sea-traveller it has, in fact, become indispensable. The issue for November contains, among many good things, a charmingly written article on "Unchanging Fez," by Mr. Richard Curle, an interesting exposition of Marco Polo's travels, by Mr. J. A. Brendon, and a slight Red Sea sketch, "Silence Afloat," by Mr. S. Hetherington. Altogether it is a number quite equal to its predecessors; and with that, enough is said.

According to Reuter's Sofia correspondent, as the result of a daring robbery at the Ethnographical Museum in Sofia a number of valuable objects have been carried off, including gold coins and a gold statuette of Alexander the Great, which dates from the fourth century B.C. The total value of the stolen objects is estimated at nearly £100,000. Some of the museum attendants and about 30 other persons have been arrested.

A pamphlet from Khartoum sets out the need of a stone British Church at Port Sudan in place of the present wooden Church, which is very inadequate. Subscriptions may be sent to the Treasurer, Port Sudan Fund, care of National Bank of Egypt, Port Sudan, or to the Rev. F. H. Durnford, Clergy House, Khartoum.

BALFOUR DECLARATION ANNIVERSARY.

A mass meeting to welcome back to England Sir Herbert Samuel, was held at Kingsway Hall on November 2, the eight anniversary of the Balfour Declaration. Mr. Philip Guedalla, President of the English Zionist Federation, presided, and other speakers included the Very Rev. the Chief Rabbi, Dr. J. Hertz, Dr. Chaim Weizmann, Mr. H. S. Q. Henriques, President of the Board of Deputies of British Jews, Sir Robert Waley Cohen, and Mr. Nahum Sokolow.

In the course of his remarks Mr. Philip Guedalla said that Sir Herbert Samuel had left behind him in Palestine a record of almost unbroken peace and increasing prosperity. The Jews in this country meant to raise £25,000 as their contribution to Palestine during the coming year, as, unless another effort was made in this country, all the work of Sir Herbert in this movement would be wasted. Out of a total sum of over £1,900,000 so far raised, England's contribution had been only about £50,000.

The following message from the Rt. Hon. L. S. Amery, M.P., was read: "I am much interested to hear that a special meeting of welcome to Sir Herbert Samuel is being organised by the English Zionist Federation, and I take this opportunity of bearing testimony to the admirable work accomplished during his tenure of High Commissionership. Palestine has been fortunate to have as its first High Commissioner a man of Sir Herbert Samuel's high character, impartiality, and constructive statesmanship, to lay on sound lines the foundation of its future progress." A message of welcome was also sent from Mr. Lloyd George, who was prevented from being present at the meeting.

Sir Herbert Samuel, who was accompanied by Lady Samuel, said that the Balfour Declaration had received the assent in Great Britain of five successive British Governments, and was now permanently established as part of the public law of the world. In describing the wonderful progress which had been made in the different towns, he paid special tribute to Tel Aviv, which he said would probably become in no distant future one of the most important industrial towns of the Middle East. For over three years Palestine had had no disturbances in the country. It was not too much to say that Palestine had been the most peaceful country in the Middle East. This was due to three causes in particular. First, he placed the firm and prudent policy of the British Government itself. Eight years ago that day that policy was stated. It had been adhered to since. All parties in Palestine knew exactly where they stood. The second cause he attributed to the vast resources which had flowed into the country from outside. The Jews alone had spent in Palestine since the war £7,000,000. The third cause which had specially contributed had been the policy towards the Arab population of goodwill and helpfulness. He pointed out that if he were to look at the matter purely in the Jewish interest alone, he could have rendered the Jews no greater service than in promoting a policy of goodwill and helpfulness to the Arabs. Without trust a people could not stand. The people of Palestine were becoming year by year more self reliant. He emphasised the importance of the formation of a Jewish agency, which the Mandate Commission had in contemplation.

The following resolution, moved by Mr. Sokolow, seconded by the Chief Rabbi and supported by Mr. Henriques, was passed by the meeting: "This mass meeting cordially welcomes Sir Herbert Samuel on his return to England, and records its deep and grateful appreciation of his devoted services as High Commissioner in Palestine, and is determined to support by every effort the great work he has done for the upbuilding of the Jewish National Home."

It is stated by the Armenian (Lord Mayor's) Fund that the work of the League Commission for Armenian Settlement has only recently been begun by sending representatives to make inquiries in Armenia. If the report of the representatives be favourable, the Commission will take the necessary steps to raise a loan.

NEWS IN BRIEF.

Ex-King Ferdinand of Bulgaria was received in audience by the Pope on November 3.

The Maharaja of Patiala, who represented India at the League Assembly, arrived at Bombay on November 3.

General and Madame Sarrail left Syria last Sunday, embarking in the s.s. Sphinx, on their return to France.

M. Henri de Jouvenel, the new High Commissioner of Syria, will leave Paris for Beyrout, after having seen General Sarrail, whose return he awaits.

According to the Athens newspapers, the well-known Bulgarian *komitaji*, Anton Ivanoff, has been arrested at Harmankeuy, near Salonika.

King Faisal, who left Paris on November 4 for Trieste on the Orient Express on his journey to Baghdad, has reached Egypt.

The Rev. P. B. Clayton (founder of Toc H), arrived in Calcutta on a ten days' visit in connexion with the Toc H movement, which already boasts a Lodge in Calcutta.

The chief dignitaries of the Orthodox Church met on November 3 at Bucharest in order to arrange for a conference of all branches of the Church at Mount Athos.

Among new flags notified for Turkey in the Admiralty Flag Book, is that of the Minister of Marine—a square red flag, having in the centre a foul anchor in white, and in each corner a white star.

Sir John Foster Stevens, of Lansdown Place West, Bath, a former Judge of the High Court of Calcutta, who died on September 19, aged 80. left estate of the gross value of £8,219, with net personalty £8,045.

Sir Horace Rumbold left Madrid on November 3 for Geneva on his way to take up his duties as president of the Commission appointed by the Council of the League to inquire into the Græco-Bulgarian frontier conflict.

General Pangalos, the Greek Prime Minister, has taken charge of the Ministry of Finance *vice* M. Kophinas, who resigned last Friday. M. Lucas Rouphos has been transferred to the Ministry of Foreign Affairs *vice* Admiral Hajikyriakos, Minister of Marine, who has been temporarily in charge of it since the resignation of M. Rentis; and Professor Richardo Livanthinopoulos has become Minister of Education, in succession to M. Rouphos.

Sir Percy Loraine, British Minister in Teheran, has informed Riza Khan that the British Government provisionally recognises the *régime* which has been set up in place of the Kajar Dynasty, provided always that the new Persian Government recognises and complies with the obligations of its predecessor towards Great Britain.

Admiral Hajikyriakos, the Greek Minister for Foreign Affairs, last Thursday morning received simultaneously the British and French Minister in Athens and informed them, as he had already informed Sir Eric Drummond, the Secretary-General of the League of Nations, that Greece was desirous of securing a permanent Balkan Pact and was in agreement with Mr. Chamberlain's suggestion to the League for the negotiation of an agreement providing for compulsory arbitration among the Balkan States.

Reports of the burning of American Mission schools and churches in the region south of Damascus, where the Druse tribesmen have driven out the Armenian and Syrian Christians, were received in New York at the end of last week. The Near East Relief Committee reports add that the British authorities have closed Palestine to refugees from Syria, many of whom are now massed on the border. Preparations have been made to evacuate at short notice 10,000 children in orphanages in Syria under the American Commission for Relief in the Near East.

Indian Affairs.

HATRED, MALICE, AND ALL UNCHARITABLENESS.

In a leading article that appeared in THE NEAR EAST AND INDIA about two months ago, it was regretfully noted that, among the many unpalatable facts to be found in the anti-British campaign carried on by extremist vernacular and Anglo-vernacular newspapers in India, the most unpalatable is their constant suggestion of bad faith against Englishmen and the British Government: and a recent note referred, also with regret, to their insistence that Great Britain's desire for the incorporation of Mosul in Iraq is solely due to her belief that oil is to be found there. The last mail brings a painful reminder of both these facts, in the shape of an article in which the *Bombay Chronicle* condemns the appeal of the Archbishop of Canterbury on behalf of the Assyrian Christians in the north of the Mosul vilayet, and the support thus given to the proposal that Britain's mandate in Iraq should be extended to 25 years, in the terms of the recommendation of the League of Nations' Commission.

The article is headed "Let us Prey": and declares that, though there is no mention of oil in the episcopal deliverance, what the Archbishop has really done is to recommend the acquisition of oil from the religious angle, and to recognise the appropriateness of the imperial formula "let us prey." The paper goes on to assert that, in the Mosul issue, the Conservative Government is "attempting a series of diplomatic jugglery to get oil on the cheap": and that "His Grace brings piety in line with the oil front and proclaims to the world the pro-English capitalism of the Almighty. To true Christians, the declaration must be a matter of utter shame. It is an attempt to infuse vulgar chauvinism with the animus of a crusade, and Mr. Amery's demands are given a sanctimonious hue by the Archbishop." That "the hallooballoo" about Christian deportations only started when the British had "lost their case before the League of Nations' Commission": and that the appearance of Archbishops on the scene marks the despair of the Cabinet of securing "the sanctions needed for the Mosul gamble." To protect Assyrian Christians by taking over their homesteads is poor missionary enterprise, although the Archbishop of Canterbury would "compel them to come in." There are in Iraq three Indian battalions, one white battalion, and eight air squadrons; the latter are good for destroying non-combatants; but, though Indian troops are, of course, available, yet "there is a limit to their cordial serviceableness and a real land expedition is unthinkable for Britain. The Dominions will not lift a finger, and Britain has a million and a quarter of unemployed people to feed, while the Amerys and the Bishops utter war-cries. Britain is trying to form "native" battalions, especially from the so-called Assyrian Christians. The process is in an imperfect stage, but 25 years may develop it into hitting efficiency. The Archbishop, whose heart bleeds for the Christians, is probably ignorant of these details of holy penetration." In his peroration, the writer says that, during the great War, British statesmen averred "there shall be no more Alsace-Lorraines to fester the world": and asks, "what is the Mosul wrangle of Britain but a repetition of the national crime that concerted the last war?"

It has, in these pages, been several times emphasised that the newspapers that write this sort of stuff are not obscure rags, but important organs that count their subscribers by thousands. It is worth reiterating that statement, even *ad nauseam*: for this is the pabulum upon which the rising generation of the Indian intelligentsia is being fed, to the exclusion of any other. And what is the remedy? There are those who would treat the matter lightly: who argue that political India is suffering from growing pains, that this sort of writing no more than reflects the attitude of the schoolboy who wins the applause of his comrades by making faces at his master behind his back, that the ebullition of youth will pass as the boy grows to maturity. There are those who cry for Government propagandist activity: oblivious of the fact that official *communiqués* meet with indifference or ridicule: that sober newspapers command no sale: that it is only the inflammatory orator who collects an audience, and that the moderate politician, unless he confines his address to a carefully selected audience, will infallibly be shouted down and insulted, perhaps even assaulted. There are those who point to the obvious fact that, if the politicians of to-day should really prove able to raise the whirlwind, they would infallibly be the first to be swept away by it: ignoring the constitutional conceit, ingrained in the average Oriental, that leads him to the facile belief that he will be equal to any emergency. All these attitudes are mistaken—the remedy must come from Indians themselves: from those political leaders who are, at present, passing through so acute a phase of insanity that they cannot even visualise the danger, not only to India but to themselves, that stares them in the face: the wholesale perversion of the rising generation, of the young men of to-day who will take their places to-morrow. Signs of the beginning of a return to sanity among the "leaders" are not wanting: is it too much to hope that, before it is too late, they will bestir themselves to destroy the rank and poisonous crop of journalistic weeds which is all that the Indian youth of to-day has to feed on? The harm that they do grows daily: before long, it may prove impossible to eradicate it. Let them set their faces against this deliberate campaign of malevolence: insist on the purging of the staff of the few newspapers that really count: and see that the apostles of hate, whom their own short-sighted policy—for it is they and their political followers who find the money—has raised from the gutter, return to it forthwith. Here is a great opportunity for Mr. Gandhi. As a politician he has abdicated; but his moral influence remains, still perhaps the greatest potential asset of India to-day. His preaching has always been of non-violence and love: let him set himself manfully to eradicate malevolence and hatred from Indian journalism, and he will achieve a greater work for the good of India—one, besides, the fruits of which he should himself live to see—that will far transcend any that could have resulted from his now discredited campaign of non-co-operation.

CURRENT TOPICS.

Swarajists' Dissensions.

A cable from Bombay represents Pandit Motilal Nehru, the Swarajist leader, as "vigorously repudiating the notion of co-operation with the Government." He is reported to have declared that, if there was no response from the Government to the Nationalists' terms laid down in their amendment to the Government resolution on the Reforms and passed by the Legislative Assembly (though afterwards rejected by the Council of State) the Swarajists would proceed on lines which would not be those of co-operation demanded by the Secretary of State and the Viceroy: and that, in anticipation of such a proceeding, the Swarajists "were organising to make formidable the expression of discontent with the present system." He added that the proposal for wholesale resignations by Nationalist members of the Assembly, who would stand for re-election on that issue, had not been abandoned, but was still under the consideration of those who had combined to form the Nationaist majority in favour of the amendment.

This announcement is presumably intended as a public declaration of the continued solidarity of the Swaraj Party, and to counteract the signs of dissension that have recently manifested themselves in it. There is no doubt that the Swarajists are becoming seriously alarmed at the tendency to revolt that is being increasingly shown by

Digitized by Google

some of their most prominent members: a tendency which has not only not been checked by appeals or denunciation on the part of the leaders, but has proved impervious to attack, on the familiar lines of Indian journalistic controversy, by the extremist newspapers. Two prominent backsliders have recently incurred the wrath of the extremist politicians, and the full violence of extremist newspaper attack.

The Currency Commission.

One of these is Sir Purshottamdas Thakurdas, the representative in the Legislative Assembly of the Indian Merchants' Chamber of Bombay. His offence is that, having accepted a seat on the Indian Currency Commission, he now declines to resign it even after the extremists have discovered that the Commission is a "packed" one that has been "flung at their heads" by Sir Basil Blackett, and a "dodge played upon the Indian people in the interests of the British money-bags." A newspaper campaign was started in Bombay to prevail upon the Chamber to boycott the Commission and to call upon Sir Purshottamdas to resign his seat on it; to which end it was urged not to "barter away its great prestige for a mess of pottage to its representative." The organisers of the campaign evidently hoped to convert the Chamber, but were doubtful of the Chamber being able to convert Sir Purshottamdas; for they recognised that the latter might claim to have been appointed to the Commission in his personal and not in his representative capacity; but urged the Chamber to "disabuse him of this bumptious misconception"; and gave it as their opinion that the least he could do, if he refused to "sacrifice his chance of personal distinction," would be to resign his membership of the Assembly—and presumably to seek re-election—on this issue.

The President of the Chamber, however, refused to bow to the storm: and characterised the campaign as mischievous and pernicious. He expressed such confidence in the ability of Sir Purshottamdas to impress his views on the Commission, that he considered his resignation would amount to a dereliction of duty: and declared that a boycott of the Commission might give rise to the impression that the Indian commercial community had no case. This attitude caused so much annoyance to the organisers of the campaign, that they set about arranging for a requisition to be addressed to the Chamber for a public meeting of that body, to demand the boycott of the Commission and the resignation from it of the Chamber's representative in the Assembly, "as a protest against the transparent duplicity of Lord Reading's Finance Minister's achievement, and against the insult to the Assembly and to the Chamber implied in it." This arrangement so far succeeded that fifteen members of the Chamber were induced to sign the requisition: a fact which received wide and jubilant advertisement in the newspaper which had made the campaign its own. It was explained that the unsatisfactory constitution of the Commission was due to pressure from England: and that the Government of India, in yielding to this pressure, had added insult to injury. Had Government appointed an Indian chairman and conceded an Indian majority, even of the "johukmi bandas" (subservient slaves) who were always ready to their hand "in the backwaters of unemployed and disgruntled Liberalism," their action might have been "misunderstood and misinterpreted in Britain as endangering the sacrosanct interests of the British money-bags in India. We are unable to range ourselves among the most ardent admirers of Sir Basil Blackett and Lord Reading, but even we must acknowledge their unswerving loyalty to their true master—British moneyed interests." In these circumstances, the case for the Chamber's acceptance of the requisitionists' demands was irresistible: not merely on the general point of boycott of the Commission, but also on the personal note of Sir Purshottamdas' presence on it." It was, perhaps, unlikely that the latter would "bow to the popular demand of his constituency"; but, if he failed to adopt such a course, he would be deliberately casting away the self-respect of himself, the Chamber, the Assembly and "the Country." No one had ever denied that he was clever—"if a trifle too emphatic and slightly too conscious of his exalted position"; but, whatever his own and his admirers' opinion of his achievements and capacities, both he and they must remember that the Englishmen on the Commission, "who were presumably jockeyed into the programme to watch and safeguard British interests," are by no means the "boobies" that they are implied to be by those who suggest that they are likely to be brought over to the Indian view by Sir Purshottamdas' persuasiveness. "We shall not hint at the contrary danger, though it is at least as possible as the one that Sir Purshottamdas Thakurdas' supporters have been advertising to an unsophisticated world."

But, in spite of these brave and confident words, the campaign ended in failure. Of the fifteen signatories to the requisition, eight either repudiated or withdrew their signatures: and as, according to the rules of the Chamber, a requisition for a public meeting must bear ten signatures, this one, when presented with only seven, was ignored by the President, who merely announced its receipt, and the Chamber "passed on to the next business."

A Swarajist Executive Councillor.

The other backslider is Mr. Tambe, a Swarajist member of the Legislative Council of the Central Provinces, of which he was elected President by the votes of his brother Swarajists. He has now accepted appointment as an Executive Councillor in the Central Provinces Government: a "lapse" at which the rest of the Swaraj Party, and the newspapers that support their views, are furious.

One prominent extremist newspaper says that, among the blessings that the Reforms have brought in their train are "extravagance, nepotism, an unhallowed competition for the loaves and fishes, unrivalled opportunities for the picking up of unconsidered trifles. Not the least of them is the setting up of efficient machinery for the systematic corruption of our public men." Another suggests that Mr. Tambe will no doubt console himself with the theory that, after his election as Speaker of the Council, he had become a non-party man and was free to bargain for his individual advantage. But, as a member of the Swaraj Party, he "stole his way into the Council" by the declaration that he was opposed to the acceptance of office and was under the discipline of his party. He has therefore "violated the obligations of honour" and his acceptance of office will be held by Indians to be "a treacherous act of self-will, a renegade action, a most flagrant example of self-aggrandisement, an incident of monstrous selfishness." Such a proceeding is only to be expected from "sordid loyalists"; but, in Mr. Tambe's case, it is a "unique instance of a politician repudiating office in advance and, at the most convenient season, taking up the emoluments of bureaucratic favour. He is apparently eager to enjoy five years of affluent jobation, against his own pledge and the behests of his party. Where men make for themselves a ladder of outraged principles, they are bound to appear as the low minions of the bureaucracy." The paper ends by saying that, if his personal interests alone were involved, it would advise Mr. Tambe to "hang on to the job like a hero, and enjoy a fat salary for the next five years"; but, as things are, it appeals to his sense of honour and patriotism to reconsider his decision.

One remembers once being present in a Court of Law where a man, accused of a serious crime, announced his intention of conducting his own defence. After expressing an unflattering opinion of the judge and the prosecuting counsel, he sought to create a good impression on the jury by addressing them as "a set of ——old —— mongers." The above appeal seems to be founded on a similar belief in the value of an honest expression of opinion. and it will not, perhaps, be surprising if Mr. Tambe declines to respond to it: and registers—as did the jury in question—an adverse verdict. Apart from this rather touching faith in the efficacy of personal abuse as an appeal to its object's better feelings, there is another point that strikes the detached observer as curious. One of the most insistent demands of the extremists is for the appointment of Indians to positions of responsibility. Whenever such an appointment is made, it is the signal for violent denunciation, not only of the authority who makes it, but of the individual who accepts it.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, October 22.

The Services and Lord Reading.

On the occasion of the departure of the Viceroy from Simla, prior to the expiry of his term of office, it is customary for him to be the guest of the United Services Club at a banquet given in his honour; this phase of the farewells took place this week. Whether the banquet is merely a matter of form or an expression of genuine appreciation depends on the impression the Viceroy has created in his official capacity, but there can be no doubt that the tributes paid to Lord Reading by General Sir Edwin Atkinson, who occupied the chair on this occasion, voiced the feelings of men who, in the words of His Excellency, were "a company of experts": and the sentiments are endorsed by the law-abiding people of India.

In his acceptance of the Viceroyalty, Lord Reading undertook a task which gave evidence of the strength which has characterised his every action as a representative of the Crown. He came at a time of which Sir Edwin well asked "Could anyone say politically in 1921 where to find firm ground in India?" To-day there are ample signs of a change of heart, to say nothing of a more placid outlook. India is awakening to her responsibilities and everything points to a better understanding between East and West, bringing into view the attainment of India's goal of self-government. To none other than the Viceroy can the improvement be attributed. With consummate skill, he has done the right thing at the right time. Silence, which has not always met with approval, has proved itself, in his case, to be an exercise of strength; his speeches have shown an appreciation of the other man's position and their keynote has been reasonableness reasonably expressed: and, lastly, when the need for action has arisen, it has been taken with strengtn tempered with restraint, a combination of wisdom and courage which it would be difficult to beat in the annals of India's Viceroys. Sir Edwin Atkinson, speaking of Lord Reading's qualities, said, "They have developed and perfected in the man the attributes which have made him in a marked degree a statesman, an administrator, a persuasive and eloquent platform speaker, a forensic debater with few rivals in his generation and a parliamentary figure of great charm and influence." In concluding his remarks, the Chairman made a reference to the indisposition of Lady Reading, who, it is reported, will undergo an operation in Calcutta this cold weather. Replying, the Viceroy was touched at the sympathy expressed and paid a tribute to the help he had received from this brave lady, who, in spite of frail health, had given him invaluable assistance in the Viceroyalty. Continuing, His Excellency dealt with the Civil and Military Services in eulogistic terms, his references to the District Officers being particularly gratifying. These men, he said, live scattered throughout India, often in isolation and discomfort, "bearing responsibilities, acquitting themselves not only honourably, but in such a manner as to be of valuable assistance to the Government of India."

Differences.

The internal affairs of the Swaraj Party are not altogether as happy as they might be. Centring round the acceptance of office under the Crown by Mr. Tambe, the denunciation of the Swaraj leaders does not appear to have met with the success they would have wished. While *Forward* lends its full weight of invective in support of the arguments of Motilal Nehru, the *Amrita Bazar Patrika* asks in what way the actions of Mr. Tambe and Mr. Patel, the President of the Legislative Assembly, differ. With the exception that the latter accepted office with the knowledge of the party, his conduct appears to the paper to be the more reprehensible. In any case, the position is a curious one; those who were loudest in clamouring for the Indianisation of Government are now loudest in their condemnation of the men who have accepted office. Mr. Patel has defined his position; he states that the President of the Legislative Assembly is above the party conflicts which rage on the floor of the House, and that he should regard himself as neither an official nor as an out-and-out non-official. In other words, in following this policy, he is co-operating in the working of the Reforms. But he adds that it is only with a view to serve his country that he accepted the office: and that the moment he found that its retention would harm, instead of advance, the cause they all had at heart, he would vacate the chair. It is not hard to see which way the wind blows.

The Modus Operandi of Indian Elections.

Some of the tactics employed in election campaigns by the Swarajists have come to light, and for sheer ingenuity rival that of Kipling's Indian policeman, who levied toll from Indian passers-by on the strength of a label from a lemonade bottle stuck on the parapet of a bridge. Evidence of the misleading of the ignorant masses is given in the dispatches of the Provincial Governments which go with the Muddiman Committee's Report. Prior to an election, the electors are regaled with denunciations of Government, suitably coloured to give the greatest local effect. Space does not admit of detailing some of the wild reports which are circulated, although they would make interesting reading. On going to the poll even the colour of the ballot boxes is exploited to the full by the Swarajists. For instance, should the colour of their opponent's box be white, electors are warned that to touch it will infect the unwary with white leprosy; but, should the Swarajist candidate's box be green, what more natural than it should represent the colour of fruitful fields, a promise of rich harvests, and therefore be worthy their best attention? It is difficult for those who have not been in India to realise the simplicity of the villagers and even of a large proportion of the town dwellers. The latter are certainly more sophisticated, but readily succumb to the wiles of the election orator denouncing Government, for he appears in the guise of a patriot and a hero. The dispatches urge the necessity for a well-organised Publicity Department to combat these abuses of the franchise. The Reforms are in progress, the vote is a *fait accompli*, but if its use is not understood it is impossible to obtain a representative Government by its means. "The "Voice of India" so much vaunted by the Swarajists is exploded; it merely means the triumph of the party who will stoop to the lowest forms of electioneering tricks.

Markets.

The jute market opened very firm after the holidays: since then prices have been mounting and at the close have reached an abnormal level. The crop is now almost at an end and, with the obvious shortness, it is more than probable that even higher rates may be expected. Gunnies, after being somewhat dull, improved later, chiefly on account of a loss due to a fire on an outward-bound steamer. The piece-goods market has been featureless. The more healthy outlook for the tea market expressed lately shows further signs of maturing: at the sales here the demand was decidedly strong, in spite of the fact that the London Market reported the position there as only steady to firm.

With a short week also on the Stock Exchange, the turnover has been small, the chief interest centring round jute and rubber shares. After a steady decline, consequent upon the rise in the raw commodity, jute shares have shown a better tendency on the improvement in Hessians, the more speculative counters being most affected. Rubbers still continue to move in an upward direction; but, with sellers difficult to find, business has been limited in its extent. Coals and teas have attracted slightly more attention, but in other departments little or no interest has been apparent.

Money has been in good demand throughout the week. with Exchange steady.

THE DEHRA DUN MILITARY COLLEGE.

(By Our Simla Correspondent).

Simla, October 22.

In India education of a sort can be had for a very small price: and the expenditure, which an Indian parent would ordinarily consider sufficient to enable his son to secure a university degree, would hardly carry an English boy through two terms at one of the less expensive public schools. The meaning of a public school education, as it is understood in England, is realised by comparatively few Indians: and, where attempts have in the past been made by private or semi-private enterprise to start institutions run as nearly as possible on public school lines, the experiments have been short-lived, chiefly because sufficient people could not be found who were willing to pay the full cost of such an education; even though, instead of filling up boys with a mass of undigested facts, it taught them to think for themselves and to take an intelligent interest in everything that was going on around them, and moulded their characters so that, when they grew up, they were able to hold their own in the world. In no walk of life perhaps are the benefits which an English public school training confers so valuable as in the Army; yet an Indian boy who, before he can obtain his commission, has to pass through Sandhurst side by side with British cadets who have enjoyed these benefits, had until recently no chance of obtaining in his own country an early education which really approximated to that of a public school.

The result was that only too frequently the Indian cadet at Sandhurst was found wanting in a greater or less degree by comparison with British standards, and particularly in those essential qualities of a soldier, strength of character and power of leadership. That in this respect there existed a defect in the normal system of Indian education was brought forcibly to the notice of the military authorities by the regrettable number of failures among the earlier batches of Indian lads sent to Sandhurst: and it was accordingly decided that an attempt must be made to remedy this state of affairs by giving Indian boys, who desired to adopt a military career, an opportunity of obtaining an education which would be as nearly as possible similar to that which British cadets were able to enjoy. The Indian boy is ordinarily handicapped by being brought up in his home in far from healthy environment, which makes it difficult for him to develop either in physique or character; while at school he is generally taught on narrow and unintelligent lines which give him little chance of developing his mind, his imagination, or his powers of observation. If then he was to be given the best chance of passing the entrance examination for Sandhurst and of competing both there and in after life with his British comrades, it was essential to catch him young, before the influences of his home had made too deep an impression on him: and to give him an education on special lines away from his home until such times as he was ready to sit for the entrance examination.

To fulfil these requirements there came into being in 1923 the Prince of Wales' Royal Indian Military College at Dehra Dun, where Indian boys are trained from about the age of twelve, with a view to their qualifying for Sandhurst at the end of the course. The system in force at the College is modelled, as far as Indian conditions permit, on that of an English public school: so that the boys, in addition to getting a sound education, develop in character and breadth of outlook in a manner rarely found in other Indian educational establishments. The College has now been in existence only two and a half years, and none of the boys who have passed out of it has done more than a fraction of what is intended to be the full length of course there; yet, in spite of this, the results already achieved have been sufficiently good to satisfy even the most critical. For the cadets who have entered for the Sandhurst examination have, despite their short training there, shown themselves definitely superior to the average boy trained at an ordinary Indian school or college: and, in the last few examinations, the great majority of the selected candidates have come from the Dehra Dun College. Moreover, the type of education given there has attracted a considerable amount of attention even among Indian gentlemen who are not specially anxious for their sons to enter the Army: and one hears of some who would gladly send their sons there for the benefit of the education given, regardless of whether in the end they qualify for Sandhurst. The College is at present a small one, catering only for seventy boys; or, in other words, turning out only ten boys a year after the full course of training. It is now announced, however, that it has been decided to increase the numbers to one hundred and twenty: and, to judge by the popularity the College has already won, it should not be a difficult matter to fill it, even were it expanded to several times that size. It must not be forgotten, however, that the fees charged to parents who, at present, send their boys there are far from representing the full cost of the education given: and that, in the case of each boy trained, the State pays somewhere in the region of half the cost. This is, of course, an advantage which the British parent who gives his son a public school education before he enters Sandhurst does not enjoy; but, until a larger number of Indian parents come to realise that to spend a considerable sum of money in order to secure their children a really good education is merely to make a profitable investment, it will probably be impossible to obtain for the Army sufficient Indian boys of suitable training and character by any other system.

A CLEARING IN THE JUNGLE.

BY JANUS.

The jungle, be is understood, is the rank growth of undigested, and indigestible, Committee-reports which has sprung up recently in India, fostered, as I suspect, by the rise in the political temperature acting on the natural fertility of the soil. In truth, many of these latter-day reports make rather sorry reading, produced, as they have been, by committees of questionable competence, inspired largely by prejudices which may fairly be described as puerile, and dominated by the fear of what is locally called public opinion, but which Burke would have stigmatised as the croaking of a few frogs. The Report of the External Capital Committee stands out pleasantly as a well-tilled clearing in this jungle, and I must confess that surprise mingled with my pleasure as I read it, for, to tell the truth, its antecedents were rather dubious. Its subject-matter is what is fashionably called exploitation, and the amount of prejudice adhering to that word in India is far beyond my powers of calculation. The Committee, again, was of the hybrid variety, the majority of members being elected by legislators too ignorant of finance to know who is competent and who is not: and few of us would have been surprised if the result had been a fiasco, whether it took the shape of a few meaningless "formulæ" or of a jumble of contradictory minutes. As a matter of fact, the slim pamphlet of twenty odd pages presents a creditable summary of first principles and elementary truths, stated clearly and concisely, with scarcely a trace of prejudice, and not even a hint of the shock which will be caused to active politicians. The traces of prejudice are to be found only in the notes contributed by two of the members. One of these has made the elementary blunder of adverting to a topic which was not discussed by the Committee, and for this he is properly trounced by Sir Basil Blackett: the other note is by Pandit Madan Mohan Malaviya, and the judicious reader will of course ignore it, remembering that, when the Pandit was made, finance and economics were accidentally left out.

The essence of the report itself can be stated in a very few words. Happy is the country which can finance itself and still spare money to lend to others; but, if a country can't, or won't, finance itself, then external capital is a boon, not a bogey. If you hedge its entry round with restrictions and disqualifications, the only result will be that you get less, and pay more for what you get: and

Digitized by Google

the one case in which the imposition of special conditions can be justified is when a body of foreign capitalists seek a monopoly or privilege. That is the whole story, and a critic might be content to say Amen, and pass to some other topic; but there are a few suggestions in the Report which, I think, need a little further development. There is, for instance, the subject of "exploitation," on which so much poisonous nonsense is still being taught to young Indians by professors obsessed with politics. I know what is taught, because I occasionally examine Indian students, and my task is to some extent lightened by the *naïveté* with which they reproduce their teachers' eccentricities. It has long been the fashion to point to the Calcutta jute industry as the stock case of exploitation, with all the profits going to foreigners: and to contrast it with the Bombay cotton mills, where the profits, when there are any, stay in the country. Probably the professors believe this in an otiose sort of way, and they will be surprised to read the Committee's incidental observation that "it is well known that a majority of the shares in Indian jute mill companies are held by Indians," so that most of the profits stay at home. I rather wish, by the way, that the Committee had developed this statement a little further; the fact has, of course, long been notorious in business circles, but it has not yet penetrated into all the University class-rooms, and they might have spared a few lines to help it on its arduous way thither. The truth is, the professors mix up ownership with management. Bombay mills are managed by Indians, and the management is often very bad indeed. Calcutta mills are managed mainly by Scotsmen: and, if the Indian shareholders like that plan, they are quite right to stick to it.

Another subject on which I should have liked a little more from the Committee is that of "pioneering." The Report rightly stresses the gain to India from the foreign capital which has been employed, and often lost, in overcoming initial difficulties, and clearing a road for Indian capital to tread; but I should have welcomed some recognition of the fact that, in the pioneering stage, the Man counts for more than the money, and that much of India's industrial progress has been due to individuals, not great capitalists themselves, but men who have been sent to India to employ the capital contributed by others. The pioneering stage has not yet passed: there is still a vast amount of initial work to be done: and Indians have spent quite a lot of money lately in buying the knowedge that it is not work for amateurs. "Indianisation" is a popular god in the courts of legislatures and universities, but the market-place knows that the idol is not omnipotent, and one of the greatest advantages attendant on the employment of foreign capital is that it brings with it from abroad the men who can clear the road.

After all, however, home capital is best: and the Report affirms once again the well-known fact that "there is sufficient potential capital in India to meet the larger part of India's industrial requirements." Again, it shows that some of this potential capital is coming out, for the last ten years have seen the advent of 387 crores of rupees, say £300 millions, or nearly a pound per head of the population, in the form of new money invested in Government loans and joint-stock companies. That is a really satisfactory item; but, alongside of it, the Committee very properly put the damning fact that, in the same period, 482 crores were hoarded or spent on jewellery; added to which there are the accumulations of twenty centuries or so lying idle. How to set more of that potential capital to work is a question which the Committee found itself unable to tackle, but it suggested, first, a "co-ordinated survey," and then a set of "expert committees." Further inquiry is doubtless wanted on many points of detail; but, in a case like this, where the broad facts are already clearly on the record, I think that a popular lead is of far more immediate importance: and that the Government of India might set to work at once to hammer the broad facts into the heads of, at any rate, the literate classes. I have heard it whispered that, somewhere in Delhi, there is a Publicity Department, and that it can even, on occasion, draw parti-coloured diagrams: why not unchain the monster, put the diagrammatists on overtime, and give an expert cartoonist to help? Having tried them myself, I know how cartoons tell in India, and there is no lack of arresting subjects. India giving her bread for stones; India self-crucified on a cross of gold; a little boy murdered for his bracelets, with the silversmith, a sinister figure, in the background; India sleeping while vampires suck her life-blood; I can see these and many others, and I believe they would make a real impression on Indians, if they were properly done, and if the Government had the nerve for an intensive campaign. I fear, however, that this last condition is not likely to be fulfilled; but the fact remains that the most urgent matter just now is to convince India that the national poverty is the inevitable result of national vice, inveterate but not incurable. Banks, and stock-exchanges, and post-offices, and so on, can do much to help the sufferer along the road to recovery; but the will to recover is the thing that counts for most: and, until that will develops, the ancillary machinery is a minor matter.

BENGAL-NAGPUR RAILWAY EXTENSIONS.

The Bengal-Nagpur Railway is now engaged in opening up a large tract of country in the south of the Central Provinces and of Bihar and Orissa and the north of Madras which is, at present, singularly ill served in the matter of railways. The Bengal-Nagpur Railways joins on with the Great Indian Peninsula Railway at Nagpur, and with the Madras and Southern Mahratta Railway at Waltair. Near the former place, there are good connections, served by both the railways that meet there, with the Wardha Valley, the most prosperous part of the Central Provinces, which contains a large coal field, about 285 miles in extent and estimated to contain 14 million tons of coal. There used to be a Government colliery at Warora, but this was closed nearly twenty years ago, as the seam had been worked out, and a new pit has since been opened at Ballalpur. At Chanda, where the G.I.P. line from Wardha meets the B.N. line from Nagpur, limestone is obtained and copper exists: and close by is the Lohara hill, 700 yards long, 200 yards broad and 120 feet high, which entirely consists of iron ore. The forests in the Chanda district contain excellent teak: and cotton is extensively grown throughout the whole of the Wardha Valley. A Government brick and tile factory also exists at Warora.

Along the main line eastward from Nagpur, manganese is found at Bhandara and there are extensive deposits between Tumsar and Balaghat. These latter were, until recently, served by a system of narrow-gauge steam tramways, the break of gauge necessitating reloading before the manganese could be put on the main line; but this drawback has now been removed, by the conversion of the whole of the system to broad gauge, to the great advantage of the industry. Copper and bauxite also exist at Balaghat. Further east, there are extensive forests of sal perhaps, next to teak, the most valuable Indian timber in and between Nandgaon and Bastar States: and bamboo covers the hillsides over large areas. At Raipur there is iron and plumbago: at and to the north of Raipur there is a coal field extending to about a thousand square miles, some of the seams in which are of surprising thickness one being of ninety feet and another of no less than 168 feet; but the field as a whole, though it includes much good coal, is in many places largely made up of carbonaceous shale, and the seams sometimes die out within extraordinarily short distances. At Rampur, close to where the existing railway takes off to Sambalpur, there is a good seam of steam coal: and iron exists at Sambalpur, where sal timber and bamboo are abundant, and rice is extensively grown.

It will be seen from the map that the large tract of country, between the main Bengal-Nagpur line through the Central Provinces and the line following the coast through the Madras Presidency, is almost entirely devoid of railway communication: there is also a wide gap on the west, between the railways in the Wardha Valley and the Nizam's State Railway in Hyderabad. Perhaps, in

Digitized by Google

time to come, the latter gap may be bridged by establishing railway connection from Secunderabad with Chanda and Raipur; but the Bengal-Nagpur railway is now actively at work in bridging the former. The lines now being built are, first and most important, the extension of the existing railway from Vizianagram to Parvatipuram, to connect with the main line at Raipur, with a branch to Gunupur: second, and next in importance, connection of the existing rail head at Sambalpur with Khurda, on the coast line—the junction for the popular seaside resort and place of pilgrimage, Puri—through Sonpur in the Orissa Feudatory States. Besides these two important through connections, a line is being built from Berhampur, on the coast railway, to Russellkonda and Surada, and another to connect Talcher, in the Orissa States, with the coast.

The main object of the connection between Vizianagram and Raipur is to provide a fresh outlet for the products of the Central Provinces to the sea: which will be found in the new port of Vizagapatam, work on which is being rapidly pushed on. The most important product of the Provinces is raw cotton: and this, which is mostly produced in the Wardha Valley, goes almost entirely to Bombay, as it will doubtless continue to do; but the other staple products of the newly opened tracts, such as minerals, timber and rice, are likely to find Vizagapatam a more convenient port. The new line to Raipur will pass close to the Jeypore Hills, which produce both teak and sal, and to the plumbago deposits of Kalahandi: while the development of the port of Vizagapatam will tap the district of that name, the most populous in the whole of the Madras Presidency, where there is already an important manganese industry worked by a company with its headquarters at Vizianagram, and a large production of rice and other food grains. The line from Berhampur to Russellkonda and Surada will tap the Goomsur Forest, 570 square miles in extent, in which grows the best sal timber in the Presidency, besides bamboo in inexhaustible quantities, which latter is likely to be of special importance in the paper-making industry of the near future. The lines through Sonpur to Sambalpur, and to Talcher, will open up the Orissa Feudatory States, which produce rice and cotton, while their forests, which were at one time among the best timber producing tracts in India, though their value was largely destroyed by ruthless exploitation, are recovering their importance owing to the introduction of scientific control. There is coal, though not of particularly good quality, at Talcher: and the two separated tracts of country that form the British district of Angul produce rice, some coal and iron, and fine sal forests as well as a certain amount of teak.

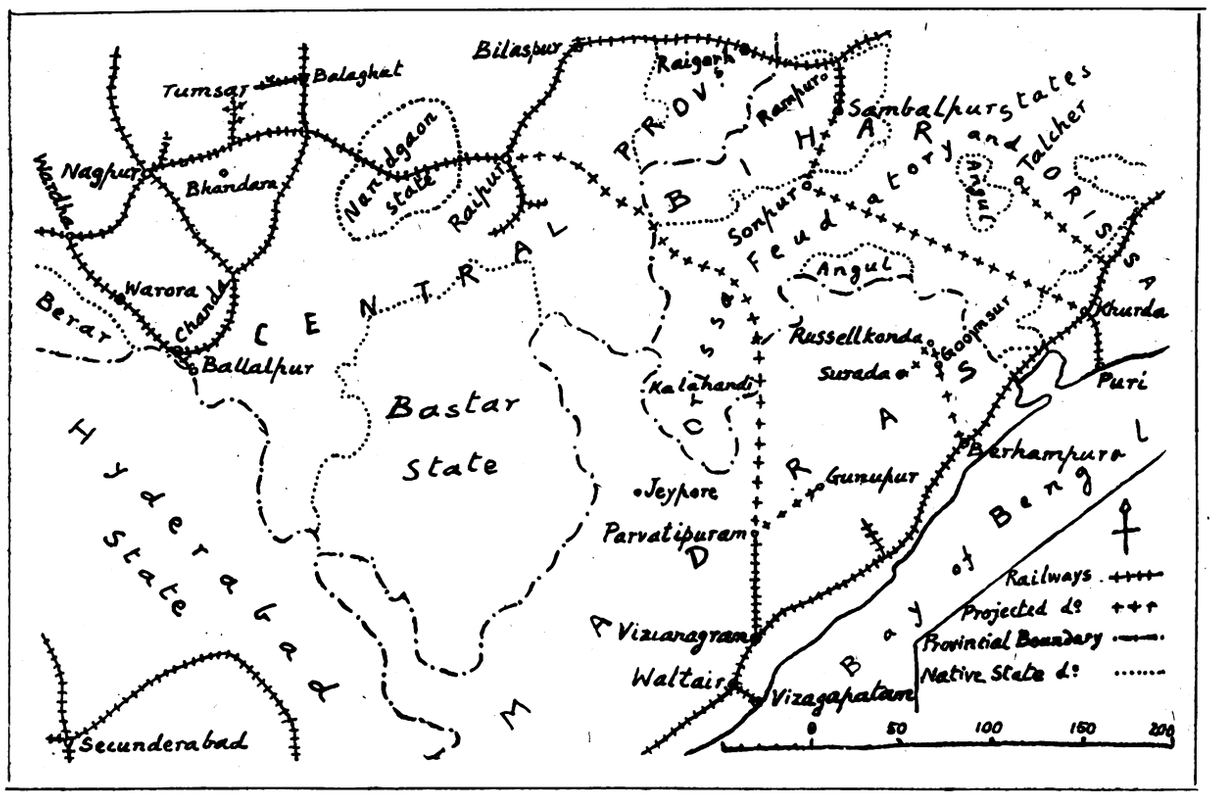
Finally, and perhaps most important of all, the extension of railway communication will be an additional safeguard against famine; the occurrence of which, in India, can be said never to be due to any scarcity of food, but to difficulty in carrying it from regions of plenty to the people in the afflicted areas. It was partly due to scanty communications that the Central Provinces suffered so severely in the great famines of 1897, 1899 and 1900; when, at the time of their greatest intensity, 2½ million people were on relief, the mortality rate rose to 57 per thousand, and the population, which, at the census of 1891, had been nearly thirteen millions, had declined to less than twelve millions at that of 1901.

THE INDIAN MAIL.

Sir Frederick Whyte's Report.

A letter to the *Times of India* from its Simla correspondent explains the actual facts about the invitation to Sir Frederick Whyte "to investigate and report to the Government of India on the relations between the Central and Local Governments in other parts of the world, with special reference to the relations that obtain between the Central and Provincial Governments in India." The original report appeared to imply that Sir Frederick's investigation was going to be undertaken on the spot—in the various countries through which his homeward itinerary was known to be mapped out: and, in our issue of September 17, we contradicted the report. In our issue of October 8, however, we quoted the exact words used by Sir Alexander Muddiman in announcing the fact of the invitation and its acceptance: and, as these appeared to bear the meaning implied in the original report, we withdrew our contradiction. It now appears that the implication that we read into the report did not, in fact, exist: and that our contradiction, in so far as it dealt with that implication, was justified.

Sir Frederick Whyte has been placed on special duty, in the Home Department of the Government of India, in order to compile a report on the relations between the Central and Local Governments of countries other than India: not from personal observations in the course of his homeward journey, but from a perusal of books of reference to be found in the library of the Indian Secretariat; a summary, in fact, of the scissors-and-paste variety, col-



Digitized by Google

lected from existing authorities. The *Times of India* contradicts the report that, as it says, "some Indian newspapers have been kind enough to suggest," that the Government of India were providing Sir Frederick with a pleasant holiday, after his strenuous work as President of the Assembly, at their expense. It adds that the suggestion has always been made approvingly, since there has been no condemnation of the supposed plan. This is certainly the fact: even the *Bombay Chronicle*, which seldom finds anything pleasant to say about any British official, has been specially polite to Sir Frederick Whyte; though its approval seems to have been due less to his work than to his personal appearance—in its valedictory remarks it describes him as "the handsomest Englishman in India": and this to a Scot! But it seems hardly fair to say that the suggestion came from the Indian newspapers: any impartial listener to Sir Alexander Muddiman's words would—unless he had received prior intimation of what they were intended to convey—inevitably have arrived at the same conclusion.

As regards the report itself, the *Times of India* correspondent says that the duty of the compiler is confined to laying bare the facts, and that he has not been asked to make recommendations; but the form that it is likely to take will not so much be a brief official report as "a student's appreciative handbook": in which the correspondent foresees that the compiler is unlikely to find himself able to refrain from including an "exposition of the circumstances now prevailing in India and of the bearing of the practice in other countries upon them." The paper adds that the report is obviously intended for publication: and that it may be expected to appear about the middle of December. It appears, therefore, that the distinguished author will have an opportunity, before he leaves India, of adding yet another to the many-sided activities that his duties as President of the Assembly have left him leisure to indulge in: and will make his final bow in the capacity of what Mr. Squeers called "a instructor of youth."

India and Egypt.

A leading Anglo-vernacular newspaper of Bombay draws a trenchant parallel between British methods in India and Egypt: taking as its text the farewell speech made in England, before his departure to take up the office of High Commissioner, by Sir George Lloyd: "whose inglorious record in Bombay, whether in the matter of administrative high-handedness, development extravagance, or repression of national activities, should alone have made him unfit to hold high office in any part of the Empire."

The head and front of Sir George Lloyd's offence is that he declared his belief that the due reconciliation of the vital interests of England in Egypt with national and legitimate aspirations of wider self-government was possible only by making Egypt feel that England was her best friend. It is reserved for the Indian journalist to detect the true inwardness of this apparently friendly and encouraging utterance: and to explain that "it is hard to compress enormous self-complacence, racial arrogance and jingo fallacies in one sentence more effectively."

When one comes to analyse this verdict, it becomes evident that the existence of English interests in Egypt is a jingo fallacy: that a reference to Egyptian aspiration to wider self-government is racial arrogance: and that the suggestion of England being Egypt's best friend is enormous self-complacence. And the formula, when applied to India, is complete: Great Britain has no interests in India, no right to any say in her political development, no claim even to friendship. Among the signs of returning sanity in political India, perhaps not the least is the advancement of such views. It is only a losing cause whose protagonists find it necessary to shriek so loudly.

INDIAN EXCHANGE.

London, November 9.

We hasten to correct an error which crept into our report of last week, when we alluded to some inter-bank T.T. for delivery this month at 1s. 6 11-16d. This was palpably a mistake for 11-64ths.

Quietness has prevailed during the past week and rupee exchange in India shows an easier tendency, with quotations in Calcutta and Bombay at 1s. 6 5-32d. T.T. A certain amount of business was done at the rate for delivery this month, coupled with two or three months ahead.

These rates held until Saturday, when a break took place in Calcutta to 1s. 6⅛d. T.T., with better unobtainable for the day, and the Japanese Banks buyers for late November and December 1s. 6 5-32d. The quotation for three months' credits in both places has come down 1-32nd, and merchants have had no difficulty in placing their three months' bills at 1s. 6 13-32d. for delivery within one month.

Forward T.T. rates have also shown a sagging tendency, and latest cabled reports quote T.T. for delivery between now and the end of February 1s. 6 5-32d.; March, 1s. 6⅛d.; April-May, 1s. 6 3-32d., at which, however, there is no inquiry except to a trifling extent at 1-32nd higher.

Last week's return of the Imperial Bank of India shows a slightly increased money demand for trade purposes, and an expansion in the note circulation of 1 crore of rupees, against the deposit of securities in London for an equivalent amount. It may be noted that the note circulation is 11 crores higher than it was at this time last year.

One feature of the Indian markets which we commented upon last week was the weakening effect caused by Japanese Banks buying near T.T., and a continuance of this policy during the past week has been mainly responsible for the present temporary ease.

In the London market there is little change to report. Remitters to India have been able to pick up a little T.T. for cash at 1s. 6 3-16d., although 1s. 6 7-32d. was quoted for delivery within a month, until Saturday, when 1s. 6 3-16d. was general, but rates are firmer to-day and there is very little T.T. available under 1s. 6 7-32d.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

NOTES AND NEWS.

170, *Strand, London, W.C.2,*
Tuesday Morning,

Loan Embargo Ended.

The decision of the Government to remove the embargo on foreign loan issues has been received with general satisfaction. The embargo had long outlived its utility, and was now only acting as a handicap on enterprise, and it was urgently necessary that it should be ended as soon as financial conditions made it possible. There is no doubt whatever that the existence of the embargo has prejudicially affected trade, and that a free loan market will give further assistance to the improvement in trade of which there are now very evident signs. It is not in the least likely, however, that there will be an immediate flood of loans. The conditions are against any such development. Money at the moment is dear, and that fact of itself is quite enough to check loans. It is dear because there is not enough of it, and what there is is already employed, so that it was rather surperfluous for the Chancellor to say that he hoped the City would use its freedom wisely and soberly.

Turkish Finances.

Whatever can be said against Turkish methods since the end of the War, due credit must be given to the Angora authorities for the efforts they are making to put the finances of the country on a sound basis by making the revenue balance the expenditure. A number of new financial measures are now under consideration. One provides for an income tax ranging from 5 per cent. to 16 per cent. on salaries and business profits. A poll tax is also proposed, and a tax on all domestic animals, while further proposals are for the creation of oil and sugar monopolies and a tax of 2 per cent. on the sales of shops, offices, factories, quarries, and mines. A series of Bills incorporating these proposals is being submitted to the Assembly, and it is to be assumed that the majority of the measures, if not all of them, will be carried into effect. They may achieve the desired end with regard to the Budget, but there is no doubt that they will greatly increase the cost of living and make more difficult the revival of business centres such as Constantinople.

The Cotton Position.

The probability that cotton will be plentiful for the next year becomes more and more certain each week. The latest American Bureau Report is most encouraging, and it now seems probable that a yield of almost 16,000,000 bales is to be looked for from that quarter. With other crops also extremely satisfactory the outlook is very bright for Lancashire, for good crops spell cheap cotton, and that in turn means increased trade. It is a refreshing change to find the quotations for American and Egyptian so low as they are at present, though even now Egyptian at 21.90 is at too high a premium over American. The Egyptian Government, it is interesting to note, has at last entered the market, though its purchases have been on a very small scale, and have been without effect in arresting the decline. The fact is that developments have reached a point at which intervention of this kind can avail little, and while it appears to be the intention to restrict the acreage under cotton in Egypt for the coming season it has to be borne in mind that the position is now fundamentally different from what it was a year or so ago. There are other Egypts now in the offing as far as the production of cotton is concerned, and the probable effect of the reduction of the yield of cotton in Egypt will be to give an enhanced opportunity for the cotton fields of the Empire. That is, however, beside the point for the moment, and the important factor at the present juncture is that Lancashire is now in a position to obtain the cotton she requires at a reasonable price, and as this has been a year of good harvests the purchasing power of the Near East and other markets will be greater, and it is reasonable therefore to anticipate a great expansion of trade in cotton goods.

Trade Restrictions.

In his address to the Council of the International Chamber of Commerce last week, Mr. Walter Leaf, chairman of the Westminster Bank, spoke strongly, but not a whit too much so in regard to trade restrictions. As my readers are well aware the innumerable regulations and prohibitions have been one of the greatest obstacles to the revival of trade conditions in South-East Europe, and while the position is better than it was it would be futile to deny that it still leaves a great deal to be desired. There is still a tendency to impose more restrictions, and this is a factor which is in evidence in every country, whether it be in the form of new taxes such as those on so-called luxuries, the effect of which must be to restrict trade to some extent, or other measures. "We have passed beyond the question of mere tariffs," said Mr. Leaf, "and in various cases we have found that recourse has been had to actual prohibition of imports. Each country—and I regret to think that even Great Britain must now be included—has set itself to exclude trade with its neighbour, to a greater or less extent; the policy has had a great success, with one considerable drawback, that each country in hurting its neighbours has, of course, hurt itself still more."

Roumanian Debt Settlement.

I am sure that I shall not be misrepresenting the general sentiment when I say that people are thoroughly weary of the subject of war debts, and the seemingly interminable negotiations concerning them. While Great Britain desired in the first place to have a universal cancellation of these obligations America, as we have excellent reasons for knowing each year, insisted on treating them on a commercial basis, and thus left no option for other countries but to do likewise. However they are dealt with it is obvious that the sooner a final settlement is reached in regard to all of them the better, and one therefore welcomes the news, as one more step forward on the road to normal conditions in international finance, that Roumania has made a provisional arrangement for the settlement of her war and relief debts to Great Britain. it is noteworthy that the initiative in this case comes from Roumania, and it may be hoped that this arrangement presages an early agreement in respect of the payment of the compensation to the oil companies for the damage incurred during the War.

America and the Near East.

I have often emphasised the point that British firms must be prepared to go out of their way to cater for the requirements of the Near East markets if they desire to make real headway in them. This is particularly the case in regard to motors. The kind of thing that America is prepared to do is illustrated in a recent issue of the *Christian Science Monitor*, which describes how a trade school of the most famous American motor firm is to train students from the Near East to be mechanics. It appears that the Turkish and Persian Governments asked the school to train mechanics to develop their agriculture, and the school is to give 25 students from each of these countries a two years' course. The effect of this development on the market for the car in question can well be imagined. This is just one instance of the initiative displayed by our commercial rivals, and it shows plainly what British firms must be prepared to do if they are to withstand successfully the growing competition in the Near East.

The Fur Trade.

The trend of the fur market is a matter of special concern to several Near Eastern countries. At the moment the outlook for this commodity is not too promising. At the recent London sales, a report of which will be found elsewhere, the movement of prices was generally downwards, and the declines ranged from 5 to 20 per cent. It appears that the demand for cheap and imitation furs is decreasing while that for the better products is on the up grade, and it is to be assumed that the substantial advances that took place in some directions was due to this development.

The Fair.

It is becoming very evident that the Government are basing very great hopes on next year's Fair, and that it has, in fact, come to occupy a very important place in their programme for the development of trade and the consequent relief of the unemployed problem. So far it must be admitted that the omens for the Fair are most favourable. Our firms are showing quite unusual enthusiasm over it, and it is evident already that both sections will be much larger and more representative than was the case last year. Up to the middle of last week 600 firms had applied for space, while the number of firms who desire to exhibit at the White City is already more than double what it was at the corresponding period of 1924. The Fair thus promises to be a very complete index of Great Britain's industrial capacity, and it only needs the presence of foreign buyers in adequate numbers coupled with improving trade to make it a supreme success.

The Future of Rubber.

So far as can be seen the future of rubber looks secure for the next few years, for while production from now onwards will tend to increase consumption is rising very rapidly, and at the present time is well in advance of production. As a matter of fact consumption overtook production in the year that the restriction scheme was introduced, and each year since then has seen a large balance on the consumption side. It has been suggested that owing to the great development of motoring and other uses for rubber there may be a real shortage in a few years, but prophesy with regard to rubber even a year ahead is unwise.

COMMENTATOR.

EGYPTIAN HONOURS.

The King has given the following authority to wear decorations conferred on them by the King of Egypt, in recognition of valuable services:—

ORDER OF ISMAIL.

Insignia of the Second Class.—Mr. James Ferguson Lees, C.B.E., M.D., lately director-General of Public Health, Ministry of the Interior.

Insignia of the Third Class.—Mr. Harold Edwin Hurst, M.A., D.Sc., Controller of the Physical Department of the Ministry of Public Works.

ORDER OF THE NILE.

Insignia of the Fourth Class.—Mr. Ernest George Griffin, Assistant Secretary-General, State Railways.

The King has given Squadron-Leader William Dickson Long, O.B.E., R.A.F., authority to wear the insigna of the Third Class of the Order of the Nile conferred on him by the King of Egypt for valuable services rendered by him as Aviation Consultant to the Egyptian Ministry of Communications.

Near East Markets.

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co., report as follows for the week ended October 24:—

Sultanas.—The arrivals since the opening of the season are estimated at 16,200 tons and the sales to date are put at 14,800 tons.

Closing prices Smyrna per cwt. c.i.f., London-Liverpool: type 12, 57s.; type 13, 60s.; type 14, 62s.; type 15, 65s.; type 16, 68s.; type 17, 73s.

The market is quiet. Business is restricted to a narrow compass considering the time of the year. Nevertheless dealers are holding up prices and at present show no disposition to make concessions. The general tone of the market, however, is heavy and a decline seems inevitable unless relief comes from consuming markets.

Figs.—The arrivals are estimated at 163,241 bags, and the sales to date are put at 161,436 bags.

We have to report a further advance in prices this week. The market closed very strong owing to the shortage in arrivals and the active demand for prompt shipments to U.K. and Continental markets. It is becoming increasingly evident that the crop is nearing exhaustion and that only limited supplies will henceforth be available from the interior. It is reported that shippers are to a large extent still uncovered for forward positions.

DECLINE IN FUR PRICES.

The report of the London Fur Trade Association (Inc.) on the October raw fur skin sales states that the sales attracted a large attendance of buyers, particularly from the home trade and the Continent, although representatives of the German and American trades were fewer than usual. Whilst business was quiet in England during the late summer and early autumn, France experienced a very good September trade, and it is satisfactory to record that purchases were freely made at these sales for both home and the French markets. Leipzig buyers were handicapped by the continued monetary stringency in Germany, and Americans were less active.

Although large quantities of cheap and imitation furs have again been consumed, the demand for these goods appears to be gradually diminishing and there is a decidedly better feeling for the medium and choicer furs. The offerings, particularly of staple goods, were moderate, and in view of the diminished support accorded by American buyers prices on the whole show remarkably little alteration. Despite the comparative weakness of American competition and the restricted support of Germany, the results of these auctions demonstrate the inherent soundness of the home and French markets, and good prospects for the coming winter's trade are thereby indicated.

TURKEY'S NUT CROP.

H. M. Consul at Trebizond reports that according to information received from a reliable source the nut crop of Ordu and district, proved exceptionally abundant this year. (The port of Ordu belonged until lately to the vilayet of Kiresun, but is now the capital of an independent vilayet). The total yield is estimated at double that of last year, namely 130,000 cantars (of 48 okes each) as compared with 65,000.

Owing, however, to the abnormal quantity, the kernels are somewhat under developed, and that applies to some extent also to the Kiresun and Trebizond crops. Thus, while each cantar (48 okes) of Ordu nuts gave last year 22 okes of kernels, this season's figures is 18 okes only.

The death took place last week at Peterborough of Sir Bache Cunard, grandson of the founder of the Cunard Line, Sir Samuel Cunard.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street. S.W.)

EGYPT.

Water Supply Works at Mellawi.—The Egyptian Ministry of the Interior invites tenders for the supply and installation of machinery required in connection with a water works scheme at Mellawi. The contract provides for the supply, delivery and installation of the following plant and accessories:—

Electrical motors and centrifugal pumps.—Two vertical three-phase induction motors of 45 h.p. direct coupled to centrifugal pumps of a maximum output of 30 litres per second, together with connections and all accessories. One horizontal three-phase motor of 15 h.p. with all accessories.

Control panels for above motors, low-tension armoured cable, wooden cable troughs, cable-end boxes, etc.

Steel piping and accessories, water meters, etc.

Machine tools and workshop equipment.—This includes a lathe, a drilling machine (American type), an emery grinder, a steel water tank, a coal bunker a transmission shaft, etc.; also a forge outfit, a turner's and fitter's outfit, a joiner's outfit and other workshop tools and equipment; belting; lubricating and cleaning apparatus. December 10. (D.O.T.)

Paper and Stationery.—The Ministry of Finance invites tenders for the supply of paper and stationery for the financial year 1926-27. In addition to paper and stationery the schedule includes filing cabinets, brushes, paints (water colours in cakes), palettes, string, etc. January 9. (D.O.T.)

Miscellaneous Stores.—The Prisons Department, Ministry of Interior, Cairo, invites tenders for the supply of miscellaneous stores including white cotton yarn, khaki serge and drill cloth, tailors' marking chalk, harness backs, fire hose, packing and belting, helical pulley blocks, leg vices, twist drills, chuck plates for drilling machines and lathes, beading or swaging machine, injectors for boilers, etc. November 23. (D.O.T.)

ROUMANIA.

Steel Railway Crossings.—Tenders are invited by the Roumanian State Railways for steel railway crossings. December 4. (D.O.T.)

Railway Points.—Tenders are invited by the Roumanian State Railways for railway points. November 30. (D.O.T.)

TURKEY.

Telegraph Wire and Insulators.—Tenders are invited by the Purchasing Commission of the Direction Generale des Chemins de Fer, Angora, for the following:—1,000 kilometres of galvanised iron telegraph wire of 4 mm. diameter; 30,000 insulators. November 25. (D.O.T.)

INDIA.

Saws and Oil Tank Railway Wagons.—The Director-General, India Store Department in London, invites tenders for (1) duplex diamond saw, frame saws and rip saw for stone dressing; (2) oil tank railway wagons. November 20.

Sub-station Equipment for Jaipur.—The Indian Stores Department invites tenders for the supply of equipment:—pole brackets, shackle and pin type insulators, bare copper wire, trifurcating boxes, distribution pillars, anchor rods, underground low tension cable, cable boxes, leading-in tubes, house service watthour A.C. meters, current limiters, one 30 K.W. transformer, extra high tension feeder panel, medium tension A.C. switchgear, galvanised iron wire and pole clips. November 30. (D.O.T.)

FOREIGN EXCHANGES.

Country.	Method of Quoting	Parity of Exchange.	Latest Quotations
Alexandria	Piastre to £	97½	97½
Athens	Drachmæ to £	25.22½	360—364
Belgrade	Dinars to £	25.22½	273
Berlin	Marks to £	20.43	20.35½
Berne	Francs to £	25.22½	25.14
Bombay	Sterling to Rupee	24d.	18 5/32—3/16
Brussels	Francs to £	25.22½	106.90
Bucharest	Lei to £	25.22½	1,030
Budapest	Kronen to £	24 02	345-347,000
Calcutta	Sterling to Rupee	24d.	18 5/32—3/16

Shipping Intelligence.

RAILWAY TARIFFS TO ADRIATIC PORTS.

The following modifications of railway tariffs for traffic to and from the Adriatic ports are now in force as a result of a series of agreements reached by the various railway administrations at the recent conference at Budapest. As regards traffic between Hungary and the Adriatic ports, the Italian railways allow a reduction of 25 to 30 per cent. on Hungarian exports over the Italian section, the Yugoslav railways allow 15 to 35 per cent. reduction on transit from Hungary to the Adriatic ports, while the Hungarian railways allow 20 to 40 per cent. on transports entering Hungary via Yugoslavia in transit. The agreements are intended to provide a *modus vivendi* until a uniform Adriatic tariff can be negotiated.

NEW ANDREW WEIR MOTOR SHIP.

The launch took place recently from the Govan Shipyard of Messrs. Harland and Wolff, Ltd., of the twin screw motor vessel Myrtlebank, which the company has built for Messrs. Andrew Weir and Co., (Bank Line, Ltd.). The Myrtlebank, which is of about 5,200 tons, will be equipped with Harland B. and W. motors. The vessel, which is built to Lloyd's highest class, is of the sheltered deck type, and is divided by seven watertight bulkheads, and there are five cargo holds. The cargo hatches are worked by twelve of the builders' steel derricks, and in addition, a heavy derrick for handling lifts up to 25 tons is fitted at the after side of the foremast. The cargo winches and windlass are steam driven with control from the bridge by a telemeter.

THE TRADE OF MUSCAT, 1924-25.

The total volume of trade for the year 1924-25 amounted to £612,883, as compared with £559,855 in the previous year an increase of about 9 per cent. This advance is due (the Acting British Consul at Muscat reports) to the larger trade with India and the United States, whose shares increased by approximately £27,000 and £29,000 respectively.

The total imports for the year under review amounted to £393,374, as against £390,460 in the previous year, an increase of about .74 per cent. Sailing craft carried imports to the value of £66,033, an increase of £13,240, or about 20 per cent. more than in the previous year. Imports of rice by steamer declined to the extent of £54,788, and this is attributed to the fact that the Indian rice market ruled high while Muscat demands were few.

Exports for the year amounted to £219,509, as against £169,395 in the previous year, an increase of £50,114, or about 29 per cent. The share of the sailing craft in the year's exports totalled £39,834, while the previous year's figures were £47,604. The increase in the total exports is almost entirely due to larger exports carried by steam vessels. It may be stated that over one-half of the increased exports went to the United States. The date crop was better than for several years past, and exports of "Fard" dates to the United States showed a considerable increase.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS UPPER DECK CABINS.
MODERATE FARES.
RECOGNISED BY INDIAN GOVERNMENT
Indian Government Vouchers accepted.

Passenger sailing dates :—

48, FENCHURCH STREET, LONDON, E.C.3.

YUGOSLAV SHIPPING DEVELOPMENT.

A new Yugoslav Steamship Company "Illyria" has been established with Head Office in Zagreb with a capita. of four million dinars (£150,000).

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Scindia for Bombay (Liverpool, November 23). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Matheran for Port Said, Colombo, Madras and Calcutta (London, November 14).

Bibby Line.—S.s. Lancashire for Port Said, Colombo, and Rangoon (Birkenhead, November 18).

British India Line.—S.s. Malda for Colombo, Madras, and Calcutta (London, November 21); s.s. Warfield for Bombay and Karachi (London, November 28).

Cunard Line.—S.s. Cypria for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, and Sulina (Liverpool, November 14).

Ellerman "City" Line.—S.s. City of Manchester for Calcutta (Birkenhead, November 14).

Johnston Line.—M.v. Sycamore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, November 21); s.s. Kenmore, for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, December 5).

P. and O. Line.—S.s. China for Bombay (London, November 13); s.s. Nellore for Colombo, Madras, and Calcutta (London, November 14).

Prince Line.—S.s. Sailor Prince for Malta, Alexandria, Famagusta, Jaffa, Haifa, and Beyrout (London, November 13).

COMPANY NEWS IN BRIEF.

Steaua Romana (British), Ltd., are advised that production of Steaua Romana, Bucharest, for October was 37,200 tons.

The production of Hamilton's Concessions (Roumania) for October was 150 tons (September, 1,220 tons). Note: Production has been affected owing to the accumulation of sand in No. 8 well not having been completely cleared.

The production of the Dacia Romano Petroleum Company for October was 1,150 tons; 4 wells are producing, 10 are in drilling and 6 are being fitted up.

The production of the Phœnix Oil and Transport Company for October was 23,390 tons gross (September, 16,303 tons); throughput, 20,231 tons (September, 23,064 tons).

The Cawnpore Electric Supply Corporation has declared an interim dividend of 3 per cent. on the ordinary shares, payable November 18.

The Madras Electric Supply Corporation announces an interim dividend of 2½ per cent., free of tax.

Following heavy rains throughout Iraq, the Basrah-Baghdad train was last week derailed 80 miles south of Baghdad. The passengers were unhurt.

A Jerusalem message reports the death there, at the age of 53, of Dr. Joseph Freud, for the past four years head of the Röntgen Department of the Hadassah Hospital, and a cousin of the psycho-analyst, Dr. Sigmund Freud.

Motors and Motoring.

By G. B. B.

The Commercial Motor Show which has just been held has proved to be one of the most successful yet held, not only in regard to the general arrangements and the number of firms taking part, but also in regard to orders booked. There are very few firms in the industry, who were showing at Olympia, who have not done much more business than they anticipated. Of course, lorries are not so popular a product as the light car, and the general public are not nearly so interested in the commercial as in the passenger car, but even so there was an exceptionally large attendance on each of the days the Show was open, and those of the public who were sight-seers rather than buyers were able to realise something of the immense strides which the industry has made of late.

The exhibits ranged from the tiny yet amazing little Austin, with a 7 h.p. engine and a capacity to take 2½ cwt. of goods anywhere, up hill or down dale, in as short or shorter a time than any ordinary car with an engine of far greater power, up to the giant 12-ton Scammell lorry, which is a six-wheeled vehicle with a body measuring 23 feet in length by 7 feet in width—not the sort of vehicle one would like to meet in a narrow country lane where neither could turn. The Scammel is a very fine proposition, and takes a very high position amongst the heavier commercial vehicles.

The low frame construction, which was to be seen in simple form on the Dennis stand, is one of the innovations of the year, and this design is, I may say, the outcome of experiments which have been made in connection with the design of a motor omnibus, of the two-deck type, with a covered top.

Another innovation was the use of the Weyman construction for omnibus and closed coach bodies. The caterpillar track was also largely in evidence, and this is now being fitted to heavy motor lawn-mowers, turf rollers, and grass-cutting machines.

Why?

A leading motor journal has been going rather deeply into the reason or reasons underlying the recent attempts on the part of American motor interests to acquire a holding in or obtain control of various British motor manufacturing companies. As is well known there is now an American interest in the Vauxhall productions, but I cannot see any likelihood of the famous Vauxhall products falling off in quality as a result of the new money. The journal in question appears to see something sinister in the idea; it says, and quite rightly, that the British motor industry is a national asset, a vital factor in national defence, and adds that this was proved during the War. Certainly it was, but what has that to do with the matter? The British motor industry is and always will be a British industry, in that it will be an industry which cannot be removed from our shores in time of war. No matter who builds it up, extends it, or improves it; no matter how it grows, no matter who provides the fertiliser, it will be a British industry of incalculable value in war-time, and an industry, no matter how greatly any other country may assist in developing it, cannot be used in war-time for the benefit of any country other than our own. We should immediately take control of the works, thank the foreigner for having developed them to so high a pitch, and—get busy. There is no need for any motoring paper to become excited on the ground that American money is coming to our motor trade. There is no ulterior reason for it; the reason is merely that which is apparent on the surface and which should be quite obvious. It is just this: the British industry is beating the American hand over fist, and, realising this, the shrewd American wants to be on the right side financially.

The New Dennis.

I was able to make a close examination of the new 30-cwt. Dennis chassis, which incorporates a number of improvements and which is the latest addition to the company's already wide range of commercial vehicles. This now includes a 1½, 2½, 3½, 4, 5-6, and 6 ton model, and is, of course, additional to the range of models suitable for passenger service, and to that section of these productions which includes fire-engines, escapes, hose carts and trailers. The firm have lifted themselves by sheer merit into the forefront of British motor manufacturers and overseas buyers should make themselves acquainted with the various products of this firm.

I find I have not mentioned above the 30-40 h.p. Dennis chassis, made with three different lengths of wheelbase suitable for motor omnibus or char-a-banc work. The three sizes of wheelbase are for 20, 25, or 35 passenger vehicles respectively. There is also a 40-50 h.p. model suitable for a 48-54 seater double-deck omnibus, in which the driver's seat is beside the engine and in which, also, the frame level is so low that the centre of gravity is dropped to such a point that it would seem impossible for the vehicle to turn over in any accident whatever.

Wolseley Enterprise.

The Scottish Show passes almost unheeded here in the South of Britain, simply because we have just had our own exhibition at which we were able to see all there is to be seen. But the Scottish Show in its way is quite as fine an exhibition and all our big manufacturers make a point of showing there the finest productions of their works. Wolseley Motors send me a list of their exhibits on various stands, and the comprehensive nature of these may be judged when it is mentioned that on the stand of one agent the three examples to be shown include the following:—The 11-22 h.p. four-seater in the new blue colour, for those requiring an inexpensive car. This can be fitted with 4-wheel brakes if required. There was also the 16-35 h.p. coach-built saloon, an owner-driver's carriage of fine finish, fitted with a four-speed gear box and 4-wheel brakes; and the third exhibit was the Wolseley 6-cylinder 24-55 h.p. model, which was one of the finest in the whole show.

A new Sheffield-Simplex has been supplied with special Cunard body work. The engine is a 50 h.p., of the six-cylinder type; has Ricardo cross-head pistons, a gear box giving four forward speeds and a reverse, six brakes and a fully floating back axle.

INDIAN AFRICAN SERVICE.

Regular Passenger and Freight Service from

RANGOON, CALCUTTA, and COLOMBO
To BEIRA, DELAGOA BAY, DURBAN, EAST LONDON, PORT ELIZABETH, MOSSEL BAY, and CAPE TOWN.

Wheel Fenders.

I have often wondered why so many cars are to be seen on the road without a set of wheel fenders, which are really one of the most useful and valuable additions to its standard equipment that a car can have. The idea is not altogether new in this country, but it has been in use in America for some considerable time and now is almost a distinguishing feature of American cars. I shall probably be told that I am advocating an American idea, to which I shall reply that I do not care whose idea it is nor where it came from provided it is a really good sound notion, as this is. There is nothing more foolish than the prejudice which condemns something that is American, French, Italian, or German merely because of its origin. Everything should be judged, adopted or condemned on its merits, and for that reason I like to see a car fitted with bumpers. They are useful and effective, and now that traffic is becoming so congested will probably, during town driving, save their cost in the course of a very few weeks.

GREECE'S MINERAL RESOURCES.

The recently issued report on Greece by Mr. R. F. H. Duke, C.B.E., contains a survey of the country's mineral resources. The production of the mineral deposits of Greece in 1913, and from 1920 to 1924, is shown in the following table:—

—	Lead (refined).	Iron Ores.	Silver Ore.	Magnesite.	Emery.	Lignite.
1913 ...	18,309	310,078	30.717	98,517	5,560	20 002 (1914)
1920 ...	5,016	45,479	2,604	71,870	11,089	197,454
1922 ...	4,408	59,272	1,310	56 642	13,000	132.233
1923 ...	4,235	100 115	4,026	62 552	21,626	117.927
1924 ...	5,103	96.000	4,461	38,213	22,632	111,000

The production of iron pyrites amounted in 1923 and 1924 to 52,000 and 76,000 tons respectively.

A considerable stimulus was given to the production of emery during the War by the placing of the emery quarries under French control. The methods of production and distribution of this product, of which the United Kingdom is an important purchaser, are however still far from satisfactory, especially in view of the fact that the industry is seriously threatened not only by the Smyrna emery (which is softer in character and used chiefly for polishing), but by the increasing use of artificial abrasives in the manufacture of which many of the leading emery users are financially interested.

In December, 1923, provision was made to raise a loan of £50,000 for increasing the output and facilitating the transport from the mines by the installation of an aerial cable line from the mines to the Bay of Montsouna, together with Decauville railways connecting the outlying to the cable, and the construction of proper warehouses and other buildings at the shore end.

Of the 1923 production amounting to 21,626 tons the sales during the year were as follows (in tons):—Great Britain, 5,248.3; U.S.A., 4,381.0; France, 3,013.0; Germany, 866.0; Italy, 720.4; Belgium, 431.0; Greece, 401.0; Holland, 285.0; total, 15,345.7.

During 1924 very little progress was made with the proposed works (in spite of the fact that a levy of £1 per ton had been added to the price to cover the expenditure), while strikes and labour troubles were frequent. The production, however, amounted to over 22,000 tons, of which the following quantities were sold abroad (in tons):—France, 5,661; Great Britain, 5,400; Italy, 1,591; Germany, 1,421; U.S.A. 1.100; Holland, 916; Belgium, 450.

It was proposed at the beginning of 1925 to increase the price still further, but the proposal was dropped on the recommendation of the British and French emery buyers' representatives, who pointed out the danger of competition from Smyrna emery and artificial abrasives. The sales brought into the Treasury some Drs. 25,000,000, of which 16 million represented expenses, so that the exploitation cannot on the whole be considered of very great importance to Greece.

The exploitation of lignite on which high hopes have always been based in Greece even to the extent of anticipating that it would render Greece largely independent of fuel from abroad—has been disappointing. In 1924 the import of coal amounted to 668,573 tons, as compared with 463,000 in 1923 and 434,000 in 1922. The import of petroleum and benzine during the same periods was 39,600, 23,000, and 20,000 tons. On the other hand, the lignite production amounted to 111,000 tons only in 1924, compared with 117,000 tons in 1923. The chief obstacles in the way of development of this valuable product are difficulties of transport (which is actually twice the cost of production) and utilisation, the mines being in districts not suitable for the erection of power stations on the spot, for which, in other countries, it is principally utilised.

Raw magnesite is produced at Limni, Chalcis, Vathi-Canalia, Ghérakini, etc. The total production in 1924 is given at 56,642 tons, of which 22,919 tons were exported.

Chrome is produced in Pharsala, Alchani-Domokos, Ghérakini, Vathia, etc. The total production in 1924 was 9,289 tons (stocks, some 10,000 tons). The quantity exported amounted to 9,907 tons.

OPIUM PRODUCTION IN PERSIA.

The production of opium in Persia has steadily increased during the last five years from 324,396 lb. in 1919-1920 to 690,833 lb. in 1923-1924; but it is still below the 1913-1914 production (says a recent report). In value there is a very great difference between the figures for 1913-1914 (krs. 37,000,000) and those for the year under review (60,000,000 krans). Such is the apparent demand for this Persian product that the 1923-1924 crop increased in value by 20,000,000, or nearly 50 per cent., although the actual production was only 30,000 lbs. in excess of the production for the previous twelve months. A still greater sale is recorded for the nine months ending December 20, 1924, the total production being valued at krs. 85,000,000 (approximately £2,024,000 at the current rate of 42 krans to the pound sterling), this representing no less than 9 per cent. of the total exports for the same period. Further, opium is the only crop at present known to the Persian cultivator which is easily transported, is comparatively easy to produce, and yields a certain and large return in comparison with the area under cultivation. With soaring prices and a constantly increasing demand, it is not surprising that recent attempts on the part of the Persian Government to diminish cultivation and restrict production by compulsory registration of all areas under cultivation, assembly of all stocks in Government warehouses, and banderoling (i.e., affixing of an official tax-label) of all produce destined for local consumption, have met with a good deal of opposition.

Substitutes for Opium.

Persian soil is as far as can be ascertained without expert examination, suitable, for the following substitutes for opium in various districts: mulberry trees (for raw silk), wheat, cotton, tobacco, tea (in Gilan and north Persia), hemp, flax, and dried fruits (in districts where there is no opium cultivation).

All these substitutes however need larger supplies of water at times when the supply of the latter is getting scarce, and their yield per acre is smaller than that of opium, so that a larger area would need to be cultivated in order to obtain the same monetary results.

The Roumanian Debt Commission, headed by M. Titulescu, arrived in New York last Friday in the Aquitania and proceeded directly to Washington.

Numbers are announced of 397 bonds of the Kingdom of Roumania Four per Cent. External Loan of 1922, which have been drawn for repayment on November 16.

The Cunard Company announce the appointment of Captain L. Ward, R.D., retired commander R.N.R., as chief marine superintendent, in succession to Captain Lyon, R.D., R.N.R., who has just retired.

Engineering Topics.

(By Our Engineering Representative.)

Transport and Cotton Development.

In March, 1924, the Executive Committee of the Empire Cotton Growing Corporation appointed a Mechanical Transport Sub-Committee to investigate and report as to the best and cheapest form of mechanical transport (other than railways) for conveying cotton and its rotational crops, and in June of that year the Sub-Committee submitted an interim report in which they described the transport problem in cotton-growing parts of the Empire generally, and in Africa in particular, as they visualised it, and the various types of vehicles which they had examined and considered in the course of their investigations. As a result of this report the Executive Comittee approved the suggestion of the Sub-Committee to purchase and dispatch to Northern Nigeria an experimental transport unit consisting of two "halt-track" lorries (subsequently increased by the addition of a third lorry and trailer), the unit to be in charge of a competent driver-mechanic who could give a full reliable, and unprejudiced report on the maintenance, comparative efficiency, and types of track. It also decided that, before dispatch to Nigeria, the lorries should undergo a trial lasting for about a month, or of 1,000 miles over a course which should resemble as far as possible an African earth road, and on which the gradients should be sufficiently severe to test the hill-climbing capacity of the vehicles. The preliminary trials have now been completed, and as the Committee deem it desirable to give wider publicity to the subject a memorandum by the Mechanical Transport Sub-Committee has now been issued describing the problem of cotton transport, and explaining why they advised the Corporation in the first instance to concentrate their attention on testing the efficiency or otherwise of the "half-track" vehicle.

The subject is one which looms ever larger on the horizon as progress is made in cotton cultivation, and it may be said quite definitely that the solution of the problem of transport will provide the solution of how to grow sufficient cotton overseas to render this country independent of America. It goes without saying that the railway is the ideal means of transport; and as far as possible use must and will be made of this medium. Thus in the Sudan projects are on foot for railway extensions, while a loan is shortly to be floated for the purpose *inter alia* of the construction of a railway in East Africa. But cost stands in the way of the unlimited use of the railway for development purposes. In Great Britain some lines have ceased to be paying undertakings, and there is nothing to induce the capitalist to come forward in support of vast railway schemes in undeveloped regions, for capital must have its adequate return, and except in the case of main lines there would be small hope of the railways yielding any return at all. That being so it is obvious that a solution must be found in the motor, and here we come to another difficulty. Just as it would not pay to lay down railway tracks so it would be quite out of the question, as the memorandum points out, to conceive any idea of covering Africa with a net-work of metalled all-weather roads. Road construction must be carried on, however, as much as possible, and the committee urge the need for a definite programme in this respect, and point out that in the construction of roads it would be desirable that one part should be provided for motor traffic and another for other traffic. But as the development of cotton cultivation cannot be made dependent on the construction of roads it is obvious that dependence must be placed on forms of motor transport which are independent of roads, and can act in any sort of conditions.

Transport it is pointed out, is required for cotton and many of its rotational crops during part of the year only, and, in districts in an early stage of development, the demand for transport during the remaining months may be small until the district concerned has developed sufficienty to require imports, or to produce exports, which are carried throughout the year, or at times other than during the months immediately succeeding the harvest. These conditions call for a low capital expenditure rather than low running costs, and it is where these conditions obtain that the need for transport is greatest, for the extent of cotton-growing areas and the distance from the railway at which cotton can be grown at a reasonable profit depend directly on transport facilities. The actual carrying of cotton can be placed under two headings, namely: 1. Carrying the seed cotton from the fields to the ginneries. 2. Carrying of lint and seed from the ginneries to the nearest port or railway station.

Assuming that for many years to come the roads of Africa will be, generally speaking, unmetalled, it is essential to consider, the Committee point out, what type of vehicle will inflict the least damage on these roads, and so keep down the cost of subsequent maintenance. In the first place, the weight on the axles or, in other words, the pressure per square inch on the road surface must be low. It would be impossible to run a regular service of 4-ton or 6-ton petrol or steam-driven lorries with solid rubber or even pneumatic tyres over African roads. This reduction of weight on the axles may be achieved by the following means:— 1. By using light vehicles. 2. By increasing the number of wheels. 3. By increasing the width of the wheel treads. 4. by enlarging the diameter of the wheels. 5. By substituting some system of caterpillar action or continuous track for wheels.

The most promising development up to the present, says the Sub-Committee, has been in the form of "half-track" vehicles, in which the front wheels are retained for steering purposes and the rear wheels are replaced by a flexible double-track system. These two tracks and their bogies carry most of the weight of the vehicle and the load.

"The Mermaid."

I have read with considerable interest the first issue of "The Mermaid," a quarterly journal issued by Spear and Jackson, Ltd., of Ætna Works, Sheffield. This periodical is primarily for those who are engaged in the saw milling and timber trades throughout the world, but its contents which are of a very varied description, are calculated to appeal as well to the general reader, and the maintenance of the standard reached in the first issue should ensure for it a long and useful voyage.

Among the features of special interest in "The Mermaid," is an illustrated article on "Forest Engineering in Northern Bengal," and other notable articles deal with "Crucible Steel Melting Process," and "Shingles and Red Cedar," while the journal contains the first instalment of "The Romance of a Great Business," the history of the development of Spear and Jackson. There are also "Topical Notes," in which I am glad to see several references to the vast field covered by "The Near East and India," and a variety of lighter matter not excluding verse. "The Mermaid" is illustrated with a large number of photographs, drawings, and cartoons, and has an attractive cover design by Alfred Leete, the well-known cartoonist.

Messrs. J. Henry Schroder and Co. announce that in accordance with an agreement of June 23, 1925, between the Bulgarian Government and the representatives of the British, French and Dutch bondholders, drawings of bonds of the Royal Bulgarian Government Four and a Half per Cent. Loan 1909 have been temporarily suspended for two years from April 1, 1925. The Bulgarian Government, with the object of removing the present uncertainty with regard to the status of the bonds now in circulation, has decided to issue new coupon sheets to holders of the bonds, who are requested to lodge with J. Henry Schroder and Co., 145, Leadenhall Street, E.C.3, all the unexpired coupons, commencing with the coupon due December 1, 1925 together with the talons.

Cotton and Cotton Goods.

MANCHESTER COTTON MARKET.

The Manhester Cotton Trade Review of the Ottoman Bank, for the week ended November 7, states:—

Whilst during the past week manufacturers have been kept fairly busy in giving out quotations business has proceeded on very desultory lines. Buyers appear to have become thoroughly unsettled in their opinions by recent American cotton crop forecasts, and appear to have little confidence even in the present low level of values. In the meanwhile another of these reports is due on Monday next and the market lives in hopes that this will lead to some more certain idea as to the extent of the crop.

Yarn.—Although it is not possible to record any considerable improvement in the turnover in American yarns there have not been wanting indications pointing to better times and some fair orders have been booked. These have not been well distributed over the trade and in certain sections there is still a superabundance of supplies and sellers consequently can only obtain very poor prices. There is nothing to report with regard to Egyptian spinnings, the demand for which continues to be small.

Cloth.—The considerable fall which took place in raw cotton prices last week-end and the imminence of a further American Bureau Report appear jointly to have had the effect of reducing enterprise on the part of buyers to a minimum. For all markets operations have been of small dimensions. Business for India has diminished and nothing worth speaking about has transpired for China. Egypt and the Near East continue to buy very cautiously.

Raw cotton.—The decline in prices which took place towards the end of last week was continued until Monday of this week, and on that day the spot quotation was below 10d Since then, however, conditions in the market have altered and quotations have advanced daily. This appears to be based on fears that the recent unfavourable weather conditions have adversely affected the growth both in quantity and quality. Opinions as to the coming Bureau Report vary considerably.

Egyptian cotton, in spite of Governmen purchases (which, however, have been of small dimensions) in Alexandria, and in spite also of a Government decree (which is not taken very seriously) reducing the acreage for next season, has continued to fall. Reports regarding the crop continue to be good whilst spinners here maintain their indifferent attitude. Closing quotations yesterday were as follows: American Middling 10.49, Egyptian Fully Good Fair 21.90.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company in their report for the week ended October 29, state:—

Since our last report the futures market has again been rather active, but the tendency has been weaker: the net changes on the week are as follows: Sakellaridis 0.83 dollars down for November, 0.75 dollars down for January, 0.75 dollars down for March; Ashmouni 0.88 dollars down for December, 0.93 dollars down for February.

The most important events of this week have been the publication of another estimate of the American crop, the figures given being 15,226,000 bales without linters, against 14,759,000 a fortnight ago, and the publication by the Government of a notice on the 26th instant stating that they will enter in the market by effecting purchases at Minet-el-Bassal. Naturally these two events affected the market contradictorily. However, as the Government's projected action has not so far been put into operation, the bullish influence of this factor upon the market is vanishing. Furthermore the Government's declaration is very vague; it does not state the qualities that they intend to buy nor the prices that they will pay.

The demand from abroad has continued to run on rather moderate lines, especially for Sakel. Reports from consuming centres indicate that Sakel prices are still considered too high, and in many casese substitutes can be used on a rather cheaper basis. Ashmouni prices also are generally considered somewhat high compared with the competing American staple qualities. Local speculators have been very active, favouring the bear side. We think that the short interest accumulated is already fairly heavy.

On the third tender day (22nd) of October 3,250 kantars were delivered. No dockets at all were tendered at the first and second tender days of this month. The position judged on present indications appears to be still somewhat bearish, but in view of the recent drop in prices and of the fact that up to the present spinners have been only moderate buyers, it is quite possible that, with any improvement in the demand, considerable resistance may be shown to any further decline. The week's receipts amount to 366,800 crs. again exports 267,950 crs.: the stock now stands at 1,575,730 crs.

Spot: We have had a fairly active week at Minet-el-Bassal, and sales amount to about 26,200 bales, of which we estimate 13,600 Sakel, 9,400 Uppers 2,500 Zagora, 400 Pilion, 200 White 100 Fouady and a few bales of Brown. There has not been quite the same eagerness about the demand this week due probably to shippers having covered their requirements for October shipment, and as a consequence there has been a tendency for spot parities to ease. Offerings are also more plentiful than last week on the spot.

Sakellaridis: has been in good request and all styles have been dealt in. Spot differences are without much change with the exception of Fully Good Fair which has eased somewhat.

Ashmouni and Zagora: The demand has fallen away somewhat, though a fair business has been done. With the exception of Good and better, which are well held and maintain their parities, spot differences are generally a little easier.

Pilion: has been in fair request. Spot parities are generally rather easier.

Brown: Only a few bales have been done. Spot differences have eased a little.

White: A small business has been done. Spot differences have once again eased considerably.

Crop 1925: Picking has now been almost entirely completed. Interior merchants have already lost quite a lot of money, and in all probability the movement of the crop will be much slower than last year.

The Syrian Committee in Cairo has sent £1,000 for the relief of distress in Syria.

A contract for structural steelwork for the Bombay, Baroda, and Central India Railway Company has been placed with W. Bain and Co., Coatbridge.

Coupons due on the Imperial Government of Persia 5 per cent. sterling loan of 1911, on November 15, will be paid on and after Nov 16, at the Imperial Bank of Persia, 33 King William Street, E.C., or at their bankers, Messrs. Glyn Mills and Co., 67, Lombard Street, E.C., and must be left three clear days for verification.

The Maharaja of Kapurthala, with the Crown Prince of Kaparthala, the Gaekwar of Baroda, Sir Victor Sassoon, Lady Miller, Sir Logie Watson, the Right Hon. Mr. E. Hilton Young, M.P., Sir Reginald Mant, Sir Henry Strakosch, and Sir Thomas Catto were among those who left London last Thursday to join the Ranpura at Marseilles for Bombay.

AFRICAN AND EASTERN.

It is officially announced that the recent issue of "B" preference and ordinary shares by the African and Eastern Trade Corporation, Ltd., has been over-subscribed. Applicants for surplus shares will be allotted 44 per cent. of their applications and allotment letters for these will be posted at the end of the week.

TEA COMPANIES.

The directors of the Sephinjuri Bheel Tea Company have declared a dividend of 5 per cent., less tax, for the six months ending November 30, 1925.

The Derby Tea Company announces an interim dividend of 5 per cent., less tax, on the ordinary shares.

The Nedeem Tea Company announce an interim preference dividend of 2½ per cent., less tax, on account of the 1925 season.

The Chubwa Tea Company announces interim dividends of 3½ per cent. on the preference shares and 2s. per share on the ordinary shares, both less tax.

NEW COMPANY.

The Compagnie Generale de Finance pour la Yougoslavia has been registered in Guernsey with a capital of £10,000 in £1 shares, to enter into contracts with the Government of Yugoslavia.

The output of the Anglo-Egyptian Oilfields for the week ended November 6, was Gemsah, 16 tons (previous week 39 tons); Hurghada, 3,231 tons (previous week 3,217 tons).

The P. and O. Company announces that its steamers would resume calls at Fremantle, commencing with the s.s. Moldavia, outward bound, due Fremantle November 10, and the Comorin, homeward bound, leaving Fremantle on November 16.

In the Corfu municipal elections the Theotokists (the irreconcilable Royalist party) defeated by a very narrow margin the new grouping of moderate Royalists and Venezelists, which wishes to separate municipal affairs from party politics.

NOTES OF THE WEEK

NEAR AND MIDDLE EAST.

The Syrian Revolt.

Reinforcements continue to arrive in Syria, but hardly in adequate numbers to bring the rebellion to an early end. The course of the fighting suggests that the climax has been passed. Isolated bands are still capable of doing material damage, and the rounding up of each mobile force must cause the French considerable trouble, if peace is to depend on the surrender of the last rifle. Other methods, we imagine, will be adopted for settlement. The French will not want the campaign to be prolonged into the rainy season, the Druses will have had enough of fighting, if they can be persuaded that new methods of administration are likely to be adopted. Both sides have an interest in the restoration of peace in time for winter sowings to be taken in hand. It has been a happy inspiration on the part of the British Government to invite M. Jouvenel, the new High Commissioner for Syria, to visit London before he sails for Beyrout. Both countries stand to benefit by cordial co-operation in the Near and Middle East; but so far there has been little of it. Mr. Chamberlain was able to win over M. Herriot to his way of thinking, and for a time there was a prospect of a better spirit permeating French representation in the Near and Middle East. Political changes in France, however, intervened before the seed sown could bear fruit. As far as Syria and Palestine are concerned, the need for a close understanding on the spot between the French and British is obvious. The preliminary talks in London should go a long way towards oiling the wheels of Anglo-French co-operation in that part of the world.

Italy and Yugoslavia.

The past week has shown that the correct relations recently established between Yugoslavia and Italy have to be regarded as being propped up by good intentions on both sides rather than as resting on a particularly secure foundation. As an aftermath of the plot to kill Signor Mussolini a Fascist crowd in Trieste started to riot and, while doing damage in various directions, appears to have directed most of their attention to the offices of the *Edinost*, a Slovene newspaper. Furniture and documents were destroyed, and attempts were made to break up the printing machinery. On the same day the monument of the Slovene poet Vilhar at Postumia was defaced. These two anti-Slovene demonstrations in Italy immediately aroused intense indignation in Yugoslavia. In Belgrade the police had time to prevent any untoward incident, by prohibiting meetings of protest and by dispersing crowds. In some towns, however, the authorities were not successful in anticipating the hotheads among the population. In Zagreb students burned an Italian flag, and windows at the Italian Consulate were broken; attacks were also made on the Italian Consulates at Split and Shibenik. At Liubliana a strong detachment of police kept watch and ward for several days round the Italian Consulate, which is in the main street of the city, and the demonstrators were unable to do more than cause inconvenience to the traffic. In due course the trouble died down, but the Yugoslav Government has had to put itself right with Italy. Formal apologies have been conveyed to the Italian Government; the Mayor of Zagreb has been retired; the students implicated in the burning of the flag have been sentenced to fourteen days' imprisonment, and an indemnity will be paid as reparation for the damage done to the Consulates.

The Treatment of Minorities.

As in the case of the recent frontier trouble between Greece and Bulgaria, the liquidation of the actual incident is not sufficient, if the desire exists in any quarter to see similar trouble avoided in future. Italy has included within her borders between five and six hundred thousand inhabitants of Yugoslav origin. As a Great Power, she is not bound by any Minorities Convention, and she adopts the view that she cannot admit any distinction between citizens of Italian origin and those who may have formerly

Digitized by Google

regarded themselves as Southern Slavs. The stirrings of Southern Slav race consciousness are of too recent a date to allow this policy to be a practical success, particularly when relations between Italy and Yugoslavia have been strained until a year ago. It is not to be expected that those of Yugoslav origin in Italy should always be able to avoid emphasising points of difference between themselves and their fellow-subjects of purely Italian extraction, if only for the reason that they wish to keep alive their Yugoslav traditions. Under the Fascist régime, accordingly, a certain amount of prominence has been given to the differences between the two sections of the population. Yugoslav National Clubs, it is complained, have been burnt, schools have been closed, and the Yugoslav organs in the Press have been suppressed or muzzled. The last rallying point, as it were, of Slovene social and economic life along this northern coast of the Adriatic was the *Edinost*, and now this has been the object of an attack. It is evident, as the Yugoslav Foreign Minister was careful to point out, that the Yugoslav Government cannot interfere with or even discuss the internal affairs of Italy; but it is not to be supposed that the Yugoslav subjects of Italy will consider themselves equally debarred from pressing their claims. Fortunately, their leader in the Italian Parliament appears to be a level-headed man, who preaches to his followers loyalty to their political home. He does, however, press for cultural autonomy for the Slovenes, the right to use their own language in church, school and court, on the lines that have proved successful with French minorities in Canada. Ultimately, perhaps, the wisdom of such a policy will commend itself to Italy, when her domestic situation has acquired greater stability. Nothing is better calculated to weld Yugoslavia into a compact whole, and to make of her for that reason a more formidable proposition for Italy than the belief that Yugoslav subjects in Italy are being oppressed or exposed to objectionable discrimination. This last trouble in Trieste has undoubtedly quickened interest in the Yugoslav population in Italy among the Serbians, who before were inclined to regard it as the particular concern of the Croats and Slovenes.

Faction in Egypt.

Independent Egypt has not had long to wait before hearing in her midst the slogan "Things were better under the British." The lesson that the Egyptians have not yet learned is that the successful working of a Constitution entails much give-and-take on all sides. If the Zaghloulists are not prepared to shape their policy on this axiom, but are bent on making things unworkable in independent Egypt, they can hardly expect to meet with the same philosophic tolerance as they experienced when British officials had more voice in the administration of the country. Ziwar Pasha's Government must be credited with a desire to "get on with their work"; Zaghloul Pasha—so it seems to the ordinary observer—does not mind what happens to the country, provided that it does not get on without him. In the circumstances there is no reason for anyone, certainly not for the Zaghloulists, to be surprised if Ziwar Pasha marshals all the battalions under his command to secure victory. One of these battalions was a hurriedly enacted Law of Associations, but the value of its assistance has yet to be determined. The Government is indisposed to allow Zaghloul Pasha as much rope as the British found it politic to give him, and consequently the police are told off to prevent or disperse Zaghloulist demonstrations. These incidents are unedifying and derogatory to Egypt, for they mean that, while the great bulk of the Egyptian people wants nothing as much as to be allowed to proceed peaceably with its work, the sole object of one section of its political leaders is to prevent the work with which they are primarily concerned—that of the political or administrative machine—from being accomplished.

Komitajis.

The Commission appointed by the Council of the League of Nations to investigate the recent trouble on the Græco-Bulgarian frontier is credited with the intention of accepting the evidence supplied to it by the Allied Military Attachés who were able to be on the spot at an earlier date, and will devote some of its time to considering the *komitaji* question. If the statement that the League of Nations is considering a plan for assisting the Bulgarian Government to "stamp out" the *komitajis* is meant to imply that a campaign of extermination is to be countenanced by the League of Nations, it may be dismissed at once as absurd. That way peace in the Balkans does not lie. The *komitaji*, as the name implies, is not an ordinary brigand, although the latter may mask himself in a Peninsula where the retention of political grievances in a Peninsula where the retention of polical grievances has been reduced to a science, if not to a fine art. If all the *komitajis* were stamped out one day, there would be a plentiful crop to take their place within a year, unless a radical change is effected in dealing with minorities in the Balkans. The trouble is not so much the official policy of any Government as the treatment meted out on the spot by subordinate local officials. If each Government could exercise special care in the selection of officials for Macedonian territory and hold them responsible for local dissatisfaction, a new spirit might begin to pervade the Balkans; but these measures would not make peaceable citizens of those who belong to the Macedonian Revolutionary Organisation.

Frontiers in Arabia.

Sir Gilbert Clayton, who left England on September 24, on a mission to the Hejaz in order to discuss with Sultan Ibn Saoud the boundaries of Nejd and Transjordan, has concluded his negotiations and has returned to Egypt. A previous agreement had settled the frontiers between Nejd and Iraq, but differences had arisen on the subjects of raids of Nejd territory alleged to have originated in Iraq. As was to be expected, the Baghdad Government has declared its readiness to deal with any offenders for whose good behaviour it is morally responsible. The problem of a Nejd-Transjordan frontier is complicated by the custom of certain tribes owning allegiance to Sultan Ibn Saoud in moving to Syria during the summer months and trading with Damascus. To avoid the inconvenience of having to pass through Transjordan territory in order to reach Syria, the Sultan of Nejd has claimed that his territory should march with Syria. The effect of this would be to cut off Transjordan from Iraq, and the question arises whether it is of more importance to Nejd that certain tribes should not have to enter Transjordan territory on their way to and from

THE POLITICAL TANGLE IN GREECE.

The Greek elections are fixed for March. During the next three months, therefore, politicians and political parties will be taking stock of the situation, and will have to decide whether the present position, far from satisfactory from a constitutional point of view, is to be continued or whether a practical attempt is to be made to win Greece back to more normal conditions. However anomalous General Pangalos's assumption of office may have been, he has, undoubtedly, steadied Greece politically and called a halt to the system of interpreting the interests of the State solely in terms of party advantage. He found the administration of the country stultified by the feud between the two chief political groups, and in order to have a strong Government he transferred power from the hands of the politicians into his own. The main trend of his policy appears to have been to give the Greek people the respite that they desire and badly needed from political strife. If he had used his dictatorial powers to the full, he could probably have avoided any appeal to the electorate for a much longer period; but the deference that he has paid to constitutionalism has obliged him to yield in this matter to the pressure brought to bear upon him. The issue before the politicians, therefore, at the coming elections would seem to be whether they can convince General Pangalos and those who are behind him that they are now ready to resume control of the Government without any risk of a relapse into a political war to the knife, or whether in his opinion a clear case is made out for a continuance of the exceptional conditions that he felt obliged to introduce into the direction of public affairs. Unless some definite action is taken by the political leaders, the elections next March may leave the political groups much as they are at present, that is to say, fairly equally matched in political strength, if, indeed, a general tendency to attribute to past and present leaders the various economic and material ills from which the public considers itself to be suffering does not cause the electorate to veer largely to the Left. In the latter case, it may be imagined, General Pangalos would feel called upon to see that the dictatorship was established on unequivocal lines, and the politicians would have lost the opportunity afforded them of restoring an unrestricted parliamentary régime.

By the reconstruction of his Cabinet, which has enabled him to modify its former exclusively Venizelist complexion, General Pangalos has given the two chief political parties a clear lead. They are unlikely to profit by it, however, unless they can bring themselves to discuss in joint conference the whole situation with all its various complications and ramifications. The dominant factor to-day is that the military element has taken charge of Greece. Now, as things were, this may not be a bad thing for the country, but it is not a solution that the politicians can be expected to endorse. The two chief political parties, as already stated, are fairly evenly matched; at the same time relations between them are still officially embittered by past events and by considerations of present emoluments. In spite of the fact that General Pangalos holds himself above parties, his identification with the republican system caused him to rely in the first instance for administrative help on Venizelists, who regard their retention of power as essential to the maintenance of the Republic. The Anti-Venizelists—the term Royalist has been dropped—considered that General Pangalos and the system that he has introduced is evidence of the failure of Venizelism to govern the country satisfactorily by itself, for the Government that General Pangalos overthrew was purely Venizelist. To them, therefore, it is an axiom, endorsed in effect by General Pangalos himself, that the interests of Greece require co-operation between the two parties. The main obstacles in the way are the execution of the five Ministers in 1922 and the problem of the Anti-Venizelist officers removed from the Army. In the former the Anti-Venizelists see a stain attaching not only to individual families, but also to the party as a whole, until the episode has been formally and finally liquidated. The position in regard to the Army is that for the most part the places of the dismissed Royalist officers had to be taken by men hurriedly promoted for the purpose; their military education in the bulk would be inferior, and if appointments were to depend entirely on merit, when the dismissed officers were reinstated, the Venizelist officers might stand a poor chance against their competitors. It may be that misgivings on this point, coupled with the conviction that General Pangalos was inclining too much towards the Anti-Venizelist camp, were responsible for General Plastiras' abortive intrigue; for in the event of any general reinstatement of Royalist officers a large number of those now on the active list could hardly expect to be retained solely on their military qualifications.

As far as is known, the desire for co-operation exists only with the Anti-Venizelists; the Venizelists, being in possession, are not so impressed with the need for any change. To overcome the obstacles in the way of closing once and for all the unedifying chapter of the Royalist-Venizelist feud, the Anti-Venizelists, it is understood, would like a joint declaration issued by the two parties admitting mistakes in the past on both sides, but recording that there were no traitors on either; the executions of the Ministers would be declared to have been unlawful, in order that the dead men might be rehabilitated in the eyes of their countrymen, but a further clause would exculpate all those in any way responsible for the executions. The fears of the Army regarding the reinstatement of the dismissed officers are held to be exaggerated, if only for the reason that many of the latter have taken up other callings and would not wish to return to military life. It could, however, be made a stipulation in the joint agreement that no present officer should be superseded without adequate compensation, for it would be essential to the success of the movement for co-operation that no considerable body of opinion on either side should labour under a sense of grievance. The concession to be made by the Anti-Venizelists would be the whole-hearted acceptance of the Republic, with possibly the proviso that, if at any time a change was suggested, it should not be adopted without the official support of both parties. Whether both the Venizelists and the Anti-Venizelists could bring themselves to accept a working agreement on these lines we have no means of knowing. Moderate men on each side are believed to favour co-operation, but neither party is without its extremists. Only by co-operation can they hope to eliminate military interference in politicics, and the leaders will incur a serious responsibility, if they go to the country in March with no better appeal than the old party cries. A political alliance between Venizelists and Anti-Venizelists would enable the Chamber to become the focus of the intelligence and constructive ability of Greece instead of a mere battle-ground for contending parties. What is required is that the leaders should meet in conference to explore the ground of possible agreement, in the meantime imposing silence on their champions in the Press.

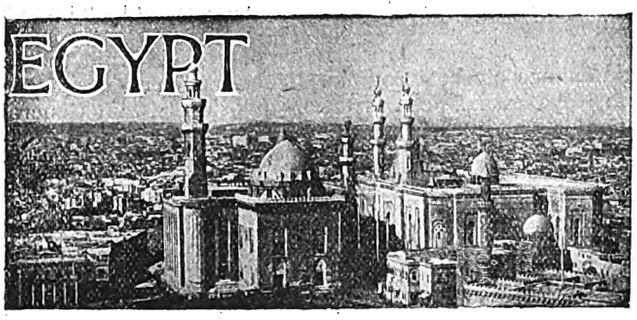
The Near and Middle East*

From Our Own Correspondents.



Cairo, November 8.

Ziwar Pasha's Return.

The return to this country to-morrow of the Prime Minister, Ahmed Ziwar Pasha, after an absence in Europe of close upon five months, seems likely to lend new animation to local politics. For a long time past it has been thought that Ziwar Pasha would welcome an opportunity of resigning from the Ministry and returning to the comparative peace and calm of the Egyptian Legation in Rome, or in any other European Capital. On the other hand, it is known that at one time he contemplated taking over the portfolio of the Interior, an intention which would suggest a wish to become even more closely concerned with the politics of the country, rather than a desire to get out of them. What are Ziwar Pasha's real views at the present time will not be known until he has had an opportunity of revealing his intentions, one way or the other, but if he is still anxious to get out of local politics he will hardly find a better time than the present, when the Coalition Ministry which he formed has become, with the single exception of himself, a Unionist Ministry, which has been led during the past five months by the President of the Unionist Party.

Government and Cotton.

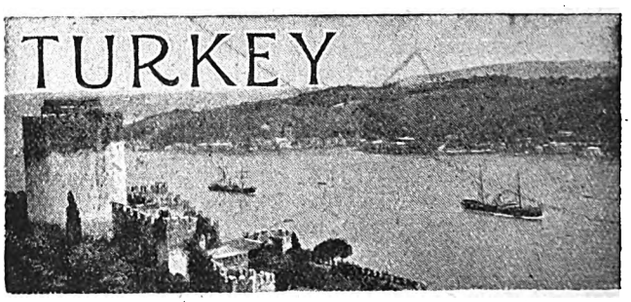
The Government's cotton speculations show little sign of influencing the market, for during the past week the official buyers have merely followed the market down with daily purchases of a few hundred bales. In previous years Governmental gambling in cotton has been very popular with the growers, but now, since it is apparent that the law of supply and demand will refuse to bow before official attempts at artificial bolstering-up of prices, the same newspapers which two months ago urged the Government to buy are now severely criticising the purchases. The Government during the past week has decided to try another expedient, namely, the limitation of the cotton area to one-third of the total cultivated land of the country. This step has been tried with success in the past, but it has many opponents to-day, because of the great difficulty of enforcing the restriction.

Political Associations' Law.

The Government's *ballon d'essai*, in the case of the new law regarding political associations, which took the form of releasing for publication the draft of the law before its appearance in the *Journal Officiel* makes it operative, seems, in the circumstances, to have been wise. For the law has encountered extraordinary opposition, and all the anti-Government forces have declared their intention of refusing to obey it. Faced with the probability of serious trouble, the Government is not only preparing a memorandum, explaining that the ordinance was never intended to be so noxious as its opponents imagine, but is also, so report says, reshaping the law itself.

Hatred of Nashaat Pasha.

This Political Associations' Law, which was a palpable "try-on," timed to appear shortly after the arrival of the new High Commissioner, with the hope, on the one hand, that the fact of his having come so lately would prevent his taking any great interest in the measure, and, on the other hand, that the country would suppose that the British Representative had no objection to the ordinance, has earned the present Administration undiluted abuse. But it is not the Cabinet upon which the Opposition concentrates its heaviest fire, for the Acting Premier and his colleagues are assumed to be tools in the hands of Hassan Nashaat Pasha, Director of the Royal Cabinet, for whom Liberal Constitutionals, Zaghloulists and Nationalists have an equally intense hatred. How this young man, who seems not to have a friend anywhere, even among the Unionist Party which he himself created, has managed, nevertheless, to increase his power and influence to its present remarkable height, is one of the romances of Egyptian politics. No doubt there will come for him, as there comes, sooner or later, for most palace favourites everywhere, a day when all that he has done and built will fall crashing about his ears, but there is no sign as yet of the approach of that day. But until then, Nashaat Pasha is yet feared by most, and exercises his authority over all.



Constantinople, November 10.

New Tax Proposals.

Further enlightenment regarding the financial sacrifices which the people of Turkey will have to make this year was quickly forthcoming after the preliminary reference made to them by Mustapha Kemal Pasha in his speech to the Grand National Assembly on November 1. The new draft laws which are now before the Assembly are a work of art as far as the possibility of taxation goes. The Ministry of Finance has left very few, if any, loopholes by which an inhabitant of Turkey can escape being taxed. In the new scheme provision appears to have been made for everybody in every station of life and the effort to

Digitized by Google

make up, on the swings, for what has been lost or missed on the roundabouts has, apparently been extremely successful. Bachelors become liable for almost as much as married men with families, and those who burn gas and electricity in preference to the taxed paraffin oil will also be caught at the end of the month when ten per cent. on the amount of the bill will be exacted as a Government tax. Chocolates, liqueurs, sweetmeats, in fact everything having sugar as an ingredient, will, from the time these projects become law, be prohibited importations because sugar becomes a Government monopoly (with a tax of three pence per pound). An additional revenue of between 60 and 70 millions pounds Turkish will be realised by these taxes, which will make up the present budget deficit and, in addition, permit a considerably raised expenditure.

Changing Customs.

It becomes increasingly difficult to estimate to what extent the reforms undertaken by the present Turkey will ultimately go, as some new or projected change is recorded every day. While the adoption of the international style of head-dress constitutes the most evident and one of the most important of these changes it is only one of many which have been agreed upon during the past few weeks. The projected substitution of the Christian era in preferance to that of Hegira is by no means a change without an important significance. Customs and modes not essentially Turkish, whose own individuality is insufficient to enforce their continuance, are being abolished. In this category comes the use of the word *effendi*. *Effendi*, as at present used in the Turkish language, is now considered as without significance, and this, together with the fact that it is of Greek origin (being a corruption of a Greek word) is sufficient to have called for its erasure from the Turkish vocabulary.

Intermarriage.

Another startling example of the complete veering round of Turkish opinion is supplied by the fact that one of Turkey's oldest newspapers published an editorial advocating the removal of the barrier to mixed marriage with Turkish women, which has hitherto existed. The rule exacting the adoption of Islam, which has constituted an important condition in all marriages between foreigners and Turkish women, is now, because the present-day standard of intelligence is awakening to the fact that such a barrier is in many ways detrimental to the country, the object of much unfavourable criticism. It is now held that intermarriage with Europeans would go far to promote the necessary standards of health and intellect in the Turkish nation.

Fashions in Hats.

As regards the new fashions of wearing hats there seems, to judge from what is seen in the streets, to be some slight uncertainty concerning just what is "done." The sight of a gentleman in the remarkably baggy pantaloons fashionable only a short time ago, wearing a sort of morning coat and top hat, hardly promotes serious respect, while the sight of *hamals* carrying miniature butcher's shops on their backs and wearing bowlers points to the fact of there being some misconception regarding the relevancy of things. Many of these strange sights were, however, due to the sudden order against wearing fezes, to conform with which, especially as the shops were closed on the day the order came into force, fashion and etiquette had to take a second place.

PERSIA.

Teheran, October 21.

The Anti-Kajar Agitation.

The City is passing through another phase of Republican agitation, which was apparently timed to coincide with the Shah's departure from Europe. The Shah postponed his return indefinitely, but the present agitation aims at the deposition of the Dynasty. Telegrams were addressed to the Speaker of the Mejliss from Committees of Progress, and so on, at towns like Tabriz and Kerman, threatening trouble if Government and Parliament failed to reply favourably at once. It was also understood that a Bill is about to be presented to the present House of Deputies authorizing the next Mejliss to make changes in the existing Constitution. Teheran is used to these extravagances, and the simple solution was indulged of the Speaker's resigning, and the House's informing the Committee of Tabriz that no reply could be given till a Speaker could be elected. As no one will accept election, there is time to consider the agitation; meanwhile Parliamentary business is at a standstill.

Fresh elections commence on November 15, and only three or four months remain to this Mejliss to finish the Land Law Tax, the Penal Code, and much other essential legislation. It is predicted by many that little future business will be transacted by this House.

The attitude of the Public is apathetic, partly as it has seen so many changes recently, and partly because it fears exploitation of any unfavourable situation by Bolshevist agitators. It is said that Police inquiries after the recent Bread Riot prove the existence of active Communist Committees in Persia, and their Press propaganda is constant and insidious.

Prospect of Hardship.

Bread is still a source of popular discontent, being both deficient and of bad quality. Every effort is being made to import reserves of wheat from distant Provinces, and even Russia, but one difficulty leads to another, and prices of fodder and consequently transport steadily increase with the demands on them. Altogether the outlook is an anxious one for the poor this winter, and, probably next year also, owing to deficient sowing.

Exceptionally abundant rains have fallen recently and are taken as a good omen.

French Aviation in Persia.

A French aviator, M. Nogues, has performed a fine feat in flying his machine here via Constantinople and Aleppo. With him was a representative of the French Air Commercial Service, who is making certain proposals to Government in competition with the German Junkers Company.

America and Persia.

Dr. Millspaugh addressed a large gathering of members and friends of the Persia-America Society on the 15th instant, on the subject of "The Economic Ties of Persia and America," in the course of which he outlined the result of his recent visit to America. Emphasising the friendly interest and sympathy existing towards Persia, he expressed confidence that capital would be forthcoming for any sound business proposition, provided a stable Government and properly balanced budget will be assured. The lecture was very favourably reviewed by the Press, though some disappointment was evinced that more information was not given regarding a loan for railway construction. It is well realized now that had the railway surveyed in 1918 been completed, the present economic

difficulties of Teheran would have been impossible. The prospect of any railways being successfully built now is remote, though the need of one is more obvious than ever.

General News.

A welcome improvement in the telephone service is promised for this winter, thanks to the efforts of the German engineers of the local Persian Telephone Company which has imported and installed an extensive system of underground cable in place of the existing maze of overhead lines. The German engineers of the Electric Light Company are proposing to do likewise for the electric light service.

Mr. McCaskey, the popular Treasurer-General, is proceeding on leave and will be replaced by Mr. Jones, from Azerbaijan. New advisers have been appointed to Resht, Kerman, and Khorassan.

A few changes have occurred in the staffs of the Legations. Mohieddin Pasha left recently for Egypt, and the new Turkish Minister, Mahmoud Shaukat Bey, is expected shortly. The new American and Polish Ministers are also now *en route*, and a new Afghan Minister has been nominated.

PILGRIMAGE TO GALLIPOLI AND SALONIKA.

The St. Barnabas Hostels have made arrangements for a War Graves Pilgrimage to Gallipoli and Salonika in September of next year. A special train has been engaged for transport to Marseilles, where the pilgrims will embark in a chartered steamer. The itinerary will be as follows:—London, Marseilles, Girgenti (for Empedocle Cemetery, Sicily), Malta, Salonika, Lemnos, Suvla Bay, Anzac, Lancashire Landing, Constantinople, and possibly Athens. The pilgrimage will last about 18 to 20 days and the inclusive cost will range from £30 upwards, according to location of cabins. The St. Barnabas Pilgrimage Fund hope to include a few poor mothers in this pilgrimage. A certain number of cabins will be available for soldiers who served in the areas, but the main object of the pilgrimage is to give relatives an opportunity of visiting their boys' graves. Lectures will be given on the battlefields of Salonika and the Peninsula, and guides will be provided for the pilgrims who will thus be assured of seeing the graves they go out to visit. Cabins will not be allotted until next year, but intending pilgrims should make early application to avoid disappointment. Full particulars can be had from the Hon. Secretary, St. Barnabas Pilgrimage, 7, Hobart Place, S.W. 1.

THE INDIAN SOCIETY.

The second issue of "Indian Art and Letters," the publication of the India Society, will be ready before the end of the month. It will contain the lectures delivered before the Society by Prof. Sylvain Lévi, on "The Art of Nepal," by Sir John Woodroffe on the "Psychology of Hindu Religious Ritual," and by Mr. Stanley Rice on "The Sanskrit Drama." There will also be an illustrated summary of Sir Wolseley Haig's lecture on the "Architecture of Hyderabad." The price is 3s.

According to the *Morning Post* the *Ekonomitcheskaya Zhizn* reports that the proposal made by Arcos to the Turkish Ministry of Agriculture to the effect that the Soviet will supply Turkish peasants with paraffin and petrol at prices below those of the Standard Oil Company has been accepted.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscriptions £1 per annum. Further particulars may be obtained of the Hon. Secretary, 74, Grosvenor St., W.1.

ORIENTAL TYPES.*

The Qadi.

By F. W. Chardin.

Ahmad Effendi had long been a clerk in the Shar' Court, rising through all its grades until he become *bash-katib* or head clerk. By disposition, culture and every physical and mental characteristic, he was the beau-ideal of an elderly Oriental gentleman. Slightly built, he possessed finely cut features with a complexion as white as an Englishman's, a short white beard framing the lower part of his face. His slender, shapely white hands, and indeed his whole appearance, proclaimed this man of some sixty years of age a scholar, just as his kindly eyes and whole deportment proclaimed him a gentleman. His well-trimmed beard, the spotless white muslin turban wound round a red fez, the long, collarless broadcloth coat of a sober colour and stretching from shoulders to feet announced, at once, his pretensions to religious learning. The authority with which he spoke and the manner with which his judgments were accepted by others showed that he indeed possessed an erudition which sprang from a lifetime of study and experience.

At this point a word as to the Shar' Court in Turkish or ex-Turkish lands is necessary. Although, nowadays, only a division in the judicial system of these lands, a system admirable on paper but so often sadly lacking in effectiveness, it was, until the middle of the nineteenth century, the only court of pleas in that vast empire. The Shar', the Canonical or Sacred Law of Islam, was the only code by which all human actions were regulated and the measure by which all human conduct judged. This code is fixed and, of a necessity, somewhat archaic, being composed of the precepts of the Prophet as contained in the Quran, together with his utterances as reported by his close intimates and preserved in the *Hadith* or "Collection of Traditions." These great collections of precepts, interpreted and explained by one of the five great legists, in this case Abu Hanifa, the founder of the "Hanafi" or orthodox school of thought followed by the Turks, became the canonical law of the most important Sunni division of Islam. The Prophet died in A.D. 632 and Abu Hanifa in A.D. 767, and, from that time, the law remained immutable. These laws might have been all that was required in a simple primitive community such as that of the Arabs of the seventh century A.D. but, with the growth of Western influence, education and thought, and with the more complex, changing and advancing conditions of European civilisation, it was found necessary for a change to be made. The Sublime Porte therefore issued an Ottoman civil and penal code of laws which took cognisance of modern conditions. This code, based on the "Code Napoleon," is, in theory, an excellent one. It is its administration which has left, so often, much to be desired. With the advent of this new civil code, new courts were established to deal with it, and the Shar' Court was left to administer such matters as marriage, divorce, inheritance. This court had jurisdiction only over Muslims, the jurisdiction in such matters, in the case of Christians, Jews and other religious minorities, being delegated to their various bishops or other spiritual heads. Of course, the ordinary civil courts were split up into several branches, such as police or magisterial courts, local

criminal and central criminal courts, court of appeal, etc., and court of first instance with jurisdiction for small pleas and higher courts of pleas. But to describe these various courts would have no reference to our subject.

Ahmad Effendi then, had for many years sat as a clerk in the Shar' Court, in an atmosphere calculated to corrupt all but the characters of the finest texture, an atmosphere of traditionalism, bigotry and fanaticism, the very birthplace of that disease of the East, religious intolerance. During all that time, while performing his clerical duties, he had absorbed, and, by great study, had acquired, an exceeding great store of knowledge and precedents. When, upon the entry of the British conquerors, he was appointed to the vacant post of Qadi, the chorus of approval from Christian, Jewish and other quarters, with no axe to grind, was unanimous.

Ahmad Effendi was appointed by the British administrator of the old Turkish province, a forceful, vigorous soldier, often of rough, violent speech, and whose actions sometimes savoured of high-handedness. But this fiery dictator was a genius in his judgment of men, be they saint or sinner, and the gentle, cultured, courteous Ahmad Effendi, who had never pushed himself forward, nor intrigued for advancement, was preferred above his more assertive and ambitious colleagues. The fearless, restless-spirited man of action appreciated the virtues of the gentle, pious man of learning.

The town had not, within living memory, had such a Qadi. Former European travellers relate that on the occasion of their visits, the Qadi was the centre of a corrupt, ignorant and fanatical circle. The labours of a well-known archæologist were greatly hindered, and well-nigh prevented, by the machinations of a former Qadi who almost stirred up a riot on the pretext that the visitor was releasing on the earth long-buried devils, worshipped in the ignorance by the *Awwalin* or ancients.

It was always interesting to watch the kindly old gentleman at his duties, to mark his gentle firmness with argumentative and often semi-hysterical claimants and witnesses, and to see him propound abstruse rulings on some intricate point of law, always carefully dealing with each particle of evidence.

I have often discussed with him the dogmas and doctrines of his faith, and have had them set forth in the best possible light. Once when I informed him that I sometimes read the Quran in a parallel version printed in Arabic and English, the old gentleman replied, "But, your Excellency, it is unlawful to translate the Word of Allah into any other language. How then can it be, as you say, translated by a Muslim?" On the reply that the translation and annotation were made by a learned Indian, a member of the Ahmadiyah sect, he shook his orthodox head sadly.

If one met him in the street, his salute would be of the most punctilious, a low bow with the right hand making a motion as of scooping up dust from the ground, the hand with its imaginary dust being placed on the breast, lips and forehead, a relic of old Eastern courtliness not much seen nowadays.

Kind-hearted and gentle though he was by nature, he knew that, sometimes, a stern severity was necessary in the task of Government. Once, when the authorities had as usual shown themselves extremely forbearing in their dealings with some troublesome desert tribesmen, the old gentleman came into my office and said, "Your Excellency, there is only one fault that I can find with the British administration of this country, it is too kind. That does not do with these Arabs, who respect only force. I know that it is not from fear or weakness that you British act thus, but only from a desire to avoid needless hardship on women and children, but my heart is very troubled about it all; the British Administration shows too much *hilm* (kindness) to people of that sort."

One day I asked my servant Ibrahim what the common people said of Ahmad Effendi. "Wallah, Sahib," was his reply, "there never was such a Qadi, so pious, so learned, so just and honest. "Yes, yes," I said, "I know all about that, but do the people appreciate such qualities?" To which he replied, "Well, Sahib, truly there are many of the poor people who complain of him, saying "He makes too much *taftish*, i.e., he investigates too thoroughly!"

PERSIA IN RECENT YEARS.

On November 12, at the Royal United Service Institution, Colonel W. G. Grey lectured to the Central Asian Society on "The Recent History of Persia," General Sir George MacMunn being in the Chair. The lecturer briefly sketched the history of Persia from the time of the Anglo-Persian Agreement of 1907 to the recent deposition of the Kajar Dynasty, paying special attention to the circumstances surrounding the nullifying of the Anglo-Persian Agreement of 1919, and, particularly, to the efforts of Mr. Armitage-Smith and of Mr. Norman to govern the finances of post-War Persia. He supplied certain evidence which went to show that some Russians, at any rate, believed in the partitioning of Persia, but declared that such a scheme was hostile to Great Britain's intention. In referring to present conditions he stated that Riza Khan, who might at any time become Shah, was exactly what Persia needed—a strong man.

In memory of Doctor Norman Lothian (British) and Dr. Darling (American), the two members of the Malarja Commission of the League of Nations who were killed in a motor accident near Beyrouth on May 21 last while investigating malaria conditions in Syria, the League's Health Committee has decided to create a "Lothian Scholarship" and a "Darling Prize," which will be awarded periodically for the encouragement of malariological study.

Book Reviews and Notes.

A SUFI PILGRIM'S PROGRESS.

"THE CONFERENCE OF THE BIRDS." An abridged version of Farid-ud-Din Attar's Mantiq-ut-Tayi. By R. P. Masani. (Oxford University Press.)

Every organised religion develops a mystic side. In each there arises a knot of earnest men and women who strive to pierce the veil concealing the Creator from His myriad creatures. By dint of ceaseless effort they cast off the slough of animism, tradition, and dogma which obscures the eternal Verities. Their goal is union with the Source of Life, but the upward path is beset with stumbling-blocks. Some mystics are inclined to quietism, which gives free scope to evil-doers; others in despair find an illusive refuge in agnosticism, which plunges them into the vortex of anarchy; while others are unable to subdue their earthy passions which enslave them to egoism and self-indulgence.

Islam was no exception to the rule. Its founder was undoubtedly a mystic; and within three centuries of his death there took root in Persia a cult which is steadily gaining ground in these troublous times. Adepts styled themselves "Sufis," from a root word signifying purity; and their speculations led them by sheer intuition to anticipate the latest discoveries of science. Thus a 13th century Sufi named Maulánd Rumi was clearly a forerunner of Charles Darwin. He writes:—

> I died as a mineral and became a plant,
> I died as plant and rose to animal,
> I died as animal and I was Man.
> Why should I fear? When was I less by dying?
> Yet once more I shall die as man, to soar
> With angels blest: but e'en from angels
> I must on—to God we shall return.

Another of the brotherhood was Muhammad-Ibn-Farid-ud-din Attar, born near Nishapur in 1119 of our era. He produced 120,000 poetical couplets, besides several works in prose, of which the best known is his *Mantiq-ut-Tayr*, or "Conference of the Birds." Unlike many of his fellow-teachers, who suffered martyrdom at the hands of orthodox Moslems, Farid-ud-din Attar reached the patriarchal age of 114 ere he was slain by one of Genghiz Khau's henchmen.

Mr. Masani has done well in giving the world a translation of this beautiful allegory, which resembles our own "Pilgrim's Progress" by typifying the pains and perils inseparable from the quest for Truth. Its author imagines a vast assemblage of birds, representing human souls, who have set their hearts on attending the Court of the Simurg, or King of Beasts. They choose a leader in the person of the Hoopoe, who guides them through seven toilsome valleys, encouraging the despondent by aphorisms and parables. Finally, thirty birds who have survived the hardships of the journey are led by the hoopoe into the Divine Presence.

Sufism is pregnant with lessons for this despairing and disillusioned age. In Mr. Masani's opinion its doctrines will help us to steer clear of the rocks of self-indulgence and nihilism; moreover,

> There is no branch of Oriental or European thought the study of which promotes a better understanding between East and West. It removes many a veil of separation which keeps the different races apart from one another, and therefore apart from God: and makes them realise their essential unity beneath superficial diversity.

F. H. S.

PROMETHEUS MI IN CHAINS.

"SIX PRISONS AND TWO REVOLUTIONS: ADVENTURES IN TRANSCAUCASIA AND ANATOLIA 1920-21." By Oliver Baldwin, sometime Lieut.-Col. in the Armenian Army (London: Hodder and Stoughton, 12s. 6d. with Illustrations and map).

This is the account of the happenings of somewhat less than a year of the author's life. The scene is laid in Erivan, Alexandropol and Kars. The period is 1920-21, the author being then 21 years of age. Most of the period was spent by him in Bolshevist or Turkish prisons of a most unpleasant kind, and all of it was filled with constantly present danger and every circumstance conducing to depression. Yet this is by no means a gloomy book. The author's youth, brains and pluck have seen to that.

Mr. Baldwin's avowed object in writing has been to make England believe that Armenia has suffered cruelly for siding with us, and that these sufferings have been very largely due to our abominable conduct in deserting her. We may say at once that, with all the horror that one must feel for the terrible events which he has so well narrated, he has entirely failed to convince us that England failed to do what she could. The author is an avowed Socialist, but even he has no use for Bolshevism after he has seen it at close quarters. It struck him "as being far more of a psychological disease than a form of society," but it is not easy to see how we could have "helped" the Armenians except by war or by coming in with the Bolshevists. In fact Mr. Baldwin's book makes us realise more clearly than before that Armenia has herself been and still is chiefly to blame for what she has suffered and is still going through, and that the Armenians are not an easy people to "help."

If, however, the author fails to carry conviction in these matters, he entirely succeeds in bringing before his reader a series of convincing and very interesting pictures of what he saw around him and of the mental attitude of those among whom he lived. And entirely unconsciously and unwittingly, he reveals himself as a very delightful personality.

We trust that he will not neglect his considerable literary talent, while hoping that growing years may lead him to relinquish the rôle of a Prometheus eating his own heart out in uncalled for shame for his own people.

THE WEEK AT HOME.

London, Tuesday Morning.

The Re-Opening of Parliament.

Parliament, which opened yesterday, promises to be a little more lively than recent sessions have been. First, and least important from the debating point of view, there are the Locarno Treaties. Then will come up a much brighter subject—the withdrawal by the Public Prosecutor of a case of larceny against some young British Fascisti who wrecked a van belonging to the *Daily Herald*. This case resembles in more than one way the affair of Campbell, during the Labour Administration. It should provide an illuminating study for the political psychologist. Without question, there is a feeling among certain Labour politicians that the Government is looking with unusual leniency upon the activities of the Fascisti, and this sentiment will surely make itself felt before long. In other words (as I think) there will be a demand for the jettisoning of the Home Secretary.

Other, larger things that may afford unexpected turns are the question of Mosul and of unemployment, towards both of which it seems difficult for the business mind to take a long view.

The session will, if one may venture to prophesy, resolve itself into a conflict between those who loyally follow Mr. Baldwin and the business interests which would like to see him deposed. Much—and not all of it from the Unionist benches—will probably be heard from these commercial representatives. From the purely political point of view the Government is, of course, as safe as Mr. Neville Chamberlain's houses.

Scottish Tories and Political Levy.

Another spoke was put in the wheel of that band of Tories who follow Mr. Macquisten in his demand that the funds of the Trade Unions shall be placed under the law at the annual conference last week of the Scottish Unionist Association. This enthusiastic exponent of the Trade Unions' "lawlessness" was very sharply rebuked by the Chairman of the London and North-Eastern Railway, who described Mr. Macquisten as one of those people "who did not understand the industrial position." This speaker explained that an agitation for the repeal of the Trades Disputes Act would inevitably be construed by Trade Unionists as a campaign for the complete suppression of Unions, and that if Mr. Macquisten's "sledge-hammer policy" were adopted, the Tories "would do more than anything else could do to annihilate trade and bring revolution."

This last view is, of course, the view of almost every impartial student of the industrial position, and its preferment at a Tory meeting is emphatically a hopeful sign.

The Raid on the Road Fund.

With a deficit of many millions on the first half of the financial year, Mr. Winston Churchill's eyes have been glancing eagerly round to see whence help may come to his Budget. At first they alighted on the Channel Islanders; but those insular *privilégiés* appear to have stared him out of countenance. His next gaze, however, has been directed to the Road Fund, and here it may be that something is doing, or, at any rate, brewing. The step contemplated has been named, happily enough, "raiding the Road Fund," for it is proposed, apparently with authoritative sanction, that part of the Road Fund should go to the Treasury instead of to the upkeep of roads.

Now the revenue of the Road Fund comes from taxes on motor vehicles. It contributes about £16,000,000 out of the £50,000,000 a year which the roads require for maintenance. The deficiency is made up out of the rates. What the Exchequer is contemplating is, therefore, to help the Budget by making the sorely-stricken citizen pay through his rates instead of through his taxes. It is a rather ghastly form of deceit. But the financiers always get the best of us with their inexhaustible dodges.

The Church Assembly.

The reforming hand is busy in the Church these days, and though the great measure, Prayer-Book Revision, is absent from the agenda of the Church Assembly this week, there is enough to occupy the public's attention. A storm of controversy is expected to arise on the question of Patronage. As is known, Diocesan Boards of Patronage are to be constituted, but nobody seems to quite know how. Should the lay electorate (i.e., the Parochial Councils) form a direct element in such Boards? Again, who shall be the residuary legatees for the patronage of lunatics, bankrupts, and criminous persons, of Jews and of Roman Catholics, and, perhaps, of the Crown and the Cabinet?

Another proposal that will excite fierce discussion is one made by the Bishop of Durham that all clergy should retire at the age of seventy. And there are other proposals down for creating an age-limit for certain offices.

Altogether it looks as though the Assembly would afford the spectacle of a contest on which shall be the greater—the elective or the non-elective elements, the clergy or the laity.

On the Nature of "Rags."

Whether it is owing to increasing senility or gentility I do not know, but there is a definite antagonism on the part of an intelligent section of the public to the "rags" in which students nowadays indulge. As is sometimes the case with other and more important matters, there is a little to be said on both sides. The public is without much doubt less tolerant (possibly it is not so well compensated) than it was; and there is unquestionably a falling-off in the quality of the rags.

Of the traditional centres of "rags," Oxford and Cambridge, I have seen little since the War. Before the War, at any rate, the rag at those places was pure farce, without motive and cause and final purpose. It was simply and confessedly anarchic. To force the doors of a music-hall; to fill up permanent holes in market-places with cement; to adorn revered buildings with articles of pagan domesticity—these and their like were the limits of pre-War rags. Now, however, students appear to set themselves up as arbiters in the Lord-knows-what-fields. Some young bloods from London, for instance, have just covered the Epstein Memorial to Hudson with green enamel, the heroic deed being commonly ascribed to law students of Gray's Inn.

Statues have, of course, been daubed many times before. But the motive has always been due to political feeling. This, however, is on the plane of æsthetics, and one does not remember a statue being maltreated on purely æsthetic

grounds before. If this sort of thing goes on, we shall have our prohibitionist loyalists being moved to smash such a portrait of the King as was hung in last year's Academy. But it will not: æsthetic quarrels are only quarrels of words—which even students of law may in due time discover.

The Affairs of Woman.

A very clever woman, who used once to delight the intellect of Cambridge, and has since considerably spread her fame, Miss Rose Macaulay, has just been protesting with all the subtle vehemence that is at her command, against the hodiernal practice of "discussing Woman with a capital 'W' in the Press." One has great sympathy with her, and one would have more if she included Man in her list of things to be left out of the journalist's expositions. For the truth is that practically all the stuff that is written in the popular Press about human beings is so much piffle: it is always the abnormal or the absurdly sentimental type which is described.

Naturally Man thinks he knows something about the subject: has he not since Time began discoursed exhaustively on Woman and Weather? But of this tendency to drag in the limelight all the modern woman's affairs, be they concerned with her own home or that of somebody else, is increasingly nauseating. There is but one correct attitude of Man towards Woman: it is eternal and incorruptible, and it was written by a woman:—

Be plain in dress, and sober in your diet;
In short, my deary, kiss me, and be quiet.

Provincials of England.

There was a time when an Englishman might be found to rise up in defence of the men of his country, but since the days when it was made known by war correspondents that anyone but Englishmen won the War, the Englishman has sat with duly humbled head and listened dully to the Welshmen and Scotsmen and Irishmen making fun of his deficiencies. It is all now part of the British game, with the ignorant, ill-speaking, unimaginative, un-self-reliant Englishman as the butt of Celtic and Colonial scorn.

Two Irishmen, for example, whose love for their own country is so intense that they needs must live outside it in order to see it better, Mr. G. B. Shaw and Mr. St. John Ervine, have lately been saying, of our educationists and of our actors, that they are the least capable and the least pure-speaking of men. And it needed a professional Scot, the Master of Balliol, and an active actor, Mr. Nigel Playfair, to put them into their place.

The truth is, of course, that many Irishmen and many Scotsmen speak most delightful English, but it is a hundred miles away from being pure English. As for education, I confess I do not know what it means. . . .

Russian Boots.

It is not in the fitness of things that a man should comment upon the fashions of the female, which alternatively fascinate and bewilder in their variety and rapidity of movement. Most of them originate, as far as England is concerned, in the West End. But an interesting social phenomenon, which is reversing the usual process, is now simply forcing itself upon one. I refer to the wearing of Russian boots. As far as one can see, the City and the suburbs have taken the lead in these attractive brown and black boots; and the West End, after a momentary hesitation, is following in coloured suit.

Three things are determining this fashion: the short skirts that are to stay, the cold weather that is to come, and the leather trade that is to exploit both. Until the present time the demand has been for Russian boots of glacé kid or willow calf, sold, I am told, at from 15s. to 25s. a pair. But now a vogue is spreading for expensive coloured boots, which, when they cease to be noticeable, will undoubtedly be imitated and worn in our discreeter, safer quarters. In any case it all provides fun for the observant male, but whether that is its subconscious object I had better leave to the psychologists to resolve.

NOTES OF THE WEEK.

(Continued from page 610.)

Syria than it is to Great Britain to have Transjordan and Iraq conterminous. It does not appear that any decision was taken during the negotiations to modify the existing arrangements, except in so far as to fix the southern section of the Nejd-Transjordan frontier.

Pouring Trouble on Oiled Waters.

Those who obey the injunction not to "miss the Post" had last week an object lesson in missing the point. A statement by the Chairman of the Anglo-Persian Oil Company to the effect that the shares of the Turkish Petroleum Company were jointly owned by the Anglo-Persian Oil Company, the Royal Dutch "Shell" Group, an amalgamation of French companies and Mr. C. S. Gulbenkian, set the *Morning Post* wondering what had happened to the twenty-five per cent. of the total number of shares in the Turkish Petroleum Company that were popularly supposed to have been allotted, in accordance with an international understanding, to a group of American Oil companies. From this it was an easy step to the conclusion that the Americans had withdrawn from the Mosul oil-fields, and a wide field was at once open for speculation as to the why and wherefore. When it was reported simultaneously that American oil companies had obtained a monopoly for the retailing of oil in Turkish territory, the "mystery" became even more profound, until twenty-four hours later it was learned that there could be no question of a withdrawal, as the American companies had never been shareholders of the Turkish Petroleum Company. To meet the wishes of the United States Government, the Anglo-Persian Oil Company has been prepared to allow America to have her share in the Iraq oil-field and negotiations to this end have been in progress; but up to the date of the Company's meeting last week no definite arrangement had been reached. Accordingly the British public is spared the worry of trying to solve another Iraq riddle, why the American group should have chosen this particular moment for withdrawing from participation in the Mosul oilfield. The incident has elicited the assurance that it has no intention of so doing. The *Morning Post* hesitates to sound the "All Clear," but its readers can take it for granted that it is a case of "as you were."

M. Litvinoff, the Soviet Acting Commissary for Foreign Affairs, has addressed to the Persian Ambassador in Moscow a letter expressing satisfaction at the election of Riza Khan as head of the Persian Government.

PERSONAL AND GENERAL.

TO-DAY

November 19, 1925 (New Style).
November 6, 1925 (Old Style).
Jumada I., 3, 1344 A.H., of the Moslem Calendar.
Kislev 2, 5686, of the Jewish Calendar.

Prince Paul of Serbia arrived in London last week from Belgrade.

Sir Marcus and Lady Fernando left London last Saturday for Colombo.

Prince Christopher of Greece left London last week for the Hotel Ritz, Paris.

The Prince of Wales received the Turkish Ambassador at St. James's Palace last Thursday morning.

Sir Archibald and Lady Weigall have returned to 41, Berkeley Square from Petwood.

Sir Gilbert Clayton arrived at the Residency, Cairo, from Jeddah last Sunday evening.

Captain Ernest and Mrs. Platt arrived at the Palazzo Geddo, Alassio, last week from Bucharest.

Captain Panas, the former Greek Naval Attaché, and Madame Panas left London on November 11 for Athens.

Ahmed Pasha Ziwar, the Egyptian Prime Minister, returned to Cairo on November 9 from four months' leave.

King Faisal was the guest of the Emir Abdulla at Amman last week for a few days before continuing his flight towards Baghdad.

Viscountess Willingdon is organising a dinner in aid of the British Empire Leprosy Relief Association, to take place at the Savoy Hotel next Wednesday.

Sir John and Lady Simon will leave England on December 3 on a brief visit to India. They will spend Christmas with the Earl and Countess of Reading at Calcutta, and will return to London at the end of January.

Sir Stanley Reed and Lady Currie were among the passengers who left London last Thursday by the P. and O. Bombay Express to join the s.s. Macedonia at Marseilles for Bombay.

Lady Reading, who underwent an operation last month, continues to make excellent progress towards complete recovery, but will not be able to take part in any public functions for a considerable time.

It is announced in Angora that Mazar Mufid Bey, who succeeded Hajim Bey of Kerassund in March as president of the Tribunal of Independence in the eastern vilayets of Turkey, has resigned that appointment.

M. Dimitri Stancioff, former Bulgarian Minister in London, Mme. Stancioff and Mlle. Fedora Stancioff arrived in London on November 8, and are staying with Sir Kay and Lady Muir at Blair Drummond, Perthshire.

Sir Horace Rumbold and the other members of the Commission appointed by the League of Nations to investigate the Demirkapu incident arrived in Belgrade on November 9.

Saleh Pasha Enan, Under-Secretary of Public Works, and Dr. Derry, Anatomical expert in the Ministry of Education, with representatives of the Antiquities Service, left Cairo last week for Luxor for the examination of the mummy of Pharaoh Tutankhamen.

The King has given authority to Mr. Robert Stewart Millar, M.D., director of the Egyptian Hospital for the Insane at El Khanka, to wear the insignia of the Fourth Class of the Order of the Nile, conferred on him by the King of Egypt, in recognition of valuable services.

"James Elroy Flecker: Scholar—Poet—Dramatist," was the subject of an address by Mr. Wallis Mansford on November 11 at the London Institution, Finsbury Circus. Sir E. Dension Ross, director of the School of Oriental Studies, presided.

M. Nicholas Mishu last Friday entertained at luncheon, at the Ritz Hotel, the Duchess of Buckingham and Chandos and Miss Gore Langton, Prince and Princess Lobkowicz, the Roumanian Chargé d'Affaires, Count A. Bernstorff, Sir Arthur and Lady Crosfield, Mrs. Philip Bateman, and M. H. G. Da Silva.

Major H. F. C. Hobbs, who was recently selected for appointment as Military Secretary to the Governor of Madras, has taken up duty as aide-de-camp preparatory to succeeding the outgoing military secretary, Colonel F. C. C. Balfour, in March. Major Hobbs is in India with the 2nd West Yorkshire Regiment.

The Begum of Bhopal was so deeply impressed by the service at the Cenotaph on Armistice Day that immediately on her return to her residence in Portman Square she wrote a letter to Earl Haig enclosing a cheque for £5,000 for his appeal fund, "As my insignificant contribution towards this most deserving charity." The Begum's little granddaughters were among the sellers of Flanders Poppies in the London streets on Armistice Day.

Lieutenant-General Sir Michael Joseph Tighe, K.C.B., K.C.M.G., C.I.E., D.S.O., of 2, Prince of Wales Terrace, Kensington, W., who saw service in Burma and on the North-West Frontier of India, and who commanded the British forces in East Africa during the earlier part of the War, who died on September 5, aged 61, a director of the Kensington Palace Mansions, left unsettled property of the gross value of £4,888, with net personalty £4,759.

At a meeting of the C.M.S. General Committee held on November 10 the Rev. S. Garrett was elected Home Secretary of the Society in succession to the Rev. W. W. Cash, the new General Secretary. Mr. Garrett has had considerable experience in India, having been Railway Chaplain at Gorakhpur from 1910 to 1913, and afterwards at Lucknow. He is at present organising secretary of the C.M.S. for the dioceses of Birmingham, Lichfield, Worcester and Coventry.

It is announced from Athens that all decorations are to be abolished in Greece. Henceforth no Greek citizen will be able to wear Greek orders, and only those of foreign countries after having received the permission of the Greek Government.

INDIAN RAILWAY POLICY.

The Indian Railway Conference Association regularly, every year, holds a session at Simla in October, which is attended by the heads of all the railways in India, and at which matters of railway policy are discussed. The President this year was Mr. Lloyd Jones, Agent and Chief Engineer of the Nizam's State Railway, who delivered an unusually interesting presidential speech. Sir Clement Hindley, the Chief Commissioner for Railways, adverted to the fact that the President occupied a position of detachment, because he represented a railway whose finances have no concern whatever with the Railway Board or the Government of India. He was, therefore, in a position to offer disinterested advice: and Sir Clement expressed the opinion that the Association was to be congratulated on having received such a useful dose of it—there had, he said, rarely been, in the history of the Association, an address so full of constructive suggestions. Mr. Jones' speech was chiefly occupied with discussing the advantages of co-operation in railway problems: with local authorities and public bodies, with customers and the general public, of one railway with another. Co-operation was specially needed with those who control ports and roads; for the chief interest of railways lay in the total cost of transport from the time a commodity was produced to the time it was consumed or exported. Construction and upkeep of roads, and improvement of road transport, were therefore matters with which railways were intimately concerned. The question in which the public took the greatest interest was that of rates: and the advantage of co-operation between a railway and its customers was, in that respect, one that could not be over estimated. A rate might be bad because it was too high or too low: in either event both the railway and the public suffered. If the rate were too high, trade was restricted and the railway lost tonnage: if it were too low, the railway lost revenue without stimulating trade, and the burden of providing the required revenue fell elsewhere. The most difficult traffic to cater for was the third-class traffic: and there the interests of the railways and the public were not always identical. The public wanted the best possible service without a rise in fares: the railways knew that low fares implied strict economy on equipment and station facilities, and a low ratio of train miles to passenger miles. It was a deplorable fact that co-operation between railways had been reduced to a bare minimum: what was wanted was a clearing house for ideas, an organisation to examine data and a tribunal before which they could place their resolutions. For instance, statistical inquiry into the passenger traffic, with a view to ascertaining the fares best suited to the public capacity to pay, and the despatch of traffic by competitive routes, were matters that would amply repay examination. A general study of such questions could not fail to elicit facts that would assists all railways, however jealously they guarded their own rights against any attempt at dictation, to frame their policy without prejudicing their decisions. Another problem of outstanding importance, in view of the early Indianisation of the railways, was that of training railway officers: those Indian officers who would, in future, largely take over the responsibility for working the lines. It was a far too prevalent idea that training fitted a man to conduct railways. It did not—it merely put him in a position to acquire the kind of experience that would enable him to do so. In conclusion, Mr. Jones said that, in view of the importance of co-ordination, it might be thought that the best solution would be that all railways should be administered by the State; but with such a view he did not agree. A single system might lead to co-ordination and uniformity, but it would be "the co-ordination of indifference, the uniformity of mediocrity. Co-ordination of the work of independent systems leads to a free and instructed criticism which, as a test of merit, is far superior to the methods of autocratic rule."

Sir Charles Innes, the Member of the Viceroy's Council for Railways and Commerce, in welcoming the Associaton to Simla, said that he agreed that a much more elaborate system of training railway officers was now necessary. He sympathised with the desire of Indians towards Indianisation of the railways, and hoped that Agents would make a serious attempt to give Indians a fair trial in all kind of posts. He felt sure that, "every Indian, however keen he may be on Indianisation, is equally anxious that Indianisation should not in any way lower the standard of efficiency among railway officers." He also referred to the Government of India's policy in the matter of branch lines: which is, "to finance extensions which are likely to be remunerative, and to consider proposals by local Governments or local bodies for the construction of lines required for local purposes, even if they are not likely to prove remunerative on railway earnings; provided that Local Governments are prepared to guarantee the railways against loss, in view of the advantages that such construction may confer locally." In this connexion, he suggested that it might be worth while to consider "whether, in certain cases, we should not go in for a much cheaper type of line. A Governor said to me, not long ago, that, if only we would make cheaper lines, his Government would probably be prepared to carry out a large railway programme."

The Indian Railway system is already moving in the direction of the co-ordination of competing lines, by the grouping of railways after the fashion obtaining in Great Britain. Close co-operation also exists between railways and seaports: and, if it is not to be found in the matter of roads, this is not the fault of the railways. In many parts of India the roads, whose maintenance is—or rather ought to be—the business of the local authorities, are in a state of disrepair that is nothing short of disgraceful: even Mr. Gandhi, that apostle of a return to the "golden age" of India, was recently moved to make scathing reference to the subject. Anything that railways can do to spur the road authorities into activity will be of the greatest possible advantage, not only to themselves, but to the general public. In the matter of rates, the public have just cause for resentment against the railways: whose tariff for carrying goods at their own risk is most exorbitant, while the process of dispatching them at railway risk is hedged about with so many vexatious formalities, as plainly to indicate the objection of the railways to this form of carriage. The ordinary rates, which, in themselves, are reasonable enough, are only allowed on

Digitized by Google

what is called a "risk note"; which absolves the railway of all responsibility except in case of proved negligence on their part. This is due to the very extensive practice of theft from goods trains, which reached such a scandalous pitch, a few years ago, that the railways were forced to try and reduce it to a minimum by organising a special "Watch and Ward" department for the purpose. In the case of theft or pilfering—unless it could be proved to be due to a railway servant—they would accept no responsibility at all: and senders of goods are so painfully aware of this fact that they generally make plans to defeat it themselves—not often effectively. The present Viceroy mentioned, one day, that he had received a hamper of mangoes, inside which was a slip of paper stating that the fruits bearing a pink label were for Viceregal consumption: those not so labelled were intended for the benefit of who ever opened the hamper en route and desired to help himself to the contents. The writer of these notes, having received several hampers of mangoes that reached him not more than half full, asked his correspondent to wire and seal the next consignment. This was done: with the result that the package arrived intact, but with its contents reduced to a state of pulp—practically all the mango kernels being separate from their parent fruits. One can only suppose that, in disgust at finding themselves unable to open the parcel, the seekers had played football with it up and down the platform. In the matter of fares, the railways are admittedly in a difficulty; since the fares of all classes are governed by that of the third class: and, unless the third class fare represents a sum that is not greater than the expenses of a traveller doing the same distance by road, the ordinary Indian, to whom time is no object, prefers to walk. Sir Charles Innes' remarks have led to some alarm and resentment in India. Alarm, when he suggested that, in the matter of feeder lines, what was wanted was "a much cheaper type of line"; by which he presumably meant a narrow gauge railway, or even perhaps a steam tramway: with the resulting break in gauge which is already a source of much economic loss, and against the extension of which the great railways have strongly set their faces. Resentment, when he laid down the Government policy in the matter of railway extensions: which amounted to saying that the Government of India is prepared to finance a line that is likely to pay; but proposes to leave it to local Governments to build, and to finance, any that are not. One might, perhaps, also add amusement; since the statement that the supporters of Indianisation are anxious that it should not in any way lower the standard of efficiency is notoriously contrary to facts. It is not so long ago that a prominent Indian politician condemned "efficiency" as a word accursed: and, though any Indian selected, in the process of Indianisation, for an important post, would doubtless feel confident in his own ability to carry out its duties without loss—rather, with increase—of efficiency, there can be no sort of doubt that, in every such case he would prefer a European to any Indian other than himself. The average Indian's idea of an important appointment is of one where he can get the real work done by somebody else, while the credit and the patronage (for a horde of needy relatives) go to himself. To such a man, efficiency is of no moment. That this should be so is, most likely, the fault of the Englishman, who has for so many years taken responsibility from the shoulders of the Indian; and it is one of the most important tasks, before the Englishman in India to-day, to improve matters in this respect; but that it is so is an indisputable, if deplorable fact.

CURRENT TOPICS.

"*To-morrow Blossoms.*"

The late President of the Legislative Assembly has been unburdening himself of the political ideas that he has collected during the years of his office: and has broken "the political silence imposed upon him by that office" in an address delivered to the European Association in Calcutta. The cabled report of his speech represents him as saying that the Reforms had not failed, but that the period during which they had been under trial had not been long enough to decide whether they had failed or not. The report also says that "he claimed that there had been sufficient co-operation in the Legislative Assembly to satisfy Lord Birkenhead's test, and argued in favour of the grant of a larger measure of authority to Provincial Councils."

One who has been President of the Legislative Assembly for five years may reasonably be expected to have formed an opinion about the success of the Reforms—one less nebulous than that with which the cable credits him, which is reminiscent of the Parliamentarian who "spoke on both sides and voted in the middle": and one who has been on special duty in a Government office, preparing a "student's handbook" on the relations between Central and Provincial Governments, may be excused for falling in love with his own handiwork. But, in spite of his local experience, he is perhaps on less sure ground when he asserts that co-operation has progressed far enough to satisfy Lord Birkenhead's test. Here he has not only the Viceroy against him, but the leader of the Swaraj Party also: whose view—to judge by his recent declaration that, if Government does not bow to the Nationalist ultimatum, his party will take steps that will not be in the direction of the co-operation desired by Lord Birkenhead and Lord Reading—is diametrically opposed to that of Sir Frederick Whyte. Otherwise, the speech is interesting to the onlooker, if only because it marks a not unfamiliar process of evolution, from official through politician to statesman: with the goal of a recognised "authority on India" and the resulting "claims" which that recognition may be expected to imply.

Some light is thrown on the meaning that the speaker intended to convey by the publication, in the *Evening News* of November 10, of an article by Sir Frederick Whyte, which follows the same lines as his Calcutta speech. As regards the success of the Reforms, the article says that it still remains to be proved whether Western institutions, of the kind recently set up in India, are appropriate to the East. As regards co-operation, it says that "the co-operation which Lord Birkenhead demands has in large measure been given": and proceeds to give examples from, be it noted, the first Legislative Assembly, when the non-co-operators had boycotted the elections, and the Parliamentary "Swaraj Party" had not yet come into being. The same claim cannot be advanced on behalf of the second Assembly: and time alone can show whether, after the general election of next year, it will be possible to advance it for the third. There are hopeful indications that this may be possible; but that is the most that anyone can say at present. As regards the grant of a larger measure of authority to Provincial Councils, the article says that, in spite of the fact that India is not yet a nation and that Indians do not really know what government is and have no mature ideas to apply to it, it is unjustifiable to conclude that India cannot govern herself, "either now or hereafter." Englishmen have held almost every responsible post in India for the past 150 years and have therefore stood in the way of the Indian who wished to learn the meaning of political responsibility: so that no one is entitled to say that Indians as a whole are unfit for responsibility until they have been given much larger opportunities of proving their quality. From this it may be inferred that Sir Frederick Whyte believes that the Indian Provinces should be given the chance to show that they can govern themselves now: and that, as the national idea develops, the ability of India as a whole to govern herself will follow hereafter. It certainly cannot be denied that we have held Indians in leading strings for so long, that it is our own fault that Indians habitually look to a European to make up their minds for them: no one who has served for any length of time in India can fail to call to mind many examples of this defect: and, since it is Englishmen who have fostered it, it is for Englishmen to eradicate it. It is permissible to suggest that the right way to set about doing so is to begin lower down than with the existing Provincial Governments: and that the true solution will be found in a wide measure of Indianisation in much smaller units, under a strong European supervision in the Provincal Governments and a still stronger one in the Central Government of India.

Hindu-Moslem Unity.

Miss Cornelia Sorabji's letter which appeared in *The Times* of November 11, throws an interesting light on Moslem mentality in India. She relates how the population of a Mohammedan village in Bengal at first declined to listen to the Health Officer's advice, in a smallpox epidemic, on the ground that the disease was due to the visitations of the Hindu goddess Kali, and therefore did not concern them; but, on the Health Officer assuring them that Kali must have heard the Swarajists' declaration of the existence of Hindu-Moslem unity, they so far relented as to buy an image of the goddess, which they carried in procession and buried outside the village precincts, after the Hindu manner. Miss Sorabji notes that history does not relate whether they also agreed to be vaccinated—"to submit to the little prick of blood which was the remedy for which Kali thirsted"—or whether their recognition of Kali's belief in the existence of Hindu-Moslem unity stopped short at the adoption of Hindu ritual. But that such an adoption should be possible shows the great effect that centuries of residence, cheek by jowl with Hindus, have had on Indian Moslems. When the unity campaign was at its height, several instances occurred of Hindus being allowed not only to take part in a meeting in a Mohammedan mosque, but actually to address the congregation: occurrences which, although they gravely scandalised strict Mohammedans—at any rate, after they had had time to think them over—show that, in times of political (as opposed to religious) excitement, the partition between Hindus and Mohammedans is apt to wear a bit thin.

In the average Indian Mohammedan of the lower class there is almost always to be found a small, but quite perceptible, admixture of Hindu ideas or prejudices. Kipling's Indian stories contain many references to this undoubted fact: for example, the "whiskified objectionable" Giffen, who "turned three parts Mussulman and one Hindu": and Abdul Ghaffur the butler, who "broke down and howled, forgetting that he was a Mussulman, Thou art a Brahmin—I am thy cow." In many parts of India, Mohammedan villages keep Brahmins to pray for them: and the writer of these notes well remembers how a Colonel of Afghan irregulars once asked him for a draw from his pipe, and took it direct from the Christian's lips into his own mouth. No Indian Mussulman would have done that: if he had taken a pull at the pipe at all, he would only have done so after first carefully wiping the mouthpiece—the faint spectre of Hindu ideas of caste being behind the orthodox Moslem belief in the brotherhood of the "peoples of the Book."

But, when religious feelings are uppermost, the matter is entirely different: perhaps, indeed, it is the consciousness of a taint, small though it be, of Hinduism that then moves the Indian Mohammedan to such fierce and intolerant fury against the Hindu. The Swarajist creed is, that politics and religion are entirely distinct, and should be so regarded; but this is one of the many truths that, incontrovertible in theory, is in practice unattainable in India.

Cure for Snake-bite.

A telegram from Calcutta to the *Morning Post* reports a case in which a woman who had been bitten by a cobra was cured by injections of strychnine and antivenine, administered six hours after she had been bitten. The bite was on the hand: and the only treatment that she had received, before arrival at the hospital, consisted of two ligatures on the arm and the administering of "nostrums by friends." As the message says, the discovery of a reliable remedy for snake-bite is of first-rate importance to India, where 20,000 people die every year from this cause: and the report suggests the hope that such a remedy may now have been found: apparently by the addition of strychnine to the ordinary antivenine injection.

The great majority of deaths from snake-bite in India are due to the bites of three specially poisonous snakes: the cobra, the Russell's viper, and the Krait. Antivenine to counteract colubrine and viperine poisons has been, for a considerable time past, prepared in India: and what is known as "polyvalent" serum has lately been successfully manufactured, to counteract either of the two. Popularly speaking, both colubrine and viperine poisons are made up to the same two constituents; but, whereas colubrine poison contains 90 per cent. of one and 10 per cent. of the other, viperine poison contains 90 per cent. of the other and 10 per cent. of the one. The difficulty of manufacturing a serum, that will counteract either, is therefore obvious; but it has been successfully achieved. In the case of the poison of the Krait, however, which is sui generis, being neither colubrine nor viperine, it has not been found possible to prepare an antidote. A reason that has been given for this—though a mere layman is naturally unable to say whether it is the true, or only, one—is that antivenine is prepared from the poison of snakes kept in confinement, in the course of which they are artificially induced to emit their venom as a basis for the preparation of the remedy: and that the Krait resolutely refuses to live in confinement, but dies immediately it is subjected to it, and before it can be induced to emit its venom. Whether this is the true explanation or not, the absence of an antidote to the poison of the Krait is a serious matter; for it is a small and inconspicuous snake, though a very deadly one, and is apt to strike without warning, besides being much less easily avoided than the much larger and more conspicuous cobra or viper.

What the particular "nostrums" were, that the friends of the patient tried in the first instance, is not mentioned in the message. Ordinarily, they consist of incantations or charms, or the administration of vegetable substances popularly supposed to cure snake-bite. A curious example of the use of the latter was, some years ago—and presumably still is—prevalent in Behar, where the fruit variously known in India as the papaya or pepita, and in some other parts of the world as the pawpaw, is common. This fruit contains a large number of seeds—at a guess, five or six hundred: and the Indian (unregistered) practitioner maintains that there is one seed in every fruit that will cure snake-bite; only the patient must select it himself, and is only allowed to take one. The value—to the practioner—of this remedy is obvious. If the patient recovers, the "hakeem" (doctor) claims the credit for successful treatment of the case: if he dies, it is his own fault—"the silly fool chose the wrong seed."

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, October 29.

Setting the Lead.

Does the action of Mr. Patel, in accepting the Presidency of the Legislative Assembly, differ in any way from that of Mr. Tambe in the acceptance of the Home Membership of the Central Provinces? This question has provided politicians with a fruitful topic during the week, and Swarajist leaders are going to much trouble to emphasise the heinous nature of Mr. Tambe's desertion, while according their entire approval to Mr. Patel's attainment of honour in their midst. Some, however, are so little impressed that they have stated that the difference is only a technical one; on the whole extremist opinion is far from united on the issue. The disciples of non-co-operation and obstruction are growing steadily less in numbers, and the blustering of the remainder prompts the *Amrita Bazar Patrika* to remark that desertions should cause them no surprise; if the Party wishes to preserve its solidarity, it must recast its whole programme and policy. Meanwhile, in the Central Provinces, matters are progressing along the lines anticipated. Mr. Tambe's resignation from the Swaraj Party has created a profound impression which does not promise to affect his own Province alone; the reasonableness of the demand for co-operation is telling on the masses. The Berar Swaraj Party and members of the Central Provinces Council, at a meeting called for the purpose, expressed their disapproval of Mr. Tambe's action, but took out what little sting there was in the resolution by adding, "This meeting at the same time puts on record its deliberate opinion that the time has come when the All-India Swaraj Party should change its policy to that of responsive co-operation,

Digitized by Google

either with or without the acceptance of Ministerships at the discretion of the Province concerned." To add to the effect, Dr. Babasaheb Paranjpe, the acknowledged Swarajist leader of Berar, has resigned from the party without giving a reason. It is rumoured that the cause is sympathy with Mr. Tambe. The gesture, asked for by the Secretary of State and Lord Reading, is taking a definite shape in the Central Provinces: and other parts of India will not be slow in following the lead.

The Pandit Again.

During the recent session of the Legislative Assembly, an amendment was passed whereby persons convicted by the Courts should not be disqualified on that account for the Legislatures. In discussion, the Home Member pointed out that, if such an amendment passed into law, it would mean that any criminal would be eligible to stand for election, even were he in prison at the time: and it is not surprising that Government have intimated the rejection of this amendment. This provided Motilal Nehru with the necessary foundation on which to raise the counter-attraction for which he has been looking, with little success, for some weeks past: and he turned the occasion to account in a speech delivered at a public meeting in Cawnpore a few days ago. Lords Birkenhead and Reading, he said in effect, could not expect co-operation when they declared that formal and final decisions had not been reached, while, at the same time, preparing India for the worst by *ad interim* decisions which left no doubt as to what the formal and final decisions would be. Swarajists had given Government the full length of rope and (hey presto!) co-operation lay dead in its coffin; a coffin which, somehow or other, had only one nail in it—the rejection of what the Pandit termed "a very reasonable amendment." Lord Reading hid other nails in his pocket, and these would be driven into the coffin before long. Changing his simile again, the Pandit said, "We Swarajists have sailed as near the wind as we possibly could. We can sail no nearer." Truth will out! Now, however, a change is imminent; the Pandit only awaits a mysterious mandate from the Cawnpore Congress, the terms of which are clear in his own mind though he cannot disclose them further than to say that they are not of the nature of the desired co-operation. And what does it all mean? It gives a clear indication of the internal state of the Swaraj party, which is now going through a period of transition; but what it means is, that the Pandit feels the waning of public interest and has done his best to revive enthusiasm by his usual bluster. India is beginning to understand these tactics and give them their true value.

The New Market Burial.

Towards the end of August the Corporation of Calcutta decided to exhume the body of the Christian beggar who had been buried in the New Market, by Mohammedans of the butcher class, with the passive acquiescence of the Deputy Mayor. An amendment followed, to the effect that a period of two months would be given, during which time any sect which felt itself interested might remove the body; but, if no action were taken during that time, the Corporation would proceed along the lines of their resolution. The period has now expired, with things exactly in the same state: and the question of exhumation has again come forward. The leaders of the Swaraj element, however, appear to be reluctant to take action: and, accordingly, at a meeting held during the week, Councillors retired to the privacy of the Mayor's room, and an informal discussion ensued. The meeting was private, and no details have been circulated; with the exception of the rumour that it was hoped that an amicable settlement would shortly be arrived at. Last night another informal meeting took place: and, according to the report which appears in the *Bengali*, the sympathetic attitude which marked the proceedings of the first conference was lacking. Hindu Councillors stated that they had approached their constituents in the meantime, and had received a mandate to oppose the re-opening of the subject; and European opinion followed the same line. The Deputy Mayor, who was responsible for sanctioning the burial, is reported to have displayed heat, remarking that the opposition showed that the Hindus were out to retaliate against the Mohammedans. Strong exception was taken to the remark, and an acrimonious atmosphere prevailed, making it apparent that no useful purpose would be served by prolonging the discussion. The Mayor then asked if there were any suggestions forthcoming which would be acceptable to all parties; on which a Councillor opined that they should pass a vote of censure upon the Deputy Mayor and another Mohammedan Councillor, obtain an expression of unqualified regret from the Mohammedan Councillors, and thereupon agree to allow the body to remain. This did not meet with universal approval and, when the meeting broke up, no decision had been arrived at. It will be interesting to see how it will all end; as a test of their abilities for self-government, the present problem will give the Swarajists all they require. It seems safe to say that there are no signs that the Corporation will rescind its resolution for the exhumation of the body, as public opinion is very definite on this point; but to move, in the face of the very uncertain temper of the Mohammedans, will prove a difficult task.

Markets.

The Jute market has again pursued its upward tendency and, with the crop fast disappearing, prices have been almost anything. Hessians have ruled firm, and speculators have been taking keen interest in all forward positions up to September; heavy goods have remained unchanged. The market closes quiet. The piece-goods market has been idle and rates have sagged. Both here and in London the Tea market has been strong and active, almost all descriptions finding ready buyers at increasing prices.

With the exception of a sustained inquiry for tea and rubber shares, the tone in the Stock Exchange has been dull. Jutes, following the continued rise in the price of the commodity, have declined, though at the close the shares are steadier. Transactions in cotton and coal shares have been restricted to one or two companies, and mostly confined to small parcels. Teas have been responsible for a large turnover and, with the maintained improvement in prices paid at the auctions here, may be expected to go better; at present, the dividend-paying class are receiving most attention; rubber shares remain strong with a preponderance of buyers, and prices have again hardened. Government securities have been the subject of a fair amount of inquiry, without displaying any outstanding feature. Money has been in less demand, and Exchange steady at unchanged rates.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, October 30.

The Bombay Legislative Council met again on October 20 at Poona, and the Nationalist Party remains unshaken in its determination to take no part in any debate in the absence of a clear majority: which merely enables Government to get on quicker with their work.

The Turf Club.

Legislation has been mainly of a social kind, including the debate on the position of the Turf Club. How a paternal Government can possibly be interested in the internal affairs of the Turf Club, such as the question whether there should be a third enclosure provided, is a mystery to most ordinary people. But it all seems to arise out of the original decision of Lord Sydenham to confine all betting to the totalisator principle. This seems a perfectly sane way of keeping gambling within reasonable limits. All betting is strictly cash, and the public cannot lose more than they have in their pockets; the unit of five or ten rupees is a low one, and any attempt to bet high shortens the odds so quickly, as to be unprofitable on the face of it. There was, it is true, a sad anecdote told at Poona of a man who committed suicide after losing 60,000 rupees of his fortune of a lakh, in one afternoon; but such a performance would be quite apparent on the Totalisator records and there is no trace of its ever having happened.

Digitized by Google

The Turf Club has a very large revenue arising from its ten per cent. on the money passing through the Totalisators, and it is not wholly unreasonable that covetous eyes should be cast on it. But it has always been administered on the principle that nobody should make a profit of any kind. There is, in fact, nobody who can, as no sort of dividend can be distributed to the members; who, if anybody, are presumably the owners of the surplus revenues. After paying the costs of racing, on progressive lines intended to improve the class of racing and of horses in Western India, reasonable sums are set aside for reserves and development, and the whole of the balance goes to charities. How much can be distributed in this way depends, of course, on the weight of taxation; and, if it should please Government to increase taxation indefinitely, there will be nothing left for charity; which will be a pity, as the hospitals are, to a very large extent, dependent on the Turf Club's large annual donations, and the money for them must be found somewhere.

There is nothing whatever to be said against the administration of the Club or the objects on which it spends its revenues; and the opposition can only be based on the general idea, that all horse racing is so bad in itself that it must be sternly prohibited to those who like it; and the special idea, that it has a peculiarly evil effect by tempting the poor millhands of Bombay to gamble. These are not local, but world-wide questions: and the only reason why they are brought up in Bombay is, that there is a certain class of Indian who considers that racing affords a convenient way of attacking the Englishmen, and incidentally the large body of Indians, who care for it, on broad moral grounds, which offer very obvious opportunities for the high and noble style of oratory about abstract principles that is so dear to the Indian heart.

Cotton and Exchange.

The sensation of the week has been the fall in the cotton market following the publication of the American Report. The Bombay mills remain idle: and, with the Continent and Japan watching the American market until it shows signs of stabilising itself, there is likely to be little activity in the Bombay market for some time to come. The return of cotton prices to something like pre-War levels is likely to have far-reaching results all over the world: and, by reducing the cost of cloth, it will probably help to restore the prosperity of the mills. Whether the fall will be heavy enough to make so serious a change in India's balance of trade as to affect exchange, is another question. The maximum possible diminution in India's exports on this account would seem to be something in the neighbourhood of 25 million pounds; against which must be offset the reduction of import values. On the whole it may be assumed that, if things take their natural course, the demand for money must be much smaller than usual this year, with the natural concomitants of a low Bank rate and a sagging exchange; but there are many factors elsewhere in India which may counteract the tendency of Bombay, and in any event the Government of India has now such wide powers of regulating the issue of notes, and the supply of money, that it is not likely that they will be forced to lower the rate of exchange. The worst that seems likely to happen is, that there will be fewer bills than usual in Bombay, and remittance rates will therefore fall slightly. But at present the other side of India seems to have enough trade to keep the rupee fully steady, and this may quite possibly continue irrespective of the reduction in Bomaby's exports.

THE INDIAN MAIL.

Railway Collieries.

From the papers received by the last mail, it appears that, in June last, the Indian Mining Federation addressed the Railway Board on the subject of railway collieries, the production of which, already seriously interfering with private trade, was likely to do so even more seriously in the near future. The Federation quoted figures showing that the present consumption of coal by Indian railways was 6½ million tons, of which the railway collieries themselves produced over 1½ million; while, at the present rate of increase, their production was likely to reach over three million tons in 1930, and about four million in 1933. It was argued that the progress of electrification would probably keep pace with the increase of mileage: and that, in the latter year, the demand for coal by Indian railways was not likely to exceed its present figure; so that, if this calculation was correct, the Indian railways would, by that time, only come into the open market for about half the amount needed at present. The total annual output from privately owned coal mines was now about seventeen million tons: and the necessary output of the railway collieries would not only greatly reduce the demand for the product of the coal industry, but would thereby add to the evil of over-production from which it was already suffering.

The reply of the Railway Board has now been published. It disputes the method by which the Mining Federation arrive at their conclusion regarding the probable increase in production by railway collieries, but does not dispute the conclusion itself: though it considers that the probable demand in 1933 will be considerably greater than the Federation's forecast. It main argument is directed to showing that the price of coal obtainable in the open market has risen so greatly in the last three years—on an average, more than fifty per cent.—that the railways found it impossible to obtain the quantity they needed at a reasonable figure, and that the policy of opening railway collieries had amply justified itself in the matter of cost. Besides the high price, there had also been serious default in the delivery of coal contracted for: in March 1921 the arrears of coal due under contracts amounted to nearly 700,000 tons and, at that time, the stocks held by several of the great railways were so dangerously low that they were faced with a most serious situation. At that time the demand exceeded the supply: and it was necessary for the railways to accept large quantities of inferior coal, as an alternative to going without it altogether. The railways therefore decided that they would protect themselves against increased cost, slackness in fulfilling contracts, and delivery of inferior material, by opening collieries of their own: and thus defeat what they declared had been an attempt of the coal companies to "squeeze them to the utmost." In view, however, of the present depression in the coal trade, and the consequently decreased difficulty in getting their contracts satisfactorily placed in the open market, they had decided not to proceed with one of their colliery projects, though they reserved the right to reconsider the matter if conditions should alter in the future.

This reply is considered unsatisfactory by the coal trade: who declare that it was not the colliery companies, but the railways, who did the "squeezing"; since the possession, by the latter, of collieries of their own enabled them to dictate their coal contracts "with a loaded pistol at the head of the coal companies." That the continued production of coal by the railways is not only taking the bread out of the mouth of those engaged in the coal industry, but is causing it direct and increasing injury by adding to the already excessive output of coal in India. Also that the decision not to proceed with one new colliery merely means that, at the present time of depression, the "loaded pistol" of the railways is effective: while, should it ever cease to be so, owing to a recovery in the industry, the railways intend to see that their pistol shall carry a heavier load. Calcutta has never forgiven the Government of India for the change of Capital effected in 1911: and this particular form of "King Charles' head" always crops up in every discussion between Bengal and India: so that it is not surprising to find a leading Anglo-Indian newspaper of Calcutta writing that the Railway Board's reply suggests "an increasing mental petrification in officialdom, due doubtless to an outlook conditioned by location at Simla in the hot weather and at Delhi in the cold. The inquiry why the Railway Board should suffer more acutely from this trouble, than other Departments of the Government of India, makes an unwarranted assumption." The dispassionate observer may think that the Mining Federation has a good enough case without the necessity for calling on the local Mr. Dick for such an addition to its arguments; but it would certainly seem that the Railway Board has the whip hand, and that the Bengal coal

Digitized by Google

industry will have to reckon with that fact. In the course of their memorandum, the Mining Federation stated their view that privately owned collieries could produce coal at an even lower cost than railway collieries; but, as the Railway Board pertinently observed in their reply, the railways are not so much interested in the price at which privately owned collieries can produce coal, as in the price at which they are prepared to sell it.

The Howrah Bridge.

Nothing further has been heard of progress in the matter of the Howrah bridge over the Hoogly except that the Government of Bengal has again addressed the Government of India regarding a contribution to the cost of the bridge: and that the Government of India maintains its refusal to contribute, except on its own terms. These are, that the bridge should be a permanent structure—that is, a cantilever; whereas Bengal has apparently made up its mind that a cantilever bridge, though admittedly much the better solution, is too costly, and that all it can afford is a new floating bridge—though a double one, in place of the present single structure. Local opinion is that the Committee of 25 members of the Bengal Legislative Council, which is conducting a detailed examination into the question of the bridge, will eventually report (its cumbrous size prevents the hope of an early decision) in favour of a floating bridge: that the Legislative Council will accept its report: and that the Bengal Government will be guided by the opinion of the Council.

The Calcutta *Statesman*, in commenting on the present position of affairs, blames the Government of India for "persisting in regarding a floating bridge, affording access to two great railways, as a matter of purely local concern": and for declining to part with its right in the matter of the central revenues to which it is entitled, part of which consists of port and railway revenues, while it has a lucrative source of income in the commerce of Calcutta: "nevertheless, a bridge over the Hoogly is nothing of its concern." The paper says that local opinion against a cantilever bridge has been steadily hardening, "nor will the insistence of Simla on its own opinion have the effect of reopening the question." That it is easy to see that the Committee will decide for a floating bridge: and that, though the Council cannot be expected to reject such a decision, yet it would be a good thing if they did, for a bold policy is likely to pay best in the long run, and to refuse to make a special effort now can only prove expensive in the end. It concludes by saying that Calcutta has no need to be downcast "because the Supreme Government fails to see the value to the country as a whole of an adequate bridge across the river that divides the commercial Capital of India from the central and western Provinces."

Criticism of the Government of India from the "Commercial Capital" is always to be expected; but, on this occasion, even on the *Statesman's* own showing, it seems misplaced. It is not fair to say that the Supreme Government fails to see the value of an adequate bridge; on the contrary, that is exactly what it does see. What it desires is, that the bridge should be adequate, and here the *Statesman* agrees with it. To an adequate structure the Supreme Government is prepared to contribute; but, if Bengal persists in deciding in favour of one that is not adequate, no contribution will be forthcoming. This is not only an intelligible position, but a perfectly sound one: and it is curious to find the *Statesman* admitting it in one breath and condemning it in the next.

The Admirable Crichton.

In a recent speech Mr. Patel, the newly elected President of the Legislative Assembly, excused himself for indulging in a little tune on his own trumpet by revealing the fact that his predecessor's parting piece of advice to him had been that "the President, of all men, must magnify his office." It is not surprising that he should have interpreted this to mean that the magnification should include the individual who held the office, as well as the office itself. For such an error—if indeed it was an error—he had some justification. More, perhaps, than in most countries, in India it seems to be honestly believed that a man, who has done good work in one appointment, has thereby established a "claim" to employment in something entirely different. "*Ex caelo descendit gnothi seauton*"; but its descent is by no means universal. Most of us think that we recognise the limitations of our friends, but to few is it given to recognise their own, and to still fewer to admit them. We all know the type of man who would be ready, at a moment's notice, to take command of the Channel Fleet or occupy the pulpit at St. Paul's: both him who admits it himself, and him who, with becoming modesty, stands aside and allows his friends to say it for him. Among Britons in India, the latter is the more familiar: among Indians the former.

The Indian "ummedwar" (perhaps best translated as "expectant") is accustomed to apply for a job entirely regardless of qualification: it is enough that he is the nephew of someone with whom his prospective patron is acquainted, or, failing that, that he is "a poor boy who has no protector except Your Honour and God." He generally professes confidence in his ability to fill "any remunerative post" with credit to himself and to the satisfaction of his employer, no matter what it should be: and, when he does descend to details, he is apt to make curious mistakes. It is on record that an Englishman in India who, being in want of a weight-carrying pony, advertised for "a good waler," received, among the replies to his advertisement, one from an Indian youth who professed his intention, if appointed to the post of "your Honour's waler," of carrying out his duties with zeal, and his certainty of being able to do so with credit.

A famous Englishman, the dispenser of much patronage in his time, once gave a seeker the following advice: "Make up your mind exactly what it is you want—then ask for it, and keep on asking for it." The Indian expectant ignores the first item in this programme, but whole-heartedly follows the letter of the rest: and it would seem that some, at least, among recent temporary British importations into Indian officialdom have caught the infection. To do them justice, they have left the asking to their friends and admirers; but it is a new departure that it may be hoped will not persist. That, so far, it has achieved no apparent success is a fact that will not be displeasing to followers of an older fashion, who dislike advertisement even when vicarious.

Non-co-operation among Fish.

A small local sensation has been caused at Bombay by the fact that a number of bathers in the sea at Juhu, a popular bathing resort on the mainland north of the island of Bombay, have received injuries from fish. The local opinion seems to be that the action of the fish is a concerted attempt at non-co-operation, to show their disapproval of the European style of bathing costume: of the "non-violent" brand made familiar when the non-co-operation campaign was at its height, when one of its devotees stood in the way of an oncoming tramcar at Calcutta and non-violently threw corrosive acid over the conductor, or when the Chauri Chaura crowd non-violently beat 23 policemen to death, non-violently set the police station on fire and non-violently threw their bodies on the flames.

A leading Bombay paper reports that some of the bathers have received injuries which "would indicate that a ray-fish had, in a mad fit, used its long knitted tail to revenge itself on its victims by using it as a cat-o'-nine-tails": while, in the case of others, "a large part of the flesh at the chest has been bitten off, distinctly showing that it was the result of a wicked operation of the teeth of both jaws of a fish": and the conclusion is drawn that

these different kinds of injuries "establish basis for a theory that it is not only one fish that has gone suddenly mad, but that there is a combination of fish of different kinds bent upon expressing their indignation at something very repulsive to piscine sentiments." The reporter who is responsible for the article sought and obtained an interview with one of the heads of the fisher folk, who gave his opinion in solemn tones: "Our fisher shores are sacred. We have always known what is shame and modesty. If even the fish are offended with such indecent scenes that take place in our waters, it is high time for some power to improve public morals."

INDIAN COMMERCIAL NOTES.

In the issue of November 5, some account was given of the prospects of the new cotton season in India; and it was shown that sowings reported to date had advanced from 21¾ to 22¾ million acres. Details of this forecast have now been received, and are of special interest in revealing the extent to which India has promoted the cultivation of long staple cotton during the past few years. During the year 1913-14 the area under cotton in India amounted to 20,643,000 acres, of which roughly five million acres were under long staple cotton (seven-eighths of an inch and over); while the balance of over fifteen million acres, were under short staple (below seven-eighths of an inch). The forecast now to hand for the year 1925-26 shows an area of 22,752,000 acres under cotton, of which 15,831,000 are under short staple, and 6,921,000 are under long staple. In other words, while the total area under short staple has not advanced very much since pre-War days, the acreage under long staple cotton has increased from five to nearly seven million acres.

Special interest attaches nowadays to the trade between this country and India and, in this connexion, the statistics for the five months April 1, to August 31, 1925, are instructive. For purposes of comparison, the percentage of the British share in India's total import trade during the five months is shown together with the percentage during the same five months of 1924, and with the pre-War percentage. Japan, America and the Continent are also shown as being our principal competitors. The following are the percentages for the periods mentioned; the figures being given in order for pre-War, April to August 1924 and April to August 1925: United Kingdom, 63, 56, 52; Continent, 14, 14, 15; Japan, 2½, 6½, 8½; U.S.A., 3, 6, 6.

The Continent has thus made but little progress so far. America has doubled her share of India's total import trade, but is stationary at that for the present. Japan has made, and is continuing to make, great strides, and has picked up a good deal of the trade with India which this country has lost, particularly in cotton textiles.

Part of the explanation lies in the export figures. To what extent is England buying less than before of Indian goods? The following are the shares in India's export trade for the same periods; the figures being given in the same order as before: United Kingdom, 25, 24, 20; Continent, 31, 26, 26; Japan, 7½, 13, 17; U.S.A., 7½, 9, 9.

The falling-off in British purchases of Indian goods is due almost entirely to lower purchases of wheat of which this year Indian supplies have been seriously curtailed as the result of a poor harvest. The increase, on the other hand, of Japan's share in India's export trade, from 13 per cent. last year to 17 per cent. this year, is due almost entirely to bigger purchases of cotton. America shows no signs of expansion over last year, while the Continent is actually taking less.

It must not be forgotten how important a market India is to this country. While she sells to England a large proportion of food-stuffs and other raw materials such as tea, coffee, jute, cotton, oil-seed, etc., which are not produced in this country and are not competitive with the efforts of the British farmer, she buys from England a large quantity of just that class of British manufactures in whose final value the wage bill figures prominently; e.g., machinery, railway plant, iron and steel, textiles, etc.

INDIAN EXCHANGE.

London, November 16.

Rupee Exchange has recovered from the temporary weakness to which we alluded last week, and in both Calcutta and Bombay quotations are back again to 1s. 6 5-32d. for T.T., with sellers at 1-64th higher, and few buyers under 1s. 6 3-16d. These quotations really hold good until the end of February, and the absence of business does not lead merchants to expect better rates in the meantime.

Three months' credits are steady at 1s. 6 13-32d. for delivery up to the end of December, but commercial paper is very scarce even in Calcutta, where apparently the bulk of the jute bills have now been contracted for.

Forward T.T. rates are called March 1s. 6 5-32d., April-May 1s. 6⅛d., June-August 1s. 6 3-32d., but it is reported that business has been done in April T.T. at 1s. 6 5-32d.

In the London market, rates have been quite steady at 1s. 6 7-32d. T.T. with a very occasional seller at 1s. 6 3-16d. for cash. There are more buyers than sellers at the lower quotation, and but little business passing either ready or forward.

The last Cotton Bureau Report giving the expected total of the American Crop as over 15¼ million bales should extinguish any hopes of a rise in the Bombay Cotton Market, where prices show a decline on last year's figures of over 20 per cent. We also learn that in spite of a scarcity of rainfall over many cotton districts, the crop in India is estimated to out-turn as much as 6¼ million bales. It is reported, however, that native holders have not yet become accustomed to the serious fall in the prices, and movements in cotton from the country have therefore been restricted. In these circumstances, it is reasonable to assume that the season will begin later and that shipments will probably be prolonged.

THE
EUPHRATES & TIGRIS

NOTES AND NEWS.

170, *Strand, London, W.C.2,*
Tuesday Morning,

Anglo-Persian Progress.

As was expected Sir Charles Greenway was able to give a most satisfactory account of the progress of the Anglo-Persian Oil Company at the annual general meeting last week. The developments in the main fields have continued to be extremely favourable, while the policy of extending the oil-bearing territory has been successfully pushed forward, and the productive area has been very considerably extended. The production for the year amounted to 4,333,933 tons as compared with 3,714,216 tons for 1923-4. For the current year, which Sir Charles Greenway pointed out is largely one of stabilising the position that the company has achieved before embarking on larger undertakings, it is not expected that the production will be more than 4,500,000 tons. As regards the opening up of new areas, the most interesting development to which he referred is the pending formation of a separate company to take over the concession for the Naft Khana area, which is on the borders of Persia and Iraq.

Company's Conservative Finance.

This year the dividend is increased by 2½ per cent., though greatly increased profits would have permitted a much larger distribution. But the policy of the directors has always been one of conservative finance, and there is no doubt that, as Sir Charles Greenway says, the first consideration should be the building up of a strong financial position. In due course it is certain that the shareholders will reap their reward, and such is the strength of the company and so imposing are its potentialities that it is far from improbable that the suggestion that in five years the value of the shares will have appreciated by 100 per cent. will be justified by the event. It is interesting to note that the company now proposes to commence the declaration of interim dividends, and shareholders will doubtless read into this announcement a foretaste of things to come.

The Turkish Petroleum Company.

On the occasion of this year's meeting as it happened the story of the progress of the company was eclipsed in interest by a brief answer of Sir Charles Greenway to a question as to the shareholders in the Turkish Petroleum Company. He stated that 47½ per cent. was held by the Anglo-Persian Oil Company, 22½ per cent. by the Royal Dutch Company, 25 per cent. by the French group, and 5 per cent. by Mr. Gulbenkian. This statement was interpreted, wrongly as it soon transpired, as implying the end of American participation in the company. It will be remembered that, following a prolonged agitation by America for an "open door" in regard to the exploitation of the Iraq oilfields, it was agreed to admit American participation, and it was arranged that half the holding of the Anglo-Persian Oil Company—or 25 per cent.—should be transferred to an American group in which the Standard Oil Company occupied a prominent place. Last week's misconception arose from the belief that that arrangement signified a *fait accompli*, and it was heightened by a report that the Standard Oil had been granted a monopoly in Turkey which led to all manner of speculations as to developments. The prompt statement of the chairman of the Standard Oil that American interests had not withdrawn and denying the reported grant of a monopoly rather intensified the mystery until it was made clear by a statement on this side that the negotiations with the American group had simply not yet been concluded. But since that is the case one may well ask how it is that this delay should have occurred. America was willing to do anything to obtain participation, and yet is so dilatory in coming forward. An objection to the 5 per cent. interest held by Mr. Gulbenkian has been advanced as the matter over which there is disagreement, but it is difficult to believe that the cause does not lie much deeper, and that the delay is not in fact another manifestation of the policy which America has so consistently pursued since the Armistice of refusing to undertake any obligations which might carry ever so remotely the risk of foreign complications.

Diala Cotton.

The supposed American withdrawal from the Turkish Petroleum Company was not the only shock with regard to Iraq to which we were subjected during the week. Reports were published with regard to the Diala Cotton Plantations which could only be described as alarming, for it was obvious that, if they represented the facts, the prospects for cotton cultivation in the Diala territory must be anything but roseate. I am able to say, on the authority of the company, that the statements in question are entirely inaccurate. That, so far as it goes, is very satisfactory, but there will naturally be considerable anxiety on the part of shareholders and others interested in cotton growing to know what has been the yield of cotton on the experimental plot, and it may be hoped that the company will shortly amplify its *démenti* with a fuller statement.

The Palestine Market.

By all accounts the Tel-Aviv Exhibition and Fair which has just come to an end has had a very considerable degree of sucess. Foreign machines and motors were a prominent feature, and it is evident that some at least of our trade rivals took advantage of the opportunity for developing their trade with Palestine that the Fair afforded. No doubt they will be still more to the front when the Fair is reopened next spring. It is regrettable to hear that British goods were poorly represented, for the Palestine market is one which offers special inducements to our traders; indeed, we are justified in looking for a continually increasing outlet for our trade there. But that is not to be achieved through apathy, and if our traders neglect opportunities to exhibit their wares they must not be surprised if their returns do not increase. After all buyers are not going to look far afield for their require-

ments if they can obtain them close at hand. That is the lesson evidently that British traders still have to learn with regard to the Near East markets.

The P. & O. Thrift Scheme.

A very interesting departure has just been arranged by the P. and O. Company in the shape of a thrift scheme for the benefit of its employees. The company has for long allowed interest on deposits made by its employees, and the present scheme gives them a definite interest in the fortunes of the concern, for in addition to the fixed interest of 5 per cent., provision is made for an additional rate which depends on the Deferred Stock dividend. In view of the fact that the company's employees are widely scattered it will be some time before an idea can be obtained of the extent to which the scheme is likely to be taken advantage of, but it will be surprising if the response is not very general.

International Debts.

The terms given by America in her latest debt settlement must give one furiously to think. Great Britain has to pay at the rate of 3 per cent., rising to 3½ per cent., but now we have Italy let off at the rate of ⅛ per cent. for the first five years. Admittedly the conditions are very different, but the gradual improvement in the terms granted does suggest that we were perhaps premature in leading the way. It is not as if the indebtedness of so many nations was in all respects an asset to America; in some ways it is an embarrasment; notably in so far as it restricts the market for America goods abroad by reducing purchasing power, and it is not impossible to visualise a situation in which America would be glad to modify the debt terms.

Indian Railway Results.

The prosperity of the Indian railways at the present times is marked. The three companies, reports of whose meetings appear in this issue, have all had excellent years. In the case of the Bengal Dooars Railway the aggregate gross earnings amounted to Rs. 22,63,884, an increase of 10 per cent. on the previous year's figures, while the aggregate expenditure was Rs. 11,52,862, an increase of 5.60 per cent. The company's earnings, it may be pointed out, constituted a record, just as those of the previous year had done. At the meeting of the Assam Railways and Trading Company the Chairman was able to point to the fact that the accounts represented the best year that the company has ever had. The railway was largely responsible for the increase in profits, and in this connexion the chairman drew attention to the fact that the railway earnings for some years past had shown progressive increases of about 5 to 6 per cent., and for the year under review the passenger traffic showed an increase of 21 per cent.. He said that they could not expect that exceptional rate of increase to continue, but the opinion of the management in Assam that a steady increase for some years to come could be expected, was borne out by the fact that their returns for the current year up to date showed a satisfactory increase on the returns included in the present accounts. Finally, the Bengal Nagpur Railway had gross earnings for the year of Rs.826.70 lakhs, which was a record, but even so, the chairman pointed out, did not quite come up to expectations, as traffic fell off during the second half of the year owing to the trade depression.

The Rubber Revival.

It has taken a little longer time for the interest to revive in the rubber market than was anticipated. The raw commodity has remained very firm for weeks past, but the shares apparently for no better reason than that there has been a flood of new issues had been rather overcast. But now the situation has changed again. The demand for the commodity has shown signs of developing considerably, with the result that quotations have firmed up particularly for distant dates, and assisted by the increasingly optimistic outlook the share market has burst into renewed life, and it looks as if we are at the beginning of another of those minor booms that have been so pronounced a feature of the market in recent months.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street. S.W.)

EGYPT.

Water Pipes.— Tenders are invited for the supplying and laying down of water pipes of various diameters and accessories at Zifta. December 3. (D.O.T.)

Hose Pipes.—The Superintendent of Stores, Saptia, Cairo, invites tenders for the supply of 1,250 hose pipes without couplings, 1,000 rolling rings and 9,060 joint rings. December 15.

Lock Bridge.—The Egyptian State Railways, Telegraphs and Telephones, invites tenders for the construction of the new lock bridge over the Mahmoudia Canal at Alexandria. This bridge is designed with a superstructure for two railway tracks and a road bridge. It will be built on the existing masonry which will have to be modified in consequence. Tenderers may submit such offer as they deem best according to the information they may obtain from the general drawings of the Administration, suggesting three solutions of swing bridges and a solution of a lift bridge. February 16.

Paper and Stationery.—The Central Stationery Stores, Ministry of Finance, Cairo, invites tenders for the supply of paper and stationery required for the year 1925-1926. January 9.

THE SUDAN.

Supplies.—The Inspector-General of Irrigation, Sudan, Khartoum, invites tenders for supplies required for the Floating Workshop "El Nasheet": (a) Electric generating set and fittings for electric light—supply only. (b) Oils and paints. Contractors may tender for one or both of the above groups. December 7.

NEWS FROM ALL SOURCES.

The ordinary general meeting of the Land Bank of Egypt will be held at 4 p.m. on December 1, at the head office in Alexandria.

The production of the Anglo-Egyptian Oilfields for the week ended November 13 was:—Gemsah 17 tons, Hurghada 3,444 tons.

The final estimate of the Egyptian Ministry of Agriculture of this year's cotton crop is 7,526,782 kantars, of which 3,547,459 are Sakellarides.

Within two weeks of the issue of a new metal coinage in Yugoslavia forged coins have been found in circulation. Successful forgeries of the two-dinar [illegible]s have been passed in Zagreb, said to be made of galvanised lead.

The traffic receipts of the South Indian Railway Company for the week ended October 17 amounted to Rs.9,23,598, making the total from April 1 Rs.2,91,30,624.

Roumania's wheat harvest amounts to 2,894,688 tons and is the best since the War, comparing with 1,900,000 tons last year, and there is an estimated export surplus of 600,000 tons.

Messrs. Bow, M'Lachlan and Co., Paisley, have obtained a contract for a motor vessel, 190 ft. in length, for the Red Sea Cargo trade of the Halal Shipping Co., London. The machinery will consist of a five-cylinder Atlas-Diesel unit of 720 b.h.p.

A Reuter Sofia message states that comments are appearing in the newspapers on the exchange of Notes between M. Kalfoff, Minister for Foreign Affairs, and the British representative with a view to the conclusion of a provisional commercial convention on the basis of the most-favoured nation treatment. They emphasise the extension of economic relations between Great Britain and Bulgaria, and express the desire that the strong bonds uniting the two nations may be drawn still closer.

ROUMANIA AS A MARKET FOR BRITISH CARS.

(From a Correspondent.)

At the beginning of 1924 the British Commercial Secretary in Roumania drew attention in his annual report to the possibilities of Roumania as a market for British cars. In spite of the authority of his advice and its obvious reliability, practically no effort has been made in England to meet a very real demand.

For a considerable period after the War, when German and Austrian currencies were depreciated, motor car manufacturers of those countries carried out a highly successful campaign in Roumania, entirely capturing the local market. The restoration of peace and the consequent re-opening of the oil wells led to a demand for motor vehicles of all kinds hitherto almost unknown. During the War all available cars in Roumania were commandeered, first by the Roumanians, and later by the German Army of Occupation. Roumanian car owners received from their Government receipts which theoretically entitled them to a car of equal value on the cessation of hostilities; in reality they either received nothing at all or some ancient wreck, worn out by military service and military drivers, the repair of which fell to their charge.

Such conditions inevitably led to a big demand for new cars, for immediate delivery, and those who had the money took the first car to be offered at a reasonable price.

The Austrian firm of Steyr, among others, realised this, and immediately flooded the country with stocks of really excellent and handsome cars at a very attractive price. Good agents were appointed, entries made and successes gained at International and local automobile meetings and trials, and within a very short time, the Steyr was the most common object on the Roumanian roads, after the ox-waggon.

Other makers, German, Austro-Italian, and even Czecho-Slovak followed suit, and met all demands. Meanwhile the British maker remained silent, apparently cowed by the exchange advantages of Central European rivals.

With the coming of stabilisation in Austria and Germany, the situation changed, and prices crept up to the world level. Here was the chance of the British maker —no longer could he complain of unfair competition— but in spite of the prestige his nationality would have given him, he remained aloof, allowing the Americans and French to succeed to the mantle of Steyr and others. The best agents were captured, and generous consignments of stocks supplied, so that now Overlands, Oaklands, Buicks, Chryslers and Fords are to be seen everywhere in Bucharest and the surrounding country. The Americans deserved their success, for in spite of the handicap of a long sea journey, they have been able to put their goods on the market of a country with a very depreciated currency. Their machines are not specially built for Roumania, but in their essentials are suitable to local conditions. Clearance is high, springs are good and shock absorbers can be easily obtained. Plentiful supplies of spares are available with agents, and in many cases American mechanics have been sent out to supervise delivery to new owners. The light car market at present rests with France, Citroens and Renaults being the most popular makes. Here again American methods have been used with deserved success, and the result is that British cars in Bucharest can almost be counted on the fingers of the hands. Their ownership is divided among a very few diplomats, some oil magnates in Ploesti, and an enterprising taxi owner, who runs an ancient Rolls Royce in the capital.

The demand for reliable passenger and goods vehicles is steady, and, though generous credit has to be given, the money is generally safe. In Bucharest itself there are two or three first-class agents, but it is likely that their time is fully occupied with French and American agencies. It would seem that it would be worth while for a British maker to set up his own selling agency, provided his car is really suitable to local conditions. The fact that he was Britsh would probably give him a 10 per cent. advantage over his rivals, and he might be able to charge a little more than do foreign makers. At any rate, the demand is there, and it seems pitiful that England should be so ignored. Reliable and up-to-date statistics are not available for the present year, but trade returns indicate that mechanically propelled vehicles were imported into Roumania during January, February and March to an amount of 582,733,790 lei, or nearly £600,000—and this during the slackest season. This figure hardly indicates a stagnant market.

Customs duties on cars and lorries amount at present to the following:—

On vehicles of 1,000 kilos and over 10 gold lei per 100 kilos; below 1,000 kilos down to 500, 13.50 gold lei per 100 kilos; below 500 kilos down to 250, 17.00 gold lei per 100 kilos; below 250 down to 100, 23.50 gold lei per 100 kilos.

The paper leu stands at something over 1,000 to the pound at present, while the gold leu equals the gold franc. There is a possibility, if certain proposals take form, of a rise in import duties in future, so that an improvement in the trade balance may be effected—and American makers are about to set in motion a "drive" throughout Europe for increasing car sales. Both these factors make it all the more urgent for the British maker to consider very seriously the Roumanian market.

MOTORS AND MOTORING.

(Continued from page 631.)

The ground clearance is 10 in. up to the back axle. I am afraid that amount would be of little use in many overseas markets. One of the things essential for Australian, South African, British East African, West African, and many parts of India and the Middle and Near Easts is good ground clearance. Time and again have buyers from one or other of these countries asked me, specifically, whether such and such a car had good ground clearance. I used, emphatically, to answer in the affirmative. I am very much afraid that in connection with quite a number of vehicles I shall in future have to say that the clearance is only so many inches and consequently, in my opinion, is insufficient. What, I would ask, is the reason for this new low-clearance fad? Who started the thing? Is it something in which we are copying American practice just because it is American? Is it because the low chassis was thought—and rightly—to be necessary for the covered top omnibus and that, as a corollary, if it were right for one class of vehicle, it would be right for all? The sooner our makers of ordinary light and medium commercial vehicles scrap the low ground clearance idea, the better.

The Chartered Bank of India, Australia and China announce that Mr. Edward Fairbairn Mackay, late of Messrs. Butterfield and Swire, Shanghai and China, has been elected to a seat on the board of directors to fill the vacancy caused by the death of Sir John Newell Jordan, G.C.M.G., G.C.I.E., K.C.B.

Near East Markets.

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co. report as follows for the week ended October 31 :—

Sultanas.—The arrivals since the opening of the season are estimated at 17,000 tons, and the sales to date are put at 15,300 tons. Closing prices Smyrna : per cwt. c.i.f. London/Liverpool : Type 12, 54s. ; type 13, 56s. ; type 14, 59s. ; type 15, 62s. ; type 16, 67 s. ; type 17, 73s.

The market broke some 3s. to 4s. (Fls. 3 to Fls. 4) this week. Business continues on restricted lines and the general tone remains heavy.

Figs.—The arrivals are estimated at 177,214 bags, and the sale to date 176,618 bags. Closing prices : per cwt. c.i.f London/Liverpool : extra choice Natural Figs, 40s. ; finest (genuine) Natural Figs, 38s. ; superior (GAQ Natural Figs, 35s.

We last week reported that it was becoming increasingly evident that the crop was nearing exhaustion. It has become a startling fact this week that there are practically no more figs left on this side to be marketed, with the consequent result of a sensational rise in prices occasioned by the rush to secure the small remaining lots by shippers still short in their forward engagements.

The possibility of further business this season must be excluded. It remains to be seen to what extent some shippers will be able to execute the totality of their engagements without recourse to covering in on the London and Liverpool markets forward contracts for November-December shipments to the States.

Russian buyers this week on spot have bought some 400 tons of Naturals (Genune quality) at the parity of 43s. c.i.f. U.K. (9.1/4 cents C. and F. New York).

The report for the week ended November 7 states :—

Sultanas.—The arrivals now amount to 17,700 tons and the sales to date are 16,000 tons. Closing prices Smyrna, per cwt. c.i.f. London/Liverpool : Type 12, 53s. ; type 13, 55s. ; type 14, 57s. ; type 15, 59s. ; type 16, 64s. ; type 17, 71s.

The market is quiet with little demand. Prices continue sliding, but the decline this week has not been very marked.

Figs.—The arrivals amount to 181,655 bags, and the sales to date are 179,941 bags.

The Russian buyers have withdrawn. The present high level of prices on this side precludes the possibility of combining new business. Some small lots of figs that reached the market this week have not met with buyers. Now that the Russians have withdrawn, shippers, still uncovered, are in no hurry to operate, realising the unlikelihood of new business at level of prices asked by dealers and hoping thus eventually to cover in at more reasonable rates.

DEMAND FOR MOTORS IN EGYPT.

Contrary to the usual seasonal trend, imports and sales of passenger cars in the Egyptian market reached a record peak instead of a low mark in the July-September quarter (says an American Consular report). This applies not only to low-priced vehicles, but to medium and high-priced cars, also. Because of an excellent crop prospect and a satisfactory political outlook, dealers are looking forward to very large sales in the last quarter of the year. It is a reliable estimate that this market will import during the last quarter about 2,000 passenger cars, including chassis. If realised, this will nearly double the receipts for the corresponding quarter of 1924.

The lorry and motor-'bus market is gradually widening, owing to the continued expansion of 'bus transport, but along rather limited lines. The abundance of second-hand motor-cycles continues to be the outstanding factor influencing limited imports of new machines. However, American makes are holding their own, while the dominating British makes are experiencing a much restricted demand over a year ago.

COMPANY NOTES AND REPORTS.

TEA COMPANIES.

The Jokai Assam Tea Company has declared an interim dividend of 10 per cent., less tax, payable December 7.

The Noyapara Tea Company has declared an interim dividend of 7½ per cent., less tax.

The Balijan Tea Company announces an interim dividend of 5 per cent., less tax, against 10 per cent. last year.

The Tea Corporation has declared an interim dividend of 7½ per cent., less tax.

The Longai Valley Tea Company announces an interim dividend of 5 per cent. on the ordinary shares, less tax at 4s. 1½d. in the £.

The Amalgamated Tea Estates Company announces an interim dividend of 5 per cent.

The Consolidated Tea and Lands Company announces an interim dividend of 5 per cent.

The Isa Bheel Tea Company has paid an interim dividend of 5 per cent., less tax, on the ordinary shares.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Scindia for Bombay (Liverpool, November 23). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mandasor for Port Said, Colombo, Madras and Calcutta (London, November 28).

Bibby Line.—S.s. Yorkshire for Port Said, Colombo, and Rangoon (Birkenhead, December 2).

British India Line.—S.s. Malda for Colombo, Madras, and Calcutta (London, November 21); s.s. Warfield for Bombay and Karachi (London, November 28).

Cunard Line.—S.s. Brescia for Patras, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, and Sulina (Swansea, December 14).

Ellerman "City" Line.—S.s. City of Canton for Calcutta (Birkenhead, December 1).

Johnston Line.—M.v. Sycamore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, November 21); s.s. Kenmore, for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, December 5).

P. and O. Line.—S.s. Rawalpindi for Bombay (London, November 27); s.s. Nankin for Colombo, Madras, and Calcutta (London, December 12.

Major-General Sir John H. Davidson, M.P., has been elected a director and a member of the London Committee of the National Bank of Egypt. Sir John Davidson is a director of the African Mercantile Company, the Gresham Fire and Accident and the Gresham Life Assurance.

Motors and Motoring.

By G. B. B.

My recent remarks regarding the certainty of a big overseas market for our commercial vehicle manufacturers, provided they take the trouble to make the good points of their products known, have attracted a certain amount of attention in trade circles, which is all to the good. As was only to be expected, my statements were met by a point-blank assertion that British commercial vehicles and the special features of all types of British commercial vehicles were already well known overseas. Others said that possibly there was something in my statement but very little. One or two agreed with my contentions. To those who assert that British commercial vehicles are well known in Near, Middle, and Far East markets, I would reply that not one business man in a thousand, in any of the regions in those three vast areas, could mention off-hand the names of five British makers of commercial vehicles, and of those who could mention five makers, not one in a hundred could tell what sizes and types of vehicles those makers produced. And I ask: Is it good enough? Here are we at home suffering under stress of taxation, of bad trade, of a dozen things that only good trade can cure, and our British captains of commerce, practically unknown south of the Isle of Wight, delude themselves with the idea that the whole world knows them and the goods they make, and that the reason they do not sell more goods abroad is because the extraordinarily wicked foreigner underquotes them! As I frequently pointed out in the *Financier*, our manufacturers are a little disposed to call on all their gods to witness their sad plight and do little or nothing to better the situation.

Our Steady Progress.

In design and construction our makers have made and are making steady and remarkable progress; it is only in commercial ability that they fall so lamentably behind their foreign competitors. The advances which have been made during the last few years in engine design have been little short of astounding and British designers and manufacturers alike have proved their immense superiority, so far as the construction of medium-powered- high-speed engines are concerned, to the rest of the world. It is true that despite the strenuous efforts and painstaking work of Messrs. D. Napier and Son, who have been wrestling with the problem for years in spite of many handicaps of which the general public know nothing, the Americans seem to have outstripped us, for the time being, in high-speed, high-powered aeroplane engine design, but I believe myself that here the American superiority is more apparent than real, and I would just say that a nation like ours would not necessarily lay the whole of its cards on the table for the purpose of winning the Schneider Cup. There is a nod in that sentence which will probably be as good as a wink to most of my readers. Speaking of aero engines, there is no doubt the aero engine practice did much to assist in the development of our light car engine, and to an extent this was also assisted by the development of the motor cycle engine, a development which showed that high-speed "babies" could more than hold their own against slow speed giants. The War also caused an immense forward stride in the manufacture of high-speed steels and alloys, and these immensely strong stress-and-strain resisting materials were pressed into the service of the motor car engine and chassis maker, and the net result was the introduction of types of comparatively high-speed engines, of but little weight and extremely compact, but giving out astonishingly high horse powers. It is these light engines, fitted into strong and beautifully made chassis, with improved change speed gears and powerful brakes that have made the British light car and the British light delivery van and medium to heavy lorry the fine vehicles they are to-day.

Protection!

A correspondent has taken exception to my remarks regarding protection and the commercial motor industry, and my reply merely is that I have expressed my opinion and stand by it. The best protection our commercial motor vehicle makers can have is that recommended by no less an authority on fighting matters than the late general, Julius Cæsar, who invariably "carried the war into the enemy's country." In other words, he did not seek to defend himself at home; he knew his home would be all right if only he kept the other fellow busy. To our commercial motor vehicle makers, I say again, as I said before: Get your goods known in the vast overseas market and you will be so busy turning out vehicles that your production costs will fall below even your most optimistic ideas and you will not need to worry about your home market; you'll have that so safe that you could not lose it if you tried!

The Guy Six.

I have just been examining the latest Guy passenger chassis, which seems to me to be more than a mere advance on what has been done before. The chassis is for a motor coach, and so far must represent the last word in comfortable and luxurious travelling. It seems to be just the type of chassis that should sell well in Indian markets, as the design has evidently been the result of a perfectly correct impression that people are willing to pay for luxury in travelling. The six-cylinder engine is of the sleeve valve type, and not only is it designed to work at a high speed but, thanks to the sleeve valves, it is practically silent at all speeds. A worm-driven back axle also tends towards perfectly silent running. The wheelbase is 16 ft. 5 in., and the track is 5 ft. 5 in., and the chassis is suitable for carrying a 32-seater body. I understand the chassis can be obtained, at a slight extra price, with a wheel base of 19 ft. 1½ in.

Low Clearance.

There is one thing in connection with modern design that I am by no means sure about, and that is the new tendency towards low frames. I agree that these are a great advance—for use in countries with good roads. I note in the "Guy" motor I have just mentioned that the height of the top of the frame of the chassis is only 1 ft. 10 in. from the ground with the vehicle unloaded.

Company Meeting.

ANGLO-PERSIAN OIL COMPANY.

Growth of Production.

Sir Charles Greenway's Speech.

The sixteenth ordinary general meeting of the Anglo-Persian Oil Company, Limited, was held on November 10 at Winchester House, Old Broad Street, E.C.

Sir Charles Greenway, Bt. (Chairman of the company), presided.

The Secretary (Mr. John Clark) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said:—Ladies and gentlemen,—The report and accounts which we submit to you to-day and which, with your permission, we will take as read are again, I am pleased to say, of a very satisfactory character and continue to reflect the successful progress which the company is making. As you are aware, our chief aim and object during the past 12 or 13 years has been to build up an absolutely self-contained organisation—capable not only of producing our crude oil but also of refining it and of transporting and distributing its products direct to consumers wherever there may be a profitable outlet for them without the intervention of any third parties—and I think that we may now claim that we have successfully achieved that object and have firmly established ourselves as one of the leading oil companies of the world. The advent into the world's markets of a new and powerful competitor has, of course, aroused a good deal of opposition, but I would like to take this opportunity of saying that while we shall always be ready to enter into any arrangements with our competitors that will serve the purpose of reducing costs to the consumer, it is an essential of any such arrangements that we should retain our own individuality. (Hear, hear.)

Profits.

I will now ask you kindly to turn your attention to the accounts before you. Dealing first with the profit and loss account, you will remember that when I addressed you last year I indicated that, subject to there being no further material decline in prices, I was hopeful that the profits for the year under review would show a substantial increase. You will see that this hope has been realised. The trading profits show an increase of over £1,500,000, and the net profits, after deducting the larger amounts payable in respect of royalty, income-tax, etc., an increase of about £1,120,000. I should explain further that the figure of £4,599,676 8s. 9d. showing in the profit and loss account as "balance of profit" has been arrived at after providing collectively in our main concerns a sum of over £3,500,000 for depreciation, which result, gentlemen, I am sure you will all regard as eminently satisfactory. (Hear, hear.)

Now, looking at the appropriation account, you will see that out of the £3,571,966 18s. 7d. brought down from the profit and loss account we have appropriated to extra depreciation and various reserves a total of £1,193,000, as against a total of £665,000 only in the previous year, and that the balance at the credit of the profit and loss account remaining to be dealt with, including £1,746,643 9s. 11d. carried forward from the previous year, amounts to £4,066,549 2s. 6d. Out of this, after allowing for preference share dividends, we recommend payment of a dividend of 12½ per cent. on the ordinary shares, absorbing £1,118,750, and carrying forward a balance of £2,072,799 2s. 6d. subject to Excess Profits Duty, if any, for the year ended March 21, 1921, and Corporation Profits Tax for the year ended March 31, 1925.

Conservative Financial Policy.

As regards the dividend which we have recommended on the ordinary shares, I would like to say that we might easily have recommended a higher figure, but I think most of you will agree with us that our first consideration should be the building up of a strong financial position, and that it is therefore advisable to continue the policy of conserving our resources as much as possible, at any rate until we have accumulated funds commensurate with the gigantic extent of our business; being content in the meantime with the knowledge that we shall thereby be gaining more by the consequent appreciation in the value of our assets than we are losing for the time being by denying ourselves a little in the form of higher dividends.

In this connexion, I may mention that we have received a letter from an ordinary shareholder who at the last meeting raised some objections to our conservative policy, complaining that his criticisms and the discussion which followed were not supplied to the Press and to shareholders in full. I would like to point out to him that it is not usual to supply verbatim reports of the criticisms of shareholders to the Press, and it is certainly not necessary when, as we know, fully 90 per cent. of our ordinary shareholders are in full accord with our policy. (Hear, hear.) I appreciate his desire for higher dividends, but I would like to say that throughout my business career it has been my practice to put back each year into my various businesses a considerable portion of my profits, and I am quite sure that every business man present here to-day will agree with me as to the wisdom of this policy, particularly in the case of an industrial concern with such wide ramifications, and so many vicissitudes, as ours, and that the advantages to be gained from the consequent appreciation in the capital value of our assets far outweigh the satisfaction of a large immediate return in the form of higher dividends. A simple calculation will show him that if as the result of our conservative policy our shares appreciate in value during the next five years to the extent of 100 per cent.—a not at all improbable assumption—his average return, even on the basis of the present dividend, would be far better than getting an immediate return of, say, 20 per cent. per annum. (Hear, hear.)

However, I am pleased to be able to announce that we now see our way, unless some unforeseen contingency arises, to falling in with the desire expressed by shareholders for the payment of interim dividends on our ordinary shares—(cheers)—and our first interim dividend will probably be declared in April or May next.

As to the outlook for the current year, all I can say at present is that, subject to there being no serious decline in prices between now and the end of our financial year, we can, I think, look forward with confidence to results at least as favourable as those for the year under review.

As regards the market for petroleum products, it is at the moment more than usually difficult to gauge the future course of prices. The production of crude during the present year will show a substantial increase in every important producing country in the world, excepting Mexico. The total increase for the year will probably amount to about 8,000,000 tons, and the decrease in Mexico to nearly 4,000,000 tons, leaving a net increase in the world's supply of about 4,000,000 tons, or a little under 3 per cent. But, speaking broadly, the consumption of the various products fully keeps pace with the increase in supplies, and though there is every possibility of further increases in production, these will, in my opinion, be fully offset by the continuous expansion in the demand for oil products which must result from the improvement in economic conditions which is taking place in practically every country of Europe, and from the extended use which is daily being found for these products in nearly every branch of industry. In any case there will, I am confident, always be a remunerative outlet for all the oil of good quality which can, as in Persia, be produced at a low cost. In this connexion, I would again remind you that every drop of crude we produce is obtained from flowing wells of large calibre which, of course, means that it is raised at the minimum of cost. These wells, I may add, are all connected with a central storage and pumping station at which at any time of the day the flow from the wells can be varied to any degree required.

I will now deal with such items of the balance-sheet as I think call for comment or explanation. Taking the debit side of the account first of all, the only changes of importance are (1) a reduction of £125,000 and £63,000 respectively in the amount of debentures and short-term secured notes outstanding. The repayment of the latter released £70,000 of the debentures deposited as security for these notes, thus making the total debentures redeemed during the year £195,000; (2) an increase of £276,463 2s. 4d. in the amount at credit of the employees' provident pension and insurance fund account, and (3) an increase in the reserve accounts of £800,000, bringing the total up to £6,083,128 11s. 6d.

On the assets side of the account you will notice that the first item—namely, purchase price of shares in and advances to associated companies—now stands at £26,445,958 17s. 3d., which is a reduction of £1,713,741 1s. 9d. on the figure shown last year, although in the meantime there has been fresh outlay in respect of this item to the extent of about £785,000. This total reduction of £2,500,000 is almost entirely due to the repayments of some of the advances to our associated companies. In connection with this item I would like to point out that about £9,000,000 of the total represents advances to our two principal subsidiary companies—namely, the British Tanker Company and the National Oil Refineries—and that the amount of these advances is far more than covered by the value of their assets.

These companies might have raised a portion of the large amounts they have expended in creating these organisations by public issues of capital, but as this could, at the time the money was required, only have been done at a comparatively high cost, the Anglo-Persian Company, for reasons of economy, financed a portion of this expenditure by means of temporary borrowings in the open market at low rates of interest. These borrowings have all been liquidated, but now that the conditions of the money market are more favourable, we may, in the near future, decide to make a debenture issue in respect of the British Tanker Company, in order that its capital may be more commensurate with the value of its large fleet and to provide the Anglo-Persian Company with some of the further funds that will certainly be required in the future to meet further developments. But this issue will only be made if it can be done on terms that will justify this change in the method of finance. The other assets included in this item are, as I think you are all aware, also of a value far greater than the figure at which they stand in our books.

In this connection I would remind you that we have during the past few years met an enormous amount of new capital expenditure out of revenue. This very sound policy is, as you will have seen from the figures I gave you when dealing with the profits of the past year, still being continued, but it is a policy which should not be carried too far, and once we are satisfied as to the company's ability to meet all possible financial contingencies, the shareholders will, I think, be entitled to look for a more liberal participation in the profits of each year. (Hear, hear.)

The next item on the credit side of the account—refineries, tank installations, pipe-lines, etc.—shows a small increase, being the balance of capital expenditure in excess of the amount written off for depreciation.

As regard debtors and debit balances, there is an increase of nearly £1,200,000, practically all of which is accounted for by the increased dividends payable to us by our subsidiary companies. Taking the last two items, which collectively represent our liquid cash resources at the end of the year under review, you will notice that they show an improvement of close upon £1,000,000 on the position shown twelve months previously, and you will be gratified to learn that the position to-day shows a still further material increase in our liquid assets.

Fields and Production.

The developments in our main fields continue to more than justify all our expectations. Our policy of extending the area of oil bearing territory has been vigorously and successfully continued since I last addressed you, and it will, I am sure, come as welcome news to you that the productive area has now been extended along a line of strike running continuously five miles north-west and over five miles south-east of the well known F. 7.

As I have mentioned on previous occasions, this famous well—which for a long time was regarded as our index of production and whose yield to date is 6,500,000 tons—is now eclipsed by a number of others. The well head fittings with which it was capped in 1909 are, however, in a dangerous condition and since the well is situated near the most active and populated area of the field it would be a serious matter were it to get out of control. Therefore, as the oil it produces can equally well be drawn off and with greater safety from adjacent new wells equipped with modern high pressure fittings it is intended to close it down at an early date for the sake of the greater security that will thus be obtained.

None the less, since we have come to regard F. 7 as an old friend, its deliberate suppression, as a matter of field policy, will cause us all a certain amount of sentimental regret.

Following on much investigatory work on the chemical and engineering sides, an important and comprehensive scheme has been adopted for recovery of petrol from the 50,000,000 cubic feet, or more, of gas which come off daily with the oil from all parts of the main fields, only a portion of which has hitherto been utilised. The installation of the necessary plant is now well in hand, and there is every reason to hope that this scheme will considerably augment our production of petrol and thus prove very profitable to the company. All necessary field developments are steadily and punctually following the drill, and I think it may now fairly be claimed that our main fields are not only the largest and the most prolific, but also the best equipped that the world can show. (Cheers.)

As I have explained on previous occasions, our policy in regard to our main fields is a conservative one. The wells drilled and coupled to the production lines are capable of yielding far more oil than could be dealt with at present by our existing pipe lines, refineries, tankers, and marketing organisations. However, we can happily record a steady progress in all these complementary facilities, and in consequence, a correspondingly increased production.

To illustrate this, I cannot do better than continue the table of figures recorded at previous meetings, viz.:—

In 1918-19	our production	was	1,106,415 tons.
,, 1919-20	,,	,,	1,385,301 ,,
,, 1920-21	,,	,,	1,743,557 ,,
,, 1921-22	,,	,,	2,327,221 ,,
,, 1922-23	,,	,,	2,959,028 ,,
,, 1923-24	,,	,,	3,714,216 ,,
,, 1924-25	,,	,,	4,333,933 ,,

(cheers) against my estimate last year of 4,250,000 to 4,500,000 tons.

Development Programme.

The current year is largely one of stabilisation of the position we have already achieved—or in other words of securing the best possible results in every direction from our present production—prior to embarking on yet larger developments. For this reason production in the year 1925-26 will probably not exceed 4,500,000 tons.

I am not able to record the discovery of any new areas elsewhere in Persia having prospects comparable with those of the present producing areas. The further examination of the strike of oil on Kishm Island, to which I referred last year, was not sufficiently promising in quantity to warrant development under existing conditions, and work in this area has therefore been discontinued.

Similarly, oil has been discovered in yet another area in quantities which, had the field been situated in America or Europe, might have warranted commercial development. But situated as they are in Persia they could not be worked remuneratively and therefore operations in this area have also been suspended except in so far as they are necessary to produce oil for field use in some neighbouring areas where we are carrying on test drilling and in which we hope to find oil in larger volume.

As a result of general geological survey work followed by an authoritative and comprehensive geological reconnaissance, no less than six new areas have now been indicated as meriting immediate test with the drill, and the necessary work is well in hand.

I have on previous occasions referred to a new area where the existence of appreciable supplies of oil had been definitely proved. This area, known as Naft Khana, is on the borders of Persia and Iraq, and is situated in what is known, so far as the Iraq portion is concerned, as the "transferred territories."

This company possesses the oil rights in "the transferred territories" by virtue of an international agreement executed in 1913, following on a rectification of frontiers. The agreement in question has since been ratified by the grant by the Iraq Government of a formal concession of these rights, and a separate company with a capital of £1,000,000 is about to be registered to take over this concession.

Drilling is steadily continuing in this field with the view of proving definitely the existence of oil to such an extent as would justify the cost of laying a pipe-line linking the field with the seaboard. There is reason to hope that this may prove to be the case, but capital expenditure of the magnitude indicated will not be undertaken until its justification is fully established.

Since we last met a concession has been obtained from the Albanian Government over areas amounting to approximately 80,000 acres, which were selected by us after careful geological survey, and drilling on these commenced a month ago. The discovery of oil in this country would, of course, be of great importance, but obviously it is too early to indicate the possibilities of success.

Relations with the Persian Government.

The past year has been characterised by one important event in connexion with our relations with the Persian Government: in a

visit to our oilfields and to our refineries at Abadan by His Imperial Highness Riza Khan Pahlevi, who has, as you are no doubt all aware, recently been given by vote of the Mejliss full control of the State. This is the first occasion on which our operations in Persia have been inspected by so high a personage, and I am pleased to report that His Highness expressed the utmost gratification in the great work which has been achieved by us in the face of the many difficulties attendant upon carrying on operations in a country devoid of transport and other commercial facilities. This visit, we are assured by our representatives, cannot but have a favourable effect upon our relations with the Persian Government, inasmuch as it has impressed upon His Highness not only the magnitude and efficiency of the operations we have carried on in the past but also the great potentialities of the Persian oilfields as a future source of increased revenue to his country. The further developments necessary to produce this increase revenue can only, of course, be carried on under conditions of security, and it is therefore a matter of satisfaction to us that the Persian Government have now for the first time established a military force in the neighbourhood of the fields to give us the protection guaranteed under the Concession. (Hear, hear.) Under these improved conditions we can therefore, I think, now look forward with more confidence than ever to the political security necessary for developing our Concession to the best possible advantage to all concerned.

I would like to take this opportunity of pointing out how greatly the advent of the company has added to the welfare and happiness of the population in the districts in which it is operating, and I am pleased to say that this is fully realised and appreciated in Persia. Apart from the employment we afford to many thousands of Persians, it is our aim to do all we can to promote the well-being and the prosperity of the inhabitants of the country with which we are associated in this extensive enterprise, and in many directions we are rendering most valuable assistance.

When it is understood that about £2,500,000 is spent by us annually in wages and local purchases it is possible to appreciate in some measure the services we are rendering to Persia in this direction.

The very material increase, moreover, in recent years in the Customs receipts at the southern ports is to no small extent due to the increased trade in Southern Persia consequent on our enormous disbursements in this area. The Persian Government therefore directly benefits from the expansion of our operations, not only in the direction of receiving increased royalties but also by a larger revenue from Customs, apart from the indirect gain resulting from our large and constantly growing expenditure in the country.

He then moved the resolution.

The Right Hon. the Lord Bradbury of Winsford, G.C.B., seconded the resolution, and the Chairman then invited questions and comments from shareholders.

Mr. Kemp requested details regarding the shareholdings in the Turkish Petroleum Company, and asked that in any future issue of that company Anglo-Persian shareholders might have a participation.

The Chairman, in reply, said that with regard to the Turkish Petroleum Company, the shares were held as to 47½ per cent. by the Anglo-Persian Company, as to 22½ per cent. by the Royal Dutch Company, as to 25 per cent. by the French group, and as to 5 per cent. by Mr. Gulbenkian. For voting purposes the shares of Mr. Gulbenkian were equally divided between the Anglo-Persian and the Royal Dutch. It was impossible for the directors of the Anglo-Persian Company to give any undertaking as to future issue of capital by the Turkish Company. The Anglo-Persian Company had only a 50 per cent. interest in that undertaking and naturally could not expect to get 100 per cent. of share subscription rights. When the time came, however, the directors of the Anglo-Persian Company would do their utmost to protect the interests of Anglo-Persian shareholders.

The resolution was carried unanimously.

BENGAL DOOARS RAILWAY.

Increased Net Earnings.

The thirty-fifth ordinary general meeting of the Bengal Dooars Railway Company, Ltd., was held at the company's offices, Gresham House, Old Broad Street, London, E.C.2, on November 10, Mr. Robert Millar, the Chairman, presiding.

The Secretary (Mr. F. J. Horne) read the notice convening the meeting and the auditors' report.

The Chairman, in moving the adoption of the report and accounts, said that it would be seen from the published accounts that satisfactory increases were shown in the company's earnings as compared with the previous year, notwithstanding that last year established a record. The aggregate gross earnings for the year under review amounted to Rs.22,63,884 against Rs.20,53,379 for the previous year, an increase of 10.25 per cent. The result for the year was that the net earnings amounted to Rs.11,11,022 compared with Rs.9,61,631 for the previous year, an increase of Rs.1,49,391, equal to 15.53 per cent.

After deduction of the Indian taxation (amounting to Rs.1,09,549) from the net earnings, there remained a sum of Rs.10,01,472, equal.

The Supremacy of DUNLOP!

THE following is the census of tyre equipment at the Olympia Motor Show (London). The figures provide abundant evidence of Dunlop predominance. The car manufacturer naturally selects the best tyre equipment for his model—follow the manufacturers' lead and specify DUNLOP the world's best Tyres.

Census of Tyres fitted to exhibits at OLYMPIA MOTOR SHOW, 1925

96% of the British Cars at Olympia were fitted with Dunlop Cord Tyres as standard equipment.

Taking all the cars exhibited 58% of them were fitted with DUNLOP.

at the exchange of 1s. 4d., to £66,764 17s. 4d., which was increased by exchange differences on remittances, etc., and interest earned and by the balance brought into the account from last year to a total of £117,950 10s. 10d. After making provision for the payment of a year's dividend on the preference stock £14,400, reserve for income and corporation profits tax £3,500, and writing off the sum of £1,565, the cost of the Daling coalheld survey, which was incurred some twenty years ago, there remained a balance of £98,485 on the net revenue account. From this an interim dividend of 4 per cent. on the ordinary stock was paid on April 9, 1925, which absorbed £16,000, and £16,626 had been carried to reserve, leaving £65,858 to be dealt with.

Before dealing with the question of the final dividend on the ordinary stock, he had a few words to say regarding the amount carried to reserve account, and to the position in connexion with possible flood damage. From the accounts before them, they would probably have noticed that the expenditure on capital account was £291,203 in excess of the preference and ordinary stock capital of £760,000, and also that the reserves consisting of premium on capital and reserve fund amounted at March 31 last to £189,873, or £11,330 less than the amount over-expended at that date on capital account. By carrying the sum of £16,626 to the reserve fund the total reserves would then amount to £206,500, which covered the over-expenditure and left a margin of say £5,300, in hand for future capital expenditure. During the year under review the capital expenditure over the whole system amounted to Rs.1,36,262, principally on the construction of stations and buildings and in improvements to rolling stock.

A further good reason for maintaining ample reserves was the erratic movements of the Diana and Teesta Rivers. Since they last met they had experienced considerable anxiety in that connexion. During the flood season both those rivers cut new channels in dangerous proximity to the railway—in the case of the Teesta the encroachment necessitated the dismantlement of some buildings at Barnes Junction and the diversion of traffic. Fortunately of two channels cut by the Teesta River, one within 300 yards of Barnes Junction and the other half a mile away, the river recently took the more distant one, but it was borne upon them that they must be prepared for possible heavy expenditure, and for that reason the directors had decided to continue the same conservative policy as heretofore. The total charge to revenue on account of flood damage during the year under review amounted to Rs.56,366.

The directors had decided that for the past year it would be inadvisable to increase the aggregate dividend and bonus, and therefore recommended the payment of a final dividend of 4 per cent. and a bonus of 2 per cent., making a total distribution of 10 per cent., the same as last year, and leaving a balance of £41,858 to be carried forward, which was practically the same amount as was brought in from the previous year.

At October 17 the approximate traffic receipts showed an improvement of Rs. 10,005 over the corresponding period last year, and they had recently heard from the manager, Mr. J. A. Polwhele, that notwithstanding mosquito blight has appeared in some of the tea gardens, "the earnings for the whole year should not be less than those of last year."

There was one other subject to which he wished to refer, and that was that under the terms of their contracts, the Secretary of State for India had the option, by giving 12 months' notice, of purchasing the railway on December 31, 1926. On July 2 last they received an intimation that he had definitely decided not to take advantage of this option, which meant that a further period of seven years would elapse, that is to say until December 31, 1932, before the Secretary of State could give notice determining the contract by purchase.

The report was unanimously adopted, the payment of the dividend and bonus sanctioned, and the retiring director and auditors were re-elected.

ASSAM RAILWAYS AND TRADING.

A Record Year.

The forty-fifth ordinary general meeting of the Assam Railways and Trading Company, Limited, was held on November 11 at Winchester House, Old Broad Street, E.C.

Mr. George Turner, M.E., presided, and after a sympathetic reference to the death of Lord Ribblesdale (a former chairman of the company) said that the accounts represented the best year that the company had ever had. The railway was largely responsible for the increase in profits. This fact was specially gratifying as these increased earnings, besides helping the revenue, protected the company's capital position, inasmuch as the price which the Government would have to pay for the line if it exercised its right to purchase would be measured by their railway earnings. Those earnings for some years past had shown progressive increases averaging about 5 to 6 per cent. The operating expenses for the year were 64.33 per cent. of the earnings as against 74.49 per cent. in the previous 12 months. Satisfactory as this reduction was, the board believed that they could be further reduced.

Dealing with the general trading account, he said that the mines had had on the whole a fair year. The output showed an increase of about 10,000 tons, and the sales a rise of 14,000 tons, but owing to the slump in Bengal coal the competition in their outer markets had become considerably keener. Luckily for them, however, their coal being the best coal in India, with a calorific value 20 to 25 per cent. better than ordinary Indian coal, they were in a good position to meet this competition. The company's investments had again paid them well during the past year. In their new colleries the company had continued their work of preparation and development. There being no programme of further capital expenditure, the company's financial position should improve unless some unforeseen development altered the board's estimates.

The balance of the general net revenue account showed a profit for the year of £146,069, against £137,779 last year, and was the largest profit which the company had ever shown—an improvement of more than £8,000 on the previous year. The board recommended the payment of a final dividend on the "B" stock of 6 per cent., making 9 per cent. for the year—1 per cent. better than last year.

The report was unanimously adopted.

BENGAL-NAGPUR RAILWAY.

Record Gross Earnings.

Mr. Robert Miller's Speech.

The sixty-seventh ordinary general meeting of the Bengal-Nagpur Railway Company, Limited, was held on October 29 at 132, Gresham House, Old Broad Street, E.C.

Mr. Robert Miller (the Chairman) said that the gross earnings for the year, Rs.826.70 lakhs, exceeded the corresponding figure of the previous year by Rs.47 lakhs, or 6.12 per cent., and were the highest on record. They did not quite come up to expectations, as traffic during the second half of the year fell off owing to depression of trade. During the five years ended March, 1925, the gross earnings increased by Rs.184 lakhs, or 22.26 per cent., against an increase in the mean mileage worked of 102 miles, or 3.6 per cent., a very satisfactory result in face of the instability of trade. The working expenses increased by Rs.22.27 lakhs, or 4.18 per cent., due partly to the larger traffic carried, and partly to heavier renewals of permanent way and additional outlay on ordinary maintenance. The net earnings amounted to Rs.294 lakhs as against Rs.269 lakhs in the previous year, and the surplus profits received by the company amounted, after payment of Indian income-tax, to Rs.5,77,224, making, with the guaranteed interest, a return on capital of 4.94 per cent., as compared with 4.45 per cent. in the previous year.

The Outlook.

With regard to the prospects of the undertaking, the gross earnings up to the end of September last were slightly lower than those received during the corresponding period of 1924-25. The depression in trade that commenced during the latter half of that year had extended into the present year, and though crops were expected to be favourable as the result of a good monsoon, there was at present no indication that the results of the whole year would be much in advance of those for 1924-25, and steps had already been taken to curtail the provision made for working expenses if additional gross earnings were not being realised.

Unlike other principal railway systems of India, which, generally speaking, were carried through country already well populated and

Digitized by Google

cultivated and carrying on substantial trade by means of road or river communication, the undertaking commenced its existence as a pioneer railway and had continued in the same role up to the present day. It provided rail communication between the centre of India and Calcutta by way of a country sparsely populated and little given to trade, and covered for thousands of square miles by dense forest. During the two decades 1900 to 1920, capital expenditure increased by about 160 per cent., and gross earnings by over 400 per cent. During the period 1920 to 1925 capital expenditure increased by 40 per cent., and gross earnings by something over 25 per cent. only. In common with other Indian railways, the undertaking was worked to its full capacity from 1914 to 1919 with traffic directly connected with, or arising out of, the Great War. With the cessation of the War that abnormal traffic ceased, but industrial activity arose in India and pressing demands for coal were made. Capital expenditure was then devoted to the work of opening out coalfields situated within the area served by the railway which up till then had remained unexploited. The construction of the necessary lines was fully justified by the conditions existing at the time, but industrial activity subsequently received a set-back from which it had not yet recovered.

Briefly, the position of the undertaking to-day might be said to be that, having fitted itself at great cost to deal promptly and effectively with the growth of gross earnings that might be anticipated in the future, it had to wait on the gradual improvement in trade and industry before it could realise the full return on its capital investment which it had every reason to believe would be reached in due time. While the progress of net earnings and surplus profits might, at the present time, be lower than was anticipated a year or two ago, stockholders would find in the end that their investment had been a fortunate one.

The report was unanimously adopted.

The Roumanian production of sugar is expected to amount to some 140,000 to 160,000 tons, compared with 95,000 tons last year.

IMPORTS & EXPORTS

The financing of the world's commerce has become one of the most intricate of machines ever constructed, and under the banker's hands lie all the cogs and controls necessary for its efficient running. It is of the utmost importance that the merchant should clearly understand the working of its mechanism in order that he may make the fullest use of the bank's facilities, not only for his personal benefit, but also for the increased commercial prosperity of the country. To assist its customers, the Westminster Bank has now prepared a booklet explaining the many ways in which the commercial man may use the bank for the furtherance of his business, and how he should proceed so as to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and combine with progress and enterprise the necessary security and caution.

Copies will be issued on application to the Secretary, Head Office, Westminster Bank Limited

41 LOTHBURY, LONDON, E.C.2

Cotton and Cotton Goods.

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Ottoman Bank for the week ended November 14, states:—

Uncertainty regarding the future level of prices still seems to be the dominating influence in the market. The American Bureau Report published on Monday last was again a surprise, the indicated crop showing an increase where, if anything, a decrease had been anticipated. Buyers of cotton goods apparently think that the process of adjustment of the earlier estimates has not yet been completed and that there is a possibility of the total yield being even larger than the latest figures.

Yarn.—Whilst there has been an increase in the inquiry for yarns the actual business transacted remains far from satisfactory, and this applies both to American and Egyptian. The most important item of interest is the recommendation made yesterday by the Federation of Master Cotton Spinners that the mills spinning American cotton should restrict the hours of working during December and January to 35 per week. This would be a reduction of 4¼ hours on the present working week. It seems rather doubtful at the moment whether the majority necessary to carry this into effect can be obtained. Shipments of yarn last month amounted to 17,856,100 lb. as compared with 13,923,400 lb. in September and 13,454,100 lb. in October, 1924.

Cloth.—Following the issue of the Bureau Report business dwindled to very small proportions. There was a slight recovery yesterday but, as a whole, the week has been a poor one. Only a fair business, still mainly for dhooties and fancy goods, has transpired for India. There is nothing new to report with regard to China, and Egypt and the Near East continue to operate very sparingly. Some good lines have been put through for the Home Trade.

Shipments of cloth during October amounted to 366,606,600 square yards as compared with 359,810,400 square yards in September and 364,293,900 square yards in October last year. The most interesting features of the returns were the large amount of goods shipped to Germany and the comparatively low figures recorded for India.

Raw cotton.—There have been considerable fluctuations during the past week. The American Bureau Report above referred to gave the indicated yield at 15,386,000 bales of which 11,199,000 had been ginned at October 31. The former figures represented an increase of 160,000 bales during the last fortnight and were larger than had been expected. There was an immediate drop of approximately ½d. per lb. in quotations, which, however, has since been recovered on unfavourable weather reports. Egyptian cotton has been weak and the quotation has fallen almost daily. Spinners continue to buy very sparingly. Closing quotations yesterday were as follows:—American Middling 10.58, Egyptian Fully Good Fair 20.60.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company in their report for the week ended November 5, state:—

Since our last report the futures market has fluctuated widely, but towards the close of the week the tendency has become somewhat firmer; the net changes on the week are the following: Sakellaridis, 0.50 dollars down for November, 0.62 dollars down for January, 0.60 dollars down for March, 0.90 dollars up for November 1926: Ashmouni 0.62 dollars down for December, 0.55 dollars down for February, 0.35 dollars down for April, 0.40 dollars up for October, 1926.

The week began with rather weak markets, but when prices fell to 35½ dollars for January Sakel and 25½ dollars for December Ashmouni they induced a good deal of speculative profit-taking, which stopped the drop and caused a slight reaction. Commercial houses also bought moderate lines of contracts round about these low levels. It is said that these purchases were against sales to spinners put through earlier in the season on a bearish view on the

Digitized by Google

market. On the first tender day of November, no dockets were issued. New York has shown a rather improved tone owing to unfavourable weather and the expectation that the next crop estimate will be somewhat smaller than the last one.

The demand from abroad has continued to be moderate for Ashmouni and rather poor for Sakellaridis considering the fact that we are now well into the new season. Spinners still find prices of Egyptian rather higher than those of the American staple cottons and other outsiders that can be used as substitutes, but the Egyptian Government, instead of facing the situation in the proper way and helping to expand the cultivation, reduce the cost of production and improve the quality by prohibiting the mixing of cotton of different growths in the villages, is using means which in all probability will result in the eventual further curtailment of the world's consumption of Egyptian cotton. It is buying Sakel on the spot market and it apparently intends to restrict the acreage under cotton for 1026 to one-third of the total cultivated land. The result of this will be to lift the price of Egyptian cotton too high compared to other cottons and so reduce the consumption still further.

Our opinion on the market remains unchanged; the position is still bearish, but prices will probably show some resistance to any further decline should there be, as is not unlikely in view of the very moderate purchases up to the present, any improvement in the trade demand. The week's receipts amount to 339,176 krs. against exports 189,286 krs.; the stock stands at 1,725,620 krs.

Spot: Minet el Bassal continues fairly active and sales amount to about 24,700 bales, of which we estimate 11,500 Sakel, 9,200 Uppers, 3,600 Zagora, 300 Pilion, and 100 White. The Egyptian Government have bought during the week about 1,900 bales Sakel from Fully Good Fair to about Good.

Sakel: has been in fair request and all styles have been dealt in. Spot differences are generally rather easier.

Ashmouni and Zagora: A fair business has been done in all grades. Spot differences are without much change with the exception of Good and above which have hardened somewhat.

Pilion: has been in moderate request. Spot differences are without much change but with an easier tendency.

Brown: is neglected and no business has been done. Spot differences are quotably dearer for the good grades and unchanged for the medium qualities.

White: A small business has been done at about last week's parities.

Crop 1925: The Alexandria General Produce Association estimates the crop at 8,000,000 kantars. This figure seems to us to be a little high and our opinion is that the crop will turn out about 7,800,000 kantars, of which 3,600,000 Sakel, 3,600,000 Uppers and Zagora, and 650,000 Pilion, White, etc.

The report of the Alexandria General Produce Association for October reads:

Lower Egypt. The suitable temperature experienced during the month of October has greatly helped the opening of the bolls. The yield per feddan for the two first pickings is on the whole superior to that obtained last year. The third picking, known as "Nili" will give better results than last year. The ginning yield continues superior to that of the previous crop.

Upper Egypt and Fayoum.—The temperature has been favourable for the last pickings. The yield per feddan is much superior to that obtained in previous years. The ginning yield is better than that of the 1924 crop. Taking into consideration all the information given us, and the increased acreage, we estimate the total crop to be about 8 million kantars.

The report of the Ministry of Agriculture for the month of October reads: "Weather conditions during October were very favourable. As a result many late bolls ripened rapidly before development of maximum pest attack; thus increasing yield expectations, especially in the later districts. The first picking has been completed in all parts with the exception of small areas in the north of the Delta. The second picking of Sakellaridis is general. The picking in Upper Egypt is about to terminate as well as the Seidi cotton cultivated in Lower Egypt. Cotton sticks are being uprooted everywhere for Shitwi cultivation.

THE BRITISH INDIA CORPORATION LTD. CAWNPORE :: INDIA

The British India Corporation, Ltd., comprises an extensive group of industrial concerns including the Cawnpore Woollen Mills, The New Egerton Woollen Mills, Cawnpore Cotton Mills, Cooper, Allen & Co., The North-West Tannery, The Empire Engineering Co., and the Nani Tal M.T. Co. These Firms, by pooling their resources and centralising control, form a corporation which is able to supply Government Depts., Railways, Police and Armies, with every form of woollen and cotton clothing, boots and all kinds of equipment of a quality and price which would not be possible for an individual undertaking.

Reference to the particulars below will give an idea of the Corporation's activities. Correspondence is invited from wholesale merchants, and may be addressed to the Corporation or direct to the Branches. Inquiries and applications for samples will receive immediate attention

LALIMLI PURE WOOL

Makers of the famous Lalimli Pure Wool Products. Manufactures include: Rugs, Blankets, Lohis (shawls), all classes of Knit goods, Flannels Tweeds, Serges, Worsteds, Broadcloths and Greatcoat Cloths. All requirements in Wool at lowest prices consistent with quality.

CAWNPORE WOOLLEN MILLS CO., CAWNPORE

Kakomi Cawnpore

These Mills produce the well-known Kakomi Cotton Goods.
The following articles are among their manufactures: Cotton Yarns, Twills, Table and Bed Linen of all kinds, Tents, Durries, etc.

CAWNPORE COTTON MILLS CO., CAWNPORE

COOPER, ALLEN AND COMPANY

This Company is one of the world's largest manufacturers of Army Boots, supplying the armies not only of India, but the world. Makers of all types of Boots, and every kind of Saddlery and Leather Equipment.

Everything in Leather.

COOPER, ALLEN & CO. CAWNPORE

Dhariwal

Manufacturers of Dhariwal "Long Life Wool Wear."

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

Queen Alexandra.

It is almost necessary to recall Tennyson's Ode of Welcome to be reminded that the Queen Mother was not a British-born Princess. Never was poet's appeal, "Come to us, love us, and make us your own," more literally fulfilled than in the way in which, as Princess of Wales and Queen, she identified herself with the people among whom she made her home. Queen Alexandra was happy in her generation, which under her lead—no less potent because it was unconscious—set itself to evolve that unique relationship which binds together Throne and Nation in this Empire of ours. For her contribution to that heritage—her choice of her own title as Queen Mother has served as a constant reminder of it—the nation has good reason to be grateful to her. Set as was her life's work in the domestic affairs of Great Britain, she had little opportunity to become known to other peoples, apart from the land of her birth. An Eastern tour with the Prince of Wales in 1868 included a stay in Egypt, and a homeward journey by way of Constantinople, the Crimea, and Athens. The Princess was in Greece again in 1899 on a longer visit to her brother, King George, and on one occasion was in Russia. The memory of these travels, in the light of all that has happened since, will, doubtless, bring home to the people of many countries the fact that monarchy as it has been developed in Great Britain is a plant that thrives nowhere else in just the same way.

The Mosul Dispute.

The controversy between Turkey and Great Britain over the Iraq frontier has been advanced a further stage by the decision of The Hague International Court of Justice. This body had been asked by the Council of the League of Nations to decide whether the decision to be taken by the Council in virtue of the second paragraph of Article 3 of the Treaty of Lausanne was an arbitral award, a recommendation or a simple mediation; also whether the decision had to be unanimous or could be taken by a majority, and whether the representatives of the interested parties should take part in the vote. The Court has ruled that the decision shall be binding on the parties concerned, and shall constitute a definite determination of the frontier between Turkey and Iraq; further, that the decision must be taken by a unanimous vote, the representatives of the parties taking part in the voting, but their votes not being counted in ascertaining whether there is unanimity. It is to be hoped that what The Hague Court gives with one hand will not prove to have been taken away by the other. That the decision of the Council should be binding is in keeping with common sense and the history of the controversy; but the obligation to achieve unanimity may enable the Council, if it be so minded, to avoid a decision regarding the frontier. Yet the Council's prompt action in regard to the Græco-Bulgarian incident encourages the belief that in the Mosul question also it will at last take its courage in both hands. It has been careful to have its authority established beyond challenge, and now it has only to deliver a verdict in accord with the principles that lie behind the formation of the League of Nations, a verdict that will make for the better government of the region in question, that will bring peace and progress to a troubled people, and that will enable both Turkey and Iraq each to mind its own business and to live in amity with one another.

Britain and Iraq.

The opening of Parliament has provided occasion for questions on the subject of Great Britain's commitments in regard to Iraq to be put to the Government. The first of these was an inquiry whether the Prime Minister could state the earliest date at which it would be open to Great Britain to divest itself of responsibility for the Government of Iraq under the terms of the Mandate it held from the League of Nations. Mr. Baldwin cited Article 5 in the decision of the Council of the League of Nations of September 27, 1924, which provided that, in the event of Iraq's

Digitized by Google

being admitted to the League of Nations the obligations assumed by His Majesty's Government (under the Mandate) will terminate. Realising that this was not quite the information that he had hoped to elicit, Sir Frederick Hall pressed Mr. Baldwin to say whether Great Britain was or was not "committed to a policy of practically policing and being responsible for Iraq for twenty-five years after the completion of the present undertaking." The Prime Minister replied that that matter would be considered by the Government, and, of course, the House would have an opportunity of expressing its views. Mr. J. H. Thomas inquired whether there were any new circumstances arising in connexion with the matter which would warrant a departure from the Prime Minister's "previously expressed views on the evacuation of Iraq in three years." Mr. Baldwin thought not, but refused to be catechised further on the subject in this way. It is to be hoped that this non-committal reply will not be quoted on future occasion as a further pledge on the part of the Government to evacuate Iraq in three years' time.

The Pessimist's Historic Role.

Unless we are mistaken, Mr. Baldwin's previously expressed views on the evacuation of Iraq in three years are non-existent. The reference is, presumably, to his speech as Chancellor of the Exchequer when commending the Iraq Treaty to the House of Commons. This Treaty was to last for four years after the ratification of peace with Turkey, and, before its termination, the Treaty stipulated that a further agreement should be concluded between the two countries. The word "evacuation" appears to be a marginal gloss on the Prime Minister's words, for which the evacuationists alone are responsible. Those who hold that Great Britain must stand by her pledged word and by the spirit of her undertakings to Iraq will console themselves by the fact that at practically every stage in her history when Great Britain has had to face responsibilites overseas there have been wiseacres who have warned her against the folly and danger of her course. Speaking at a dinner given by the China Association last week, the Secretary of State for the Colonies made this shrewd point in connexion with the development of Hongkong. When Great Britain occupied the island in 1841 there were not wanting those who pointed out that the place was too malarial for white habitation, that its harbour was useless and that its possession would be a source of danger to Britain. To-day it is, if nothing else, the largest seaport in the world, from the point of view of shipping tonnage. When it was a question of building a railway across Canada, the prototype of our Iraq evacuationists prophesied that the line would never earn enough to pay for the accidents that it would have. So too all over the world, and there is no special need for those who realise that Great Britain has still to stand by the Arabs, if she is to remain true to her word and to her position in the East, to be turned aside from a bounden duty by jaundiced pessimists or the yellow Press.

The Syrian Revolt.

As the insurgents have conveniently taken up a central position midway between Damascus and Tyre (es Sur), an encircling movement on the part of the French, operating from the former town and from Sidon, has been facilitated. The necessity for striking a blow without further delay and a desire to forestall a break in the weather may, however, cause them to move before they have enough troops for the country that has to be covered. Unless the insurgents are unduly elated over past successes, they should be more anxious to escape the French net than to try conclusions with a superior force, better equipped in every arm. Moreover, if their news service is efficient, they will probably want, when the time comes for negotiations, to deal direct with the new High Commissioner in preference to attempting to make their peace with officials of the old régime. It should help the cause of peace, if the Druses and the Nationalist insurgents in Syria realise that so far the good opinions formed in the first instance of the new appointment to the High Commissionership have been confirmed by the attitude of M. Henri de Jouvenel and his public utterances. He appears to be aiming at not only friendly co-operation between France and Great Britain in the Near and Middle East, but also "the unification of their conceptions of policy towards the Orient." If this latter aim can be achieved, it will be an important factor in the peaceful and progressive development of Western Asia.

Difficulties in Egypt.

Egypt is experiencing political troubles entirely of her own creation, which by no stretch of the imagination can be attributed to British interference. It is, no doubt, exceedingly difficult for the Government to steer the middle course which will satisfy the true constitutionalist and will at the same time prevent the Zaghloulists from making a farce of the administration of the country. Unfortunately the failure to retain the Liberal Constitutionalists in the Government has tended to make them ultra-critical, and it has been, apparently, an easy step from that stage to making common cause with the Wafd for the defence of the Constitution. Egypt's past history, it might have been thought, would have made the Government very chary of lending itself to any scheme of things that seemed to challenge comparison with the old days of Palace despotism, that were mainly responsible for the British occupation. The objection to Zaghloulism is that it makes political agitation directed against Great Britain the end-all and be-all of Egyptian statesmanship. Ziwar Pasha came forward, not to jettison Egypt's claims, but to put them in their proper place and in the meantime to carry on the routine of government on Egyptian lines. The wisest way of combating the impossible methods of Zaghloulism would have been gradually to group round the political nucleus which provided the first Ziwar Cabinet an ever-widening circle of sane Egyptian opinion. At one stage or another the Government seems to have allowed its attention to be distracted from this aim, and to have embarked on a policy of alienating its friends and so playing into the hands of the Zaghloulists.

The Yugoslav Coalition.

With the appointment of M. Stefan Raditch to a seat in the Cabinet the very notable coalition of parties in Yugoslavia is complete. Serbia is preponderatingly Radical, Croatia Raditchist. The fly in the Southern Slav ointment hitherto has been that the other senior partner in the federation did not wholly accept the Serbian basis of the federation. That difficulty has now been removed, and it is impossible to deny the personal triumph that results for the veteran Prime Minister, M. Pashitch. It may be that the policy that he has pursued in the past will have to be modified in some particulars to meet Croatian susceptibilities; on the other hand, responsibility for all that is done in the Government's name is now shared by Croat and Serb alike, and there will be less opportunity for contrasting the two peoples in matters of politics and statesmanship to the disadvantage of the Serb. It is not without significance that M. Raditch should have taken the portfolio of Education. It is the Ministry over which M. Pribitchevitch presided, and from which, in all probability, originated most of the measures directed against M. Raditch in his unregenerate days. By his appointment to this Ministry the Croat leader shows that, as coalitions go in Yugoslavia, he is as near achieving equality with M. Pashitch as anyone else has been able to do. Moreover, with his nephew in the Cabinet as Minister for Agriculture, M. Raditch appears to have struck his roots fairly deep in the political soil. Yugoslavia, however, is anxious for a practical, businesslike lead in public affairs; she will have little patience for mere oratorical fireworks. The Supplements that we are publishing monthly are evidence of the solid improvement that the country is making, and of its determination to go ahead still more. If M. Raditch aspires to lead his country on these lines, he may find that he will have to do greater violence to his past than M. Pashitch has to do to his Radical policy.

The Allies and Turkey.

M. de Jouvenel is contemplating a journey to Angora in the early days of his tenure of office in Syria. It is to be hoped that, before he goes there, the understanding

BRITAIN AND FRANCE IN WESTERN ASIA.

The visit to London last week of M. Henri de Jouvenel, High Commissioner-Designate for Syria, was very welcome evidence of a desire on the part of Great Britain and of France to arrive at such a co-operation in Western Asia as the wiser heads in both countries have always recognised to be essential, but the necessity for which has not always been apparent to subordinate agents actually at work in Asia Minor and in the Arab countries That the visit was brought about was mainly due to Mr. Austen Chamberlain, who, it may be recalled, so long ago as the date of M. Herriot's accession to the French Premiership, took the occasion to impress upon the French Government the desirability of a closer entente in the Near and Middle East. For his part, Mr. Herriot lost no time in sending orders in this sense to his representatives in the old Ottoman Empire. Unfortunately, however, the memories of, for instance, Colonel Mougin's anti-British activities at Angora, and of the anti-French activities of certain Transjordanian Sheikhs, took time to dispel themselves, so that it could hardly be said that the entente was as satisfactory as British and French Ministers in London and in Paris genuinely wished it to be. The attempt was being made, however, and in Syria, at any rate, it promised at one time fruitful results. There can be no question that General Weygand, when High Commissioner at Damascus, realised as no man before or after him realised, the necessity for full co-operation between Syria and Palestine, and, indeed, the essential unity of all the Arab lands under British and French mandates. But, unfortunately, it was seen fit by M. Herriot to recall General Weygand. Upon his supersession by General Sarrail, a different atmosphere began to prevail, if not in the highest quarters, at least in the sphere where junior officials can do so much to make or to prevent friction. It is no business of ours to comment upon General Sarrail's eleven months' administration in Syria, but if it was not mismanagement that brought the natives under his charge almost unanimously against him, then we do not know the meaning of the word. Let there be no *Schadenfreude*, however: even if it were only because France's interests are Britain's interests, France's potential enemies Britain's potential enemies. It is the duty of this country—all the more manifestly so, in view of the very gratifying declaration of M. de Jouvenel that it is his intention to restore order in Syria with the help of Syrians and always to work within the framework of the League of Nations—to assist France in her present difficulties, both actively in the direction of preventing the violation of the northern frontiers of Palestine and of Transjordan, and negatively in the direction of keeping within decent bounds the indignation of Arab Nationalists in its mandated territories. We are glad indeed to note that the Foreign Secretary has already sent to British agents in Western Asia a message on the subject of Anglo-French co-operation.

For what are the facts? Whether or not Turkey, whose friendship both Britain and France are, in face of sufficient difficulties, persistently trying to cultivate, desires ultimately to get back her Arab provinces—in our own consideration, she does not—two things are at once obvious from the British point of view. First, Palestine would need, were there no mandatory Power in Syria, to be held by a very much larger force than at present is adequate for its policing and protection; and secondly, the use of that section of the Berlin-Baghdad railway which runs between Maidan-Ekbez and Chobanbeg would, in the event of trouble with Turkey over the Mosul vilayet, become of prime importance. Whatever may be the case in Europe, in Western Asia France and Britain must to a certain extent share their friends and enemies. Now, apart from the question of the Holy Places, there is nothing in the Arab countries that profoundly dissociates French from British interest and sentiments. The problem of Syria, with its score of religions and sects, is admittedly different from the problem of Iraq or of Palestine, but in essentials, the tutelage of Arabs under their charge, their protection from external foes, and the prosperity of the particular countries, Allied interests are absolutely identical. Especially patent is the fact that both Iraq and Palestine need a secure Syria from the commercial point of view but there is no necessity to reiterate the trade aspect of the three countries: it is known to the most superficial student of the question. It is obvious that, if these Arab lands are to develop, as it is hoped they will develop, Anglo-French capital must, at any rate in the preliminary stages, be the main promoter of trade. That fact, one may mention as an example, has already been recognised in regard to the motor services that were until a month or two ago running between Beyrout, Damascus, and Baghdad.

The question arises, then, How is France to quell the revolt that has broken out against her rule? Can she rely on sufficient troops to subdue the Druses and the Moslem tribes that are more or less working in collusion with these hardy warriors? Will she, that is, an embittered and disillusioned Administration, finally impose terms upon an equally embittered enemy; or seeing that, if the campaign has, like that in Morocco, to carry on until the spring, it would probably entail the employment of white troops, will she endeavour to substitute diplomatic for military methods? It is impossible, until the new High Commissioner has actually studied the problem from close quarters, to tell; but if the temper of his preliminary utterances be considered, the probability seems that the coupling of a gift of wider autonomy with the display of more considerable and more reliable forces would induce the Druses to return to their historic fastnesses. And with the Druses enjoying a new independence, the rest of the Syrians would soon be content with the same political delights which they have so fleetingly tasted. But it is no part of the British critic to offer advice. If the freedom of the Iraqi Arab is remarked to the Frenchman in Syria, it is difficult enough to parry the thrust which is made by a reminder of the effectual denial of such freedom to the Palestinian Arab. Syria must solve her own problem. On two things, however, which might affect mandated territories in Arabia, we may in conclusion comment. If the French had possessed in their local Air Force such a ground organisation as Britain has at Baghdad, and in less degree at Ramleh and at Amman, the revolt of the Druses could hardly have spread outside the Jebel Druse. This is a point, indeed, which we trust will never have to be proved; but it is worth remembering. As for the threat, which has been given wide publicity, that behind the Syrian Moslems are countless hordes of Wahhabis, it is baseless, and is sufficiently disproved by the recent Treaty which Sir Gilbert Clayton made with Sultan Ibn Saoud on the subject of the frontiers of Nejd with Iraq and Transjordan. No; France's problem in Syria is really self-contained, and if she can solve it in time, the serious repercussions in the rest of Arabia that have been feared may yet be avoided.

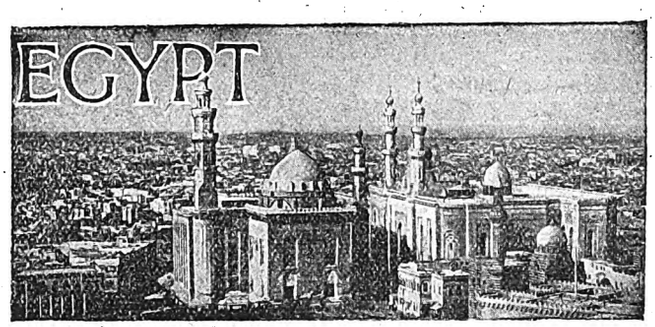
The Near and Middle East*

From Our Own Correspondents.



Cairo, November 15.

The Premier's Return.

A return of interest to political life as the result of the homecoming of the Prime Minister on Monday last had been expected, and has materialised. If the Premier has not yet himself resigned or made changes in the distribution of portfolios, it seems that the latter course, if not the former, is likely to be adopted in the very near future. At the time of the break-up of the Coalition, I mentioned the regret felt by everyone who desires a continuance of the peaceful atmosphere which marked the early months of this year at the resignation of Ismail Sidky Pasha, Minister of the Interior. From a purely British point of view there are many Ministers and ex-Ministers more *sympathique* than Sidky Pasha, for he cannot be described as in any way pro-British. Nevertheless, his great ability cannot be denied, and, although he enjoys no sort of general popularity with his fellow countrymen, his prestige is tremendous. Very largely to him is due credit for having kept the country quiet, the students at work and subversive politicians cowed during difficult months when the undoubtedly arbitrary and unconstitutional acts of the Government might, with a less cool head and firm hand in the Ministry of the Interior, have led to serious disturbances.

Effect of Sidky Pasha's Departure.

Almost from the moment of Sidky Pasha's departure there could be felt a change in the atmosphere, and trouble-makers who had lain low for months began to bob up again and be seen and heard. The Ministry's policy began to change from one of quiet but firm control into something that seemed like deliberate provocation. On the day of the new High Commissioner's arrival troops were sent to surround Zaghloul Pasha's house and there they have since remained, for no apparent reason and serving chiefly to irritate and stir to activity the old Wafd leader who, for nearly six months previously, had scarcely been seen or heard by anyone but his family, but who, now that his residence is being treated as though it were an enemy stronghold, is beginning to bring his own guns into action.

Governmental Ineptness.

The ill-considered Political Associations' Law which has encountered such violent opposition that, although it has been issued as a decree, over the signature of King Fuad, has not yet been made operative by publication in the *Journal Officiel*, and probably will never now, in its original form, be given the force of law, has served to unite the forces of opposition into a combined whole, pledged to refuse to carry out the law, should it be put into action, and to action and to defy the Government to do its worst. The obvious reluctance of the Government to take up the challenge has not increased the Ministry's prestige.

Lastly, forbidding the Nationalist and Zaghloulist Parties to hold political meetings has infuriated the Government's opponents, and on Friday evening led to a very ugly encounter between the police and members of the Zaghloulist Party, the latter refusing to obey the order of the authorities and, after an affray in which both policemen and politicians were hurt, forcing their way into the Party's headquarters and holding their meeting in defiance of the authorities.

Nashaat Pasha.

All these happenings combine to produce a spirit of unrest and the Opposition, encouraged by its recent partial successes, might at any moment break out into more violent activities. The anti-Government Press indulges in criticism of an extraordinary violence, directed not so much against the Government as such, but through the Government against the Ittehad Party and its creator and controller, Hassan Nashaat Pasha, the Director of the Royal Cabinet. In his recent speeches Abdel Aziz Fahmy Pasha, ex-Minister of Justice, has declared openly what has been known to everyone for long past, though nobody hitherto has had the courage to state the facts with such precision, that the present Government is completely subservient to Nashaat Pasha, who exercises absolute control over at least three Ministries and has a supervising influence over the remainder. The Ittehad Party is simply a means to an end, and recent revelations of the manner in which mudirs and provincial officials are utilised for recruiting support for the party have provided the Opposition with further ammunition for denouncing the Government and its hidden controller.

Nashaat Pasha is so near the Throne that it is impossible to regard the torrential abuse now showered from all sides upon him as being directed at him alone, and there are other signs showing how easily the present position might develop into a distinctly dangerous one. Last autumn it was held as one of the most heinous of Zaghloul Pasha's crimes that, at the time of a Ministerial crisis, when Zagloul Pasha was at the Palace insisting upon the dismissal of Nashaat Pasha, students gathered in front of the courtyard of Abdin and shouted "Saad or Revolution." But now the newspapers of all three anti-Government parties use the word revolution with the greatest freedom, not only in the text of political articles, but in huge banner headlines. An interesting commentary on popular opinion is provided by the popularity of a doggerel song, doubtless composed and distributed in broadsheet fashion at the expense of one of the Opposition Parties, of which the first two lines, freely translated, are:—

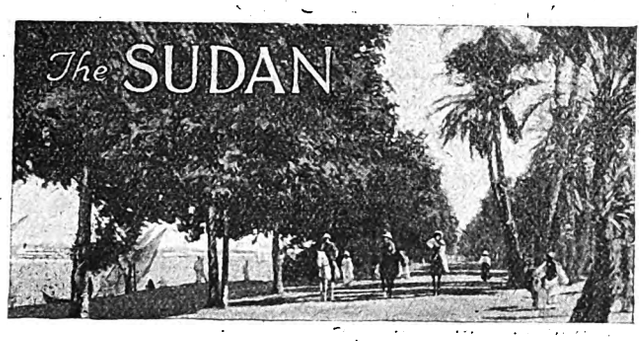
> "Do you know the party of Ittehad—
> That is making Cairo like Petrograd?"

Without wishing to be in any way alarmist, it is certainly true to say that the present position gives rise to real anxiety for the near future. Once again, as a year ago, the storm centre is Nashaat Pasha, who last year was saved from a crashing fall by the murder of the

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Palestine, Iraq, and Persia.

Digitized by Google

Sirdar, resulting in Zaghloul's going into the wilderness instead of Nashaat's doing so. What it is at which Nashaat Pasha is aiming it is difficult to say. His objects may be entirely patriotic and in the country's best interests, but there is no doubt about his methods being utterly inconsistent with modern times and ideas. For that reason he is a constant embarrassment to successive Governments, and there is no doubt that he will have to go if any sort of political stability is to be attained. And, indeed, it seems now that it will not be long before he does go, for there is growing up in circles which have hitherto defended as inevitable recent administrative methods a realisation that very dangerous playing with fire is going on.



Khartoum, November 6.

Khartoum To-day.

Although irrigation and the development of cotton-growing have focussed a considerable amount of attention on the Sudan of late, it seems extremely doubtful whether many people, apart from actual residents, realise how rapidly the capital has extended during the past few years. New and well-lighted streets of attractive houses have spread far beyond the farthest limits of the city of ten years ago. The old steam trams (which incidentally suffered a minor accident a few days back), are to be replaced by a frequent service of modern electric cars, no small boon to a population that has at present to rely on an hourly service for communication between Khartoum, Khartoum North, and Omdurman. And a second great bridge is to be thrown from near the Moghren to Omdurman, across the White Nile.

Ignorance on the Sudan.

They tell a story in Khartoum of the representative of a British firm who journeyed here from Cairo. The firm is one whose name is a household word, and at one time or another it must have had representatives in nearly every city of importance in both old and new worlds. This particular representative reported his arrival by cable, only to receive in reply a most indignant query as to how and why he had wasted four days on a journey that should only have taken one. There is, unfortunately, no record extant of the recipient's comments on this, but the story is useful in illustrating the amazing lack of knowledge at home of the conditions prevailing here.

Undoubtedly one of the main causes—and one that has been strongly commented on in the local Press—is the habit of appointing the Egyptian agent of a firm, agent for the Sudan also. With the best will in the world, such an agent can pay only fleeting visits to the country, and then probably only to the capital, and he must perforce find it well-nigh impossible to keep in touch with local conditions. One consequence of this appears to be a prevailing impression that the Sudan is a smallish province in Upper Egypt, instead of a country of over a million square miles area, with its capital well towards its northern confines. And although the Railways Department has, in face of almost incredible difficulties, established one of the best organised and equipped systems possible, it cannot be too strongly emphasised that Khartoum is four days by express train and steamer from Cairo, and 36 hours from Port Sudan. Until that fact is thoroughly realised, merchants here are bound to meet terms and conditions which often render their efforts to trade with Great Britain nugatory.

A German's Impressions of the Sudan.

At a time when the Sudan is undoubtedly on the verge of more and more rapid development and progress, the opinions of a leading representative of an important German firm are not without interest, and two points in his conversation stand out as worthy of record. The first was his surprise at the perfection of the railway system, which he considered without parallel in Africa. The second was what he described as the compactness of organisation of the country, and he expressed admiration for a system which could dovetail within so small a compass all that was necessary for the administration and development of the Sudan. On this latter point he was most emphatic.

Airways.

"Transportation is civilisation," said Mr. Rudyard Kipling, some years ago now; and there can be little doubt that modern experience all goes to prove this very true indeed. The preliminary agreement for an experimental air mail from Khartoum southwards to Rejaf and on to Kisumu has been signed. On October 28 the R.A.F. flight of three aeroplanes from Helouan arrived *en route* for Kano, Nigeria, leaving at dawn for El Obeid and El Fasher. And now we are awaiting the arrival of Sir Sefton Brancker, with Mr. Alan Cobham as pilot, on his way to the Cape. The experiences of the South African pilot who made this trip, as well as those of his less fortunate rivals who, for one reason or another, failed to complete the journey, some six years ago, demonstrate that it is a formidable task that Mr. Cobham has before him, but the resultant gain in information should prove invaluable. A fast passenger and mail service both South and North from Khartoum would be of inestimable benefit to the country, and it may be that the day when we shall be able to reach England in 96 hours or less is much nearer than the pessimists would have us believe.

The Church at Port Sudan.

An appeal has recently been published to awaken the interest of the British community in the question of erecting a stone building to replace the present wooden Church at Port Sudan. A site has been acquired, and it only needs the support of those who should be most interested, for definite plans to be adopted. In face of the example set by other communities, it does not seem probable that this support will be lacking.

Sofia, November 18.

The Rumbold Commission.

After taking cognisance of the Allied Military Attachés' report at Belgrade, the League of Nations Inquiry Commission proceeded by special train to the scene of the recent Græco-Bulgarian dispute. The Commission established its headquarters at Demir-Hissar, and on November 13 entered Bulgaria. They were met on the frontier by a Bulgarian delegation which placed itself at the Commission's disposal. The latter divided itself up into three groups and immediately set off to visit the territory occupied by the Greeks. Inquiries were made regarding the damage and looting alleged to have been committed, and the peasantry were questioned as to the losses they had sustained.

The Commission refused to make any statements whatsoever to the Press, and said that it was bound to secrecy until its report was in the hands of the League's Council, which meets at Geneva on December 12. It is thus almost impossible to know what was the result of its investigation, but it is believed that the Commission definitely established that a certain amount of damage had been inflicted by the Greeks. It is reported that Bulgaria is claiming 31 million levas, equal to about £50,000, as compensation for the material losses of its peasantry. This sum does not include indemnities for the families of peasants who were killed and wounded during the hostilities.

Several amusing incidents occurred during the Commission's inquiry. At one village the Bulgarians had accused the Greeks of driving off a number of cows. The Greeks denied this, saying that the Bulgarians had shifted the animals in question from one village to another with the sole idea of obtaining compensation. The Commission went to a village in order personally to investigate these charges. They found it almost impossible to say which story was correct; finally someone made the ingenious suggestion that the cows themselves could decide the question. So the cows were left to themselves until the evening with the object of seeing where they would return. Eventually they wended their way to the village to which the Bulgarians claimed they belonged, and it was decided that the Bulgarians were right!

On November 16 the Commission left for Athens, where it will spend three or four days before coming to Sofia. Afterwards it will return to Geneva in order to prepare its report. At Athens and Sofia the Commission is expected to inquire into the question of *komitajis*. Greece alleges that her frontier is continually being disturbed by *komitaji* bands operating from Bulgaria. Bulgaria denies this and points out that the Greek Government has made only one protest during the last two years regarding this question. Meanwhile the only thing that can be said is that both Bulgarians and Greeks are definitely opposed to the creation of a demilitarised zone between their frontiers. They hold, and with reason, that such a zone would only lead to more *komitaji* trouble as the latter's bands would find such a strip of territory an ideal spot wherein to organise themselves. The Commission's report, is, of course, being awaited with great interest, but until its publication it would be unwise to make any prophecies concerning Greek or Bulgarian guilt.

A Cabinet Crisis.

A real Cabinet crisis has now developed, the position being that the members of the Democratic Entente (the governing party) demand that at least three Ministers resign and make way for others. M. Tsankoff, the Prime Minister, has at last agreed to his followers' demand, but has dropped the attitude that MM. Liaptcheff and Bouroff must themselves enter the Cabinet, as otherwise it is not worth while making any changes. MM. Liaptcheff and Bouroff are, however, unwilling to serve under M. Tsankoff, as they regard themselves as his eventual successors. There is no knowing how the crisis will develop, but until the League of Nations Inquiry Commission has come and gone it is improbable that any change will occur.

ROUMANIA.

Bucharest, November 11.

Roumanian Foreign Relations.

On November 5, M. Duca, Minister of Foreign Affairs, made a long speech in the Senate in continuation of the discussion of the speech from the throne. M. Duca spoke of the foreign relations of Roumania, and said that he had noted with great satisfaction during his attendance at the League of Nations meetings, that the prestige of Roumania had recently increased to a gratifying degree. He spoke of the policy of peace which it was Roumania's fixed intention to pursue consistently, and while fully appreciating its importance regretted that the Locarno Convention did not serve to remove the two disquieting factors in Roumania's foreign relations, viz., the attitude of Russia, and of "certain of the conquered nations" who, he said, harboured a strong desire for revenge. He again emphasized the fact that Roumania was ready to resume diplomatic relations with Russia as soon as the latter had formally recognised the frontiers given to her by the Peace Treaties, and also that she was prepared to sign a pact of non-aggression as far as Russia was concerned.

With regard to the Minorities M. Duca reminded the minority populations that no other Government was disposed to treat them with so much consideration as was that of the Liberals, who fully recognised that it was in the best interests of the country to establish the friendliest possible relations between these minorities and the Government and native population of the country. He also reminded them that rights could not be enjoyed without involving duties also, and he admonished them to loyalty and urged them to play their part in bringing about a better understanding.

The Patriarchate of Hungro-Wallachia.

An interesting historical even took place on November 1, when the Metropolitan Archbishop of Bucharest was elected Patriarch of Hungro-Wallachia. During the last spring's session the Holy Synod and National Assemblies raised to the status of Patriarchate the Archbishopric of Hungro-Wallachia, and it was with a most impressive ceremony that the Archbishop of Bucharest, Miron Cristea, was invested with his new title. The ceremony

of investiture was attended by delegates from almost all the Orthodox Churches of the East: from the Patriarch of Jerusalem, of Constantinople, and from the Bulgarian Russian, Polish and Greek Churches, the delegates in each case having the rank of Metropolitan. The Hungro-Wallachian Archbishopric of Bucharest was created in 1359 by Alexander Basarab Vaevod. There are no precise records of the first holders of this office, but two or three Metropolitans are mentioned for the Principality of Wallachia alone, which shows how large was the number of Christians and how well the Church was organised in those days. The Metropolitan of Bucharest was the representative of the Œcumenical Patriarch of Constantinople for all the Christians beyond the Carpathians. All the Roumanian Bishops and Prelates of Transylvania were elected by him. The proceedings were as follows: on Saturday October 31, at 7 p.m., a religious ceremony at the Cathedral. At 8 a.m. on Sunday, November 1, another service, after which, the Metropolitan was conducted in a Royal carriage to the Palace. At 10.45 the King and Queen and Royal Family, attended by many Members of the Government, received His Holiness in the throne room, where the investiture took place. The new Patriarch expressed his thanks with some emotion, and in the course of his speech said: "Not only will the Roumanian Church have to form a whole corps of enlightened and educated prelates, and create and stimulate religious literature, in order to accomplish its task of religious education of the masses, but it will also have a vast philanthropic and humanitarian task to accomplish."

The King made a long speech in reply, in which he traced the history of the Roumanian Church through its various vicissitudes. After receiving the congratulations of the Royal Family, the new Patriarch walked to his residence, followed by an imposing procession of Churchmen in their magnificent robes. His Holiness was entertained to dinner in the evening by the King and Queen.

Miscellaneous News.

A bust of the late Queen Elizabeth was unveiled last week at the Blind Asylum founded by her late Majesty. The unveiling took place in the presence of the King and Queen, and the Prime Minister made a long speech in which he paid a tribute to the philanthropic activities of "Carmen Sylva."

Considerable interest and excitement has been caused by the passing of a law quite recently, permitting the installation by private persons, under certain defined conditions, of wireless telephones in their houses. As if by magic the shops were full of wireless sets within the following few days and a number of installations have already been made. There is, however, no public broadcasting station in Bucharest yet, so that a powerful apparatus is required that can pick up Vienna, Rome, and so on. It is hoped that by the beginning of next year broadcasting stations will be arranged in this country for the benefit of the public. There are strict rules (at least on paper) as to the types of apparatus that can be introduced into the country, and the approval of the G.P.O. is required before any set can be imported.

Money Orders can now be sent by post from Roumania abroad.

Grain exports are at a complete standstill owing to the huge quantities of grain exported by Russia recently at very low prices.

GREECE.

Athens, November 11.

Municipal Elections.

Municipal elections took place throughout Greece on Sunday, October 25. Being held on party lines and in the principal towns, these elections of *demarchs*, or mayors, are regarded as indications of political feeling in the country, and on this occasion the Royalists made great efforts to secure the return of their candidates. The results were as follows:—In 34 demes, the Republicans won 18 seats, Royalists 9, Communists 2, other parties 3. In two cases the political views of the elected candidate are not stated. While the Republicans express themselves satisfied with these results, they deplore—what cannot be disputed—that so many voters abstained. At Athens and Salonika, for example, only half the electorate voted, and in the latter place the election of a Labour candidate was due to the Republican vote being split. In point of fact the new mayor received only one-seventh of the votes of the total electorate and, of those who actually voted, one-third. He is not a Communist, but was elected on a combined vote of Communists and of a section of Jews and of refugees. The Government promptly met the situation with a decree that candidates must obtain one-fifth of the votes. The election of the Communist mayor at Xanthe, the centre of the tobacco industry, was annulled at the same time on the grounds that the public safety was endangered. At Missolonghi the Royalist candidate got in with a majority of one, but was unseated on a recount. What is almost unprecedented in Greece—in three places candidates were unopposed.

The Drachma.

The drachma rose suddenly at the beginning of the month, and on November 4 stood round 340 to the pound. Since then it has been falling, and is now about 365. A discreet silence was preserved in the Press about the sudden retirement of the Minister of Finance, which occurred about the same time.

Macedonia.

Interest in the frontier incident has never been so great in Greece itself as it seems to have been outside. The Government is criticised for making a diplomatic mistake in occupying Bulgarian territory and bombarding Petritch, instead of referring the case at once to the League. The incident should have one useful result, viz., to bring to the front the whole question of *komitajis*. This is a question which interests Yugoslavia more than Greece, because so far as Greek Macedonia is concerned the arrival of the refugees has made the question of an autonomous Macedonia obsolete. But the great majority of the inhabitants of South Serbia are still Macedonian in sentiment and in race, and so far the Serbians have made no headway with them. That they will eventually be assimilated there can be no doubt, but the process would probably be quicker if Belgrade adopted a more conciliatory attitude towards them. As it is, they are prevented from electing their own deputies, their newspapers are repressed, the numerous Uniates are obstructed by local officials in the practice of their religion, and a feeling of discontent is kept alive which the *komitajis* from the Bulgarian side do their best to encourage, but more with the idea of embarrassing Yugoslavia than of forwarding the ideal of autonomy—already much weakened by the behaviour of the Bulgars themselves in the occupied districts (especially around Prilep) during the War. The plantation of Croatian settlers should do much to improve the situation.

Modern Improvements.

While not all the schemes for the improvement and development of Greece can meet with the approval of those who prefer Greece as it was, one must acknowledge the progressive spirit and the desire to bring the country into line with modern ideas. The present Government recognises these requirements, and it is probably true that more has been accomplished in this direction in the four months during which it has been in office than in any

Digitized by Google

corresponding length of time in modern Greek history. In Athens itself, two obvious defects are about to be remedied —absence of water for watering the streets and shortage of post-offices. During the last few years there have been only two post-offices to serve the whole of Athens: seven branch offices are now to be opened.

The Government has decided to proceed at once with the construction of a railway between Thessaly and Epirus. The present line from Volo to Kalabáka will be extended to Yánina, the capital of Epirus, through the famous pass of Métsovo, once the highway between Constantinople and the West. English travellers who visited Turkey at the beginning of the last century used to begin their tour with a visit to Ali Pasha at Yánina, and then, crossing the pass, descended into the Thessalian plain of Kalabáka, where they would visit the celebrated Metéaar monasteries. Should the new railway be continued beyond Yánina to the sea, this historic route may once again become a highway. As it is, Yánina, one of the most beautiful places in Greece, and Epirus whose population are perhaps the most intelligent and patriotic, are almost completely cut off from the rest of the country, and remain undeveloped and, it must be added, unspoilt.

Recovery of Hygia's Head.

An archæological sensation has been the recovery of the head of the statue of the goddess Hygia, one of the figures from the pediment of the temple of Athena Aléa, at Tegea, excavated by the French in 1902. This famous head, an excellent example of fourth century work, was stolen from the Tegea museum nine years ago. Various people were arrested and a schoolmaster had actually been in prison for the last sixteen months in connection with the theft. It seems that he received the head, as a dowry, from a peasant whose cousin he married, but was unable to dispose of it. A joint expedition of police and archæologists went in the dead of night to the remote Arcadian village, where they recovered the head from its hiding-place below the floor of a barn, and it is now in Athens.

CYPRUS.

Nicosia, November 10.

The New Council.

The new Legislative Assembly was opened by the Governor, Sir Malcolm Stevenson, on November 6, with all the ceremony observed on such occasions. After the opening speech His Excellency left the Council, and his speech was translated into Turkish and Greek. A Sub-Committee was appointed, with the Chief Secretary, to consider the reply.

Little mention is made of the proceedings in the Press. The speech is described as dry and disappointing. Dissatisfaction is expressed that in translating the Governor's speech precedence is given to the Turkish language (as has always hitherto been the custom), since four-fifths of the population are Greeks. Appeals have been lodged against the validity of elections in several divisions, on account of alleged bribery, undue influence, intimidation, acceptance of the votes of persons who were not qualified electors, and so on. Petitions for annulment are said to be pending in other cases.

SCHOOL OF ORIENTAL STUDIES. LONDON INSTITUTION
(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

The Forests of Cyprus.

It is satisfactory to note that great praise is universally given to the Principal Forest Officer, Dr. Unwin, for the zeal and ability with which he carries out the duties of his office. Following his practice in late years, he has again organised an exhibition of the numerous articles which are now manufactured out of island timbers. The exhibits this year, which are unusually abundant, are of remarkable interest. The Governor has inspected them, and large numbers of Cypriots have shown great interest in them. The villager is at last realising more and more the inestimable value of the forests, which before the British occupation were sacrified to such insane methods of destruction. This is very important, as likely to diminish wanton and spiteful damage which has hitherto too often prevailed; while the prospects of reafforestation, in which the P.F.O. takes the keenest interest, are proportionately increased.

The Mail Steamers.

It is said that the Khedivial S.S. Company will not renew their contract for a mail service, even at three crossings a month, except at a highly increased subsidy—of £14,000—and the opinion prevails that the Egyptian Government should be invited to combine, and pay at least half of the sum to be demanded. No doubt Egypt benefits very considerably from the service. The steamers should of course return to a weekly, instead of a tri-monthly service. Should the Khedivial liners cease, arrangements would presumably have to be entered into with some other company, probably not British, for steamers of smaller tonnage; and Cyprus would suffer from a yet more retrograde state of things just when there seemed to be a hope of rather brighter prospects.

Hospital for Consumptives.

The new Hospital for Consumptives, which has been constructed a few miles from Nicosia, will shortly be ready for use.

THE JEWISH NATIONAL HOME.

We have received from the Zionist Organisation a Memorandum, submitted to the Secretary-General of the League of Nations for the information of the Permanent Mandates Commission, on the development of the Jewish National Home, 1924-1925. It is divided into six sections: immigration, agricultural colonisation, urban development, industry, public health, and education. Some striking figures are given. In 1924, for instance, 12,856 Jewish immigrants settled in Palestine and in the first half of this year, about 15,000 Jews. In all, 55,000 Jews have settled in Palestine since the British occupation up to May 31, 1925. On the land 2,800 Jews have been settled since the War, making in all 23,000, or 21 per cent. of the Jewish population. And in the other departments the figures are impressive.

The Memorandum has been prepared owing to the disliking, by the Zionist Organisation, of certain details in the report submitted by the Permanent Mandates Commission to the Council of the League of Nations in December, 1924—details which, in its view, "did less than justice to the Jewish immigrants who had settled in Palestine during the period under review." It is obvious, however, that it is during the last eighteen months that the Jewish National Home has made such enormous, and possibly unexpected, strides.

"THE WORLD'S ART SERVICE."

Messrs. Raphael Tuck and Son, Ltd., are again at their best in providing messages of greeting for Christmas. Christmas cards and pictures, books, bon appétit and lacette paperware, calendars, puzzles—these and many other things have been designed to delight the artistic eye of both young and old.

THE HOSTILITIES IN THE HEJAZ.

The British Prime Minister has sent the following letter to ex-King Hussein:—

27th October, 1925.

Your Majesty.

I have to thank Your Majesty for your letter of the 22nd of August, which I have carefully considered in conjunction with those members of His Majesty's Government who are concerned with Arabian affairs.

I much regret that anxiety should have been caused to Your Majesty's friends by reports appearing in the Egptian Press that you are being detained in Cyprus as a prisoner of war. As Your Majesty points out, these reports are untrue and it has never been the intention of His Majesty's Government that Your Majesty should be treated in any way other than as a private person who, on their invitation, took up his residence in Cyprus. When His Majesty's Government invited Your Majesty to leave Akaba they were considering only your own interests and those of the Arab race which, in their opinion, have been well served by Your Majesty's acceptance of Cyprus as a place of residence. They, therefore, consider that it is unnecessary to hold any inquiry into the circumstances in which Your Majesty left Akaba; their opinion is strengthened by the admission in Your Majesty's letter that Ma'an and Akaba were used for the concentration and transport of troops to be employed against the Sultan of Nejd which they can only regard as justifying their statement that Your Majesty and the Hejaz Government were engaged at both those places in activities against Nejd.

His Majesty's Government have considered the request that they should take any possible steps towards the termination of the present hostilities in the Hejaz. His Majesty King Ali recently made a similar request, and on the receipt of this appeal His Majesty's Government asked His Highness the Sultan of Nejd whether he would accept their good offices in an endeavour to reach a settlement of the differences between the Hejaz and the Nejd; but as His Highness replied that he was unable to accept such mediation, His Majesty's Government were regretfully compelled to refrain from any further attempt at intervention. Consequently, unless and until both parties spontaneously invite them to do so His Majesty's Government are unable to assist in the re-establishment of peace.

A later paragraph of Your Majesty's letter dealing with the circumstances in which you relinquished the throne of the Hejaz might, in the opinion of His Majesty's Government, convey to an uninformed reader the impression that the influence of His Majesty's Government was exerted in order to induce you to abdicate. Doubtless Your Majesty did not wish to give so erroneous an impression but, as your letter has already received a certain amount of publicity and may therefore give rise to misapprehension, His Majesty's Government think it advisable to state categorically that Your Majesty's action in abdicating was in no way influenced by them, and that this was a matter in which they were not concerned either directly or indirectly.

I am causing a copy of this letter to be sent to those newspapers which are known to have published Your Majesty's letter to which this is a reply.

I have the honour to be,

Your Majesty's obedient Servant,

(Sd.) STANLEY BALDWIN.

A POCKET ATLAS.

Messrs. George Newnes, Ltd., of Southampton Street, Strand, London, have issued a new revised edition of their "Handy Pocket Atlas and Gazetteer." (Price 2s. 6d.) It is a compact, well-printed little volume, that will serve many ordinary purposes for which it is not necessary to have recourse to a bulkier atlas. The gazetteer covers 80 pages with 4,600 entries, and some useful tables give the areas and populations of the countries of the world, and lists of the chief rivers, mountains, lakes, etc.

PERSEPOLIS.

The first of a series of five public lectures on his recent archæological researches in Persia was given at the Oriental School of Studies on November 20, by Professor Ernest Herzfeld, Sir Thomas Arnold being in the Chair. Professor Herzfeld's first lecture was upon Persepolis, the ruins of which wonderful city, constructed during the reigns of Darius and Xerxes, the first two kings of the Achæmenian Dynasty, he described with the aid of some magnificent photographs. The various royal palaces, winter and summer, the audience halls, the columns and terraces and gardens, and so on, were abundantly portrayed. Sculptures and inscriptions proved the diversity and the extent of the Persian Empire at that time—an Empire in which African people, Medes, Assyrians, and Indians were represented. Many of the more beautiful sculptures of this period, portraying the human form, were, he said, destroyed on the invasion of the Moslems, and also by a fanatical Persian King in the eighteenth century, but sufficient remained in Persepolis to show to posterity the height to which the art in marble then reached.

Some of Professor Herzfeld's conjectures and reasonings were most fascinating. He reconstructed, for instance, a temple that may have been a kind of Ziggurat, a shrine of Zoroastrianism, and he showed conclusively from decipherings that at one time the Persian Empire extended over the N.W. Frontier of India, through the Punjab and Sind even as far as Bombay and Delhi. He had found an inscription which proved that a Persian Minister chose to return from Persia to Kabul—upon which choice he commented with the fact that times had changed now!

In conclusion, Professor Herzfeld stated that there had been recently founded in Teheran a Committee for the preservation of ancient Persian monuments. The Persians were intensely proud of Persepolis, which indeed could boast art as good as anything that Greece had to show. And a nation which respected its ancient monuments always had some grain of hopefulness in it.

In subsequent discussions Professor Rapson remarked on the fact that numismatical evidence bore out in a striking degree Professor Herzfeld's discoveries at Persepolis, stating that what on the strength of numismatics had previously been guessed at, had been confirmed by his archæological records.

The remaining four lectures will be delivered next March.

NEWS IN BRIEF.

Mr. Morgenthau arrived in Athens at the end of last week.

A censorship has been instituted in Persia over all private telegrams.

Last Friday, the first anniversary of Sir Lee Stack's death, was commemorated by a service in St. Mary's Church, Cairo.

The total receipts of the Jewish National Fund in the Jewish calendar year of 5685 (September, 1924—August, 1925) amounted to £267,011.

Following the incident at the College of St. Jerome in Rome, when the Pope dismissed the Yugoslav Director, the Yugoslav Minister to the Vatican left for Belgrade to report to his Government, after appointing as Chargé d'Affaires M. Yovanovitch, whose appointment was, however, not acceptable to the Vatican. The Yugoslav Government is reported to have protested against the attitude of the Holy See in this matter.

The Times Basrah correspondent reported on November 21 that an explosion of gunpowder and ammunition at Ahwaz, Persia, had killed 70 soldiers. The ammunition, which had been confiscated in the Sheikh Mohammerah's trouble last summer, was being broken up when the explosion, the cause of which is unknown, occurred. The doctors of the Anglo-Persian Oil Company were stated to be giving every assistance.

Book Reviews and Notes.

A ROYAL PHILOSOPHER.

THE QUESTIONS OF KING MILINDA." Translated from the Pali by T. W. Rhys Davids. (Oxford University Press. 15s. net.)

This ancient Buddhistic treatise has a very curious history. It was written in Northern India soon after the beginning of the Christian Era, but disappeared for eighteen centuries from the land of its origin. In Ceylon, however, it survived in the guise of a Páli translation; and twenty-eight years ago five Sinhalese scholars published a version in their vernacular. The attention of the learned world was thus directed to the Páli text, and Professor Rhys Davids has rendered it in English, as Vol. XXXV. of Max Müller's "Sacred Books of the East." In a scholarly Introduction he identifies the author with a Bactrian King named Menander, who founded an Asiatic empire on the aftermath of Alexander's ephemeral conquests. The "Questions of King Milinda" deal with the doctrine and ethics of Primitive Buddhism in the form of a historical romance. Its hero is the reincarnation of a monkish contemporary of the Buddha who, by dint of merit, had acquired the faculty of solving difficult problems in each successive re-birth. When the story opens he is reigning over an extensive realm in North-Western India, his capital being a wealthy city yclept Ságala. In a remote hermitage there lives a sage named Nágasena, a reincarnation of the god Mahásena, who is deeply versed in Vedic lore. Hearing of his fame as a theologian, King Milinda resolves to enter the lists with him as a disputant, and sets out for Nágasena's abode, attended by 500 "Yonakas," *sc.*, "Ionians"—the Páli word for Bactrian Greeks—who serve as chorus in the ensuing controversy. In its long course Milinda poses a multitude of questions, embracing the entire theory of Buddhism, which Nágasena answers to his entire satisfaction.

As an illustration of the manner in which thought arises from sight through association, the sage remarks:—

> In the art of calculating by using the joints of the fingers as signs or marks: in that of arithmetic pure and simple: in that of estimating the yield of growing crops: and in the art of writing, O King, the beginner is clumsy. But after a certain time, with attention and practice, he becomes expert. Just so is it that, where sight arises thought by association springs up.

This dictum gives an interesting peep into the progress of arithmetic. When our author wrote, the old method of counting on the fingers was still in vogue, but the modern system was coming into general use. The esoteric character of Buddhism formed another subject of discussion; and Nágasena's opinion thereon is based on the Buddha's well-known utterance: "There is no such thing as the closed fist of a teacher who keeps something back." Professor Rhys Davids makes this dictum the text for a diatribe against the "Esoteric Buddhism" of our day:—

> Its tenets are perfectly accessible, are well known to all those who choose to study the books of Indian mysticism: and are Hindu, not Buddhist. . . . If one doctrine—more than any other—is distinctive of Buddhism, it is the ignoring in ethics of the time-honoured belief in a soul; that is in a separate creature inside the body, which flies out of it like a bird from a cage when the body dies. Yet the Theosophists who believe, I am told, in seven souls inside each human body (which would be worse according to true Buddhism than seven devils), still venture to call themselves Buddhists, and do not see the absurdity of their position!

Students who can appreciate the mingled subtlety and *naïveté* of King Milinda's treatise will probably agree with the learned translator in pronouncing it to be "the masterpiece of Indian prose, and indeed the best book of its class that had then been produced in any country."

F. H. S.

ISLAM CONDENSED.

"ISLAM AND ITS NEED." By Dr. W. Norman Leak. With foreword by Rev. S. M. Zwemer. (London: Marshall Brothers, 6d.)

The stream of Christian missionary books dealing with the subject of Islam appears to be increasing, for the literary method as a means to converting both Moslems and Christians is now well understood by the pioneers of either religion. Many of these books are extremely able and sympathetic efforts to illumine what to Christian missionaries appears to be darkness, but it is doubtful whether any book, before the publication of Dr. Leak's pamphlet, has attempted an exposition of the essentials of Islam and of the Christian's duty towards it within forty pages. The Rev. S. M. Zwemer praises it, indeed, as supplying "all that every Christian should know about Mohammedanism in tabloid form," but it is a little difficult to imagine that Christians would be ready to accept as comprehensive a similar attempt on the part of a Moslem to interpret Christianity.

However that may be, Dr. Leak essays his bold task with enthusiasm. He recounts the history of Islam, explains its distribution over the world, tabulates both the points of the belief of Islam and the practice of the Moslem religion, describes its ideals ("it is," he says, "an ever-standing menace to the world outside, for in spite of all the fair words of its nominal leaders to-day, Islam still stands definitely anti-Christian, challenging it at every point, and scorning it as well"), has a word on the personal characteristics of the Prophet's followers, recounts the history of the contact of Christianity with Islam, and includes chapters on Methods of Christian Approach and on the effect of the War upon Islam.

It is when explaining the difficulties under which the missionary in Moslem lands has to work that the author, who was Medical Officer in Nablus and Jaffa and a Medical Missionary in Arabia, is perhaps most convincing. He gets near the heart of the matter when, after describing how, though it may not be too difficult to convert Moslems, in, say, the Christian surroundings of a clean hospital, the convert returns to his own people and finds that in their surroundings Christianity "is not a religion which will work." Yet he believes that, owing to the decreasing by the War of the religious consciousness of Islam, the prospect of the conversion of Moslem is much improved. The impartial outsider may be permitted to doubt whether the conversion of materialistic Moslems is any easier than that of materialistic Christians, but that is a point only indirectly encountered by the author of this sincere and optimistic propaganda.

General Pangalos, the Greek Prime Minister, has invited the following leaders of parties to a conference to discuss the coming elections for the Greek Senate, for which the new Constitution makes provision:—MM. Kaphandaris, Michalakopoulos, Saphoulis, and Papanastasiou, all of whom have been Prime Ministers, and M. Rallis, and Generals Metaxas and Kondylis.

THE WEEK AT HOME.

London, Tuesday Morning.

Queen Alexandra.

Among all the solemn obsequies and observances that attended the death of the Queen Mother, there was nothing so impressive as the unanimous desire to chronicle her simple virtues. She was indeed universally loved. Our older and younger generations have of her different memories, the one emphasising the beauty of her personality, the other the kindness of her character. But on one point all her subjects are agreed: that she was a pious, generous, and gentle woman, the type whom all sections of English society at once and abidingly loved.

What she did, at a time when elsewhere Republican notions were fast gaining ground, for conserving the dignity of and fostering loyalty towards Royalty, may perhaps be left to history, but it is quite certain that no Lytton Strachey will ever arise to expose frailties and deficiencies that might have been overlooked by an indulgent nation. Queen Alexandra, the most gracious figure of our time, pretended to be no whit more than she was: and that was enough for the people who returned her love and now respect her memory.

The Debate on Locarno.

The debate in the House of Commons last week upon Locarno provided no surprises. It is true that both Mr. Ramsay McDonald and Mr. Lloyd George spoke in qualified terms against it, emphasising such points that Russia was still outside the League and that the Pact lacked the signatures of the Dominions, but when it came to the point only thirteen members voted against the Government.

It was inevitable that the Locarno Pact should be regarded as an attempt at the isolation of Soviet Russia, but the Foreign Secretary had little debating difficulty in disposing of this charge. Admittedly many of the Pact's supporters see with delight that the partial isolation of Russia will be one of the effects of Germany's entry into the League of Nations, but the Russians themselves have conveniently provided our Government with many excuses to explain this effect away.

It is, of course, a universal desire that Russia should wish to enter the League, for without her co-operation nothing very much in the matter of disarmament can be done. Of such an entry, however, there is at present no sign. In the meantime there is a good deal of talk of doubtful wisdom being indulged on the creating of a united Western Europe against Russia. Such commentary is valueless. Russia will never become a purely Asiatic power, and Europe will never enjoy through peace until she does so with the assent of Moscow. It is just as well to know where we are.

Liberals and their Funds.

As is well known, many wealthy men supported the Lloyd Georgian section of Liberals when that unfortunate Party was split into the Coalition and the Independent camps. Now after the Asquith-Lloyd George feud had been pronounced to be settled, money began to flow from the Lloyd George Fund into the general Liberal exchequer. The two funds, however, were never identified. And, as it now appears, with good reason.

For Mr. Lloyd George has suspended the transferring of any of his fund to the Liberal Million Fund until he knows the fate of his recent Land proposals at the hands of the forthcoming Liberal Conference. There has been much criticism of the Land Inquiry Committee's proposals by Liberals, so that it will be interesting, in the event of their being disowned by the main body of Liberals, to see what happens to the residue of the money belonging to the Lloyd George Liberals. Whether Liberals will be thus influenced in favour of the Welsh statesman owing to his potential pecuniary control remains to be seen: personally, I think too highly of them for that. The Liberal Headquarters have the funds at present at their disposal both audited and published from time to time; it would be a pity to have to add to them Mr. Lloyd George's private fund—for there would be little auditing and publishing after that. In other words, the Party would lose its independence.

The Miners' Politics.

Before the Liberal Commission that is now considering the problem of the mines, the mineowners' representative, Mr. Lee, last week had his say. He was cross-examined by Mr. Herbert Smith, and gave what politicians might call a very good account of himself. Briefly, his thesis was that the trouble now agitating the mining industry was largely the product of the miners themselves. He frankly attacked the miners' aims as being political, and gave the impression that if the industry were left alone by persons responsible for a wrecking policy all might be well.

Now it is impossible for one lacking expert knowledge to judge on the merits of this affair. But speaking from a broad psychological basis, one cannot easily believe that his continued desire on the part of the miners for change is simply indicative of the fact that there is no need for change. Equally, it is difficult to believe that even were the Royal Commission to confirm—which seems improbable—the Mining Association in its proposals, that the opposition tactics of the miners would cease. Whether, however, the suggestion that the miners themselves propose should be adopted is a quite different matter. For the political student there is little to choose between State Capitalism and Private Capitalism.

Mussolini and British Labour.

The more one studies democracies, the more one comes to doubt the existence, outside academical institutions, of genuine democrats. There is, it seems, no one, who is always prepared to say that what is one man's meat is another man's poison, that the only conceivable motto in life is Live and let live. Intolerance is undoubtedly the rule, or rather the attempted rule, of most people's existence—at least in the theoretical stage. When it comes to practice, it is another matter.

This remark is prompted by the reported intention, on the part of a section of the Labour Party, to boycott Signor Mussolini, if he comes next month to London. For the sake of the future of the Labour Party, one hopes that they will do nothing so foolish.

Going Back to Dicksee.

They will not let it rest—I mean the opponents of Epstein's Rima Memorial. They have prevailed upon the

Calcutta, Delhi, Simla, Lahore, Rawal Pindi and Murree.

Digitized by Google

poor *Morning Post*, torn between its loyalty to Mr. Baldwin, who recently unveiled the Hudson Memorial, and its present antagonism to Epstein, to publish a public protest in favour of the removal of the Memorial. And they have collected a list of signatories which truly is formidable enough: Academicians like Sir Frank Dicksee. Sir David Murray, and Mr. A. J. Munnings; men of artistic leanings like the Hon. John Collier, Sir Philip Burne-Jones and Mr. Avray Tipping; others so much in the public eye as Mr. E. F. Benson, Hon. Stephen Coleridge, and Sir Arthur Conan Doyle; and last, but greatest of all, Mr. Hilaire Belloc.

In demanding the removal of Rima, which they state is "by universal consent so repellent and even inappropriate in character," they refer to the authorities' "woeful lapse of judgment," and end by stating that "it would be a reproach to all concerned if future generations were allowed to imagine that this piece of artistic anarchy in any way reflected the true spirit of the age."

This is obviously going to create what is called a "first-class sensation," and is arousing opinion on the problem, in the extraordinarily happy words of the *Manchester Guardian*, of whether we are going back to Dicksee.

An Artistic Battle.

It is something, at any rate, that the dispute about Rima has been raised from the plane of green paint to that of the newspaper. Not that anything can finally be resolved by the printed word, but at least we are now on the old familiar battle ground where the merits of such things as the work of the Pre-Raphaelites, the sculpture of Gilbert, the paintings of Sir Frank Dicksee himself, were once disputed.

In my view, all the big guns are on the side of those who strive to maintain the Hudson Memorial in its place. For one thing, the Rima was approved in the most formal fashion and publicly unveiled by the Prime Minister. For another thing, the Memorial's supporters have with ease and speed produced a list of names very much more formidable than that published in the *Morning Post*. And lastly, public opinion, which, it may be remembered, is just the same as that which once hissed Wagner, which never heard of Hudson until the few discerning ones had made his merits known, and which is so used to being dully non-committal towards sculpture that it seizes upon the chance of pointing out that Epstein apparently does not measure his models with a foot-rule, does not, until the next generation, matter in the least.

As for "the true spirit of the age," of which the anti-Rima-ites speak, what on earth is it? Is it represented by the Academy? And "artistic anarchy"—is that not a term that might justly be applied, say, to Beethoven, whose later string quartets and piano sonatas are not even yet wholly comprehended? Here the whole trouble arises, of course, between the inability to distinguish between the violation of existing laws and the creation of fresh ones.

"He noblest lives and noblest dies who makes and keeps his self-made laws."

Whether Epstein is really a great artist or merely a pioneer, soon to be forgotten, in a new sculptural expression, it is perhaps wisest for Time to decide.

The Editor of "Wisden."

To the cricketer, "Wisden" is much more of a Bible than is even the "Book of Form" to the student of race-horses. And that this should be so was very largely due to Mr. Sydney Pardon, the Editor of "Wisden," who died last week. Mr. Pardon had a sufficient genius for many things other than Cricket: he had, in particular, a love of Music which appears to be so common a characteristic of our better writers on the game. He made a table of averages as exciting as a novel, the story of a Test Match more stirring than the Iliad. There is no one quite like him now writing. Perhaps Mr. Neville Cardus comes nearest.

ALTER EGO.

IBN SAOUD AND CENTRAL ARABIA.

On November 16, at 22, Eccleston Square, Lord Belhaven and Stenton, who, as Colonel R. E. A. Hamilton, was sometime political Agent at Koweit and was also a British representative at Riyadh, lectured to the Victoria League on "Ibn Saoud and Central Arabia," Sir Charles Bailey being in the Chair. He talked in discursive and illustrative fashion upon the character and the conquests of the Wahhabis, speculating on whether the present efforts of the Ikhwan would end as barrenly as did those of their forbears 114 years ago. Lord Belhaven's aim was, however, rather at general description than at political exposition, in which direction he went only so far as to say that he thought mediation between the Emir Ali of the Hejaz and the Sultan of Nejd quite out of the question, and also that Ibn Saoud would remain pro-British. And on the problem of frontiers in Central Arabia he stated that geographical limits were impossible: the only line was the tribal line, and that, of course, was constantly changing.

A remark which he quoted from one of Ibn Saoud's conversations with him is worth noting. The ruler of Nejd had asked Colonel Hamilton whether Europeans would remain in Arabia after the War, and said that if they did, they would in time find their settlements submerged by the periodically rising Arabs just as did the Arab villagers find their possessions occasionally submerged by the flooding *wadis*. On which the lecturer commented: "No doubt the Arabs would like to imitate their *wadis* if they were allowed to!"

NOTES OF THE WEEK.

(Continued from page 640.)

between Great Britain and France will have assumed a concrete shape. For the moment Britain is officially "the enemy" in Turkey, and it has been France's policy, under a mistaken idea of her interests in the East, to try to turn this situation to her advantage by the unedifying intrigues of special missions, official or semi-official, to Angora. If M. de Jouvenel can change all this, both France and Turkey will benefit. The Turk is too shrewd to be taken in by Mougins and others, although he will exploit them for all that they are worth to his policy of the moment. His real interests, however, are built on a more solid foundation. It would be a fine achievement, if the new High Commissioner for Syria could persuade the Turkish Government that it is much better to put up with what they have to bear at present, even if they do regard them as ills than to court mishaps in a variety of other directions. Turkey has been buoyed up in her dispute with Great Britain by the attitude of a section of the British Press and by the reflexion that the more embarrassment she causes the British Government the better pleased France will be. When M. de Jouvenel disillusions her on this point, she will be readier to listen to schemes for a Locarno Pact of the Middle East. !

PERSONAL AND GENERAL.

TO-DAY

November 26, 1925 (New Style).
November 13, 1925 (Old Style).
Jumada I., 10, 1344 A.H., of the Moslem Calendar.
Kislev 9, 5686, of the Jewish Calendar.

Colonel and Mrs. Stephenson R. Clarke have left Borde Hill on a visit to India.

Moukbil Bey, Counsellor to the Turkish Embassy, returned to London last week from Paris.

The Roumanian Minister and Madame Titulesco will return to London early next month from America.

Mr. Hilton Young, M.P., and the other members of the Indian Currency Commission last week arrived in Bombay from England.

The Duke of Connaught, as Grand Mark Master, has appointed Mr. Arthur Blake, District Grand Master for Burma and Mr. A. Y. G. Campbell, District Grand Master for Madras.

Sir William Beardsell and Sir John and Lady Kerr left London last Friday to join the China at Marseilles for Bombay. Sir Aurel Stein also embarked in the China at Marseilles for Bombay.

Dr. Dragutin Subotitch, Ph.D. (Munich), was appointed as from August 1, 1925, to the University Readership in Serbo-Croatian Language and Literature tenable at King's College, London.

Mme. Yovanovitch, wife of the Yugoslav Consul-General, left London last week for Monte Carlo. After proceeding to Italy she will return to London with Colonel Yovanovitch after Christmas.

After over a fortnight's stay, the Rev. P. T. B. Clayton (founder of Toc H) and the Rev. M. P. G. Leonard (chaplain of Toc H, Manchester) left Calcutta for Bombay on November 18, on the penultimate stage of their tour.

The King has, by Letters Patent, conferred the dignity of a Baron of the United Kingdom on the Right Honourable Sir George Ambrose Lloyd, G.C.S.I., G.C.I.E., D.S.O., and the heirs male of his body lawfully begotten, by the name, style, and title of Baron Lloyd, of Dolobran, in the country of Montgomery.

Owing to the death of Queen Alexandra the E.E.F. dinner, which was to have been held on November 24, with Field-Marshal Lord Allenby in the chair, has been postponed.

Sir Alfred Davies, Permanent Secretary to the Welsh Department of the Board of Education, and Lady Davies, sailed last Friday in the s.s. Lancashire on a visit to Egypt and Palestine. They expect to be away six months.

At the University of London, King's College, Strand, two Public Lectures will be delivered to-day (November 26) and on December 3, at 5.30 p.m., by M. Beza, on "The Story of the Creation and the Flood in Roumanian Folk-lore." Admission is free.

The Secretary of State for India has appointed General Sir Claud W. Jacob, K.C.B., K.C.S.I., K.C.M.G., to be Secretary in the Military Department, India Office, in succession to General Sir A. S. Cobbe, V.C., K.C.B., K.C.S.I., D.S.O., who has been appointed General Officer Commanding-in-Chief, Northern Command, India.

A public lecture will be delivered at the University of London, King's College, Strand, on December 2, at 5.30 p.m., by Dr. Edward Benesh (Foreign Minister of the Czecho-Slovak Republic since 1918). His subject will be "The Rôle of Small Nations in Europe Since the War," and the lecture, which is to be delivered in English, will be presided over by Viscount Cecil of Chelwood.

THE NEXT STEP.

Mr. Archbold's article on "The Next Step in India," in the *National Review* for November, gives expression to a point of view that is becoming increasingly vocal. The article argues that the Montagu-Chelmsford scheme has failed, and that something quite different is required for the next step in the Reforms. If "the leaders of the educated portion of so many millions of people" refuse to work the scheme, they must have some real reason for their refusal: and Mr. Archbold believes that the reason is that they did not and do not want it. In politics, he says, it is a fatal mistake to give people something they do not ask for: it is unreasonable to bother India with things that she has no real use for, and then to blame her for not liking them. The late Mr. C. R. Das said, shortly before his death, that what he wished to see established was not a democratic form of government, but bureaucracy: and this is what the Indian politician wants—a bureaucracy, largely Indian in composition, and one in which Indians will hold positions of real responsibility. Mr. Archbold thinks that nothing but a Federal scheme can meet the difficulty, and that it must be one in which the Native States, as well as British India, will be included.

If this is to be acepted as a sound view—and it is one that seems to be obtaining an increasing number of adherents—it is worth while to consider how it could best be brought about. The "Montford" scheme apparently looked forward to a time when the Englishman in India would be there merely in the capacity of an adviser, holding much the same position in regard to the Indian rulers of British India as the Political officers now hold in regard to the Indian rulers of Native States; but without the real power that the latter wield owing to the presence, in the background, of the British Government of India to whom they can appeal in case of necessity. A Federal Government that would include the Native States as well as British India, and that would give real responsibility to Indians in the latter as well as in the former, would necessarily be one whose component parts would be relatively small. About twenty years ago, a series of articles appeared in an Anglo-Indian periodical, advocating the Federation of India on the basis of a number of large Indian Native States: the author suggested the creation of new States after the model of the creation of the State of Mysore, under the rule of descendants of the original rulers, where they could be found, and, where they could not—or where they were unsuitable—by selection of suitable Indian noblemen as rulers. In addition, he advocated the union of existing Native States, which are in many cases too small to form separate entities in any reasonable scheme of Federation, under one ruler selected from among those of the States to be united: his general idea being that this should be a gradual, not an arbitrary, process: to be brought about by a reintroduction of something analogous to Dalhousie's doctrine of lapse—the lapse to be in favour of a neighbouring State of similar racial characteristics, instead of, as in the former case, in favour of the British Government. Apart from the inherent improbability of any such scheme being practically possible within any reasonable limit of time, this was very generally held to be a proposal tending in the wrong direction: modern ideas demanded that the goal ought to be to bring the Native States into line with British India, rather than the reverse.

Those who maintain that the "Montford" scheme is on the wrong lines, may reasonably be expected to suggest an alternative. If the "Native States" scheme is impracticable, what is the alternative? One that has been suggested is, that the existing Provinces of British India should be recast, into a smaller number of (in most cases) larger Provinces—perhaps five: Northern, Southern, Eastern, Western and Central, covering respectively the Punjab, with the Frontier Province, Baluchistan and Sind; Madras; Bengal with Bihar and Orissa, and Assam; Bombay, with part of the Madras Deccan and part of the Central Provinces; and the United Provinces, with part of the Central Provinces: and that each of these Provinces should be subdivided into a number of sub-Provinces, on a racial, linguistic and religious basis. That the Governments of the sub-Provinces should—with a few obvious exceptions—be mainly Indian, but should be subject to general control by the Provincial Governments, which should be partly British and partly Indian: and that the latter should, in turn, be subject to the control of the "Federal" Government of India, which should be preponderatingly, if not entirely, British. In this way, it is argued, the Indian would learn real responsibility, in a limited sphere with the idiosyncracies of which he was fully acquainted; while his British adviser—if it should be decided that he should have one—would, as in the case of the political officer in the Native States, have the authority of the Provincial Government behind him, in case he thought it necessary to interfere, to prevent mistakes or abuses. It is further argued that such a scheme would fully satisfy Indian politicians, in that it would give Indians the opportunity of "running their own show" on a comparatively small scale: and that the desire for the wider responsibility of participation in Provincial or Central Government would appeal to but few of them. For those to whom it did appeal, there would always be a certain number of administrative posts, at any rate in the Provincial Governments, to which they could aspire. And, finally, it is argued that the general continuity of policy, and the responsibility for the government of India as a whole, would rest in the hands of a strong Central Government, which would ensure stability and confidence: on it would fall the duty of adjusting such differences as might arise between Provinces, just as Provincial Governments would adjust differences arising between sub-Provinces. Moreover, the scheme would not involve any new departure, but only the extension of a method already in existence: that of the "sub-Province" of Sind, which is ruled by an official styled the "Commissioner in Sind" who, though under the orders of the Government of Bombay, enjoys, in fact, a very considerable measure of independence. As for the Native States, they would remain in direct relations with the Central Government; but the similarity between the constitutional form of rule, prevailing in the sub-Provinces of British India, and their own

Digitized by Google

form of personal rule, would be much greater than it now is, and would be likely to lead, in time, to an increasing tendency to assimilate the latter to the former. If articles, such as that by Mr. Archbold, lead to the examination of the possibilities of some such scheme as this, they will certainly serve a useful purpose, whatever the result of such an examination; for 1929 is not far off, and it is certain that an important step will have to be taken then; if, indeed, it is not taken earlier. In the light of the experience gained since the inception of the Reforms seven years ago, it seems almost equally certain that that step will be decisive: that the decision then reached will be one that, in its results, will be final. If there is to be any alteration in the lines along which the Reforms are to proceed, it must be decided on, for good or evil, within the next two or three years. The dictum that in politics, it is a fatal mistake to give people something that they do not ask for, is an unimpeachable one; though this, of course, is by no means the same thing as saying that it is good policy to give people everything that they do ask for. Parliament will have to make up its mind what it is that Indians really want: and see to it that what it is prepared to give is in consonance with, and not in opposition to, their real desires.

CURRENT TOPICS.

A Business Man's Impressions.

A recent issue of the *Glasgow Herald* contained an interesting account of the impressions of "a man of business visiting post-War India on his lawful occasions": one of a class less vocal than that which ordinarily presents its impressions of India to the public. As the writer says, such a man does not go there with the express purpose of forming views or collecting opinions; but, as he goes about his business, he comes up against facts, and cannot help forming impressions. The things that seem to have struck him most are, the small extent to which Government interferes in the life and business of the ordinary citizen, whose spirit remains strongly individualistic while the theory of government becomes more and more Socialistic: the total absence of even the smallest germs of national life in a congeries of peoples where "a Simla hillman differs as much from a Madrasi Brahman as a Montenegrin shepherd from a London bank clerk," and where a Hindu philosopher will discourse on the profoundest mysteries of metaphysics while, in a neighbouring street, a humbler devotee acquires merit by rolling sideways round the outskirts of a temple: the curtailment of official pomp and circumstance which to-day results in the Collector "driving himselfe about in a dingy American automobile" instead of touring his district "at the head of a retinue of horses, elephants or camels": a realisation of the truth of Mr. Lloyd George's statement that the British element in the Indian Civil Service is the steel framework of Indian Government—"whenever there is a difficult job to be done, an Englishman is called upon, almost by common consent, to do it"—while the result of increasing the proportion of Indians in the Service has been "an indubitable deterioration in the general standard of administration": and the fact that the aim of helping Indians to govern themselves means, to different people, two entirely different things—to well-meaning folk in England it means the gradual introduction of representative institutions; while, to the average educated Indian, "it is not unfair to say that its most important aspect is the admission of Indians to a share in, and eventually to the monopoly of, the power and emoluments of Government." or that he is more interested in the prospects, offered by the Reforms, of place and its perquisites for himself or his family, than in their power to improve the lot of the people of India.

The British politician on a cold weather tour generally seeks and meets Indian politicians. The Englishman who visits India on business comes into contact with the large, important and growing middle class of business and professional men, on whom the future prosperity and progress of Indian greatly depend. Considering that this is the very class from which most of the politicians are drawn, the writer was surprised to find how little interest the individuals, whom he met, appeared to take in politics. Their attitude of mind seemed to be that "the politician was a rather dangerous kind of pet of the British Government, which had an amiable weakness for playing with him, but could be trusted to see that he did not break his chain and become a serious nuisance to his neighbours. It is not their business to interfere, and the instinct, inherited through centuries, is to leave such matters for the Government to deal with." Large quantities of Indian Government stock are now held by the middle class, and the writer suggests that not a bad test of their real views on any measure of political reform would be to watch the effect of its enactment on the prices of such stocks. His general conclusion is that, though the converse is broadly true, it would be untrue to say that no Indian politician has an eye for anything but his own advantage, or that there is no popular sentiment against British rule. Racial antipathy does exist, and is fostered by all the arts of the mob-orator and the pamphleteer. When the simple Indian peasant is constantly regaled, by politicians who seem to him endowed with profound education and high social standing, with virulent abuse of the Englishman, some of the mud is bound to stick. It is impossible, and it would be useless, for the English official or merchant to go on the stump in a campaign of contradiction: they know that such things must be, and that the true aims of the agitators do not come from the heart of the people. It is their duty to disregard them unless they become dangerous, and then to suppress them.

These impressions coincide, in a remarkable degree, with the view generally held, and voiced, by thoughtful and unprejudiced commentators on the present state of affairs in India: and the testimony of a business man who, as the writer says, belongs to a class that is seldom vocal, is valuable evidence in favour of its accuracy. Mr. Lloyd George's speech about the "steel frame" aroused strong resentment among Indian politicians; but their objection to it lay not so much in the use of the phrase itself as in the implication, which they read into it, that it was to be permanent—that, at no future period, would it be possible to imagine an India that could be governed except through its support. With negligible exceptions, all shades of opinion look forward to the time when India will stand alone; but, while that time is being worked up to, each individual part of the "steel frame," as it grows thinner, must grow stronger. In the process, even "the dingy American automobile" can play its part, though its advent is not an unmixed blessing. As work grows more exacting, so does the necessity for rapid movement increase, even at the loss of some of the prestige that the old-time "retinue" advertised: and a busy official can now cover distances that, a generation ago, were unthinkable. But it must be remembered that the motor car is useless except on a decent road: and its general use tends to reduce to a minimum the intercourse of the official with the most important part of his clientele—the peasant who lives in the small villages at some distance from any main road. Nowadays, if the inhabitants of such a village wish to interview a superior officer, they have to journey to a main road and take their chance of meeting him there: an expedient which is of much less value, to both parties, than the old-time method of personal visits to the peasants in their own villages.

Swarajist Dissensions.

The acceptance of office under Government by the Central Provinces Swarajist, Mr. Tambe, has brought to a head the revolt against the official policy of the Swaraj Party which has long been smouldering among the rank and file. The division between the leaders of the All-India party, who stood for "non-co-operation within the Councils"—opposition to all Government measures, good, bad, or indifferent, and support to all anti-Government resolutions, with a similar breadth of qualification—and some of the Provincial leaders, who advocated "responsive co-operation"—the consideration of, and support or opposition to, all measures on their merits, irrespective of

Digitized by Google

whether they were promoted by Government or not—has been growing more marked for some considerable time past: and Mr. Tambe's action has been the spark that has fired the tow. Mr. Jayakar and Mr. Kelkar, the leaders of the Swarajists in the "Congress" Provinces of Bombay City and "Maharashtra" respectively, have resigned from the Executive Committee of the Party, on the ground that Pandit Motilal Nehru, the President, is openly preaching against the doctrine of "responsive co-operation" while insisting on their silence. Their resignation is intended to give them freedom to reply. Two important Mohammedan members of the Party have also resigned; though, in their case, the claims of business and failure of health are the reasons alleged, and differences of political opinion have not been mentioned, thoug they are generally believed to exist: and a meeting of Berar Swarajists, though condemning Mr. Tambe's action, has passed a resolution urging a change of Swarajist policy to "responsive co-operation."

One of the main complaints made against Mr. Tambe by the Swarajist newspaper is that he was an entirely undistinguished member of the Party, who owed his political existence entirely to the fact that he had adhered to it, and would otherwise never have had the chance of achieving the distinction to which he has now attained. If this charge rankled in Mr. Tambe's bosom, he at least has the satisfaction of knowing that, even if it had once been true, it is true no longer: and that the great split, which now seems imminent in the Party, will always be dated from his action, and will always be associated with his name.

It really looks as if Lord Birkenhead's demand for co-operation is on the point of receiving a real response: and that, in spite of Pandit Motilal Nehru's brave words about a fresh campaign in opposition to it, and the belief that he was about to start "civil disobedence" in a new and compelling form, "responsive co-operation" will carry the day, and Motilal will have either to come into line with it, or resign himself to ploughing a lonely furrow, the goal of which can only be the cold shades in which other dethroned leaders, such as Mr. Gandhi, are already seated. And it looks as if Lord Reading may yet be hailed, before he hands over his office, as the Viceroy who transformed contumacy into co-operation, and guided Reformed India into the true path. If such should be the fortunate result of the present crisis in the fortunes of the Swaraj Party, while we acclaim the name of Lord Reading, do not let us forget that of Mr. Tambe.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, November 5.

The New Viceroy.

The appointment of Mr. Wood as successor to Lord Reading has come as a surprise to India, despite the *Pioneer's* assurance that the name has been mentioned in well-informed circles for months past. The news has been well received on the whole, but disappointment exists that the choice did not fall on Lord Ronaldshay, whose strength and experience, coupled with his charm of personality, have won for him a deep respect from a large section of Indian opinion.

In a leading article dealing with Mr. Wood, the *Pioneer* is non-committal. The new Viceroy's hereditary claim to a connexion with India is emphasised, also the fact that his task is no so difficult as that which confronted Lord Reading some four and a half years ago. The *Bengalee* is frankly pleased that the honour has not gone to Lord Birkenhead or to Lord Peel, and says that Mr. Wood will bring with him a freshness of outlook and a healthy freedom from preconceived notions. *Forward*, following its usual practice, has waited for the comments of other papers before expressing its opinion, and has seized upon the *Pioneer* and some of the Home Press, each of which it proceeds to reduce to ribbons, leaving the idea that India would be much better off without any Viceroy or other governing authority. So little is known of Mr. Wood by the masses that the appointment has been generally received with Oriental fatalism; his connection with Agriculture and Fisheries presents a difficulty; they cannot quite understand how this qualification affects his capabilities for the Viceroyalty, and discussion of the topic has given rise to some chaff as to the size and price of *bekhti* (an Indian fish) which may be expected on his assuming office. Behind all this, however, there is a growing movement which holds the opinion that the Government is to blame for the state of India to-day. Leniency is not universally understood, and is accepted by many as a sign of weakness; it is not to be inferred from this that a reign of terror is wanted, in which political opinion would be suppressed, but it is felt that most of the extremist agitation is nothing more than mischief, and should have been put down once and for all on its first appearance. "If, on seeing a seedling, it is plucked up with the fingers, it is done for; but it takes many coolies to remove a full-grown tree," is how a Marwari merchant expressed it: and a Viceroy who will take real steps to preserve peace will earn the gratitude of the majority of Indians to-day.

The Central Provinces.

Certain politicians in the Central Provinces, in showing signs of thinking for themselves, have been a thorn in the side of Pandit Motilal Nehru in particular and the Swaraj Party in general. In staging the meeting of the Executive Council of the All-India Swaraj Party at Nagpur, the worthy Pandit sought to revive an interest which was waning, and the occasion was taken advantage of in passing important resolutions. The suggestion that the present time was one when the Party should change its tactics of non-co-operation and obstruction for responsive co-operation was deprecated; there was no reason why the policy should be changed in any way. Thus the Berar Provincial Swaraj Party were put in their place, but even in an atmosphere rendered almost sacred by the presence of the Pandit and Sen Gupta, some ten members had the temerity to dissent from the opinion of the remainder in this particular. Mr. Tambe's treachery was condemned; he must be getting used to votes of censure, now that fifteen or sixteen have been passed upon him; but, for accepting his resignation without reference to the Executive Committee of the General Council, the Berar party received another reproof.

It will be interesting to see what will become of the resolution of adherence to the Swarajists' policy of non-co-operation. In Madras, the Andhra Provincial Congress Committee has passed a resolution not only in favour of civil disobedience, but in favour of the complete independence of India, whatever that may mean. This has probably forestalled the Pandit's dire threat, which was to be given effect to at the Cawnpore Congress; but, while civil disobedience shows promise of being an effective medium for the raising of sensation throughout the country, it is a movement which can only be taken up if it is agreed to *nem. con.* by the whole of India. But public opinion is veering round to regard the empty claptrap of the Swaraj leaders without passion, and the Pandit will shortly be lamenting the lack of faith of his country.

The Political Situation.

Two pronouncements on the political situation have been made during the week, and these have been represented in the Extremist Press as being of widely divergent views. In addressing the Calcutta Branch of the European Association, Sir Frederick Whyte, the first President of the Legislative Assembly, pointed out that democratic ideas were not of Oriental origin, and it remained to be seen whether, in fundamental principle, the idea of self-government, as it was known in Europe, particularly in England, was natural in India. Politically minded Indians were committed to the conception that what they called self-government was a practical possibility: but those who had been working Institutions set up by the Government of India Act, 1919, realised that there were grave difficulties in the way. In his opinion, if Government were going to impose the test as to whether Indians could carry on their own government, they must allow the experiment to go

Digitized by Google

on longer, and they must carry it out on a more generous scale. More responsibility must be given, to determine whether the responsibility was there at all: and he felt that the time had not come when it could be said either that the Reforms had succeeded or that they had failed. Referring to the test imposed by the Secretary of State, he said that in his opinion this had been met by the first Legislative Assembly. Sir Frederick is no pessimist, and his speech is full of common sense views; but, at the same time, it cannot be said that the Swarajists have been evidencing their capacity for further responsibility. The joint resolution in connexion with the Muddiman Committee Report leaves little doubt of their destitution of even the elements of statemanship: and would scarcely serve as an inducement to Government to increase the measure of autonomy.

On the other hand, Lord Sinha, writing in the *Indian Daily Mail*, takes a view which will not meet with the approval of the extremists and will be resented by many of more moderate views. In his opinion, constitutional advance depends upon the ability of those, who demand it, to show that they are fit to receive a further measure of self-government: and it is idle for Indian politicians to imagine that it is possible for them to enforce their views on the British Parliament. Lord Sinha declares that India is not ripe for self-government: and as for Bengal, which is his own Province, he says that it should not be entrusted with provincial autonomy—to say nothing of anything higher.

Into these opinions of long-sighted men may be read a grave warning. Although taking an optimistic view, Sir Frederick Whyte expresses a doubt as to the feasibility of the idea of self-government by Indians; Lord Sinha states that India is not ripe for self-government. Is it not time that the Swarajists changed their policy, and concentrated on demonstraing India's fitness for the attainment of the great task she has set out to accomplish in true Swaraj?

Markets.

After opening very steady, the Jute Market became quieter at the close and prices were inclined to ease; less interest has been taken by the mills and, with sellers willing to deal only at full prices, business has been on a smaller scale. Gunnies have reacted to a greater extent and, even at a lower level of prices, few transactions are reported. The piece-goods market remains featureless. Although the tea market both here and in London has been described as irregular, it is not anticipated that there will be any appreciable drop in prices: and, as soon as the outtturn figures are to hand, a hardening in rates is expected. A firm opinion still prevails that the figures will show stocks down a further ten million maunds, as a result of which the surplus will be almost entirely wiped out.

The only department to interrupt an otherwise dull week on the Stock Exchange was the rubber market, where a strong tone continued to prevail: and, but for the reserve shown by sellers, a considerably larger turnover in the shares would have resulted. Jutes, but for a small business in the more speculative counters, have received little support, prices fluctuating within narrow limits. Cottons are higher on the week, but inquiry has been restricted to the better class shares; coal shares show no change, and teas have been quiet with only a few dealings taking place. Sterling rates remain steady but the money market has been dull with little business passing.

BACK TO SHAHJAHAN.

By Janus.

A few weeks ago I was privileged to discuss in these columns the report of the Committee on External Capital for India. Since then I have been occupied in absorbing another report which appeared almost simultaneously, that of the little Committee appointed to clear the ground for an economic inquiry and the contrast between the two documents is rather startling. The former Committee, dubious as was its origin and composition, produced an excellent report: one which, if the dissenters' notes could have been eliminated, would have deserved to rank with the work of Select Committees of Parliament. The latter, unexceptionable in point of personnel, and assigned a simple and straightforward task, seems to me to have gone clean off the rails: and the comments I have seen in the Indian Press show that, for once, I am not alone in my opinoin. At the outset, however, I must distinguish between the majority and the minority. The Committee consisted of two Indian administrators of repute, and one Englishman, a Professor of Economics at Allahabad; but they never got together as a team, and eventually the Professor went his own way. His note of dissent is sane, if not always convincing, and it suggests to me that, in other company, he would have done much better: but, in this review, I must confine myself to the report of the majority. The first impression it produced on me was as if a steady-going Indian bullock-cart had suddenly taken to stunting, and had come to grief in a spectacular attempt to loop the loop, but further study showed that it is not just so modern as all that; in essence it belongs to the seventeenth century rather than the twentieth and, on purely internal evidence, I should be inclined to date it in the palmy days of Shahjahan. The despot expresses a hasty wish, his loyal henchmen go far beyond it and, in their efforts to please him, design something of which he never dreamed, something to be carried out at a huge cost to be borne by other people and, of course, to the merry cracking of the sjambok. In the good old times it might have worked, but to-day I fear it must be accounted an anachronism.

The despot of this parable is of course the Legislative Assembly, which, in response to a rather widespread demand, asked recently for an enquiry into the present economic condition of the people. The Government was uncertain how to meet the request, so it told the Committee to find out what relevant information was already on record, and how it could best be supplemented. The Committee thereupon outline a grandiose scheme for transforming and enlarging the Indian statistical machine so that, at some not very definite period in the future, it may begin to turn out periodical reports which will, in time, meet the demand. To put it more shortly, the despot asked for a photograph, and the Committee in reply propose to build a new and greater Hollywood, which, when the actors have been found and trained, will eventually give him films galore. Now I am not concerned to argue that such an institution would not be useful, supposing it could be afforded. My point is, that it is not what the despot asked for: and I should not be greatly surprised if he, being in a violent hurry, as despots usually are, is rather seriously annoyed by the reply. The report gives only vague indications of the forces that have led to this curious result: but I think I can detect two of them, a possible verbal confusion, and a clear hypnotic influence. As to the former, the Government really began it, because, in their resolution appointing the Committee, they passed from the word "inquiry" to the word "survey," used obviously as a synonym. The Committee, however, seem to have been more or less unconsciously influenced by the technical sense of the latter word, denoting an organisation for producing surveys: and what they offer is, not a survey, but a Department of Surveys. This idea, however it originated, clearly becomes fixed under the influence of those attractive year-books of statistical information which some of the Dominions issue, mainly for export. The report comes back to the Dominions again and again: if they issue year-books, India must obviously do the same. Now this is sheer hypnotism, not logic. If the analogy be tested in the light of reason, it becomes clear that, in this matter, the Dominions should serve as warnings rather than examples. A homogeneous community like Australia, negligible in point of numbers, but standing exceptionally high in point of wealth, literacy, and technical efficiency, produces a book designed to tell the world in general, and its creditors in particular, how it is getting along: how can such a production be relevant to the case of India, a jumble of heterogeneous communities, united mainly by the common poverty, illiteracy and inefficiency, and now wanting to know what is the matter with it?

Digitized by Google

The majority, however, ignore such considerations, and set out to frame a scheme which shall give India year-books and publications on Dominion lines.

They find it will cost a good deal of money: to be precise, 32 lakhs for the start, and then 57½ lakhs year by year. The latter figure is, of course, under-estimated: and, following a widely accepted practice in such cases, we may double it, and put the annual bill at a crore of rupees for a beginning, but rising rapidly, as such administrative expenditure always does. Naturally, the despot is not asked to find this money: the Provinces are to provide about 97 per cent of the cost, and the suggestion, put forward with great deference, that the Central Government might meet them half-way for the first five years, ignores the hard facts of the budget. The Provinces, again, are to squeeze as much as possible out of municipal and local boards, while a sort of pious hope is expressed that even individual villages may come forward to pay for their own anatomization. Anyway, the despot will get his films for practically nothing, but the question remains whether the films will be worth having even as a gift. Now the majority recognise that the facts needed for the year-books will not always come out voluntarily: there must be "legal powers of compulsion, howsoever mild"; the law must have penalties attached; and the investigators must have a backing of authority from those admirable officers, the tahsildars. Very possibly their schemes of investigation could have been carried out more or less effectively in the Mogul days, at least in those regions where the Emperor's writs ran, and the people were kept in strict discipline by the sjambok; but nowadays tahsildars are not allowed to use the whip, and the milder substitutes in vogue would certainly fail to extract the truth from unwilling witnesses, though they would doubtless stimulate imaginations to produce acceptable romance. It seems to me as certain as anything can be, that the methods of investigation proposed by the majority, costly as they are, would result merely in the production of an enormous mass of crude lies and vague guesses, tabulated in columns and therefore masquerading as ascertained truths. The year-books will not nourish the student, but they are likely to drug him—to sleep or to madness, according to his individual diathesis. The new Hollywood, like the old, will deal in fiction, not in facts.

I asked a United Provinces man what ought to be done to such people, and he suggested that they should be made to experiment with their own proposals, by investigating the real wealth and income of half a dozen villages of Meerut Jats. To this I objected that the case did not really call for capital punishment, and that, anyhow, to be torn in pieces by infuriated Jatnis would be an altogether excessive penalty. He then proposed that their energies might be devoted to the members of the Indian Merchants Chamber, who are comparatively peaceful folk, though rather noisy at times; but finally we agreed that the best thing would be, that they should be set to follow up a hint in the note of dissent, and make a careful examination of the huge masses of data already available for the serious economic inquirer, material of which the report scarcely glances at the surface. Let them forget for a time all about Canada and New Zealand—about Abanah and Pharpar—and let them bathe in the Jordan flowing past their doors. One good dip ought to be enough.

THE INDIAN MAIL.

The Currency Commission.

The question whether the Currency Commission shall or shall not be boycotted was still being agitated among the members of the Indian Merchants' Chamber at Bombay, when the mail left. A number of members of the Chamber had, after full discussion, unanimously resolved "to strengthen Sir Purshottamdas Thakurdas' hands"—he being a member of the Commission, as well as the representative of the Indian Merchants' Chamber in the Legislative Assembly—by placing before the Commission "overwhelming evidence to help it to make recommendations in favour of an effective gold standard as the soundest currency system for India." They felt that the opportunity for such a departure was favourable, owing to the large imports of gold bullion into India during recent years, and the fact that the balance of trade had lately been strongly in her favour. Among the concrete recommendations made by them were, that additions should be made to the currency, not in rupees or rupee notes, but in gold notes or gold certificates: that a gold coin—to be called a mohur—of the same weight and fineness as the sovereign, should be made the standard gold coin for India: and that its relation to the rupee, preferably as one to fifteen, should be defined by law.

On the other hand, it was understood that a fresh requisition for a public meeting of the Chamber was in course of preparation, in continuance of the campaign, which has so far proved abortive, for persuading the Chamber to boycott the Commission and to call upon Sir Purshottamdas Thakurdas to resign his membership of it. A public meeting, under the presidency of Mr. Jinnah, the Bombay member who leads the Independent Party in the Legislative Assembly, was also to be held, to endorse the Assembly's condemnation of the constitution and personnel of the Commission.

The experiment of coining a "gold mohur" has been tried once, in recent years, but without success. It was made on a small scale, the number issued, if memory serves, being only three millions. The instant the coins were issued, they disappeared, and they have never been in circulation. The English sovereign circulated freely before the War, but the absence, for the past eleven years, of current gold coins of any denomination in India would probably lead, if such coins were issued again, to a similar prompt disappearance, at any rate at first. It might be a good thing, if it were decided again to attempt to introduce gold currency, that the Mint should be opened for the coinage of gold bullion offered for the purpose by private holders, either into sovereigns or "mohurs," on their account. The result might be, not only to tap the very large stock of gold that has been unproductively accumulating in India for several years past, but also gradually to re-introduce gold coins into the country, where they achieved considerable popularity before the War, passing current at fifteen rupees: any Government Treasury would give sovereigns for rupees, or rupees for sovereigns, at that ratio. At the present exchange value of the rupee, the pound sterling is worth about 13 1-6 rupees. The Indian merchants of Bombay have always strongly supported a return to the pre-War standard ratio of fifteen rupees to the sovereign; and it will be noted that they still adhere to this, though they advocate the name of the gold coin being changed to the recognised Indian one of "mohur." Gold coins, under that name, were issued by the Moguls as well as by other Indian rulers: and the term "a gold mohur" is still current among Europeans to denote what the old coin used to stand for—sixteen silver rupees. Some of the old coins still exist, though only as curiosities: they are often presented as a gift of welcome to officials—who, however, are not expected to keep them, but only to "touch and remit."

Gold Coins in India.

The suggestion, by the Indian Merchants' Chamber of Bombay, that gold coins should be specially struck for India, at a fixed ratio with the rupee, recalls the almost forgotten fact of the popularity of the English sovereign before the War. After the inevitable initial period of distrust, the general public took to it whole-heartedly, in particular the Punjab wheat-grower, who preferred to receive payment for his crop in sovereigns, rather than in any other form of currency. There were exceptions, of course, among the elderly or old-fashioned. A few years before the War, it happened that a servant of the writer of these notes died while in his employment; and the servant's old mother arrived one day, in a curtained palanquin, to receive the credit balance of her son's estate. The cash that was handed in through the curtains included two sovereigns; but, when the palanquin started to leave, these were found lying on the ground beside it. The procession was stopped, and the coins handed in again, only to be promptly thrown out once more. Argument ensued, and it was explained that the coins were of gold, and were worth fifteen rupees each; but the old lady would have

Digitized by Google

none of them she had apparently originally supposed them to be copper—and her departure had to be delayed until the sovereigns could be changed into silver rupees, the only form in which she consented to receive them.

With the advent of the War, gold immediately went out of circulation, though considerable stocks of sovereigns remained in the Government Treasuries. As the War progressed, the people began to get nervous about accepting notes, and to insist on receiving silver: which they promptly proceeded to hoard. The first move in this direction took the form of the dispatch by rail of chests of specie, to the homes of the owners. This traffic speedily attained large dimensions: and Government countered it by prohibiting the dispatch of current coin by rail, except under licence. The senders then had recourse to the Post Office. The maximum weight that may be sent by post in India is 800 tolas—a rupee weighs one tola, approximately one-thirty-ninth of an English pound: and, when nervousness was at its height, the General Post Office at Bombay was a curious sight. The entire available floor space was occupied by Indians sitting in the midst of nests of boxes each of which contained about 750 silver rupees—the balance of the maximum weight being made up by the box and the packing—waiting their turn at the counter. As much as eight tons of rupees were being sent daily, from Bombay alone, by this method: and Government found it necessary to prohibit it also. But the hoarders were not to be defeated: and arrangements were made by which a number of them should hire a motor vehicle, load it with silver coin, instal an armed guard of servants of their own, and send it off by road. The enormous withdrawals of rupees from circulation, consequent on these proceedings, forced the Government of India to have recourse to special measures for obtaining silver; for, in default of such measures, they were faced with the alternative of declaring currency notes inconvertible—a necessity which would have had a disastrous effect on the public confidence. They accordingly arranged to purchase a very large quantity of silver from the United States, in the form of melted dollars: and this began to arrive before the motor transport device of the hoarders had made more than a beginning: its advent was well advertised, and the panic ceased.

As an interim measure, before the arrival of the American silver, Government appealed to a number of Indian Princes, and other important magnates, for silver rupees: offering, in exchange, sovereigns from the Treasuries at the pre-War rate of fifteen rupees each. As a sovereign, when obtainable at all, fetched anything from eighteen to twenty rupees in the open market, the generosity of this offer is apparent. A number of Princes took advantage of it, and accepted payment: but one—the late Maharaja Scindia, whose name deserves to be recorded for many reasons, not least for this—produced a large sum in rupees—it was said to be thirty lakhs—but refused to take payment in sovereigns: desiring that the transaction should be treated as a loan until it could be adjusted at par. One magnate in Northern India—not a ruling Prince—whose name deserves to be recorded also, though it would probably be libellous to give it—adopted a very different policy. When approached by Government, he offered to provide seventeen lakhs of rupees by a given date. The offer was accepted; whereupon he arranged for a number of agents to present currency notes at the various Government Treasuries in his Province, and to get them exchanged for silver. This silver was collected by him, and handed over to Government in fulfilment of his contract: so that, in fact, he made over to Government 1,700,000 of their own rupees and claimed (and obtained), in return, gold worth something over two million.

Trade Returns for September.

As compared with the figures for last August, the September returns show very little variation in the total trade of India: for, while the value of the imports of private merchandise fell from 1880 to 1853 lakhs, and that of the exports of produce and manufactures from 2830 to 2719 lakhs, the net imports of treasure rose from 338 to 462 lakhs, while the value of re-exports remained practically stationary. The visible balance of trade in favour of India was 514 lakhs, as against 713 in the previous month.

Under imports, the figures for food, drink, tobacco and raw materials show a rise in value of 25 lakhs, but there was a fall of over 50 lakhs in manufactured articles, the decrease in the import of cotton goods being larger still: as the yardage fell from 140 to 117 millions, and the value from 494 to 418 lakhs.

Under exports, the value of raw materials and produce increased from 1157 to 1254 lakhs, but that of manufactured goods decreased from 829 to 784 lakhs, and of food, drink and tobacco from 820 to 660 lakhs. The exports of raw jute amounted to 86,000 tons, valued at about 440 lakhs, compared with 37,700 tons, valued at 194 lakhs, in August. Of this quantity, the United Kingdom took 25,000 tons and Germany 22,600 tons: France, Italy, Belgium and the United States took amounts varying from about 9½ to about 7 thousand tons. The exports of raw cotton amounted to 24,000 tons, of a value of 320 lakhs—which denotes a heavy fall, both in quantity and price, since the previous month's exports of raw cotton were valued at 550 lakhs. In manufactured goods, the largest decrease was in gunnies—bags falling from 51 to 40 millions in quantity, and from 322 to 267 lakhs in value, and cloth from 122 to 106 million yards and from 250 to 227 lakhs.

Railway Advertising.

One of the points to which Sir Charles Innes, the Member for Commerce and Railways, in his speech before the Indian Railway Conference Association at Simla, drew the attention of the Conference was that of publicity and advertisement—could not the Indian railways do more, by judicious advertisement in London, to attract tourists to India? Tourists brought money to the country and custom to the railways: and he believed that it would be a paying proposition of they could be attracted in greater numbers than at present. Sir Charles' championship of advertisement in London is one that naturally appeals to any newspaper publisher there; but, to have any great effect, it would seem that it should be accompanied by a campaign for reduction in steamer fares—Indian railway rates are among the lowest in the world; but passenger fares to Indian by sea are among the highest; so much so as to be almost prohibitive to the ordinary tourist. Anything that would sensibly increase the number of first and second class passengers on Indian railways would be a great boon to them; for, at present, all the passenger traffic on Indian railways rides on the back of the third class customer—the first and second accommodation often runs practically empty: and even when it does not, it never really pays. This is, perhaps, inevitable in a land of vast distances like India; but, if loss there must be in this department, even at the best of times, it would certainly be a good business proposition to do all that is possible to reduce it.

Improving Prospects.

In a lecture delivered at Bangalore on October 13, Colonel Crawford, the Secretary of the European Association, urged Europeans in India to take a live interest in the public affairs of India, which are now progressing in the way in which they wanted them to go: it was therefore necessary that Europeans should study the politics of the country and make themselves heard. Answering a suggestion that the Association was spending a disproportionately large sum on establishment, Colonel Crawford said that it was not economical to employ cheap men: and defended the recent appointment of an Assistant Secretary, on the ground that it would relieve the Secretary of urgent matters and leave him free for propaganda work. He added that politics had always had a fascination for himself and that it was this that had caused him to relinquish his army appointment, which was financially more advantageous than his present position: he had been "a fool to chuck up the Army to take up the work of the Association."

By this last remark, the speaker gave an unsolicited, and possibly inadvertent, testimonial to the recent improvement in the prospects of the British official in India, the recognition of which has had such a striking effect on

Digitized by Google

recruitment during the last few months. For, in one of the first addresses delivered by Colonel Crawford after entering on his present appointment, he explained that he had left the Indian Army, in spite of the opinion of his friends that he had a promising career before him, because he had made up his mind that it was no longer good enough to stay in it. That he now regrets his decision, and publicly announces that it was a foolish one, is an example of the change of view that has occurred to many: one to which Sir Edwin Atkinson gave eloquent expression in his speech at the recent farewell dinner to Lord Reading at the Simla United Service Club.

Catch Phrases.

Pundit Motilal Nehru's words, quoted in last week's Calcutta letter, by which he meant to convey that the Swarajists had done their best to meet Lord Birkenhead's views on co-operation—"We have sailed as near the wind as we possibly could. We can sail no nearer"—show the difficulty that even the best educated Indian is likely to find in English phrases. The Englishman in India is inclined to laugh at "Babu English"; but the wonderful command that English-speaking Indians have, over what is to them a foreign tongue, should be a matter of admiration rather than of laughter. The number of Englishmen who could express themselves with anything like the same fluency, and with so few mistakes in phraseology, in any foreign language, must be small indeed. The phrase brings to mind a case in which an Englishman ingeniously utilised the difference between the real and (to an Indian) apparent meaning of one somewhat similar. Every time a servant quits one's service in India, it is necessary to give him a testimonial—even if he has only served for a few days. If this is uncomplimentary, he either destroys it or arranges for the manufacture of a more satisfactory one. It was the spacious sound of the critical words, and his knowledge of their separate meanings, that induced an Indian servant to show, with pride, a reference which ended, "I can confidently recommend anyone, who seeks a thoroughly capable, industrious and honest servant, to give Eli Bux a wide berth."

Indian Irrigation.

The appearance of the Review of Irrigation in India for the years 1921-24 is specially noteworthy because it is the first of these (triennial) reviews issued since irrigation became a Provincial subject under the Reforms. The Review gives the average area irrigated annually by Government works as 27½ million acres, an advance of ¾ million acres on the average for the previous triennium. It states that, during the last of the three years under review, the area cropped in British India was 223¼ million acres, and that the area irrigated by Government works amounted to nearly twelve per cent. of this total; also that the estimated value of the crops in the irrigated area amounted to one and a half times the total capital expended on the works. About 38 per cent. of the total irrigated area of British India is to be found in the Punjab, the irrigated area of which forms the same percentage of the total cropped area of the Province. Three irrigation works of the first magnitude were initiated during the triennium covered by the Review: the Sukkur Barrage in Sind—the greatest ever undertaken in the history of India—the Sutlej Valley scheme in the Punjab, and the Sarda project in the United Provinces. These three great projects, when completed, will together add nearly fifty per cent. to the irrigated area of British India, besides adding largely to that of several of the Indian States.

When Indian politicians denounce the British Government and all its works, they never mention this subject of irrigation: and even Mr. Gandhi, who preached that such things as railways and hospitals were Satanic inventions which the Indian people would be better without, in the Golden Age to which he desired them to return, seems to have approved of the existence, and even of the extension, of canals; since he taught that every peasant, who needed water for his fields, should be entitled to receive it—though as a free gift and not in return for payment, after the custom of the soulless British Government in India.

INDIAN EXCHANGE.

London, November 23.

A little more activity has been manifest in markets during the past week, and rates have become a shade firmer, although quotations in Calcutta and Bombay still stand at 1s. 6 5-32d., with sellers throughout the week at 11-64ths cash. T.T. has been obtainable off and on at 1s. 6 3-16d. in Calcutta, where Government have also been called upon to a small extent, and they are reported to have purchased £300,000 at 1s. 6 3-16d. for immediate delivery. Rates to-day are cabled steady at 1s. 6 3-16d. T.T. in both places, with buyers' requirements satisfied for the moment.

In the earlier part of the period under review, three months' credits were placed at 1s. 6 13-32d. for delivery three or four weeks ahead. Towards the close, however, the rate has stiffened, and we understand that it is difficult to place good commercial paper at better than 1s. 6 7-16d. Forward rates are slightly firmer at 1s. 6 3-16d. T.T. from December to February; March 1s. 6 11-64d., and April 1s. 6⅛d. No animation is shown, however, in forward quotations, and operators take little interest in rupee exchange beyond a month or two ahead.

The London Market has been a trifle firmer, with T.T. generally quoted at 1s. 6 7-32d., although some amounts were fixed earlier in the week at 1s. 6 3-16d. for ready and near delivery.

In the last weekly report of the Imperial Bank of India, money has been flowing out more freely again for trade purposes on the Calcutta side, while in the other centres business has been dull. This is especially the case in Bombay, where the positon of the Cotton Industry shows little improvement.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

NOTES AND NEWS.

170, *Strand, London, W.C.2.*
Tuesday Morning.

Good Balkan Harvests.

It is a most happy circumstance that at a time when the omens generally are propitious to a trade revival, when the Locarno Pact has brought within realisation that stabiliation that Europe so badly needs, the Balkan countries generally should have been able to revel in good harvests. The main obstacle to commercial development in South-East Europe has been the absence of adequate purchasing power, and no better and more immediate tonic could be devised than a plentiful yield of agricultural produce, on which in the main these countries depend. The fact that this year the fields have "laughed with corn" means for the British trader increased outlets for his manufactures and commerce less hampered by the handicap of adverse exchanges, for increased exports naturally mean that the exchanges will improve. It may be hoped that he will take full measure of the opportunity that the kindly soil has thus unfolded for him. A few details regarding the crop in two of the Balkan countries, Roumania and Yugoslavia, will serve to indicate the outlook. Roumania has had the best wheat harvest since the War, amounting to roughly 2,900,000 tons, and this despite the fact that the crops in Bessarabia and Moldavia were a failure. It is estimated that this will leave 600,000 tons available for export. Then the yield of oats and barley together totals 1,880,000 tons, while the maize crop has been excellent. Then Yugoslavia, which had good harvests in both 1923 and 1924, has this year had one which far surpasses them. The yield of wheat is put at 2,240,000 tons, as compared with 1,650,000 tons for 1924 and 1,684,000 tons for 1923, while the yield of barley and oats is placed at 982,000 tons, as against 630,000 tons for 1924 and 743,000 tons for 1923. The surplus of wheat available for export is estimated at 400,000 tons, while that of maize is put at double that figure. It scarcely needs emphasis that the realisation at good prices of surpluses such as those indicated must make an immense difference to the economic situation in South-East Europe. 1925-26 may well prove the turning point in reconstruction, pointing the way to a period of prosperity such as the Balkan countries have not hitherto known.

Currants and Currents.

These days it is not enough to think Imperially; we have also to eat Imperially. This particular current is now set in the direction of the Christmas pudding, to say nothing of the cakes and penny buns that fill in the time and appetites in between. On this subject I find it difficult, as a loyal Briton devoted to the Near East, to write, shall I say, *currente calamo*. I certainly want to see the Australian dried fruit trade forge ahead, but what is one to do when the geniuses who preside over kitchens take sides against those who preside over advertisements? The opposite to a seedless raisin is not necessarily a seedy one; yet the man who first applied the word "pip" to express dissatisfaction must have been fond of dried fruit. A solution of the problem might be found in the establishment of a world-wide Jack Horner Association for the creation of a corner in currants and raisins. The nations and the currants-cum-raisins could then be graded; the nations of most use to the trade would receive the best fruit from the top of the other heap; those who consume the smallest quantity would come in for the under currant, without knowing whether it came from down under or elsewhere. Competition would be stimulated among consumers and producers, and neither the shadow nor the substance of the Christmas plum-pudding of Great Britain need ever grow less. New countries, be it noted, are already entering the lists. One of the first results of the recent signing of a commercial treaty between Great Britain and Bulgaria is to be the inauguration of a regular service of direct steamers between Bulgaria's Black Sea ports and London, which is to coincide with a special effort to place the Bulgarian currant on the London market. The British housewife will soon be starting a rough-and-ready grading of her own for currants, as she has done in the case of eggs, unless the corner idea can be adopted.

Cotton Supplies.

The latest American Bureau Report, while showing a slight decrease on the previous estimate, may be said to have left the position materially unchanged, though, as was to be expected, it has not been without its effect on prices. The estimated yield per acre is 165.5 lb. as compared with 166.4 lb. on October 31, and with the final yield last year of 157.4 lb. This estimate means a crop of 15,298,000 bales exclusive of linters, which compares with 13,639,000 bales for 1924, and as anything over 14,000,000 bales must be regarded as satisfactory it will be evident that if the estimate is borne out—and it may, of course, well be exceeded—there is no need for anxiety as regards cotton supplies for Manchester for the next twelve months. The present prices of cotton are more satisfactory than the industry has experienced for a very long time, and in default of an overwhelming demand for cotton goods there appears no reason why they should not continue to obtain throughout the season and possibly even reach lower levels. And as each year that passes brings about an extension of cotton growing in the Empire and as we are now reaching the juncture at which this development will tell in the world's cotton statistics, it is clear that the stage should not be far removed when the possibility of undue prices for cotton is out of the question. The desired end is a price which while giving a reasonable remuneration to the grower will not handicap the manufacturer. How far it will be possible in the future to achieve some measure of stabilisation must remain to be seen, but it is certain that the nearer that ideal is attained to the better it will be for both the grower and the consumer.

Roumania's Finances.

The provisional arrangement for the settlement of Roumania's war and relief debts to Great Britain, which amount to £28,000,000, and the negotiations now in progress for the settlement of her debt to America reflect the improvement that has taken place in Roumania's position in recent months and at the same time afford proof

of the country's determination to put her financial house in order. The failure of Roumania to make progress commensurate with that of other countries despite her great resources has been remarkable, though the fact must not be overlooked that the difficultes with which she has had to contend have been greater than those of other countries in South-East Europe. Now, however, marked progress is being made, revenues are rising—for the first nine months of this year they totalled 23,585,943,490 lei, which is considerably in advance of the estimates—the harvest has been good, and provided that the transport is equal to the task the exports of oil and agricultural produce during the next year should bring about a great change in the situation, which will be reflected in a marked appreciation of the leu. The trade figures for this year have not been satisfactory so far, this being due to the decline in the export of cereals and other produce, but it is probable that the leeway will at least be made up before the end of the year, as recent measures that have been taken are calculated to give a great impetus to the export trade. The Budget for the coming year, which has now been drawn up, provides, it may be noted, for a considerable excess of revenue over expenditure. Including the separate railway estimates, revenue is estimated at 38¼ milliard lei, while the expenditure, including the payment of inter-Ally debts is put at 34¼ milliard lei. If these estimates are borne out, and judging by results of the current year the revenue may well yield a greater surplus in consequence of developing trade, Roumania's financial postion will be immensely strengthened.

Cotton-Growing in Armenia.

It is very interesting to note, as indicating the realisation of the value of cotton-growing to a country, that outside the Empire just as within it, various schemes are under consideration having as their object the development of cotton cultivation. I have already dealt with the efforts that Turkey is making to increase cotton-growing and apparently with considerable success. In Armenia also various irrigation scheme are under contemplation to enable the cultivation of various crops, among which cotton would figure prominently. In this connection, it may be noted that the reports submitted to the League of Nations in regard to the settlement of Armenian refugees, for which purpose it is proposed to raise a loan of £900,000, dealt with the question of carrying out irrigation works in Armenia, and the scheme which is favoured provides for the irrigation of about 50,000 acres near Erivan. The work, it is understood, would only entail canal construction, and could be finished within a comparatively short period, and the land would be utilised in the main for cotton-growing. How far the scheme is practical must, however, remain to be seen, for the terrain in Armenia as a whole does not offer the advantages for the cultivation of this crop that is the case in other countries.

The Rubber Boom.

If I had written a little later last week than I did I should not have referred to the present movement in the rubber market as a boomlet, for it very evidently merits the stronger term. Yesterday, indeed, the scenes in the market were unparalleled since the War, and brought back memories of 1910. The position has arisen, of course, as a result of the continued and increasing strength of the raw commodity. Last week 4s. 8d. was touched for spot for the first time since 1913, and while the price is a shade lower at the time of writing, the quotations are quite firm, and there is no visible reason why a higher price than 4s. 8d. should not be reached for a time. Naturally the share market responded valiantly to such encouraging strength, and with Vallambrosas declaring an interim of 75 per cent. it is small wonder that there has been a general upward movement. As usual, I suppose, it will go on for a little time, and I would say here that I look for renewed strength in the first week of December whatever may happen in the intervening days, but there will be the inevitable decline, followed after an interval by another upward movement. In the prevailing circumstances a serious slump is out of the question unless the high price of the commodity should have the effect of checking consumption. It has to be admitted that that is possible, and that is the only fly in the ointment in the immediate future.

COMMENTATOR

COMMERCIAL BOOKSHELF.

A Useful Year-Book.

"The International Mercantile Diary and Year-Book" 1926. (Syren and Shipping, Ltd., 7s. 6d., post free.)

This is the tenth annual issue of this well-known year-book which has deservedly earned for itself a special niche among the reference books of business houses. Its outstanding feature is an international section giving in concise form those particulars regarding foreign countries and every part of the British Empire which are likely to be needed in commerce. The details given in respect of each region include currency, weights and measures, shipping facilities, and a great variety of commercial information. In addition to the diary there is also a general section giving the tables required in offices which do foreign business. This feature alone makes the year-book invaluable to commerce.

The Motorists' Vade Mecum.

"On the Road," vol 6. (Ed J. Burrow and Co., Ltd., Cheltenham, 6d.)

This is the sixth volume in the series of the pictorial road plans issued by the Dunlop Rubber Company. Among the routes that have been dealt with in the previous volumes are these from London to Brighton, Eastbourne, Hastings, Folkestone, Dover and Margate, from London to Bournemouth, Weymouth and Exeter, from London to Aberystwyth, and from London to Glasgow. The present volume covers the London, Grantham, Doncaster, York, Durham, Edinburgh road, together with the alternative route via Boroughbridge. This road, 384 miles in length, is described in forty-five "strip" maps, while a comprehensive and most interesting introduction tells the potential traveller of the outstanding features along the route. The "strip" maps themselves are models of what such things should be with the way most clearly marked out, while inset are illustrations of the features that the tourist, as distinct from the traveller whose first consideration is speed, would not wish to miss.

International Combustion Ltd., announce that their associated Company of New York, the Combustion Engineering Corporation, received orders during September for one complete "Lopulco" pulverised fuel plant for the Canadian International Paper Company, including three air heaters and three fin furnace walls, also other contracts including 33 boilers totalling 127,000 square feet together with combusion equipment.

THE PIG-REARING INDUSTRY.

Opening for British Stock.

At one time Serbia was the centre of the pig-rearing industry in south-eastern Europe. The Serbian breed of pigs, known as *srpska mongolica*, which originated in Shumadia, proved so excellent in the production of lard that it spread westwards, almost to the Adriatic, and northwards beyond the southern frontier of Czecho-Slovakia. In Hungary also, the *srpska mongolica* was reared so extensively that it ousted all other breeds, and in the decades before the War Hungary became Serbia's competitor in the production of lard. This competition was well known to have been one of the chief causes of the customs war between the old Austro-Hungarian Monarchy and the Kingdom of Serbia. Serbia was compelled to work up her industry of meat products, in order to export them via Salonika, inasmuch as by the closing of the Austro-Hungarian frontier, pig-rearing, which had been the peasants' chief industry, was seriously affected. Not long afterwards the Serbian meat industry found itself confronted with changes in the world market, which began to demand better quality meat rather than lard. American competition in the production of lard also brought about a constantly increasing depression in the price of lard on the European market.

A few years after the War, this depression in the price of lard created a crisis in the pig-rearing industry, from which Voivodina was the greatest sufferer last year, owing to the losses incurred by a heavy mortality from swine fever. Pig breeders began to realise that fat pigs could not fetch good prices, in spite of the fact that the fever had reduced the number by more than half. In an investigation of conditions, the writer of this article came to the conclusion that infectious diseases are rife among pigs as a result of too much in-breeding, the lack of preventive measures against infection, and the absence of vaccination. Pig breeders in the district of Sombor have, therefore, decided to remedy this state of affairs by the formation of the first pig-rearing co-operative association. Its tasks are: (1) to stamp out infection by strict preventive measures; (2) to have regular protective and curative measures against illness by means of cheap co-operative purchase of serums and medicaments as well as of co-operative veterinary assistance; (3) to improve the breed of pigs for the production of first-class pork by the introduction of *British medium and large white breed pigs;* (4) to keep strict records and thus prevent in-breeding, which decreases resistance against plague; and (5) to introduce strict selection according to the productive value of the pigs bred by crossing with English breeds.

This first pig-rearing co-operative at Sombor should be the pioneer in removing many deeply-rooted prejudices, to which veterinary surgeons and experienced stock-breeders have testified. The chief prejudices were that the introduction of white English pigs may increase the liability to infection, inasmuch as English pigs, being better bred, are more delicate in constitution, and that the Serbian Mongolica breed cannot be improved by crossing with English pigs, because crossing does not produce a homogeneous type.

The prejudices are supposed to be the result of practical experience, but have never been confirmed by objective and scientific experiment. The first prejudice has been actually disproved in practice by some of the western provinces (Varazhdin and Belovar), which twenty years ago gave up the crossing of home breeds for British white pigs, and did not suffer any greater losses from infection than the parts where the pure Serbian Mongolica was retained. The second was disproved by the experiments of the writer of this article, by the crossing of a western variety of the Serbian Mongolica called *Turopoliska* with a medium English white. Unfortunately, the success of these experiments could not be popularised, for the writer of the article had to give up his work.

This work can only now be resumed by the foundation of the first pig-rearing co-operative. The Chief Federation of Serbian Agricultural Co-operatives has also introduced into its test farms English white pigs, in order to continue the experiments mentioned and to improve the pure Mongolica breed by crossing.

This undertaking has met with sympathetic response from the Ministry of Agriculture, which has assisted the first pig-rearing co-operative by a subsidy for the purchase of British hogs. The Ministry has even assisted the carrying out of this programme and a special commission will shortly leave for England to purchase white Yorkshire

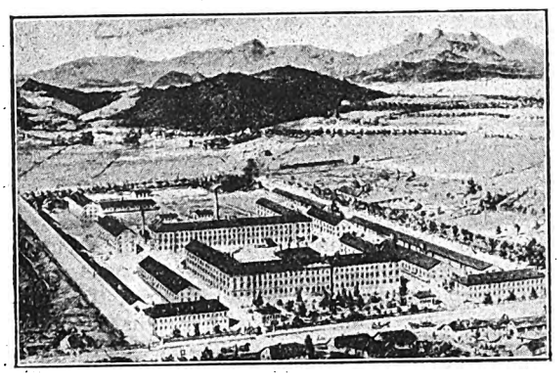
State Monopoly Administration of the Kingdom of Serbs Croats & Slovenes



State Tobacco Factory in Liubliana.

Tobacco Culture

The 1924 harvest will yield about 27.000.000 kgs. of leaf. Of this amount about 10.000.000 kgs. will be set aside for export. The tobacco is from Serbia, Macedonia, Herzegovina and Voivodina.

Fermentation and preparation of the crop will be completed in October, when negotiations for sale will begin.

All information can be obtained from:—

The State Monopoly Administration, — BELGRADE —

breed pigs for the State experimental farm. A nucleus of English animals will give breed boars and serve, by crossing, to improve breeds generally.

The work of improving the breed of Serbian Mongolica by crossing with English Yorkshire has hitherto been attended by many and great difficulties. The First Pig-Rearing Co-operative at Sombor and the Chief Federation of Serbian Agricultural Co-operatives were anxious to get their first breed hogs from England. The great distance, the high cost (on account of currency), the risk and the cost of transport, however, made it impossible, in spite of the efforts of Mr. Murray Harvey, the British Vice-Consul at Belgrade, and the writer of this article. Reasons of distance and price made it necessary to buy the first breed hogs from Hungary, from various estates, and even in transport from Hungary, which is so near, there was much difficulty and loss. In order to reduce the difficulties to a minimum, there will have to be set up sooner or later an *acclimatisation centre*, where pigs imported from England will have to be kept until they are sold to breeders and co-operatives. Such a centre is necessary for several reasons. With rational care and feeding imported pigs would recover from long and distant transport, whereas this would take much longer, if after their long journey the animals went straight to the farms of their purchasers. Most of the buyers are peasant breeders, who would be incapable of giving the necessary care and feeding, even if they were supplied with proper instructions. This the writer has proved from his own experience. Without such an acclimatisation centre the risk attendant on the import of pigs from England would be so great that breeders would be reluctant to undertake it.

The difficulties have already proved prejudicial to the import of English pigs into the S.H.S. Kingdom. Germany is on the way to supplanting British export of breed pigs to this country with her Hanoverian pigs, which were originally bred from the British white. This Hanoverian breed is penetrating into the country in two directions, for it is being adopted in Slovenia and Voivodina. Two factors facilitate the penetration:—First, these provinces are the nearest to Germany, and transport is consequently cheaper and less risky. Hanoverian breeds have spread all over Germany, as far as the eastern extremity of Bavaria, and thence into Austria and still more extensively into Hungary. The fact of the proximity serves as an argument that Hanoverian white pigs acclimatise better on the Continent than the original English white. It is also affirmed that the Hanoverian pigs are more robust and suited to primitive "peasant" breeding and attention and for putting out to pasture, because, being less pure in breed, they are hardier.

These widely accepted opinions were not confirmed by the first import of pure breed English and Hanoverian pigs from Hungary for the first S.H.S. Pig-rearing Co-operative; for the losses and difficulties with both breeds were the same. On the contrary, it has been proved that the first cross-breeds of English with Serbian Mongolica gave much better results in size, appearance, fattening and fertility than the first crossings with Hanoverians. This is recognised by the opponents of the import of English pigs, who say, nevertheless, that such success is only in the first generation, but that disturbance and instability of form and characteristics ensue later.

This notion is the result of lack of control of breeding, improper selection and absence of plan in crossing.

I am convinced that much greater and more rapid success would be obtained by the import of original English pigs for crossing with the Mongolica, and by progressive improvement and co-operative selection than by the import of Hanoverian pigs.

Zoo-technical prejudices against the import of English breeds are quite unfounded, but the following technical difficulty must be solved:

The imported English pigs must be kept at an acclimatisation centre, whither they could be sent regularly and consequently in larger batches, i.e., at reduced freights, and whence they could be sold.

State import from England will not be able to solve this

Digitized by Google

problem for some time, because it will not produce sufficient breed boars for sale.

Acclimatisation centres will be the best method of combating prejudices directed against the import and improvement of the Serbian Mongolica with English white breeds.

The writer of this article is willing to give information concerning the possibility of setting up such centres for the use of English breeders.

DR. LJUDEVIT PROHASKA,
Secretary, Chief Federation of Agricultural
Co-operative Association, S.H.S.,
Frankopanova, 15, Belgrade.

YUGOSLAV EXPORTS.

Expectations that Yugoslavia would have considerable quantities of agricultural produce available for export this year have been fulfilled by the harvest results. The year has been excellent as regards weather, the surface of land under cultivation has been steadily increasing since the conclusion of the War, communications are improving, and credit is stimulating production. Last year for the first time since the War, export exceeded import, this year also the harvest seems again to promise an active trade balance. It is estimated that this year's export will exceed 10 milliard dinars (about 40 million pounds sterling). From the Armistice onwards, Yugoslavia's export has moved as follows:—

1919	686	million	dinars.
1920	1,321	,,	,,
1921	2,461	,,	,,
1922	3,072	,,	,,
1923	8,048	,,	,,
1924	9,538	,,	,,
1925 (estimate) ...	10,000	,,	,,

Import on the other hand remains fairly steady at 8 to 8.5 million dinars.

At the end of September a congress of exporters was held at Belgrade—this congress is now held every year at the opening of the export season—and the following estimates were calculated for the chief articles of export:—

Corn—(wheat and maize, the chief cereals) together with haricots, potatoes, etc., over 120,000 trucks, valued at 10 million pounds.

Fruit and fruit products, dried fruits, preserves, wine, spirit, about 6,500 trucks valued at 2 million pounds.

Cattle and cattle products (meat, lard, cheese, leather, poultry and eggs), about 10 million pounds.

Wood and minerals, about 7 million pounds.

Industrial products, about 3 million pounds.

Various (tobacco, silk, preserved fish, opium, medicinal plants, etc.,) about 8 million pounds.

On these estimates are based many hopes for the further settlement of State finances, and the stabilisation of the currency, etc. Considerable discussion is taking place regarding the return to the gold standard. Abroad, too, attention is being paid to these questions. One section of foreign bankers is buying large amounts of dinars, reckoning on a certain rise. Further, large quantities of State 2½ per cent Reparation Bonds and 7 per cent. Railway Loan Stock are being bought for foreign accounts, again reckoning on a rise in value. These hopes have not been disappointed; the Reparation Bonds have risen 100 per cent. in value during the summer and the 7 per cent. loan by 30 per cent. Recently there have been visiting the country American bankers, economists and other well known persons, as well as many distinguished personages from European countries, all of whom have shown a keen interest in the economic circumstances of this country. Very often no pains were taken to hide the purpose of these visits which were for the investigation of conditions for possible investments, or the acquirement of concessions over certain natural sources of wealth, such as petroleum, forests, mines, etc. Many eyes, too, are watching the economic development of Yugoslavia and calculating her future capacity for the payment of War debts.

In the export estimates there is one point on which discussion has by no means finished. That is the estimate of the value of wheat allotted for export. The appearance of Russian wheat has brought about a great disturbance of prices on the markets frequented by Yugoslav exporters. The fall in wheat prices is still continuing, and almost all exporters are refraining from purchase. On the Bourses of Yugoslavia and neighbouring countries advance buyings have not been introduced since the war. The absence of advance buyings makes it difficult for merchants to know what to do now, with a fall in prices and uncertainty in the near future. Exporters, therefore, mostly prefer to keep their capital free at the banks (where deposits have grown to formerly unheard-of amounts), or to invest them in paper of value. This has brought about lively business in securities on the Stock Exchanges and a sudden rise in State bonds and bank shares.

Many agricultural experts, following the development of Russian agriculture and foretelling the return of wheat prices to pre-War level, recommend Yugoslav farmers not to increase their wheat production, but to undertake rather the cultivation of industrial plants (hemp, flax, hops, tobacco, opium, etc.), or of maize which is used in the country for the fattening of swine and the production of alcohol for industrial purposes. This advice will very probably be followed, especially as regards the cultivation of maize, which is popular here. Finally, the position of wheat in our export trade is relatively unimportant (under 10 per cent.), compared with other agricultural, stockraising, forest, mining and industrial exports.

Nevertheless the fluctuations in wheat prices on the world markets have brought many surprises and upset many calculations. But while merchants and farmers are disappointed, the townsfolk, and workers and officials in particular, for whom life is always hard, are very thankful for cheaper bread.

PROF. DR. MILORAD NEDELJKOVITCH.
General Director Postal Savings Bank.

IRON IN SERBIA.

It is a matter of general knowledge that there are important iron fields in Yugoslavia; among the better known being the mines at Varesh (Bosnia), with their smelting works, and at Ljubia, the famous iron mine in Basanska Kraina. There are, however, numerous iron outcrops in Serbia, which have been practically untouched for want of capital. The only exception is the mine at Maidanpek, where iron as well as copper ore is mined and sent away for manufacture. Practically nothing beyond a preliminary investigation has been done in the case of the largest iron mine in the country at Vlasina, 20 kilometres from the Belgrade-Salonika Railway, although in Turkish times up till 1875 primitive mining and smelting were carried on. The ore, which is found in the Vlasina Lake, is magnetite in crystallised slate Its presence has been determined for a length of about 30 kilometres, with a width of about 10 kilometres; there are two main sections; the primary outcrop found in crumbled mica-quartz, containing 2 per cent. of magnetite, and secondary outcrops in the Vlasina lake.

In the Middle Ages, ore was worked both from the primary and secondary layers, where the magnetite was washed. It was then conveyed to neighbouring rivers, where sufficient water power was obtainable for smelting and forging. Mr. J. Drashkotzi, mining engineer, estimates from the borings made in 1913 that the mine has a cubic content of 6,000,000,000 cubic metres. In these 6 milliard it is reckoned that there are about 194,028,000 tons of magnetite, with an average content of 32.3 kilos of magnetite per cubic metre. The magnetite yielded 68.55 per cent. of iron. According to the same authority its estimated value is 4,268,616,000 francs. It may also be mentioned that there are about 130,000 tons of slag left from the old furnaces in the mining sphere.

Other mines of less importance but hitherto not sufficiently investigated, are those of Kopaonik and Boranya. Here also the ore is found in crystallised formation, as well as in serpentine rocks. In addition to its occurrence in

Digitized by Google

crystallised rocks, ore is to be found in sedimentary formations, as e.g. at Markova Crkva, near Valyevo, and around Petrovatz.

The importance of the Vlasina mine lies in the fact that its position near the railway and its size gives a reasonable prospect of successful exploitation.

DRAG. R. STEPHANOVITCH,
Chief of Department.

ECONOMIC NEWS AND NOTES.

Rescinded Customs Duties.

The Tariff Section of the Legislative Committee has unanimously resolved to abolish customs duties on agricultural products (corn, maize, rye, etc.). In the case of the export of pigs, it was decided that white and so-called cross-breeds should not pay duty when weighing seventy kilograms. For other breeds the old prohibition of export of animals up to seventy kilograms in weight remains in force.

Customs duties on eggs are also removed, and those on wood reduced. The Minister of Finance has been asked to publish a decree confirming these resolutions as soon as possible.

New Commercial Treaties.

The conclusion of a Commercial Treaty with Austria is to be followed by similar treaties with Czecho-Slovakia and Albania. These countries are of special interest to Yugoslavia in the matter of imports and exports. Particular interest is being displayed in the possibilities of these negotiations as regards conditions and concessions. The Central Office of the Industrial Chambers of Yugoslavia has, therefore, drawn up a detailed proposal for a commercial agreement with Czecho-Slovakia, paying special attention to the protection of home products.

The Central Office has also undertaken the study of the problem of the first Yugoslav commercial treaty with Albania. Economic and commercial relations between Yugoslavia and the neighbouring republic are of particular significance, since Albania is obliged to import industrial and other products from farther distant countries. In the negotiations therefore, Yugoslavia should not lose sight of the possibilities on the one hand of obtaining predominance in regard to Albanian imports, and on the other hand of satisfying the widest needs of mutual trade. The Central Office of the Industrial Corporations has, therefore, drawn up a special proposal which, together with expert recommendations, has been sent to the Minister of Commerce and Industry.

On the conclusion of these treaties, further commercial treaties will be considered with the following countries:—Germany, Turkey, Great Britain, and Greece.

The Price of Agricultural Products.

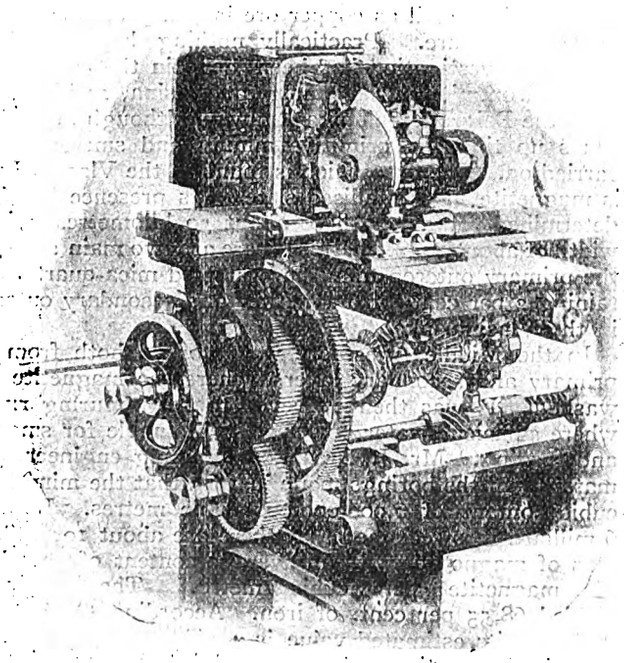
The fall in prices which has occurred in all agricultural products and in cattle, was brought about in Yugoslavia by an abundant harvest and by the effect of world prices. Prices of all corn have fallen by 30 to 50 per cent. as compared with last year.

"Futures" in Foodstuffs.

Voivodina, the province of Yugoslavia most interested in the placing of its agricultural products, has broached the question of the introduction of advance business (futures) in foodstuffs at its goods exchange at Novi Sad. Inquiries in this direction are being made by Bratislava and Budapest, and these have to some extent started the discussion here. All the exchanges in the Kingdom sent their representatives to the conference called at Novi Sad by the Novi Sad Exchange. The latter explained the need for advance business as follows:—

1. Advance business allows the producer to sell his goods at a more convenient time;

"UNITED-TRIUMPH" GEAR-DRIVEN STEEL-BLADE CUT-OFF



"CUT-OFF" FITTED TO "U.K." MACHINE.

Digitized by Google

2. It gives a guarantee that business will be transacted only between merchants.

3. It excludes the possibility of speculative tendencies regarding food prices, and also precludes extreme fluctuation in prices, either up or down.

The conference concluded with a resolution admitting the advantages of the introduction of advance business, in spite of all objections to the contrary, but recognising at the same time certain difficulties, and handing over the question to the investigation of a special committee, which is to prepare a scheme for the introduction of advance business at a convenient time and as advantageously as possible.

Danubian Freights Tariff.

Since certain foreign shipping companies have been conveying goods on the Danube to Vienna for 33 per cent. less and to Braila for 30 per cent. less than the Yugoslav Shipping Syndicate, the latter has decided to reduce freights on the Upper Danube by from 5 to 10 per cent. according to distance, and on the Lower Danube by 5 U.S.A. cents per 100 kgs., irrespective of distance. These reductions came into force on November 1.

Coal.

A livelier demand for coal is being felt on the home markets. Private mineowners are finding buyers through experienced agents and by means of reduced prices and other facilities. State mines on the other hand are not so well and so practically organised, and consequently have very large stocks on hand.

The import of foreign coal into this country has been made more difficult by the import duties and the increase of railway freights. For this reason, British coal imported via Sushak is now 1,200 dinars per truck more. The same increase applies also to Czech and Polish coal. In spite of this, foreign coal is still endeavouring to penetrate here. The competition of Polish against British coal is succeeding, since the former quotes 650-720 dinars per ton franco Belgrade, as against 680-750 for British coal.

Reduction of Railway Freights.

In spite of the average reduction of 20 to 25 per cent. on freights introduced by the new transport tariff of the Ministry of Communications, it is felt still that economic needs have not been satisfied. The reduction of prices is felt only over greater distances, whereas for smaller journeys it remains practically the same, and in some cases is even somewhat higher. It is, therefore, expected that the Ministry of Communications will very soon correct these discrepancies of the new tariff.

Butter Production at Belye.

The State domain of Belye possesses 1,500 milch cows which give daily 10,000 litres of milk. This milk is prepared by modern methods and yields 400 kilograms of the finest butter.

Export of Prunes.

In spite of the good crop of plums, earlier calculations of plum drying have not been realised. Large consignments at the beginning brought down the price per set to 4.20 dinars, and this made the peasant undertake brandy distilling rather than prune drying. Later on prices became considerably firmer, which put the advance sellers in difficulties and forced them to cover themselves at any cost. Germany has not appeared as a buyer this year. About 300 trucks of conserves have been produced, and sold mainly to Austria and Czecho-Slovakia. It is interesting that the prices of conserves is higher than that of prunes.

Customs Duties Before Parliament.

The Finance Committee Section is continuing to discuss the Customs tariff. It was resolved to increase the duty on stone, and to decrease duties on gum arabic by 25 per cent., on flour by 20 per cent., on cocoa by 30 dinars. It was also decided to decrease the duty on sugar, since it was the unanimous opinion of all parties that it is too high.

National Exhibition at Belgrade.

The Society for the National Exhibition at Belgrade has concluded an agreement with the Belgrade municipality for a fifty years' lease of fifteen hectares of land (37 acres) on Topchider Hill. Preparatory work for the exhibition will occupy two years, as, although the site is not far from the centre of Belgrade, it must be connected with the latter by new tram and railway lines.

Payment of Coupons of War Reparation Bonds.

According to the official statistics of the State Debts Management, 3,526,930 No. 1 coupons, representing a total value of 88.173.250 dinars, have been paid out between February 11 and October 11 this year as interest due on the 2½ per cent. War Reparations Bonds.

Payment of coupons continues until February 1, 1926.

MONOPOLIES IN YUGOSLAVIA.

The following statement of revenue and expenditure for the month of July and for the first four months (April-July) of the current financial year has been issued by the Autonomous Administration of Monopolies of the S.H.S. Kingdom:—

NINE MONTHS' EXPORTS.

Yugoslav exports during the month of September last amounted to 421,812 tons, of a value of 79,840,196 gold dinars, as compared with 384,596 tons valued at 66,905,171 dinars in September, 1924, an increase of 9.67 per cent. in weight and of 19.33 per cent. in value.

Exports for the first nine months of the current year amounted to 3,229,823 tons, valued at 581,435,102 gold dinars, as compared with 2,695,149 tons, valued at 456,043,829 gold dinars, for the corresponding period in 1924 an increase of 534,674 tons, or 19.83 per cent. in

Digitized by Google

weight, and of 125,391,273 dinars, or 27.49 per cent. in value.

The chief articles exported during these nine months were :—

Article	Unit	Amount	Paper dinars (millions)
Corn : wheat ...	Tons	45 761	125,8
other corn ...	,,	7,623	16.1
Maize	,,	53 695	104.7

Sheet lead	,,	805	9.5
Hemp...	,,	774	9.3
Various	,,	129 660	152.4
Total	Tons	421.812	867.6

During September wheat was the most important article of export, while during the preceding months maize had been taking the first place. During the period November 1, 1924-October 1, 1925, there were exported of last year's harvest: 101,817 trucks of maize, worth 2,144.3 mil. dinars. From January 1 the amount of maize exported amounts to 87,151 trucks, worth 1,832.8 mil. paper dinars.

The chief countries to which Yugoslavia exported during the third quarters of 1925 were (in order of percentages): Italy 24.02, Austria 21, down the Danube via Braila 15.34, Greece 8.31, Czecho-Slovakia 7.55, Germany 6.49, Switzerland 4.35, Hungary 4.35, France 2.88, Poland 2.10, and all other countries 3.91.

Under the heading "Cash" a gold dinar is reckoned as a dinar, an English pound as 25 dinars, a dollar as 5 dinars, an Italian lira as one dinar, a Swiss or French franc as a dinar, a coined silver dinar as one dinar, etc.

Discount rate: 6 per cent. Loans on securities: 8 per cent.

GREEK MARKET FOR ELECTRICAL HOUSEHOLD APPLIANCES.

Electric fans are used extensively in most of the larger cities in Greece during the long hot season (says an American Consular report). Almost every office is equipped with fans in such cities as Athens, Piræus, Salonika, Patras, and Volo. Both ceiling and desk types are used, but there is a preference for the latter, in medium and small sizes. In the case of ceiling fans, the large sizes are used and wall-mounting regulators are desired. There is no marked preference in colour or finish. Very few exhaust fans are used. Germany, Italy, and the United States furnish most of the electric fans, the former being preferred owing to their low price.

Rugs and carpets are found in almost all of the better houses, but they are taken up in April and put down again in October. Waxed or varnished wooden floors are found in about 25 per cent. of Greek homes. Heavily upholstered furniture is common. Almost no power-driven vacuum cleaners are in use, and hand-operated ones are unknown.

Most houses the provided with laundry facilities. No power washing machines are used, but electric flatirons, most of which come from Germany, are common.

Practically no electrical cooking equipment is used in this country. The electric plants in most of the Greek cities are overloaded, and the price per kilowatt-hour for electric energy is high. As a result electricity is little used in homes for other than lighting purposes. It is estimated that cooking by electricity would cost at least twice as much as by coal and three times as much as by gas. Virtually no electric cooking equipment is on sale.

About 25 per cent. of the better class Greek homes have refrigerators, as do many of the shops and cafés. Approximately 50 per cent. of the better homes use ice from May to October, but no electric refrigerators are seen. Electric heaters are seldom seen, and the few headlight and radiator types used in hotels and luxurious homes in Athens and Salonika are of German or British make. No electric curling irons, heating pads, immersion heaters, or vibrators are used. Three or four hospitals are equipped with violet-ray machines.

Local dealers usually buy electrical appliances direct from the foreign manufacturer, and desire ordinarily an exclusive agency for the entire country. Electrical appliances are not sold on the instalment plan, largely because the market is too small, nor are they rented.

TURKISH MARKET FOR MOTORS.

The Turkish motor market has been improving steadily for some months and distributors appear to be satisfied with future prospects (says an American Report). This satisfactory condition is owing primarily to the improved general economic situation resulting from last year's crops. Since the beginning of this year 750 cars were sold, of which 490 were American. Open cars comprise about 75 per cent. of local sales, but dealers express the opinion that there is a decided tendency towards the adoption of closed types. Practically no demand has been noticed for lorries, except for a few of the lighter types for which the sales outlook is good. Motor-cycle sales at present hardly amount to 50 units annually. A British make is said to be the most popular, but even its sales are not very satisfactory.

Mr. Francis Thureau Dangin, Hon. D.Litt., Curator of the Assyrian Department of the Louvre, Paris, has been elected to an Hon. Fellowship at Queen's College, Oxford.

A Bucharest message states that an arrangement has been reached with representatives of Messrs Baldwin, of America, for the payment of 2,000,000 dollars for locomotives to be supplied to Roumania. A contract was signed on November 16 by the Minister of Finance, under which this amount will be remitted in instalments spread over five years, the first of which will be included in the next Budget.

Near East Markets.

SUDAN TRADE PROGRESS.

The figures for the trade of the Sudan for the first eight months of this year make a very favourable showing. The total volume of trade amounted in value to £E7,003,409, as compared with £E6,423,405 for the corresponding period of 1924, and an increase is recorded in respect of all the items except Government imports, which at £E1,069,897 show a decrease of £E199,126. Public imports are £E154,752 up at £E2,363,960, there being thus a slight decrease in the total imports. Exports show an increase of £E476,462 at £E3,254,788, re-exports are £E63,184 up at £E192,117, while transit trade has expanded from £E37,915 to £E122,647.

Government imports, which cover a wide field, including iron and steelware, sugar, machinery (excluding motor cars), coal and oil fuel, timber and railway sleepers, and cement, to take some of the leading items, show large decreases in respect of two items. Imports of machinery are £E76,015 down at £E117,761, while timber and railway sleepers figure at £E36,215 as compared with £E103,638. In public imports the principal increase is in respect of cotton piece-goods, the value being £E843,718 as against £E699,706. Here also a marked decrease is to be noted in respect of machinery, the value of the imports being £E93,628 as against £E136,736.

Cotton, of course, heads the list on the export side. The amount exported was 164,809 kantars, as compared with 174,546 kantars, but the value rose from £E1,387,919 to £E1,602,630. Othere notable increases in value were in respect of dura, sesame, ground nuts, cattle, and hides and skins. Gum and cotton seed both show more or less substantial decreases, the figures for gum being £E599,282 as against £E642,975, and those for cotton seed £E117,616 as against £E153,865.

SUDAN GUM EXPORTS.

The exports of gum from Port Sudan during September amounted to 951 tons of the value of £E37,296. This brings the export for the first nine months of this year to 15,114 tons of the value of £E636,845. For the corresponding period in 1924, the exports were 15,114 tons of the value of £E697,650.

SPECIAL MARKET REPORTS.

Hamadan, October 24.—The price for sugar per batman is: Belgian 10.85 krs.; Russian, 10.25 and 10.75 krs.; soft sugar, 9.50 krs. There is a very good demand for soft sugar, but there is no stock in hand.

Tea has been selling at 43.44 krs. Stocks are very short. The market in Manchester and Bombay cotton goods is firm. Matches are selling at 460 krs. per case. The market is firm. The market in spices is improving. Dates have realised 600 krs. per khalvar, but the market is falling. The market for gall nuts at 1,300 krs. per khalvar, is firm.

Mosul, October 24.—The rain which fell abundantly during the week encouraged cultivators to continue the sowing of their land which they had neglected this year.

The sheep market remains uncertain owing to the fact that Syrian merchants have not returned to Mosul. Some lots offered during the week for sale have been bought by native merchants.

HEAD OFFICE:—SOFIA, BULGARIA

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street. S.W.)

THE SUDAN.

Hull and Cabin Work.—The Inspector-General of Irrigation, Sudan, Khartoum, invites tenders for the supply of hull and cabin work only for two launches. January 25.

Supplies.—The Inspector-General of Irrigation, Sudan, Khartoum, invites tenders for supplies required for the Floating Workshop "El Nasheet": (a) Electric generating set and fittings for electric light—supply only. (b) Oils and paints. Contractors may tender for one or both of the above groups. December 7.

EGYPT.

Clothing, Etc.— The Chief Inspector, Customs Administration, Alexandria, invites tenders for the supply of clothing, boots and tarboushes required during the year 1926-1927. February 5.

Water Supply Works.—Tenders are invited for the installation of water supply works for the Zifta Municipality. December 1. (D.O.T.)

Clothing, Etc.—The Secretary-General, Ports and Lights, Administration, Arsenal, Alexandria, invites tenders for the supply of clothing, tarboushes and boots required during the financial year 1926-1927. February 1.

Water Pipes.—Tenders are invited for the supplying and laying down of water pipes of various diameters and accessories at Zifta. December 3. (D.O.T.)

Hose Pipes.—The Superintendent of Stores, Saptia, Cairo, invites tenders for the supply of 1,250 hose pipes without couplings, 1,000 rolling rings and 9,060 joint rings. December 15.

Lock Bridge.—The Egyptian State Railways, Telegraphs and Telephones, invites tenders for the construction of the new lock bridge over the Mahmoudia Canal at Alexandria. This bridge is designed with a superstructure for two railway tracks and a road bridge. It will be built on the existing masonry which will have to be modified in consequence. Tenderers may submit such offer as they deem best according to the information they may obtain from the general drawings of the Administration, suggesting three solutions of swing bridges and a solution of a lift bridge. February 16.

Paper and Stationery.—The Central Stationery Stores, Ministry of Finance, Cairo, invites tenders for the supply of paper and stationery required for the year 1925-1926. January 9.

TURKEY.

Tenders are invited by the Chemin de Fer d'Anatolie-Baghdad for 3 crane wagons. December 31. (D.O.T.)

634 tons of senna were exported from the Sudan during the first nine months of this year as compared with 856 tons for the corresponding period of last year.

The Dublin Dockyard Co. (Messrs. Vickers-Ireland, Ltd.), has secured a contract for the construction of a tug and pilot vessel from the Bluff Harbour Board, New Zealand. The dimensions of the vessel will be 135 ft. by 30 ft. by 20 ft., and she will be fitted with twin-screw semi-Diesel machinery by Messrs. Vickers-Petters, capable of developing 1,200 b.h.p. Her speed on service will be 12 knots.

BULGARIAN NOTES.

(From Our Bulgarian Correspondent.)

Sofia, November 18.

Last week, the British Legation and the Bulgarian Ministry of Foreign Affairs exchanged Notes, the tenour of which is that pending the signature of a commercial treaty, existing commercial relations between the two countries will continue as heretofore.

Bulgarian Exports for England.

Details have been published in the local Press of a scheme whereby vast quantites of Bulgarian dairy produce will be exported to England. The Ministry of Commerce has actively interested itself in this scheme which provides for 100,000 pigs being exported the first year, rising to half a million in the fifth year. An English company, whose capital, it is stated, will be over a million pounds sterling, will be formed to buy the pigs and other animals. The company will build slaughter-houses throughout Bulgaria and will arrange for a weekly service of ships between Varna and Bourgas and the principal British ports.

Such a scheme is greatly to be commended but there are several difficulties still to be surmounted, notably the question of granting credits to pig breeders and other farmers. In any case, as the newspapers say. "Once upon a time geese saved Rome. To-day pigs may perhaps save Bulgaria!"

GREEK REFUGEE LOAN.

Hambros Bank states that the revenues for the nine months ended September 30, assigned to the service of the Greek Government Seven per Cent. Refugee Loan, 1924, are as follows:—

	1925. Jan. to Sept. Drachmæ.	1924.* Whole year. Drachmæ.
New revenues (a) ...	530,360,573	541,397,112
Old revenues	1,196,787,798	1,428.681,881 and £14,982
Old revenues surplus (b)	(c)	735,819,000
Average approximate exchange drachmæ per £1	296.18	248.17
Nine months' service of loan at above exchange requires	204,919,538	—

* Adjusted definite figures. (a) The loan has a first charge on (b) these revenues and surplus. (c) No actual figures can be given until after the end of the year.

The Greek Government has given an order to Krupp Works, of Essen, for the minting of small coins to the value of 65,000,000 drachmæ. The alloy will consist of 70 per cent. copper, 20 per cent. nickel and 10 per cent. aluminium.

Shipping Intelligence.

NEW ELLERMAN LINES STEAMER.

The launch took place recently at the Central Shipyard of Messrs Wm. Gray and Co., Ltd., of the finely modelled, single-screw steamer, City of Leicester, built to the order of the Ellerman Lines, Ltd., Liverpool.

The vessel is of the one deck and shelter deck type, with tonnage opening, and is built to Lloyd's highest class. She has a cruiser stern, and is of the following dimensions: length, overall, 359 ft. 3 in.; breadth, extreme, 47 ft. 6 in: depth, moulded, 26 ft. The hull is built with deep bulk angle frames, cellular double bottom, and after and fore peak ballast tanks.

The cargo gear is of strong, up-to-date type for the rapid handling of cargo, consisting of fourteen derricks, ten 7 in. by 12 in. steam winches, a warping winch aft, and fitted for auxiliary steering, steam windlass, stockless anchors, steam steering gear, and telescopic topmasts.

SHIPPING AT PORT SUDAN.

The rapid expansion of the traffic at Port Sudan is borne out by the figures for September. Fifty-eight merchant vessels entered the harbour, their net tonnage being 196,404. The figures for the corresponding month in 1924 were 49 and 133,027, while for 1923 the figures were 39 and 96,664.

INDIAN SHIPPING.

The tonnage of vessels entered into British India and cleared outwards with cargoes from and to foreign countries and British Possessions during September amounted, respectively, to 583,000 and 615,000 as against 517,000 and 614,000 in August and 510,000 and 644,000 a year ago. The tonnage entered into and cleared from British India during the six months ending September was 3,363,000 and 4,029,000 respectively, as compared with 3,281,000 and 4,601,000 in the same period last year.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Massilia for Bombay (Liverpool, December 7). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mandasor for Port Said, Colombo, Madras and Calcutta (London, November 28).

Bibby Line.—S.s. Yorkshire for Port Said, Colombo, and Rangoon (Birkenhead, December 2).

British India Line.—S.s. Hatimura for Colombo, Madras, and Calcutta (London, December 5); s.s. Gharinda for Bombay and Karachi (London, December 19).

Cunard Line.—S.s. Brescia for Patras, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, and Sulina (Swansea, December 14).

Ellerman "City" Line.—S.s. City of Canton for Calcutta (Birkenhead, December 1).

Johnston Line.—S.s. Kenmore for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, December 5); s.s. Quenmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, December 26).

P. and O. Line.—S.s. Ranchi for Bombay (London, December 11); s.s. Nankin for Colombo, Madras, and Calcutta (London, December 12).

Prince Line.—S.s. Tartar Prince for Malta, Alexandria, Jaffa, Haifa, and Beyrout (London, December 4).

The Delhi Umballa Kalka Railway Company has declared an interim dividend of 6 per cent., together with a bonus of 1 per cent. on the Ordinary stock, payable, less tax at 2s. 1d. in £, on January 25.

An Athens message states that an agreement has been signed between the Minister of Marine and a French group for the construction of three submarines of 710 tons each, delivered in two years. The price is £115,000 each.

Motors and Motoring.

By G. B. B.

Need for Garages.

Leaving for a time the subject of overseas trade, one of the most burning questions of the day and one which must, sooner or later, be answered in a proper manner, is as to where the motorist, in London, can leave his car whilst paying a brief business visit, and, further, where he can leave the car during the day if he uses it merely to bring him up to town and to take him home at night. Unless the motor is to go largely if not altogether out of use as a means for travelling up to town and back, something will have to be done to solve the at present serious and daily growing more serious—problem of garaging.

There is a further aspect to the position. The comparative scarcity of garages is having a bad effect on the development of our light car industry, in that it is having a deterrent effect upon buyers. It must be remembered that a very considerable number of middle-class people to-day live in flats, half houses and apartments. There is no possibility of a garage being built as an adjunct to such premises in most cases. The result is that many thousands of potential car purchasers are debarred from buying even the lightest of light cars and, instead, depend on the various public service vehicles.

It is true that in many parts of the London suburban area great garages, capable of accommodating many dozens of cars each are springing into existence and, as fast as they are erected, they are filled with regular customers. With them, the idea is twofold. In the first place those people who motor up to town in the morning and go back at night can garage their cars, and in the second place the car-owners in the vicinity who have no garage of their own can make use of the accommodation thus provided. These big suburban garages are a great stride in the right direction, but they do not go far enough and I do not think they ever can go far enough. At the outside they can only deal with a comparatively few vehicles, and they do very little to mitigate that congestion, that over-crowding of vehicles due to the small amount of vehicular storage space available, which is so noticeable in London itself. What is wanted is a number of garages, in London, built on the plan which allows of the storage of motor-cars on any of a dozen floors or more, with lifts to hoist and to bring down the cars.

Hire Purchase.

Although this is not a system of purchase which is liked by the older school, there is no doubt it has come to stay and, equally, there is nothing unbusinesslike about it, carried out on proper lines, any more than there is about discounting a bill. There are a number of factors in the system which have to be taken into account, but provided they are properly considered and such allowances made as have to be made, the hire purchase system is as fair and equitable a system of buying as is the payment of spot cash. Quite a number of firms are open to sell their products on this system; indeed, I have the impression that any and every make of light car, at any rate, can be bought in this way, either direct from the makers or through an agent.

Further, it is by no means certain but that the immense development of hire purchasing has not had one good effect in that, in spite of the impression so many people have regarding it, it really teaches thrift. A man or woman buys a car by paying a certain sum down and promising to pay so much a month for a certain time. There is no getting away from the payments short of forfeiting the car or a portion of the money paid. Consequently the payments are kept up and in a year or so the purchaser finds he owns and has paid for, something that has an actual selling value of some few hundred pounds. Without the compulsion of keeping up his payments to the hire-seller, the man or woman in question would probably not have saved so large a sum in his lifetime!

Money for Nothing.

There is nothing at which the evil-minded small boy casts such envious eyes as he does at some one else's cherries. Just now the Chancellor is looking covetously at the monies of the Road Fund, a fund which consists of money taken from motorists for the express purpose of maintaining our present roads and building new ones. We were definitely and categorically promised by the Government when the motor taxes were imposed that the cash received should be used for certain clearly defined purposes, and knowing the money would be well spent in carrying out such purchases and relying on the common honesty of a Government, we paid the money. Now one of the most versatile of Chancellors tells us that no fund, no matter how many pledges have been made regarding it by Prime Ministers and Cabinet Ministers, is sacrosanct, and complains that as soon as he wishes to effect a national economy by taking the Road Fund money for other purposes, somebody starts grumbling. Of course any statement that would represent the using of the Road Fund money for anything other than that for which it was intended would be merely a terminological inexactitude. No housewife would think she was effecting a saving by taking money out of the bank to pay the butcher's bill. Any Chancellor who considers that he is effecting a great economy by laying hands on Road Fund monies could say regarding his office, in the words of one who, with all his faults, was a statesman: "I am a child in these things!"

This proposed misappropriation of the Road Fund, as of a part of it is not alone a motorists' matter. It affects every person in this country, in that the proper upkeep of the roads is essential to cheap transport. It affects cyclists, charabanc and motor omnibus passengers, shopkeepers, wholesalers, manufacturers and even statesmen who wish to go, by road, to spend week-ends in Bucks. Unless we keep up our roads our internal trade must decay.

Miscellaneous.

It is announced that the Coventry Chain Co., Ltd., has entered into an arrangement with Messrs. Brampton Bros. Ltd., the well-known chain manufacturers, by which subject to the approval of the shareholders concerned, the C.C.C., as it is generally called, will purchase all the ordinary shares of Brampton Bros., at an average price

of £1 18s. 1d. per share; payment being partly in cash and partly by the allotment of C.C.C. shares.

In his recent speech at the All British Motor Show in Adelaide, the representative of the Association of British Motor Manufacturers said that no British manufacturer would hesitate to build for a Colonial market, but that it was hardly to be expected that he would build for one market alone. British manufacturers, he said, are now endeavouring to standardise a Colonial model which would also suit the home market.

Which manufacturer was it, I wonder, who first suggested a vehicle which should be equally suitable for Park Lane, London and the journey from Basra to Kut?

Cotton and Cotton Goods.

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Ottoman Bank for the week ending November 21, states:—

An exceedingly quiet week has been experienced in this market. Most transactions have been of a retail description and a feeling of disappointment prevails that the abundant supplies of raw cotton which are now assured have not produced the expansion in business which was so confidently expected.

Another report is due from the American Agricultural Bureau this afternoon and perhaps, in the absence of any better explanation, the hesitant tone of the market may be ascribed to that fact.

Yarn.—The imminence of the ballot on the question of increased short time appears to have encouraged spinners of American cotton to take a firmer stand on the matter of prices and quotations have been steadier than for some little time past. There is no improvement in the turnover.

There has been possibly a little more animation in the section using Egyptian cotton.

Cloth.—Business in piece-goods has been on a restricted scale and for none of the larger consuming centres has any exceptional business transpired. Such sales as have taken place have been usually for very small quantities. Some of the prices offered from India are said to be absurd. Only a moderate business has been done for China. The Near East and Egypt have contributed little to the week's total but on the other hand a fair amount of support has been received from Home trade.

Raw cotton.—Quotations for Americon cotton are very little changed on the week and fluctuations also have been within a narrow range. The Bureau Report to be published this afternoon is awaited with interest, but is not expected to record much change from the figures last published. There is only one further report to be published, due on December 8, and the markets will probably feel relieved when this also is out of the way.

Reports received regarding the Egyptian crop continue to be good and a very large yield seems to be assured. Closing quotations yesterday were as follows:—American Middling 10.60; Egyptian Fully Good Fair 20.00.

SUDAN COTTON GROWING.

The report of the Central Economic Board of the Sudan Government, dated October 25, gives the following particulars:—

Blue Nile Province.—Prospects of the cotton crop in the Sennar and Hag Abdalla Districts are above the average. No cotton has been shown in Kamlin District and the areas sown in the Hassa Heissa, Rufaa and Wad Medani Districts are much less than the 1924 areas.

Kassala Province.—Southern District: Rainfall is still considerably below the average, but prospects are on the whole very fair, except within certain limited areas. The cotton crop at Mafaza is satisfactory. Gash Delta: Sowing is general.

The Fung Province, October.—A telegraphic report forecasts the cotton yield at between 19,500 and 22,500 kantars.

Mongalla Province.—Rejaf District: The crop, approximately 300 feddans, is reported as very fair, but backward. A report on the east bank areas states that some of the cotton has been sown on too light soil which, though suitable for dura, is too sandy to support much cotton. It also states that the natives are good tillers and remarks on their skill in utilising small plots of good soil lying between outcrops of rocks.

Red Sea Province.—The total area in Tokar watered by this year's flood is 31,000 feddans and it is estimated that 22,000 feddans will be under cotton. Of this total 12,000 feddans are sufficiently well watered to produce a normal crop without rain in the near future. This is the smallest flood for many years.

Upper Nile Province.—The inland Dinkas of the Melut District, who had not started cotton cultivation last year,

Digitized by Google

have this year disposed of 49 sacks of seed and the crops are reported to be very promising. It is expected that the yield of this district will be about 310 kantars compared with 160 kantars in 1924. This is the first instance of inland cultivation in the Province and it will be interesting to see how the cultivators overcome the transport difficulty. It is considered that the cotton of Gelhak is the best in the Province.

Cotton Grown on Pumping Stations.

Berber Province.—Gendettu: Cotton is looking very well and some picking started on September 23. The plants are sturdy and well laden with bolls. There has been practically no boll shedding. Picking should be fairly general in the first decade of October on the north part of the station and towards the end of October on the south part. Kitiab: The cotton crop promises a fair yield. Picking started in the Gezireh on September 29, but no cotton has been brought into store yet. Bouga: The cotton crop is satisfactory and picking should commence towards the end of October. Mikeilab: All cotton has germinated very well.

Dongola Province.—Nuri: Cotton looks promising and is flowering very well. Gureir: Cotton on the whole is looking very good indeed. It is now flowering and, on the earlier sown, bolls are well formed. It gives every promise of being a very good crop except in very exposed places where plants have been destroyed by "haboobs." Ghaba: Cotton is looking very well; most of it is in flower and some bolls have formed.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company in their report for the week ended Novembre 12, state:—

Since our last report the futures market has been rather erratic; at the close Sakel showed great weakness, while Ashmouni finished relatively firm. The net changes on the week are the following: Sakellaridis, 2.19 dollars down for November, 1.71 dollars down for January, 1.70 dollars down for March, 1.80 dollars down for May, 1.80 dollars down for July, 2.10 dollars down for November 1926; Ashmouni, 0.18 dollars up for December, 0.10 dollars up for February, 0.10 dollars up for April, unchanged for October 1926.

The period under review opened with fairly quiet markets. On the 9th instant, a new estimate of the American crop was published, the figure given being 15,386,000 bales against 15,226,000 bales a fortnight ago, and as this figure was distinctly larger than the market expected heavy selling, both speculative and commercial followed.

The relative firmness of Ashmouni must be attributed to the recovery of New York during the last two days, and to the fact that at the decline the trade came in and bought heavily, apparently in cover of sales, especially to America, made during the last few weeks and left unhedged until now.

The demand from abroad has been fairly good, and whereas up to now the proportion of sales of Ashmouni has been larger than that of Sakel, we think that the reverse has been the case this week. The drop in Sakel prices seems to have re-awakened interest, as considerable purchases have been made by spinners during the last few days. On the second tender day of November 500 kantars dockets were issued.

The Government has bought a further few hundred bales of Sakel, but what is incomprehensible is the fact that they bought when prices were fairly firm and withdrew when the market became demoralised. Nothing further has been heard about the projected restriction of acreage.

Our opinion on the market is that prices have now reached fairly reasonable levels, and we would advise caution. Concerning Sakel, one must not lose sight of the fact that spinners' purchases to date have been very small, that the Government may continue and even increase its purchases of the better qualities and, finally, that there is a considerable proportion of "mixed" cotton which is untenderable against contracts, all of which factors should tend to prevent any further serious decline in prices. The week's receipts amount to 338.072 krs. against exports 312,432 krs.; the stock stands at 1,752.260 krs.

Spot: Minet Bassal has been fairly busy this week and sales amount to about 27,700 bales of which we estimate 14,300 bales Sakel, 19950 bales Uppers, 1,800 bales Zagora, 400 bales Pilion, 50 bales Brown and 200 bales White. The Egyptian Government has bought during the week about 1,100 bales Sakel from Fully Good Fair to about Good.

Sakellaridis: A good business has been done and all styles have been dealt in, with medium grades attracting most attention. With the exception of cotton below Good Fair, which is not yet in plentiful supply, spot differences are generally rather easier.

Ashmouni and Zagora: have been in good request and all grades have changed hands. Spot differences are without change.

Pilion: has been in fair demand for all grades without any change in spot differences from last week's rates.

Brown: A retail business has been done at last week's rates.

White: A fair business has been done without much change from last week's parities.

Crop 1925: Picking having been completed, there is nothing further to say under this heading.

The October report on the state of the river published by the Ministry of Public Works states:—"Everywhere the river is very low and the prospects for next low season are very poor." Although the low state of the river is not cheering, we think that it is premature to predict a shortage of water during next summer.

COMPANY NOTES AND REPORTS.

ANGLO-BELGIAN OF EGYPT.

An extra-ordinary general meeting of the Anglo-Belgian Company of Egypt has been called for December 1, when the directors will propose the reduction of the issued 69,138 shares of £5 each by £2 10s. per share. Upon the reduction being made, the capital will be increased by the creation of £1,000,000 by additional shares of £2 10s. each.

TEA COMPANIES.

The Chargola Tea Association announces an interim ordinary dividend of 3½ per cent. (less tax).

The Jaipur Tea Company has declared an interim dividend of 7½ per cent., less tax.

The Baraoora (Sylhet) Tea Company has declared an interim dividend of 5 per cent., less tax.

The Jhanzie Tea Association has declared an interim dividend of 10 per cent., less tax.

NEW COMPANY.

RANGOON AND CEYLON TEA.

Rangoon and Ceylon Tea has been registered as a private company with a captal of £500, in 1s. shares. The objects are to carry on the business of cultivators of tea, coffee, cinchona, rubber and other produce, etc. The regist ered office is at St. Stephens House, Westminster, S.W.

The second rice crop estimate for Burma shows an increase of 565,000 acres over the corresponding acreage of last year, but a decrease of 230,000 on the actual matured area of last year.

Bonds drawn for repayment and coupons falling due December 1, of the Roumania Four per Cent. External Loan, should be presented for payment at the counting-house of Helbert Wagg and Co., Ltd., 41, Threadneedle Street, E.C.2.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

Sir Austen Chamberlain, K.G.

The exceptional honour conferred on the Secretary of State for Foreign Affairs is a merited tribute not only to his success in connexion with the Locarno Pact, but also to the strength of character and tact that he has shown in the exercise of the wider duties of his post. In no part of the world does personality count for more than in the East, and we look confidently to his tenure of office to mark the complete restoration of British prestige in the Near and Middle East.

Turkey and Iraq.

The final stages in the protracted negotiations between Great Britain and Turkey over the Iraq frontier will be reached next week, when the Council of the League of Nations will have to deliver its verdict. For a definite delimitation it will be necessary that the members of the Council—representatives of France, Italy, Japan, Belgium, Sweden, Czecho-Slovakia, Brazil and Uruguay—should be unanimous; if they cannot achieve unanimity, they will be obliged under the ruling of The Hague Tribunal to refrain from delivering judgment on the question, and the controversy will continue, with Iraq, supported by Britain, on one side of the Brussels Line and the Turks on the other. In the light of the Turkish attitude towards the arbitration a Brussels Line decision or the announcement that the members of the Council are unable to agree among themselves would have practically the same result. Turkey will protest that she must have Mosul and will continue to spread abroad reports of her preparations for war. The hard logic of facts, however, will be against her. The most interested spectators of these warlike measures will be the Kurds, recently reduced to submission, and the people of Erzeroum, where it has been necessary to proclaim martial law. There must have been very bad staff work in Moscow to allow Russian spies in Erzeroum to attract the attention of the Turkish authorities to their activities at a moment when the Soviet Government was encouraging Turkey to push her quarrel with Great Britain to extremes. This outbreak in a fanatical district will have occurred opportunely, we may hope, to prevent the Turks from committing themselves irrevocably as the catspaws of Soviet intrigue. Even if a campaign for the conquest of the Mosul vilayet were an easy matter at this season of the year, there would be no enthusiasm in Turkey for the war, and the least mischance would certainly have unpleasant consequences for the Angora Government. It will have done its best to obtain Mosul; but if the fates are against it on this point, it is surely better to bow to the inevitable with as much grace as possible, and to turn the controversy to some profit by enlisting the help that Britain is willing and anxious to give the Turks in other directions.

Turkey in Transition.

Although there would seem to be no real reason for investing the Mosul controversy with all the terrible consequences that have been predicted for it in some quarters, the protracted negotiations over this question are to be doubly deplored, if only on the ground that they have prevented the very considerable amount of good will for the Turks that exists in Great Britain from being mobilised at this time on their behalf. Had it not been for the largely artificial fuss made in Angora over Mosul, which has not been under Turkish jurisdiction for over seven years, the occasion would not have arisen for the reversion to the cold-blooded cruelty of pre-Republican days as exemplified in the treatment of the luckless inhabitants living near the Brussels Line. Almost simultaneously with General Laidoner's report on these outrages the world is informed that a Bill is to be submitted by the Cabinet to the Turkish Parliament embodying the most up-to-date provisions of labour legislation on the lines that commend themselves to the League of Nations. It is difficult to reconcile two such contradictory aspects of

Digitized by Google

the Turkish character. The outbreak of trouble in Erzeroum and the Black Sea littoral shows that the path of reform is not to be trodden easily and that Turkey needs complete respite from external complications as well as a helping hand from foreign capital. Unless, however, the Angora Government can make up its mind to close the Mosul incident and to take definite action in restoring friendly relations with Great Britain, the long furrow that it has set itself to plough in embarrassed isolation may prove too much for its resources.

Assyrian Refugees in Iraq.

Although the Turks refused to allow the representatives of the League of Nations to visit villages on their side of the Brussels Line, General Laidoner's Mission has been able to obtain a clear view of what has been happening across the border from the victims who have escaped from Turkish attention and taken refuge in Iraq. Nothing in the attitude of the Angora Government during the whole Mosul controversy has been so inexplicable as its treatment of Assyrian Christians at the very moment when the attention of Europe was fixed on this part of the world, and a Commission of the League of Nations had virtually suggested that, whatever else might be taken from them, the Turks might be trusted with jurisdiction over the Assyrians. The effect of this sudden act of persecution must have been foreseen, unless indeed the Angora authorities were so ignorant of the terrain that they imagined that a clean round-up of the people could be effected without the chance of any escaping. For the moment, however, Great Britain's concern is more for the fate of the Assyrians in Iraq than for an explanation of Turkey's strange behaviour. A fortnight ago it was reported that provision had to be made for more than five thousand destitute Nestorians and three thousand destitute Chaldaeans, with refugees still arriving daily. An appeal comes from Iraq, endorsed by Sir Henry Dobbs, British High Commissioner, for £100,000, as in addition to the food required for nine thousand or more people for five months, money is needed for clothing and shelter.

Compromise in Greece.

A fortnight ago the basis of a possible working agreement between Venizelists and Anti-Venizelists in Greece was outlined in these pages, and it was suggested that the only practical way of arriving at a solution of the political tangle was a round-table conference of the party leaders. This gathering has since taken place under the auspices of General Pangalos, the Prime Minister, and the attitude of the Anti-Venizelists towards the Republic was defined on the lines that we then adumbrated. It was hardly to be expected that a political alliance between the two parties would be reached at the first conference, but some useful ground was covered. General Pangalos appears to have been so far satisfied with the progress make towards reconciliation in Greece that it is announced that the freedom of the Press is to be completely restored and that those arrested for political offences will be released. The Venizelists set store on having the elections of the Chamber before those of the Senate, which has been called into existence again by the new Constitution after an interval of sixty-three years, during which period Greece has been content with a single-Chamber Parliament. On this point, however, General Pangalos refused to yield and let it be known that the elections would take place on the dates fixed, those for the Senate on January 10, those for the Chamber on March 7.

Italy and Yugoslavia.

In spite of the treaty that, by settling the Fiume question, was supposed to place the relations between Italy and Yugoslavia on a permanently satisfactory basis, it is evident that there is a quantity of inflammable material on either side of the Adriatic, towards which excitable people in each country make a point from time to time of directing their oratorical fireworks. Immediately after the settlement of the incident arising out of the attack on the offices of the Slovene paper in Trieste and the subsequent anti-Italian demonstrations in Yugoslavia, M. Stephan Raditch, the new Minister for Education in the Yugoslav Cabinet, made some unflattering references to Fascism in a speech that he delivered in Liubliana. Now whatever the advantages of Fascism to Italy, it has never been at pains to adopt a conciliatory attitude towards Yugoslavia, if every now and then what appears to be semi-official expressions of Fascist opinion in regard to international affairs grate on their nerves. Thus, when the Prefect of Zara declares that all Dalmatia must ultimately come under Italy, and the Fascist Press, both semi-official and unofficial, implies the same and worse, Yugoslav public opinion not unnaturally takes offence, and verbal retaliation is bound to follow. It was unfortunate that M. Raditch should have exposed the Yugoslav Government to any legitimate protest from Italy; but in matters of this kind the peace can be kept only by rigorous self-restraint on both sides, and Europe has the right to expect that an example will be set in the highly disciplined forces of Fascism.

Britain and the Hejaz.

The letter that we published last week from the Prime Minister of Great Britain to ex-King Hussein was a reply to the communication from the latter, which was published in full in our issue of September 10. Perhaps the most interesting part of Mr. Baldwin's reply is the statement that the British Government asked the Sultan of Nejd whether he would accept its good offices in an endeavour to reach a settlement of the differences between the Hejaz and Nejd. Sultan Ibn Saoud rejected this offer, and nothing more can be done in the matter, as far as Great Britain is concerned, unless and until both parties spontaneously invite her mediation. The attitude of the ruler of Nejd is that he will not make peace so long as a member of the Shereefian family holds power in the Hejaz. He appears to be in no hurry to conclude the "war" between the two countries, relying on the state of stalemate that has existed for some time to work the undoing of King Ali. In the meantime the negotiations undertaken by Sir Gilbert Clayton for the delimitation of the frontier of Nejd and Transjordan on the one side, and of Nejd and Iraq on the other have been carried to a successful issue, and Sultan Ibn Saoud's quarrel with King Ali has not impaired his relations with Great Britain. Unless King Ali's resources give way or his followers take the bit between their teeth, the most likely agent for bringing the comparatively peaceful war to an end would be united action on the part of Islam, if that could be contrived.

Owing to the rising of the River Save floods have been caused in the neighbourhood of Brod, and 200 families have been rendered homeless. In the Zagreb area dykes have been broken and considerable damage caused.

THE SITUATION IN EGYPT.

That at this particular season of the year there should be a "certain liveliness" in Egyptian politics is not to be wondered at. The close season that normally coincides with the long Egyptian summer is over; the Prime Minister himself has only recently returned from a tour in Europe extending over several months, during which important Ministerial changes took place as a result of the withdrawal of the Liberal Constitutionalists from the Coalition Government, and the rearrangement of the Cabinet that followed was necessarily of a tentative nature. Ziwar Pasha would hardly have taken office when he did, if he had not been a man of strong character, and he could be relied upon to form his own judgment on what had been done while he was out of the country, and, if action were necessary, to take it. Zaghloul Pasha, on the other hand, with his ever ready battalions behind him, is too shrewd a politician not to make a point of testing the strength of the Prime Minister's position before he has time to consolidate it. The opportunity was the more favourable, because the Liberal Constitutionalists had broken with the Government and a sound stroke of policy might definitely aline them with the Zaghloulists in formal opposition to the Unionists. There could be no more suitable ground for joint action than in defence of the Constitution, which in the opinion of both parties had been violated, in general by the Government's apparent resolve to dispense indefinitely with Parliament, and in particular by the recently promulgated Law of Political Associations. While, however, the intention of the Liberals was to defend the Constitution constitutionally, the Zaghloulists considered themselves hampered by no such restrictions, and Zaghloul Pasha himself has made too much use of mob pressure in the past to be able easily to abandon it as a political weapon. The decision, therefore, to hold in public on the day when Parliament ought to have met a meeting of the Assembly that had been dissolved may be attributed to the Zaghloulists. It was a clear challenge to disturbances, and if the plan had been carried out, it could hardly have failed to lead to grave disorders. The Government, however, proved true to its reputation. It prohibited the meeting, and, by leaving no doubt as to its determination to prevent it by force, convinced Zaghloul Pasha that he stood to gain nothing in that direction. The public demonstration was abandoned, but a private meeting of Zaghloulists was held and was attended by the Liberals. This meeting, although at one in its denunciation of what was considered to be the Government's unconstitutional tendencies, could not agree upon a common formula of protest, and it was left to the two parties to draw up separate resolutions on the subject.

On this first trial of strength between the Zaghloulists and the Ziwar Government the honours seem to rest with the latter. The Prime Minister, however, can hardly be satisfied with the position. With the Liberals against him he cannot pretend to be governing the country otherwise than by a minority, and, if in these circumstances he appeals to the country, he cannot hope to survive the first meeting of Parliament. Whatever may have been the truth regarding the experiences of the members of the Liberal Constitutionalist Party who served in the Coalition Ministry under Ziwar Pasha, the official basis of the Party's antagonism to-day is the dissolution of Parliament without provision made for the holding of fresh elections. If, as is expected, the Government can reassure the Liberals on this point and disabuse their mind of any desire on the Part of Unionists to govern unconstitutionally, it might yet be possible for the breach to be healed. The folly of the quarrel between the two parties who combined to save Egypt from the evil effects of Zaghloul Pasha's crazy policy is so great, that it is little wonder that so many Egyptians are ready to attribute the breach to some sinister influence actively engaged in creating open sores in the political world. In matters of this kind many allegations are likely to be made that have no foundation in fact. If, however, Hassan Pasha Nashaat, King Fuad's chief adviser and political confidant, has gained a reputation for interference in the political affairs of the country, it will be only because he has lent himself to the accusation. There can be little doubt that his actions, or rather the activities popularly attributed to him, are widely resented, although politicians out of office will not protest against them so long as they are directed to the inconvenience of the Government. His high position at Court almost precludes the possibility of his being able to interfere in politics of his own accord, and the inference is left to be drawn that King Fuad must be ill-served by his advisers if he has not been informed of the prejudice done to the Throne by allowing the impression to gain ground that Egyptian politics are again, as in the days of the Khedive Ismail, to be at the mercy of a Court camarilla.

It must be admitted, however, that the situation presents some baffling features. The Ittehadists, or Unionists, who form the present Government, are usually regarded as owing the formation of their party to the prompting of Court circles, and it seemed as though their breach with the Constitutionalists was designed to give them a free hand in the government of the country. It has, as we have seen, strengthened the Opposition, and at the very moment when as a result the Government is embarrassed, come reports that all is not well between the Cabinet and the Court. To the outside observer it will seem, if these reports have any foundation in fact, that the tendency of any direct participation that there may have been in Court circles to interfere in Egyptian politics has been to promote political discord by playing off one party against another. History is full of instances of the danger attaching to this game for those who indulge in it. Apart from Egypt's own experiences, it will be recalled that one of the rulers who lost his throne as a result of the War had previously earned an unedifying reputation for this particular method of trying to keep both the politics of the country and the politicians subservient to himself. He was credited with the possession of a dossier of the records, compiled with the most intimate details, of every politician, and of using his knowledge when occasion arose. Certain it is that in that State political stability was a thing unknown. Both from a personal point of view and for the injury done to the country the system is not one to be imitated in Egypt. If, on the other hand, it is not the case that differences of opinion have arisen between the Egyptian Government and the Court, then the action of a number of Princes of the Royal House in presenting a memorial to King Fuad in support of the resolutions against the Government passed by the protest meeting of the Opposition on November 21 acquires special significance. The manner of their reception by King Fuad suggests that the Princes are not lending themselves to political intrigue, but are genuinely concerned over the trend of events in Egypt. The capacity already shown by deputies elected to Parliament for changing from one party to another is a further indication of the risk that a Sovereign may run by identifying himself with one political party. Three years ago it was an open boast of the Zaghloulists that one of their first acts on obtaining power would be to bring about a change in the occupancy of the Throne. This attitude was abandoned when the time came, for Zaghloul Pasha's followers obediently took up a different cry. What once has been, however, may be again. On one point Zaghloulists, Ittehadists and Constitutionalists would be agreed, that the only way in which the Throne can be sure of keeping intact the esteem and loyalty of the Egyptian people is by holding itself severely aloof from all party politics.

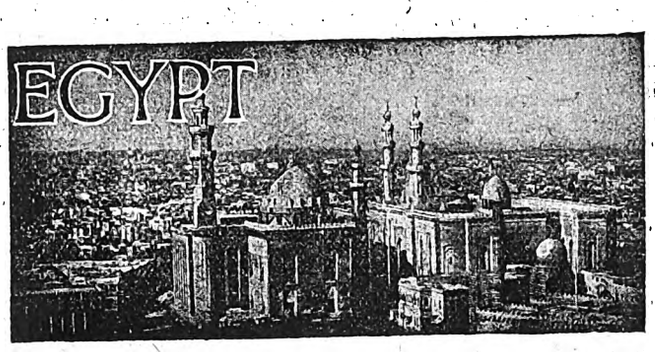
The Near and Middle East*

From Our Own Correspondents.



Cairo, November 22.

Governmental Precautions.

Taking a walk round Cairo streets yesterday morning one was surprised to find that the Government apparently thought the peaceful city to be on the brink of revolution. Extraordinary precautions had been taken to prevent the Opposition deputies and Senators from carrying out their proposal to meet and discuss the present political situation. "Opposition Deputies" is, of course, not a strictly correct term, because since the late Chamber was dissolved, these are merely ex-Deputies. But the Opposition refuses to consider the second dissolution as legal, and therefore maintains that Parliament has existed continuously, but has been prevented by force from assembling. Article 96 of the Constitution lays down that "Parliament is convoked each year by the King in ordinary session before the third Saturday of November. In default of being summoned to meet, it assembles by its own right on the latter date." It was in declared conformity with this Article that the Opposition arranged their meeting.

The Government, as already mentioned, took extraordinary precautions against disorder. The proposed assembly was declared to be illegal, whether held inside or outside of Parliament House, and the Minister of the Interior announced that he would, if necessary, employ military force to the utmost to prevent the meeting from being held. On Friday afternoon two battalions of infantry were moved in from Abbassia and camped in the grounds of Abdin Palace. A strong military guard was posted in the Parliament grounds, the buildings themselves being locked and bolted, and the keys, placed in a sealed bag, handed over to the Commandant of Police. On Saturday morning other powerful detachments of troops took up positions completely surrounding the Parliament area, which was forbidden to the public, some nine or ten streets being closed to traffic. The grounds of the Ministry of Public Works fairly bristled with bayonets of the reserve, held in readiness to proceed to any point attacked. Most of the police and Buluk Gaffar had been concentrated in that quarter of the town, and patrols, mounted, in motor-cars and on foot, were constantly passing and repassing through every street within a mile of Parliament.

The Opposition Deputies.

And while all this imposing display of force was vastly interesting American tourists, vainly trying to understand the position from the explanations of dragomans who themselves had only the vaguest ideas of what it was all about, the real business of the day was quietly going forward in quite another part of the city. In the Continental-Savoy Hotel the whole of the Opposition Deputies, some 170 in number, and approximately sixty Senators, had gathered without let or hindrance from the police outside, and had proceeded with their business in exactly the same way as if they had been a normal, lawful combined session of the two Chambers. Zaghloul Pasha had left his house, surrounded by troops who had made no attempt to stop his going out, and had joined his supporters and temporary allies, who immediately elected him President of the Assembly, appointing as Vice-Presidents Mohammed Pasha Mahmoud, one of the Liberal Constitutional Party's leaders, and Dr. Abdel Hamid Bey Said, a prominent Nationalist, thus emphasising the unity of the gathering to be a lawful assembly, expressing complete lack of confidence in the present Government which was described as having consistently flouted the Constitution, which the gathering pledged itself to defend "with our lives and blood, if necessary," and agreeing to meet again at a time and place to be communicated secretly to those present.

The Government's Embarrassment.

In a way, therefore, the Opposition has scored heavily over the Government. The prohibited meeting has been held, despite threats and a great display of force. The Government's policy has been discussed and condemned and unity, at least for the purpose of the present movement, has been attained between the three Opposition Parties. Yesterday's gathering has declared its intention of meeting again, and no doubt it can and will reassemble, and again advertise its defiance of the Government, unless the Cabinet decides upon the drastic course of arresting all those who participated. This might in a measure re-establish the Ministry's prestige, but it would be a most embarrassing decision to have to take and would certainly play into the Opposition's hands by investing all the defiant deputies and Senators with the brightly luminous haloes of political martyrs. There is nothing that Zaghloul Pasha and his friends would like better at the present moment than to be arrested, and for that reason it may be supposed that they will be left at liberty. But, clearly something ought to be done, for a Government cannot allow itself to be frequently flouted in the manner

of yesterday. What actually will be done is a matter of unprofitable speculation.

Tutankhamen Again.

In between political excitements there have been the thrilling descriptions of the latest finds in the tomb of Tutankhamen. The Ministry of Public Works, after at first displaying an undue reticence in its bulletins has during the past week issued a series of excellent statements, giving full descriptions of the new discoveries, and there is no doubt that this new method of keeping the world informed of the progress of the work is much to be preferred to the intense inter-newspaper rivalry of past seasons. From hints dropped by earnest archæologists, it looks as though the centre of popular interest in Egyptology may shortly be moved from Luxor to nearer Cairo. Despite difficulties presented by the dangerous nature of the shaft leading into the tomb of the Seneferu period which Dr. Reisner discovered near the Great Pyramid, work is being resumed there, and a gang of a hundred sturdy workmen from Thebes has arrived to help with the excavations, for which sufficient skilled labour cannot be found in Lower Egypt. Everyone expects that this tomb is going to rival in historical if not spectacular interest that of Tutankhamen, while there are also rumours of other important discoveries that may be made in the near future. One way and another, politically and archæologically, Egypt seems to be in for plenty of unpaid advertisement.

ALBANIA.

Tirana, November 19.

The Political Situation.

The political situation remains stationary. All hope of reconciliation between Ahmet Bey Zogu and the extreme Opposition Parties (the groups led by Mgr. Fan Noli and M. Mustapha Kruja on the one hand, and by MM. Petsi and Ali Klissura, known as the "National Union," on the other) has become out of the question. And the fault is entirely with these groups. Ahmet Zogu has shown himself ready to forget and to forgive. Nobody is more anxious than he to rally to the service of the State all men of experience and good will, from whatever party origins they may spring. He has held out the olive branch; and those who have disdained to accept it, will have only themselves to blame if, as a result, they are excluded from taking any part in the life of their country for many years to come.

Co-operation with Ahmet Zogu.

The more moderate elements of the Opposition are gradually coming to realise the advisability of recognising the present régime and of seeking to co-operate with Ahmet Zogu. Many of them—especially those belonging to the class of officials and school teachers—have already availed themselves of the recent armistice and have returned to Albania; and Ahmet Zogu has in many cases restored these to their former posts, thus showing his determination both to be generous and to put aside party considerations, in the desire to make as many competent persons available for the service of the State. It is interesting to observe how many of these returned exiles feel agreeably surprised at the condition of the country. They are discovering that Ahmet Zogu is not the blood-stained, unscrupulous tyrant they imagined him to be, but rather the strong man, with a gift for leadership, which their country requires. It is to be sincerely hoped that the remainder of the Moderates will follow their example and avail themselves of the terms of the armistice before the time limit expires.

The Problem of Reconciliation.

M. Eshref Frasheri, having failed in his attempt to reconstruct the Clique and having compromised himself in the attempt, since his friends in exile published their violent and ill-timed manifesto, has dropped out of the picture altogether. As for the efforts of M. Mehmet Konitza and M. Fasli Frasheri to arrange terms by which a definite reconciliation could be brought about between Ahmet Zogu and those who look to M. Faik Konitza as their leader, they may be said to have been allowed to slide. It is felt that with this group reconciliation will come gradually, and that it is wiser to leave it thus. Time is the best healer, where differences are not fundamental. Meanwhile, Ahmet Zogu appears stronger than before. He is gaining strength and prestige slowly but surely. His difficulties are immense, chiefly owing to the mutual jealousy which animates the vast majority of Albanian public men. There are few who can be trusted to co-operate with him loyally. There are few who can be relied upon not to play for their own hands (and to forget the interests of their country and their sense of loyalty in the process) whenever an opportunity presents itself.

This is the curse of the land, and there appears to be nobody except Ahmet Zogu who is able to make any headway against it. For the present, therefore, he is quite indispensable.

In this connection it is regrettable to have to announce the resignation from the Ministry of M. Tutulani, Minister of Justice, on the grounds of ill-health. The latter is a man of exceptional integrity. He is not a leader of men, but he is a conscientious and competent administrator, and his loss is generally deplored. No successor has yet been appointed.

Captain Shearme.

Universal regret is felt at Tirana at the news of the death of Captain Shearme, the Anglo-Persian Oil Company's representative, to whom the chief credit is due for the successful issue of the negotiations between the company and the Albanian Government. During the long months which he spent at Tirana, pressing the company's claims with infinite patience and consummate tact, he won the respect of all with whom he came in contact and made a great number of friends. The announcement of his death in London as the result of an operation came as a great shock; and widespread sympathy has been expressed for his charming wife, who spent some considerable time here with her husband.

German Air Service.

A German company, known as the "Aero Lloyd," has started a regular air service between Tirana and Scutari, Tirana and Koritza, and Tirana-Valona-Koritza. There are two machines in the service, which takes place twice weekly for each of the routes. Thus Koritza can now be reached from the capital within the space of one hour, whereas by road and mule track the journey takes four days! The machines carry the mails and four passengers each. On account of the great saving of time, the service has been largely patronised in spite of the high fares; and the company announces for next summer a considerably extended service.

Liubliana, November 24.

The Prospects of M. Raditch.

While Dr. Koroshets, leader of the Slovene People's Party, was away on a propagandist tour in Croatian Dalmatia and Herzegovina in the hope of winning adherents from among M. Raditch's followers there, M. Stefan Raditch retaliated by paying a visit to Dr. Koroshets's domain of Slovenia for the purpose of waging a campaign there against the Slovene People's Party.

Who is likely to be the victor in this tussle? Dr. Koroshets's weapons are the Catholic idea and the mistakes of the centralist administration of Yugoslavia. M. Raditch is only a politician, and his one weapon is the peasant democracy, which is to bring harmony into the policy of the State and thereby render possible the wholesome development of all resources, mental and material, of the nation. Dr. Koroshets appeals to tradition, deep-rooted and strong; M. Raditch appeals to the soul of the people, and that in an exceedingly able manner. If, furthermore, one remembers that it is much easier for a Croat to speak in Slovenia than for a Slovene to hold an audience in Dalmatia or Herzegovina, it must admitted that on the whole M. Raditch's prospects appear to be better.

Of course, the victory will not be easy; there was probably never a politician so decried in Slovenia as M. Raditch has been. In almost all Slovene newspapers he was depicted as the worst of demagogues. No one had a good word to say for him. All Slovenia was prejudiced against M. Stefan Raditch, and herein lay the strength of his opponents.

A Man of the People.

By the speech he delivered at the *Narodni Dom* in Liubliana on Sunday, November 22, M. Raditch thoroughly dispelled this prejudice. The big hall was packed with members of all parties, among whom M. Raditch's own adherents formed an insignificant majority. M. Raditch's mere entrance furnished his opponents with the first surprise. It was so unaffected. Not a trace of any tendency to the theatrical was noticeable. The audience saw before it a man of the people, but one who has unsuspected depths of knowledge at his disposal and has the art of addressing himself straight to the mind of his listener.

Frankly and clearly M. Stefan Raditch explained the genesis of the Understanding between his party and the Radicals, and the impression produced by it abroad. He pointed out, emphatically, that the negotiations for this Understanding had passed directly between himself and M. Pashitch. So great had been the impression produced abroad, that the Understanding had been a necessity of State. No one would alter that policy, because no one could alter it. With practical examples quoted from everyday life he demonstrated the necessity of compromise—and the Understanding is a compromise urgently needed. The policy of the strong hand as advocated by M. Pribitchevitch was bound to suffer shipwreck, because no one can by force be constrained to love. It had also become evident that the opposition of the Croats could not be broken.

Supremacy of the Peasants.

An Understanding was the only way out—an Understanding based upon the political unity of the State and upon peasant democracy. Eighty per cent. of the population of Yugoslavia is engaged in agricultural pursuits. If the State is to live and flourish, it must pursue an agrarian policy resting on the following principles:—The foundation of all classes is the peasant class. By it the entire population is fed. It furnishes the men for the Army and preserves the national culture. The other classes are only helpers, whereas the peasant class must be the pillar supporting the State's policy. But this policy must follow a course which accords with the demands of Western culture. Pacifism, social justice, and the safeguarding of national rights are the chief demands of the new policy of the West. Therefore M. Raditch declared himself altogether in favour of the League of Nations, and of the work done by M. Albert Thomas at the League. The national principle as understood by M. Raditch is, of course, widely removed from chauvinism; it has, in fact, nothing in common with it. He demands only that all Yugoslavs be spiritually united (it is by this time generally known that Italy has deprived her Yugoslav subjects of all national rights) and that the policy pursued should spring from the soul of the people. The national will must be sung by the poet, but put into practice by the politician.

Relations with Italy.

In so far as M. Raditch's speech contained references to the relations between Italy and Yugoslavia, it led to a diplomatic protest on the part of Italy, but without any reasonable cause. M. Raditch dwelt upon the fact that Yugoslavia is allied by a pact of friendship with Italy: but that this pact must lose greatly in value if it is constantly reiterated in Italy that Dalmatia must become Italian and that Italy is too far from Zagreb and Liubliana. One does not think of encroaching upon one's neighbour's territory, said M. Raditch; but neither would one suffer encroachment of one's own on the part of Italy. M. Raditch spoke with sympathetic appreciation of the Italian people; that he could not praise the Fascists is only too easily understood. Let the Fascists but pursue a different policy, and the former sympathies with Italy will revive.

M. Raditch's Increased Prestige.

The impression produced by M. Raditch's speech was very great. Before his appearance upon the platform of the *Narodni Dom* there was plenty of jeering and whistling by adherents of the People's Party; after his speech there was no more of either.

As has been said before, M. Raditch has overcome the prejudice which existed against him in Slovenia. He has done even more. He has won the esteem of his opponents. He has become a political factor, and for a first appearance this means a considerable success.

IRAQ.

Baghdad, November 19.

Parliament.

On November 1 the first ordinary session of the Iraq Parliament was formally opened by the Regent, H.R.H. the Emir Zeid. The House was crowded with Senators and Deputies, and a number of guests were present, including the High Commissioner, the Air Vice-Marshal, and the various Consuls. The Assembly rose as the Prince entered, and remained standing while the Iraq National Anthem was played. The Emir, in declaring Parliament open, informed the House that King Faisal, whose early return they were all anticipating, was now completely restored to health. He congratulated the deputies on the excellent work done in the preceding session, and remarked on the general satisfactory progress made throughout the country, the only disturbing feature being the uncertainty over the fate of Mosul. This question would be considered by the League of Nations in its coming session; in the meantime the thanks of Iraq were due to Great Britain for its continued support of her just claims.

On the departure of the Emir, Rashid Ali Beg al Gilani was by a very large majority elected President of the Assembly.

Review of First Session.

The Parliament of Iraq has made considerable progress during its first session, more in fact than its best friends had dared to hope. The session was an extraordinary one, called in order to pass the Budget for the current year. Financial matters have therefore been in the foreground, and a very real and general desire for economy has made itself apparent. The members of the Budget Committee at first talked determinedly of a 100 per cent. reduction on the Government's expenditure of 54 lakhs, and declared that they would rather cut off their right hands than see so reckless an extravagant a Budget passed. Hard facts, however, gradually convinced them that Government expenditure was not on so lavish a scale as their ignorance of the matter had led them to believe. Nevertheless, the committee's recommendations put before the House were of a fairly drastic nature, even the King's household not escaping the axe. The Chamber of Deputies showed its common sense by preferring the Budget as put up by the Ministry of Finance to the Committee's proposals, and passed it after embodying a few of the Committee's more reasonable suggestions. Unkind critics point out that the saving affected by Parliament barely meets the salaries of the deputies; but the House showed a commendable desire to economise as much as possible and that the saving was not larger is entirely due to the fact that Government had prepared a Budget which admitted of no further economy without prejudice to the administration of the country. Such savings as were made are to a certain extent more apparent than real, the safety margin in various estimates being dangerously low, and outstanding debts being transferred from this to next year's budget. It is noteworthy that though the house showed a real anxiety to set Iraq's finances on a better footing, reduction of expenditure was the favoured method, increase of existing taxes or the introduction of new sources of revenue meeting with a cold reception.

The session has revealed in the deputies a marked aptitude for Parliamentary procedure, unknown hitherto as it is to all of them; and though the legislature has at times trespassed on the executive, the resultant clash has been minimised by good feeling on both sides. Until towards the end of the session, the proceedings were orderly and the tone of the House good; it is hoped that the six weeks' vacation will restore the jaded nerves of deputies, and that they will return to Baghdad not in a bellicose mood, but ready to co-operate with the Government in the large number of reforms which the country so badly needs.

Adjournment of Parliament.

A special committee, presided over by Yassin Pasha al Hashimi, drew up the Address in reply to the Regent's speech from the Throne. This was submitted to the House on November 5, its brevity being perhaps a sign of fatigue on the part of the deputies. It ran as follows: "Your Highness,—Our Mejliss is very pleased to know that His Majesty (May God uphold his Kingdom) will shortly return to Iraq, enjoying the best of health. It also thanks your Highness for the statements contained in your speech.

"The Mejliss declares its readiness to support the Government particularly as regards any action it may take to protect our rights on the Northern frontier.

"May God make this inaugural opening of the Mejliss the beginning of prosperity and good fortune for our land!"

Opinion was strongly divided on whether the House, having met at the beginning of November as laid down by the Organic Law, should or should not have a brief vacation after the labours of the extraordinary session. Those members who lived in or near Baghdad saw no disadvantages in continuing the session, in fact rather the reverse, as they would be drawing their salaries; on the other hand, those who lived at a distance wished to be reunited to their families or to visit their estates, particularly as this month is the beginning of the normal agricultural year. Eventually an adjournment of six weeks only was decided upon. The reading of the Royal Iradé to this effect was loudly cheered by the Government's supporters; the Opposition remained silent, possibly because, thinking that their opinions were beginning to make headway, they regretted the breathing space which would allow their opponents to reform their ranks, in which some dissension had appeared towards the end of the extraordinary session.

At the last meeting the feeling of concern and apprehension over the fate of the Mosul Vilayet was much in evidence, and was given prominence by an attack on the Prime Minister for his failure to give the public fuller

information as to General Laidoner's mission. The attack was unmerited, as all available information had been published in the local Press.

Mosul.

General Laidoner, who heads the Commission sent by the League of Nations to investigate the alleged Turkish ill-treatment and deportation of Christians living in the neighbourhood of the Brussels Line, has left Baghdad for Mosul. His personality, and the breadth of vision which he is bringing to bear upon the problems of Iraq, have created a most favourable impression. In a speech to notables and officials at Mosul he explained the task of his mission as follows:—

"As you know, apart from its own extreme importance, the question of the frontier is closely connected with the League's decisions in accordance with the Treaty of Lausanne, so that to bring it to a conclusion has needed much time. Disturbing incidents which have taken place on the frontier have caused a number of complaints from the British, Iraq, and Turkish Governments to be made to the League of Nations. In order to obtain certified information, the League decided to send me here as the President of the Committee and representatives of the International Court, with instructions to study all the incidents which have been reported on the frontier known as the Brussels Line.

"I know of what great importance it is to you to end this difficult question of your frontier, so that you can set Iraq on the path of progress, and this is the desire of the League also. Our task will be easy if no fresh disturbing incidents occur. My duty and that of my colleagues has been greatly facilitated by the Frontier Commission, which made it unnecessary for us to hold a plebiscite, or anything approaching a plebiscite.

The British and Iraq Governments long for a speedy settlement of this important question, and we hope that the Turkish Government shares this longing. The League also desires to end the question as soon as possible, but you must understand that time is necessary. It is for you to be patient, and await the final decision of the League, which will, I believe, be equitable and just."

Return of King Faisal.

His Majesty King Faisal returned to Baghdad on November 14, three days later than he was originally expected, owing to unfavourable weather conditions and to a break in the journey made at Amman to enable him to visit the Emir Abdullah. The aeroplane provided by the R.A.F. for His Majesty, with its escort of nine others flying in perfect formation, was sighted about 10.30. The High Commissioner, the Emir Zeid and the Emir Ghazi, the Air Vice-Marshal, and a number of Iraqi and British officials were assembled at Hinaidi to meet the King. His Majesty proceeded by motor car to Baghdad, where the decorated streets with their triumphal arches were lined with citizens. In the main street was drawn up a large contingent of the Arab Army, whose band played the Iraq National Anthen. The King, escorted by the Royal Bodyguard, proceeded to the Palace, where he held a reception of officials and notables.

Armistice Day.

On November 11 the High Commissioner unveiled the Cross of Sacrifice and the Memorial to the men of the XIII. Division, in the British Cemetery at North Gate. On the Memorial are four plaques bearing a list of the battles fought in Iraq by the Division. The inscription is as follows: "To the memory of Lieut.-General Sir Stanley Maude, K.C.B., C.M.G., and his comrades of all ranks of the 13th Division, who gave their lives for King and Country: Mesopotamia, 1916, 1917, 1918. Their name liveth for evermore." A guard of honour was provided by the 2nd Batt. Bedfordshire and Hertfordshire Regiment. A number of wreaths, including one from "Officers, Warrant Officers, and Airmen, British Forces in Iraq," were placed on the memorial. At the same time a combined Church Parade Service was held at the Aircraft Depot, Hinaidi.

The High Commissioner.

H.E. the High Commissioner has just returned from a brief tour to the Middle Euphrates. He visited the holy cities of Karbala and Nejef, and also met Sheikh Fahad of the Anaizeh tribe, who, though almost an octogenarian, still holds powerful sway over the desert between Iraq and Syria.

Sir Henry Dobbs is proceeding to England on two months' leave at the end of this month. In his absence the Counsellor, Mr. B. H. Bourdillon, will act as High Commissioner.

PERSIA.

Teheran, November 5.

The Kajar Dynasty.

For some weeks there has been a growing sense of tension and of approaching crisis. Telegrams from a Committee styled the Committee of the National Rising were received from Tabriz, in which the deposition of the Kajar Dynasty was demanded on threat of separation. These telegrams were very shortly followed by identical telegrams from Kerman, Ispahan, Shiraz, and even Khuzistan. For some days the matter was treated lightly by the public, but it was gradually realised that a serious movement was afoot all over the country. The matter was discussed in the Mejliss on October 29, but the session terminated hurriedly at the sound of a few shots fired in the vicinity of the Mejliss, and the members could not be reassembled to continue the discussion. Eighty members then assembled in private session and signed Articles for proposal to the Mejliss in open session on October 30.

Uncertainty and anxiety were terminated very dramatically on October 31, when at a special session of the Mejliss this Single Article was passed by 80 votes from a total of 85 present to the effect that:—

"The Mejliss in the national interest, notifies the deposition of the Kajar Dynasty from the throne, and, within the limits of the Constitution and National Laws, entrusts the temporary Government of the country to Reza Khan Pehlevi. Appointment of the final form of Government will rest with the National Council with Constitutional Power by change of Articles 36, 37, 38, and 40 of the Constitution."

The Crown Prince Mohammad Hassan Mirza left for Europe via Baghdad, and the end of the Kajar Dynasty was celebrated by a Royal salute. The city was illuminated for three nights, and receptions were held in all Ministries in honour of the event.

A Parliamentary delegation, led by Tadayon, the Acting Chairman of the House when the Single Article was passed, called on His Royal Highness the Regent to announce the decision of the Mejliss. At the same time they requested an amnesty for all political prisoners, and the continuance of their employment for all courtiers affected by the decision of the Mejliss. The Regent accepted both requests, as well as a request from the population of Teheran that the price of bread be reduced.

Orders for doubling the number of Parliamentary

THE PERSIA SOCIETY.

Representatives to be returned at the current elections at once issued, so that a Constituent Assembly of 272 members will be formed early next year to confirm the Single Article just passed, and to decide on the necessary alterations to be made in the Constitution.

Public Reception of the Change.

The above events were accepted very quickly by the people, the general attitude being one of relief at the quiet settlement of the tension and uncertainty of the past four months. There were no signs of regret or enthusiasm. Such opposition as was evinced in the Mejliss was chiefly from the clerical and legal representative, based on doubts upon the legality of any measure passed affecting the Constitution.

Pirniya, and Mustaufi al Mamalek, had declined election as Speaker just previously, and Tadayon, the Vice-Speaker, acted as Speaker in their place. The chief speakers in favour were Sheikh Jellal, Dawar, Seyed Yakub, and those against were Modarris, Taghizadeh, Dr. Mossadiq, Daulatabadi, and Malik as Showra.

General News.

The Agricultural Exhibition early in the week was well attended, though somewhat interfered with by rain. Great interest was taken in the display of ploughing by tractors provided by the various foreign firms, and in the various displays, undertaken by members of the Agricultural College.

The French aviator, M. Nogues, who recently completed the wonderful feat of flying from Paris to Teheran in 33 flying hours, has given several fine demonstrations of flying over the city and surrounding mountains. It is understood that Colonel de Renty, his companion during the flight, has made a very favourable proposition to the Government in regard to the Air Mail Services, and that his proposals are receiving favourable consideration by the Ministry.

Mr. C. I. McCasky, the Treasurer General, left for America on short leave this week. Major Hall, from Seistan, will officiate for him till his return. Mr. Homens has been appointed to Khuzistan Province, which has not previously had the benefit of a Financial Adviser.

Mr. McMurray, C.B.E., Chief Manager of the Imperial Bank of Persia in Teheran, leaves in the next few days for England on retirement after a long and active career in Persia, and will be replaced by Mr. Wilkinson. Mr. and Mrs. McMurray leave a great gap in the public, social, and sporting life of Teheran, and have been the recipients of many expressions of esteem and affection from a wide circle of friends of all nationalities.

November 8.

"Business as Usual."

Further details to hand regarding the change of Dynasty show that the news was quietly received everywhere and, as far as is known, without loss of life, except that of a Qasvin editor who was shot dead outside the Mejliss on October 29—apparently in mistake for a well-known opponent of the change.

The Crown Prince was quickly apprehended in his garden and instructed to leave Teheran within two hours. His suite and all remaining members of the Kajar Family were reassured and not interfered with. All Crown property was at once sealed.

In an address to the people, the Regent has reiterated his determination to complete his two chief aims of establishing law and order and introducing badly needed reforms. The sale of intoxicating liquors is henceforth prohibited, and the police have been instructed to act energetically against those who offend against Mohammedan Law.

No new appointments have been made pending the election of the Constituent Assembly, except that Zoka al Mulk, Minister of Finance, will officiate as Prime Minister, and Major-General Abdulla Khan as Minister of War.

Wathug ed Dauleh, who is now in Baghdad, is expected to arrive shortly after his three years' exile, and with Qawam as Saltereh his brother, who is now in Switzerland, may resume his part in Government affairs.

The price of bread has been lowered slightly, and all available transport commandeered to ensure a plentiful supply of flour for winter.

Beyond the consequent dislocation of traffic, business is proceeding as usual, and all conditions are normal.

CYPRUS.

Nicosia, November 17.

The Situation.

Since, and even shortly before, the proclamation of Cyprus as a British Colony there has been and was a consciousness throughout the island, and among all classes, that the situation and outlook have changed, and that a period of transition is being ushered in. The alteration in the status of the Legislative Council, which increases the numbers of the elected non-Moslem and of the British Official Members by three respectively, coincides with this change, and the late elections have brought it into fuller notice. While it is far too early to mark any effects of the altered conditions, the line to be taken by the Greek elected members will be watched with new and growing interest.

One matter may be noted. In the speeches of newly elected Greek members, and of some candidates who were unsuccessful at the polls, there have been expressions of a desire for co-operation between Greeks and Turks in the Council. This, of course, may point to a wish on the part of Greek members that the elected members together may be able to outvote the British. Hitherto the Turks have almost invariably voted with the British, and, the High Commissioner having had a casting vote, Greeks could be outnumbered in their often obstructive methods, and their endeavours to intrude political matters into debates. Turks have no desire what-

ever to change their lot, or to come under Greek control. Seeing that a return of the island to Turkey is out of the question, any political change would be distasteful to them. They have recognised the absolute justice of British administration, the impartial treatment of Moslems, and the steady, if slow, progress made in many directions. They now note that the Greek leaders say openly that they are resolved to maintain their struggle for union with Greece outside the walls of the Council, and they know that their resolution must inevitably influence their attitude in the Assembly. The Turks, while ready to vote with Greeks, even against the Government, if they are convinced that any proposed measures aim purely at the good of their island, will strenuously oppose any endeavour to introduce administrative changes, and will no doubt co-operate loyally, as heretofore, with the British in defeating disloyal tactics. One thing therefore is quite clear, that the character of the Council will remain unaltered so far as the reciprocal feelings of the Ottoman and Greek elements are concerned.

The draft reply to the Governor's speech has been fully discussed in Committee. It expresses the thanks of the Council for the promises of radical measures to improve the condition of the agricultural classes—to the distressed state of whom attention is specially requested—to aid cattle breeding, the creation of factories, development of mineral resources, and progress in general. As regards the lately established Agricultural Bank, both Turks and Greeks agreed (the British members dissenting) that the manner in which it work was carried on was not satisfactory, that its capital was insufficient, and the conditions under which loans were issued excessively stringent. They beg for the establishment of a Bank better adapted to meet the needs of the island. The Turkish members expressed satisfaction that political questions were avoided. As long, they said, as Greeks confine themselves to consideration of measures aiming at island welfare and progress they would have their support.

Among the petitions presented by members were many praying for the release of the island from any obligation to contribute to the Turkish Debt, and that a committee of British, Ottoman, and Greek members should be appointed to go exhaustively into the question of island water supplies.

A Naval Station for Famagusta.

It is stated that the small harbour at Famagusta will be converted into a naval station, and that a loan of £100,000 will be contracted, and that the work will begin shortly. While it is admitted that this will be of great benefit for the island, it is argued in the Press that the cost of the work, which will be undertaken for imperial purposes, or even of any part of it, should not be charged against this poverty-stricken island.

A CYPRUS MESSAGE.

We have received from the Greek Press Bureau at at Limassol, Cyprus, the following telegram:—"The newly elected Greek members of the Legislative Council have submitted to the Home Government a Memorandum emphasising the strong will of Cyprus for union with Greece."

SARACENIC ARCHITECTURE.

At a recent meeting of the Société Internationale de Philologie, held at its house in Taviton Street, London, N.W., Abdul Haleem Bey, delivered an address on the Saracenic Architecture of Egypt. Sesostris Sidarouss Bey, Egyptian Chargé d'Affaires, occupied the Chair, and introduced the lecturer to his audience.

In the course of his address Abdul Haleem Bey, traced the history of Saracenic architecture, more especially in Egypt, illustrating his remarks by lantern slides. The term "Saracenic," which implied both Oriental and mediæval, was not exactly correct, he said, for the artists were not all Arabs or Moslems. The style was developed and brought to perfection is the Middle Ages; it was a remarkable one, recognised wherever it occurred from Alcazar of Seville to the Mosque of Samarkand and Gaur in Bengal. In the different countries which adopted it, it always showed local characteristics: Saracenic Egypt, the Barbary States and Morocco, Andalusia, Persia, India, Anatolia, Armenia and Turkey, had every one a special development of the style. This was in part due to the different elements found by the Arabs in their settlements. In some respects the Egyptian Saracenic was the most important; for the mosques of Cairo furnished a fuller, longer and more continuous record of arts employed in their construction and decoration than any other series of monuments in a single Moslem city. The simple lines and restrained decoration of the Egyptian artist exhibited the essential character of the style. From Alhambra to Delhi fanciful elements were added, but the purest style and most satisfactory to the eye was found in Egypt. The Mosque of Touloun, who in 768 founded a dynasty in that country, was the first and best in Saracenic art. He encouraged the arts. On his palace, mosque, hospital, and a ground for horse racing and polo he spent 300,000 dinars of gold. In this mosque the pointed arch was to be found; it did not appear in English architecture until three hundred years later.

THE KORAES CHAIR.

No appointment has yet been made to the Chair of Modern Greek and Byzantine History at London University, rendered vacant more than a year ago by the resignation of Professor Arnold Toynbee, but it is expected that an appointment will be made before the next academic session in October. Meanwhile, Professor Andreades, of Athens, an eminent authority on economic subjects, has been invited to deliver a series of lectures at King's College, and has accepted the invitation provided that suitable dates can be arranged. It is probable that these lectures will be delivered during January.

On November 24, Sir Herbert Samuel, ex-High Commissioner of Palestine, broadcast an address on the subject of the "Administration of Palestine," from the London Studio of the British Broadcasting Company.

The Czecho-Slovak Archæological Expedition in Asia Minor, says Reuter's Prague correspondent, has sent a telegram to President Masaryk, stating that it has discovered important Cappadocian archives near Caesarea. About 1,000 tablets and fragments have been unearthed in the excavations. They are 3,000 years old, and are covered with the Cuneiform inscriptions of the Hittites. The leader of the expedition is Dr. Hrozny, Professor of Cuneiform Research and Semitic Languages at the University of Prague.

The *Morning Post* Athens correspondent states that since the Revolution of 1862 abolished the Senate, which had existed under King Otho from 1844, Greece has had no second Chamber. The new Constitution has, however, established a Senate, and a decree has been prepared proclaiming the first Senatorial elections for January 10. The Senators, 100 in number, will be elected by a direct vote of all male citizens above 35 years of age.

PERSONAL AND GENERAL.

TO-DAY
December 3, 1925 (New Style).
November 20, 1925 (Old Style).
Jumada I., 17, 1344 A.H., of the Moslem Calendar.
Kislev 16, 5686, of the Jewish Calendar.

The Aga Khan arrived in London last week from Paris.

Prince George of Greece left London last Monday for the Continent.

Sir Oswald Bosanquet will leave 1, Vicarage Gate about December 18 for India.

The Hon. Mrs. Gideon Murray will return to London from Malta on December 10.

Sir Charles McLeod, who is paying a visit to Bath, arrived last week at the Grand Pump Room Hotel.

Sir Francis Couchman, a former member of the Indian Railway Board, left London last Friday for Bombay.

Sir William M. Ramsay, D.C.L., is in London, on a visit to the Rev. Dr. Frew at 64, West Cromwell Road, S.W.5.

Lord Meston left London last Friday on a private visit to India. He expected to be back in England on January 25.

Mrs. and Miss Rogerson have left Kirkbank, Yorkshire, for Cairo. They expect to return to England in February next.

M. Nicolas Mishu, Secretary to the Roumanian Legation, left London last Thursday for Bucharest to take up a new appointment.

Princess Andrew of Greece dined with their Majesties the King and Queen at Buckingham Palace on November 29.

Among passengers in the Rawalpindi, which left London last Friday, were Lady Gardner (for Port Said) and Lady McCracken (for Bombay).

Sir John and Lady Simon leave London for India to-day on a visit to the Viceroy and Countess of Reading. They will return to London at the end of January.

The Rev. A. D. Dixey, lately chaplain for the Sabsagar district of Assam, has been appointed vicar of Charlton with Standlynch, Salisbury—patron, the Vicar of Downton.

Field-Marshal Viscount Allenby and Viscountess Allenby left London last Thursday by the P. and O. special train to embark at Marseilles in the s.s. Mooltan for Sydney. They will spend the winter abroad, and will return to Deal Castle early in April.

Bt. Lt.-Col. D. E. Knollys, D.S.O., will lecture to the Central Asian Society on December 10, 5 p.m., on "Military Operations in Trans-Caspia." The lecture, which is to be provided with lantern illustrations, will take place at the Royal United Services Institution.

Bishop Gwynne, Bishop of Egypt and the Sudan, has appointed the Rev. Geoffrey C. L. Lunt, Vicar of All Saints', Northampton, as Chaplain-in-charge of All Saints' Pro-Cathedral, Cairo, and Archdeacon of the Church of England in Egypt. Mr. Lunt will be leaving for Cairo early in the New Year.

Mrs. Margaret Hasluck will speak to the Near and Middle East Association, on December 10, at 8.45 p.m., on "The Problem of the Dervishes," Sir Harry Lamb being in the Chair. The lecture will take place, by kind permission of Mrs. Beauchamp Tufnell, at 14, Queensbery Place, South Kensington.

Among the R.A.F. appointments announced by the Air Ministry is that of Air Commodore R. H. Clark-Hall to Headquarters, Mediterranean, to command.

Sir Henry Dobbs arrived in Cairo last week from Baghdad and left a few days later for London. While in Egypt he was the guest of Lord Lloyd at the Residency.

Among the appointments in the Royal Air Force by the Air Ministry are those of six officers to "Cairo-Cape Flight, Northolt," including that of Wing Commander C. W. H. Pulford to command.

The King has given Mr. Frank Rupert Jemmett, Director of Works, Egyptian Ministry of Public Works, authority to wear the insignia of the Fifth Class of the Order of the Nile, conferred on him by the King of Egypt, in recognition of valuable services.

THE WEEK AT HOME.

London, Tuesday Morning.

Queen Alexandra's Passing.

It was in such a snow storm as we have not had for years in London that Queen Alexandra went through the streets of the capital of the Empire for the last time. All that could be said on her passing has already been said. No more can be done. But the movement of that white cortège will surely and always be remembered by those who saw it, so beautiful and solemn appears to have been the ceremony, and certainly so unusual its setting.

The Queen Mother had such a popularity as is hardly comprehensible to the younger generation. How, one wonders, will historians explain the genuine grief and emotion of the people in Whitehall and in Westminster? Thoughts of mortality came tumbling fast about the assembled peoples like the snowflakes that were falling, yet thawed by the memory of immortal example and of queenly service. Only a Gibbon, and an uncynical one at that, will, from the musty records of our time a thousand years hence, be able to reconstruct this moving scene.

The Trial of the Communists.

Singularly little interest seems to have been aroused by the decision of a jury last week that the twelve Communists charged by the Public Prosecutor were guilty, the two main lines of comment being that if they were really guilty of what they were said to be doing, they deserved much more than one year or six months, or, alternatively, that though they of course were guilty, the whole trial was a grave political blunder. The latter seems to be the most generally accepted view. It is recognised that mere imprisonment will not stop the sort of folly which these Communists indulged, for their food was simply the bad trade conditions prevailing in Great Britain. While these endure, it is argued, one is bound to have Communists: remove them, and one removes Communists. To imprison them is to make of them just that kind of martyr which is revered and hailed by unbalanced minds.

And there is more than this about the trial, more, I mean, than the probable consequence of lifting these twelve Communists from the obscurity which hitherto had rightly and naturally surrounded them. For we have had before in this country an attempt on the part of politically minded people to seduce the loyalty of the forces of the Crown. No one who interests himself in the political trials can forget the circumstances enveloping the intention of Ulster, just before the War, to resist the decision of the British Parliament. Nor is the fact without significance that the men who have urged on this prosecution of the Communists are in part the same as those who were twelve years ago advising Ulster to disobey commands of lawful authority! The trouble is, of course, in the personality of the Home Secretary, of whom it is being said that there could not be a better publicity agent for the Communists. It is safe to say that no Home Secretary has brought more ridicule on himself since Mr. Winston Churchill called out the Guards for Sidney Street.

The Irish Imbroglio.

To no country but Ireland could the present crisis over the question of the boundary between the Free State and Ulster have occurred. As a matter of fact the situation is serious, and should not be flippantly referred to; in its essentials it is nevertheless typically Irish. Here we had a Boundary Commission, commonly supposed to be drawing up a frontier which would on the whole be favourable to the Free State at the expense of Ulster. It was, therefore, received with undisguised apprehension by the sturdy Protestants of the North, who, indeed, declared that it was an unjust Commission and that its findings were not necessarily to be obeyed. And, of course, the Free State people were in high glee.

But the tables are suddenly turned. For the Commission appear to have recommended a line that as a whole decidedly favours Ulster. Round, then, go the respective attitudes of the two Irish States towards the Commission. Now it is Ulster which proclaims that the Commission's findings must be carried out, and the Free State which bucks at that idea. Justice in Ireland is an elusive thing, for it is a country where the theory of relativity is very widely held.

The Dublin Government is really in a most unenviable position. The resignation of its nominee on the Commission, Dr. Macneill, seems not to have affected the authority of that Commission in the least, and all the cards are now out of the Free State's hands. The two Premiers in Ireland have been dashing to and from England, and it is thought possible that they may have agreed to the suggestion to leave the frontier between their respective States just where it is at present. Some hold, on the other hand, that Dublin should appeal to the League of Nations. That seems a most doubtful course, for there appears to be no question that the League would decide against it. On the whole it would seem that poor old England will have once more to attempt a settlement. She may even have to pass an Act of Parliament fixing another boundary than that of the Commissioners!

A Laboural Party?

Those political journalists who pride themselves on their prescience are trying at the moment to make capital out of a recent remark on the part of Mr. Ramsay MacDonald to the effect that the Liberals ought, in their own interests, to join the Labour Party—in other words, that there should now be a *bloc des gauches*. This speech was followed by the *Daily Chronicle's* responding in a generous spirit to Mr. MacDonald's invitation.

There is nothing more in it than that. Actually the Liberal Party and the Labour Party are as many miles apart as ever they were. Mr. MacDonald was not, it seems, speaking seriously but jocularly in thus addressing those who once were his bitterest enemies, and the *Chronicle's* words are not necessarily representative of Mr. Lloyd George's opinion. It is true that many advanced Liberals would like to see a closer *rapprochement* with Labour, but it is difficult to see the two parties uniting except possibly under the stimulus of a General Election and that would seem to be at last three years off.

Liberals and Party Funds.

What is probably more important than all these reported Liberal-Labour negotiations is the internal row that is going on inside the Liberal Party itself. I referred last week to the dispute that has arisen upon the power of Mr. Lloyd George over certain funds amassed during his period of office, and his refusal to hand them over to the main Liberal Fund until he has seen how his Land

Digitized by Google

Scheme has taken on among the Liberal rank and file. This dispute has reached such serious dimensions that this week there is to be an executive meeting of the National Liberal Federation to discuss it. For Mr. Lloyd George has not only refused to part with this money—as is indeed his right—but, according to the *Westminster Gazette*, he has allocated £87,000 for the purpose of conducting propaganda in the provinces for his Land Scheme. More than this, he has told delegates to the Federation Conference in London that they will, if only they support the Land Scheme, have their expenses paid. The piper would indeed seem to be trying to call the tune.

This is all very nasty. It is true that the funds which Mr. Lloyd George controls were subscribed, not for the furtherance of Liberal principles, but for the furtherance of Mr. Lloyd George, and that, therefore, he has obviously a perfect right to dispose of them as he pleases. But what a use of these moneys!

Town and Country.

The by-election at Bury St. Edmunds is unusually interesting. For in this stronghold of agricultural Toryism there is a very definite tendency to break away from the loyalty which would normally be paid to a Minister of Agriculture seeking re-election. Farmers are obviously profoundly displeased with the present Government's agricultural policy, their degree of feeling on the subject being shown by the fact that many of them have come out openly against the Unionist candidate and are supporting the Liberal. This revolt is largely supposed to revolve around the question of a malt tax, but a friend of mine who lives at Bury tells me that the farmers are thoroughly disgruntled with what they consider the inaction of the Government. Particularly, they resent the extra fourpence that the rural labourers will shortly have to pay in insurance. The point that they make is that it is unfair to suppose that the labourer, who but rarely gets more than thirty shilings a week, should have to pay the same amount as a town labourer who is earning very much more. They also dislike the rumour that the rates are to make good the expenses that the Exchequer's reported raiding of the Road Fund will entail, for the country will thereby be paying for what the town-dwelling motorist enjoys. Upon the result of this revolt I have no ideas—it is said that Mr. Guinness is certain of election—but it is at least pleasant to see the country once more asserting itself in English political history.

Nationalising Broadcasting.

There is a rumour, so far, I believe, quite unsupported by official authority, that at the end of its period of monopoly next year, the British Broadcasting Company is to be taken over by the State, in the same way as some years ago the telephone service was taken over. To this proposal there has already been raised a good deal of opposition, even from unexpected quarters. Doubt appears to be very widespread of the Government's being able to provide better programmes than at present are being offered by the B.B.C. There have of course been many criticisms of certain features of the various stations' programmes, but these, generally speaking, cancel each other out. But just imagine what these complaints would be like if the service were under Government control!

Winter.

Winter, which our younger ones were beginning to look upon as a fabrication of senile brains, has once more come to England. Last week in many places it was blowing half a gale, and towards the end of the week the East and North-East Coast suffered very severely. Later on the north-easter tore inland, with the consequence that snow fell on Friday and has abundantly remained where it fell. The time is a trying one to many people, but for the majority it is a splendid tonic. There is something indescribably beautiful about an English winter, for on our small landscapes things are both merged and individualised. In town, of course, it is a different matter, but after all extremities of climate are not for those of the towns.

ALTER EGO.

NEWS IN BRIEF.

King Fuad returned to Cairo from Alexandria on November 26.

The mother of Ahmed Pasha Ziwar, the Egyptian Prime Minister, died on November 24.

The first Japanese Ambassador to Turkey, Mr. Obata, presented his redentials to Mustapha Kemal at Angora on November 24.

The Turkish Minister of Agriculture arrived last week at Moscow, and was received by M. Kalinin, President of the Central Executive Committee of the Union of Soviets.

The annual report of the S.P.C.K. states that the sum of £500 a year has been granted for the production and distribution of Arabic literature in the Near East.

The President of the French Republic, M. Doumergue, has accepted the honorary Presidency of the "Organisation France-Palestine," which consists of French friends of Zionism.

The Air Ministry announces that as a result of an accident at Hinaidi, Iraq, to a D.H.9A of No. 30 Squadron (Hinaidi) on November 23, Flying Officer Joseph Albert Moore, the pilot of the aircraft, and No. 354,797 Aircraftsman Arthur Algernon Rickaby, were killed.

Of the three persons sentenced to death by court-martial in Athens on November 23 for the embezzlement of public funds, two were hanged last Thursday. One of them, named Zaphiropoulos, was the Chief of Police at Salonika, and the other, named Drakatos, was an officer. The third man, Aidinli, whose sentence was commuted, was not a public official.

The Greek Government has notified the Rumbold Commission that it claims £85,000 for compensation to the families of Captain Vassiliades and the 19 soldiers killed and 36 wounded during the recent invasion of Bulgaria, and £57,000 for the cost of the invasion, including wear and tear of transport.

M. de Jouvenel, the new High Commissioner of Syria, had an audience of King Fuad in Cairo on November 29. He also called upon Lord Lloyd and Ziwar Pasha. Afterwards he took tea with Prince Loutfallah, and met many Syrian notables, later attending a reception at the French Club. Last Monday he lunched at the Residency with the Maharao of Cutch and the French Minister to Egypt.

BOOK REVIEWS.

SARAYEVO.

"THE SERAYEVO CRIME." By M. Edith Durham. (London: George Allen and Unwin, Ltd.) 7s. 6d.

It is common ground that the murder of Archduke Franz Ferdinand at Sarayevo on June 28, 1914, supplied the immediate cause that led to the Great War, and it is a matter of general knowledge that sufficient responsibility attached to Serbia in connexion with the crime to prompt Austria-Hungary to impose some very exacting demands on the Serbian Government. Two of those demands were, to all intents and purposes, impossible of acceptance. The rulers of Austria-Hungary must have been perfectly aware of this fact. In any case, when Serbia undertook to comply with all the conditions imposed upon her except two, Austria-Hungary prepared for war. So did Russia and Germany, the precise order in which their respective mobilisations took effect being a matter of dispute. Hence the Great War. From that point onwards the world at large and all practically-minded people had neither the time nor the inclination to spare a thought to the murdered Archduke or to the Sarayevo crime. Not so Miss Durham. It is conceivable, rather, it may be taken from granted, that, if Austria-Hungary had given the world time to pass judgment on the Sarayevo crime, the verdict would have been an uncomfortable one for the Serbian authorities. The greater crime, however, swallowed up the lesser, and the four years of common suffering that followed for the Allies caused them to draw a veil over the beginnings of the terrible ordeal. Not so Miss Durham.

For the future historian it will be useful to have such evidence as exists regarding the murder of the Archduke Franz Ferdinand collected in an accessible form, as the author has done in this volume. Whether that historian will attach the same degree of weight as is attached in this book to the statements of prisoners at the Salonika trial, and to the unsupported testimony of various publicists is another matter. Miss Durham has been indefatigable in preparing her case, and in so doing has made her contribution to history. Her readers, however, are left with the uncomfortable feeling that this was not her purpose. A paragraph interpolated in the middle of the book reads: "Let us suppose that Mr. Baldwin told the Cabinet that some London University students had started for Paris in order to kill the President of the French Republic in three weeks' time, and that he and Lord Eustace Percy neither inquired at the colleges nor set the police in motion but merely waited to receive the news by telephone." But why suppose anything of the sort, unless the author wishes the reader to infer that the Balkans are in Western Europe, and that British and Balkan standards are identical? British opinion on the subject of political murder is so well known that the majority of people in Great Britain consider it superfluous to emphasize the fact that they have nothing but denunciation for such a crime as that committed at Sarayevo, for the actual authors and for the instigators. That particular crime was committed eleven years ago, and the toll of expiation will seem to most people to have been a fairly heavy one. The reader is left to infer that the author considers that further expiation is called for. Marshalled against her are commonsense, the Christian virtues and the interests of Europe. Unless she raises the banners of vindictiveness and blood-lust, she stands alone. In the book it is not made clear to whom she addresses her appeal: "Only by exposing the guilty and depriving them of power can the better elements of the South Slav lands arise and a new era for the Balkans and Europe begin." If, as has been inferred from Miss Durham's public utterances, the appeal is addressed to her own country, it is mere foolishness, born of the lack of political sense; if it be addressed to the people who are now making a great effort to heal their differences to bury the past and to work together for the material, if not the moral, uplift of their sorely tried land, it is, coming from a foreigner, an outrage.

That Book you Want!

OLD AND NEW PALESTINE.

(From a Correspondent.)

M. L. Pilichowsky, who was commissioned by the Zionist Organisation to go to Jerusalem to paint the scene at the inauguration of the Hebrew University on Mount Scopus, remained in Palestine for six months after the event—during which time he painted some 130 pictures. These are being exhibited at his studio, at 7, Hill Road, St. John's Wood, until next Sunday. M. Pilichowsky has depicted the ceremony on Mount Scopus in an impressive manner, in keeping with the setting and the occasion. In the foreground a sea of faces gaze down upon the platform, the whole a splash of brilliant colour, while behind stretch the yellow pine-clad hills to the Dead Sea, and beyond the Hills of Moab outlined against the bright blue sky. Surrounding this picture in the exhibition are sketches, portrait studies, and impressions of the chief persons taking part in the University ceremony. Among those who gave the artist sittings, often of not more than half an hour, were Sir Herbert and Lady Samuel, Lord Allenby, the Bishop in Jerusalem, and Canon Danby.

It is obviously impossible to do justice here to all the pictures, but one or two, by reason of their subject, are of special interest. In a picture entitled "To Jerusalem thy city return, return in Mercy," M. Pilichowsky has presented that mysterious contrast of the two spirits, those of the Old and the New Palestine, which has been his chief inspiration. In the foreground are seen two Halutzim, sitting among the stones with which they are building the new Jerusalem, playing chess during the mid-day interval, while behind them rise the Tower of David and the walls of the ancient city. The same idea, treated symbolically, is the subject of M. Pilichowsky's other picture of Halutzim. Another picture to attract the attention of Zionists is the Town Hall, Tel Aviv, a fine building surrounded by spacious gardens of cypress trees and vividly coloured flowers where six years ago stood only sand dunes. It is worthy of mention, in passing, that M. Pilichowsky has been commissioned to paint for the Town Hall, Tel Aviv, the portraits of its four honorary citizens, Lord Balfour, Baron Edmond de Rothschild, Sir Herbert Samuel, and Professor Einstein. Of these the last two have been already completed and purchased. Of the portraits in the present exhibitions the most notable is that of the Chief Rabbi in characteristic pose.

The Exhibition Committee of the Palestine Pavilion at Wembley met at the London Office of the Economic Board for Palestine on November 24 to present to Mr. Walter S. Cohen, Chairman of the London Committee, a pair of silver entrée dishes, in appreciation of his work in connexion with the Pavilion. Among the speakers were Lt.-Col. H. J. Solomon, O.B.E., Major R. T. Little, Commissioner of the Pavilion. The presentation was made by Mrs. Friedlander.

Colonel W. S. Fergusson, late King's Dragoon Guards, Commandant of Jaffa and Jerusalem during Viscount Allenby's advance, and now a member of the King's Bodyguard, has been appointed by the Appeal Committee for funds for the distressed refugees in Iraq as special commissioner to administer the funds already collected, nearly £6,000 having been raised by the end of last week. The total amount asked for is £100,000. Colonel Fergusson left England last week for Baghdad and Mosul. He is hoping to be able to proceed by aeroplane from Egypt to Baghdad.

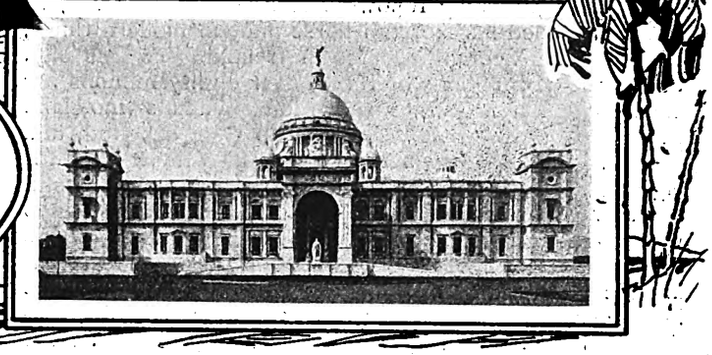
INDIA



HINDU MOSLEM ANTAGONISM.

(By Major-General Sir George MacMunn, K.C.B., K.C.S.I., D.S.O.)

To those who are watching the policy of knocking away the props that have up to now made peace and prosperity in India possible, the constant outbreaks of fierce antagonism between Hindu and Moslem present a disconcerting phenomenon. To those conversant with the history of India, however, it is a perfectly intelligible one, while, to those who have been concerned with the internal management of India any time during the last two hundred years, it has always been known as the one outstanding political factor. To the genuine Indian politician it is a heart-breaking reality, which only in his most optimistic moods can he hope to see overcome within the near future. To those golden-hearted Englishmen who hoped that the reforms might yield so much, it is a bitter disappointment. To those of sardonic mind it is a matter perhaps of amusement, and to those who have experience of the normal Indian district it is but what they knew must be.

To understand it we must go far back into history, at the latest to the time of the Norman Conquest in England; nay, earlier, to soon after the evacuation of Britain by the Romans, when Mohammad fled from Mecca to Medina in 622 and the era of Islam began. At that period India was divided into many Hindu Kingdoms in which Rajput and other rulers carried on a continual warfare with each other, for no Hindu ruler, be he never so famous, had ever dreamed of ruling as one kingdom, or as one people, the Peninsula of Hindustan. Not even in the height of Mogul dominion did Aurungzebe, in the heyday of the Mogul power, rule as much of India as the British do. The rise of the faith of Islam (which means submission to God) that the Prophet Mohammad taught, soon resulted in a remarkable change among the races to whom it was preached. That part of the East was short of a faith. Christianity, by reason of its quarrels and shortcomings, made no appeal: Judaism could find no proselytes in Arabia: and yet mankind wanted something more compelling than the ancient pagan faiths of Arabia. With Islam, the tribes were to unite and carry their zeal and their teaching, and with them the power temporal, far afield. In a few generations the Arab Empire, comparatively short-lived though it was, became for a time the largest the world had seen. The faith soon spread beyond Arabia; it ran up into Persia, ousting the feeble Nestorian Church, it compelled or persuaded the Persians to join the great Submission. In 44 years only it swept into the tribes of what is now Afghanistan. It began to reach the rude pagan combinations of Turkish, Tatar or Mongol tribes that roamed the steppes of Central Asia, and had thrown out the hordes of Huns and the like who had swept in successive centuries from Europe to the confines of China. About the time of Mohammad, these Turkish or Mongoloid races were already invading India and fighting with the Rajput rulers of the Punjab. But it was not till 1001 that Mahmood, King of Ghuzni, first began the series of Turko-Mohammadan invasions of India that eventually resulted in the establishment of a chain of Mohammadan kingdoms over the length and breadth of India. An exception, however, should be mentioned, in the Arab conquest of Sind from Bussora, which men now spell Basra, in 711 and following years, a kingdom which left its mark on the people, but eventually died away.

Mahmood of Ghuzni and all his successors in their thrones of Delhi were, with the exception of one dynasty, Turks or Turki, using that word to denote the various Mongoloid races, whether Hun, Tatar, Mongoloid, or Mogul, that, led by Attila, Gengis Khan, Tamurlane or Baber swept the Eastern world for many hundreds of years. From the days of Mahmood of Ghuzni to the last of the Moguls in our own times, the rulers of Delhi, and generally of India, have been Turks, with the exception of the Lodi Dynasty at Delhi, who were Afghans and more probably of Semitic descent. It is well to remember this point when we are trying to visualise a united self-governing India. Always in the past ruled by invaders from the North, and almost always by Turks—those who, some say, are the descendants of Cain, on whom the twitched eyelids that give the almond eye were conferred by the Almighty, as that sign of exile by which men should know him. The almond eye and the curious monosyllabic or agglutinous tongue, so different from the rest of the world, distinguish these collections of cognate races, whose dominion at last disappears with the deposition of the Turkish Shah of Persia. The dynasty of Mahmood of Ghuzni ruled at Ghuzni and Lahore, to be succeeded by the more obscure but forcible race of Ghor who ruled at Delhi, and so on. The Mohammadan conquerors gradually spread south, establishing kingdoms that were sometimes independent, sometimes fiefs and provinces of Delhi. With them rode legions of horse from Central Asia, from Afghanistan, from Persia and even from Arabia. The leaders of horse, like the Norman barons, became lords of the manor. The Rajput kings and princes, driven from the Punjab with many of their followers, withdrew into the deserts and fastnesses of what is now Rajputana, and alone escaped the conquering Moslem; alone, that is to say, with those Rajput clans who withdrew to the foothills of the Himalayas and who were not worth interfering with. Now the earlier conquerors, especially Mahmood of Ghuzni, were zealous proselytisers. The faith or the sword was their motto, and to this day the broken Hindu temples and carvings bear testimony to the zeal of those who loved to claim the title of "idol breaker" among their sonorous distinctions. So Mohammadan rule spread from the Indus to Cape Comorin, and many millions of Hindus accepted the faith, many from terror of the sword, but many for the charm that this clean, clear teaching had for those who wanted something more satisfying to their religious instincts than popular Hinduism. Hinduism, it must be remembered, had almost died in India at one time, before the teachings of Prince Gautama the Buddha and his wonderful philosophy. Then slowly, through hundreds of years, the Brahmins reclaimed the land for the Hindu gods. So, when Islam came with its prestige of conquest, many a Hindu, no doubt little versed in the dogma of his

Digitized by Google

cult, accepted the teaching of the Prophet for many and diverse reasons. The Lords of Iran and the Lords of Turan, as the conflicting racial parties and leaders were called, that is to say those of Aryan and those of Turkish stock, brought many followers to settle on the land, as William settled his Norman horse and, in modern times, Cromwell his Scotch troopers in Ireland. To this day, out of the 315 millions of India, over eighty millions are of the Submission—Moslems or Mohammadans who claim five times a day that "There is no God but God, and Mohammad is his Prophet" and who also know that, for eight hundred years, they were the arrogant ruling folk, before whom other religions were only tolerated, and to whom the Hindu, the *Mushrik*—those whose gods are partners—were beneath all contempt. And, beneath it all, the Hindu smiled to himself in patient hatred, secure in the knowledge that only the twice born could inherit the future, and would perhaps in due course inherit the present.

But the Islamic rulers of India weakened in their easier land, and a time came when fresh invaders from the North, from Persia and Afghanistan, Turkish, Iranian and Semitic, broke the power of the last Turkish dynasty, that of the Moguls, which began in the days of our Elizabeth. After being the greatest rule that India had yet seen, it began to die for want of vitamines. But, before this open decay, the European traders had come, protected by the Imperial power. As that power failed to carry out its protection on the coasts, the traders turned their night watchmen into soldiers and their accountants into administrators, and backed that local governor or chief who seemed likely to prevail in the turmoil that was arising in the crumbling Empire. The Marathas were rising against the Empire through many and various causes; but so great was the Mohammadan prestige that they always acted in the Emperor's name. So indeed did the British for a long time. So great was still this waning prestige of the Mogul that it has been argued, not without academic relevancy, that the British themselves became rebels against the Mogul when they ceased, in time, to exercise their authority in his name.

It is not hard, even to those who know nothing of India, to see how fresh in Moslem minds is this memory of superiority, both religious and temporal. It is easy to realise how, if a régime were to come in which the ballot box and numbers were to count, 80 more virile millions might find themselves counted out before the balance of the 315 millions of India—men whom they look on as idolaters: and that only rebellion against a weakling Hindu Government, protected by British bayonets, could get them a hearing. That has been in the Mohammadan mind pretty vividly since the days of Lord Morley's tentative reforms. That is why Moslem missionaries strive for fresh converts, and why Hinduism talks of forgoing its arrogance of salvation and admitting to a Hindu classification the millions of the outcast races.

But while these thoughts are ever present to the former ruling race and faith, what must the more patient Hindu mind be thinking? Does he forget the broken idol and ruined fane, the temples that moulder in gathering sand, and the stones that lie strewn in the cedar grove? We, who have present with us the undying bitterness across the Irish Channel, can realise the problems of good rule in India. Mr. Gandhi's heart has been torn often enough at the depth of the problem, and every Indian politician now sees that his ideal, of 315 millions of diverse races and religions talking as one, is not so easy of achievement as he once thought. The success, nay the very possibility, of British dominion during the aftermath of the Mogul crumbling has been undoubtedly due to the position of Umpire that they have always held, far above the cauldron of conflicting interests. There must still be some Englishmen alive who have heard the old folks call down blessings on their heads, as they rode through their districts, on the peace and security the Raj had brought. Within the last four years there have been a good many places where the prayer for the protection of British bayonets has gone up from the weak and the peaceable. These fierce Hindu-Moslem riots have been the despair of the kindly-hearted who dreamed that such things might pass. Pass they may in time, and all who wish India well will hope it may be so; but at present the feeling has been running stronger. It is easily stirred and hard to stay, but it causes all who think to wonder once again, what kind of Swaraj is possible in a continent of 315 million people, who have never, except under this astounding British protection, been one kingdom and under one government. When it has been achieved, it will be the most remarkable tribute to all who have had a share in it.

CURRENT TOPICS.

Indian Government Supplies.

The recently published report of the India Stores Department mentions that the total value of the stores ordered during 1924-25 by the companies working State Railways in India amounted to 4¾ million pounds, half a million of which were spent in purchases from British Government Departments, the remainder being spent in the open market. Two of the most important of these railways—the East Indian and Great Indian Peninsula—are now being worked by the State, and their requirements in material and rolling stock, which have averaged 3½ million pounds during the last three years, will now be met through the India Stores Department. The Director-General of Stores states categorically that "the British manufacturer receives no preference of any kind in the allocation of orders. The sole considerations are price, quality and delivery, and every attempt is made to encourage competition." This statement ought, of course, to dispose of the criticisms of the Department frequently to be found in the extremist Press of India; though, equally of course, it will not do so—they will either ignore it, or affect to disbelieve it, and persist in pretending that the object of the Department is to favour the British manufacturer at the expense of India: not only by excluding indigenous stores, but by weighting the scales against foreign competition. In spite of the facts, the British percentage of the total purchases of stores through the Department is more than 87—a result that will be gratifying to British traders, though it will merely serve to supply the Indian critics of the Department with an argument in support of their pretended beliefs; which will not be shaken by the further fact that this percentage, high though it is, is less by more than six per cent. than what it was last year. Of the non-British balance, the United States supplied, last year, about seven per cent., and Germany rather more than four per cent.

As regards the advice, recently given by the Trade Commissioner in India, that British manufacturers should establish agencies and hold stocks in India, the Director-General says that a tendency to raise prices is apparent on the part of manufacturers who have followed this advice: the tendency being to quote, in London, the considerably higher price which the extra expense of maintaining an Eastern branch or paying an agent, with charges for freight, storage, insurance, interest and an allowance for the chance of rejection, compels them to ask in India. If the manufacturer quotes his price for delivery ex-factory, allowing for inspection during manufacture at his works, to the India Stores Department in London, he will ensure that his agent in India secures no orders; so he either refrains from quoting at all, or quotes on the Indian level. The Director-General mentions some concrete instances in support of his belief that this is a growing practice and one that is likely to become more so: but the High Commissioner dissents: on the ground that he "does not think it likely that branch houses will be established in India by all the important manufacturers of any particular class of goods"; so that, as long as competitive prices are maintained in Great Britain, from important manufacturers here and on the Continent, the establishment of branch houses in India will not affect the prices at which the Department will be able to buy in London.

Opinion in India favours the placing of orders in that country: and the presence of British stores there may not

Digitized by Google

infrequently allow of an Indian tender for goods partly of Indian manufacture. These were the special reasons that induced the Trade Commissioner in India to suggest, to British manufacturers, the advisability of placing stocks there. The High Commissioner's remarks suggest some divergence in view between the Indian trade authorities in England and India. The latter desire to encourage British manufacturers to tender in India, and to place Indian manufacturers in a better position to tender than they are at present. The former rely on their command of the open market to prevent Indian tenders from being accepted at a price which, in London, appears to them to be excessive—though, to the British manufacturer in India, and to his Indian competitor, it would probably only appear reasonably remunerative. Before any more British manufacturers accept the advice of the Indian Trade Commissioner, they would probably do well to inquire, from those who have already done so, whether, under present conditions, it is worth following or not: and, if not, whether it would not be possible to improve matters, by some slight alteration in the conditions. It would be a pity if a departure, which not only promises to be of real economic value to India, but also accords with the strongly held desire of even the most moderate of Indian politicians, should have to be abandoned as a failure at the very outset.

Indian Revolutionary Conspiracy.

Since the cables informed us of the discovery by the police of a bomb factory in the neighbourhood of Calcutta, and of the arrest of a number of young men of the educated middle class on the premises, they have been silent regarding the further development of the case. It seems not unlikely that there is a connection betwen this discovery and the sensational hold-up of a train near Lucknow, which occurred in August, and in connection with which several young men, most of whom are apparently Bengalis of the same class, have now been arrested. "Political dacoities" are no new thing in the records of Indian revolutionary crime: that is to say, highway robberies by anarchical bands of desperadoes, undertaken with a view to obtaining money with which to finance their more secret activities; but it is unusual to find the dacoits moving so far afield as would be the case if the robbery in the United Provinces should prove to be connected with the bomb factory in Bengal.

The comments of the extremist Press, on this discovery, should be of interest when they reach this country. In the early days of the revolutionary movement in Bengal, the extremist newspapers accepted the facts, while for the most part excusing the proceedings of the "misguided youths" on the ground that they were driven to violent methods as the only means of convincing an alien and oppressive Government that its rule was unpopular, and must be improved: though some of them went so far as to extol the individual courage, and motives, of the revolutionaries, to hold them up as patterns worthy of imitation, to mourn them as martyrs if convicted, to welcome them with processions and garlands if they escaped conviction. Of late years, however, these newspapers have generally adopted a different attitude, and have asserted that Indian revolutionary activity is a police fiction: that, if bombs or arms are found, they have been "planted" by the police, who manufacture evidence in order to justify their own existence and to assist Government in its policy of "repression." They do not, indeed, scruple to declare that Government has, in the past, arranged the finds to synchronise with arbitrarily "repressive" action that it would be unable to justify otherwise: and that this may be expected to remain part of its regular policy.

At the time of the important recrudescence of revolutionary activity in Bengal which occurred rather more than a year ago, a special Ordinance was passed under which a number of persons, some of whom had attained a certain amount of political notoriety, were detained without being brought to trial, the reason being that, in the state of public terrorism then existing, witnesses who were prepared to give confidential evidence to the authorities could not be induced to do so publicly. The period of quiescence that followed the removal of the most active among the revolutionary leaders, and the most dangerous among the youths whom their doctrines had infected, has led to a demand for their release which has lately been growing in insistence: and it may be confidently expected that the recent discoveries will be represented as a deliberately conceived move on the part of the authorities to provide an excuse for their refusal to accede to the "popular" demand.

British Sports in India.

Several commercial newspapers have recently drawn attention to the market that exists in India for sports goods and equipment. One of them suggests that "efforts should be made to encourage participation in outdoor pastimes, and to bring British goods within the reach of a larger section of the community by keeping prices as low as possible."

The latter part of this suggestion is perhaps the more practical. Indians have taken kindly to cricket, football, hockey and lawn tennis; but they find most of their requirements, in these games, amply catered for by Indian firms, who produce locally all kinds of equipment at a price with which imported articles of British make could hardly hope to compete: and it is the low cost of the Indian supplies that appeals to the great bulk of Indian players. It is only the fairly well-to-do Englishman in India whom British firms can reasonably hope to retain as a customer: and some of the Indian "sports works" are already beginning to cater for him. In particular, there are well-known and well-advertised Indian firms who produce high-class lawn tennis rackets, priced as high as fifty rupees—about 75 shillings. One cannot imagine the English tennis player paying such a price for the indigenous product, when he could get a first-class English racket for the same money; but apparently he does do so, or its production, and its wide advertisement, would not pay.

The former part of the suggestion opens out alluring possibilities: such as a combined team of athletic commercial travellers, touring India prepared to take on all comers at any sort of game, and thereby to give their opponents a practical demonstration of the superiority of their own equipment. There is, by the way, one form of sport that, though extraordinarily popular in Europe, has not yet penetrated to India, to which it would, at first sight, seem totally unsuited—to wit, winter sports. But some of our frontier garrisons, certainly in Waziristan, and probably also in the Khyber, live in a climate that seems eminently suitable. If the Commercial Travellers' team included a few winter sports experts, they might be able to place quite a lot of orders: and even, perhaps, to lay the foundations of a regular winter sports season in Waziristan, that would attract enthusiasts from all over India, with benefit to health and trade and even, perhaps, to civilisation. Mr. Gandhi proposed to tame the wild Pathan with the "charka"—the spinning wheel: it is at least possible that he would succumb more readily to the civilising influence of the ski, the luge and the bob-sleigh. The suggestion is offered gratis to Mr. Gandhi; who, if he were unwiling to try it himself, might depute one of the more robust of his admirers—Shaukat Ali would perhaps be a likely starter—to take a course in Switzerland and then to give the scheme a trial on the Frontier.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, November 12.

Through Indian Eyes.

There can be few politicians who have not, at some time or other, experienced the difficulty that, no matter how pure their motives may have been, their opponents have endeavoured to destroy the ring of truth in the policy advocated by dubbing it nothing more than a plausible and clever attempt to beguile the unwary. In England the electors possess the faculty for thinking for themselves: and this ensures that, as a rule, common sense will prevail

Digitized by Google

on major issues. In India, however, the masses are subject to influences unknown in England at the present time; hero worship—and a man has only to threaten Government to be a hero—is rampant and the patronage of a "leader" is valued beyond rubies; when he is in a position to offer bribes, the appeal is irresistible and creates a position in which commonsense would be superfluous. Herein lies the secret of the Swaraj Party to-day.

An Indian, writing in the *Statesman*, points out that hgh sounding name of co-operation; at the same time, To practise the latter, it is essential that the co-operating parties must have a certain amount of regard for each other; while the non-co-operator, on the other hand, has merely to shun a person or party and non-co-operation is perfect. Hence it comes about that, in India, a section of the public dislikes the present mode of Government and says so; while the remainder either do not understand, or do not care: and non-co-operation has been the result. The writer proceeds to blame Government for, as he puts it, coupling a demand for co-operation with a threat of no further progress unless the stipulation is complied with. The British people, he says, must realise that India has passed that stage of life when implicit obedience to orders could be extracted by giving it the high sounding names of co-operation; at the same time, he recognises that the British are not afraid of extremist threats, and opines that a face to face talk is the best remedy. The article provides food for thought; the writer's view is one that is not often put forward, and is indicative of the method that is likely to be employed in meeting any gestures that Government may make.

A Revival of Anarchy.

The arrest of a number of Bengali youths in a house at Barnagore, some eight miles from Calcutta, and the seizure of a live bomb, large quantities of chemicals for the manufacture of explosives, arms, ammunition and masks, gives the lie to the oft repeated statement of the Swarajists that the revolutionary movement in Bengal is dead. It would appear that the police have stepped in not a moment too soon to prevent another outrage. Searches have been carried out in other parts of the city, resulting in further arrests and seizures: and, although the situation may not be so serious as it looks, the *Statesman* says that the literature which has come into the hands of the police does not point in this direction. Criminal proceedings have been instituted against the arrested men, but no further details are available at the moment.

In this connexion, there has been a certain amount of agitation in Corporation circles in regard to their Chief Executive Officer, Mr. S. C. Bose, who was interned under the Bengal Ordinance. This came to a head last night, when the Corporation passed a resolution demanding either the release of Bose or that he should be given a public trial. From the point of view of the Swarajist element who engineered the resolution, the bomb discovery is far from happy: and *Forward* comes out this morning with a leader which endeavours to show that the "discovery" has been engineered, although it is clever enough not to say so in so many words. Naturally it forestalls Government's reply to the Corporation's resolution, and predicts that political prisoners will be "left to suffer in prison for another indefinite period, probably till after the next Council elections": and it concludes its outburst by assuming "misguided youths imbued with revolutionary thought and activity" as an actuality. Such a contingency, it goes on to say, merely points to there being deep discontent which the impatient, and thinkers of a lower mentality, are unable to bear calmly. But, should these impatient ones be allowed to proceed unhampered by any restrictive action, or if their impatience turned in the direction of any member of the Swarajist party, *Forward* would be the first to open its thumb-marked dictionary in the search for new invectives.

Protection for Coal.

The demands which the Indian Mining Federation have placed before the Tariff Board are not conspicuous for their moderation; but, when they have the precedent of protection for the steel industry to guide them, this is not surprising. There have been no arguments used in this connexion which do not apply equally to coal, and the present demands, though they are essentially ridiculous and would probably have been turned down without a moment's consideration twelve months ago, now present a more serious aspect. The Federation asks for a protective duty on all coal imported from South Africa at the rate of Rs.5 per ton, and a duty of Rs.10 per ton on coal imported from other countries. They add that this duty should rise correspondingly with any additional indirect bounty granted to South African exported coal. Then comes a master stroke; the Federation demands the imposition of a duty of half an anna per gallon on all oil fuel imported into the country, and that the proceeds should rise correspondingly with any additional indirect bounty of Rs.3 per ton could be made on all Indian exported coal. It does not yet appear whether Burma is to be included in the countries to which this duty should apply.

The views of the Indian Mining Association, however, do not lean towards protection. In their opinion all that is necessary is that the industry should be given a reasonable chance, and that Government should come to its assistance in the matter of reduced railway rates and increased transport facilities. These, coupled with a preference for Indian coal when large Government orders are being considered, would soon put the coal industry on a better footing and do away with the necessity for protection. After all, if the protection advocated by the Indian Mining Federation is granted, it will only serve to put up the price of coal to the Indian consumer, who is already complaining of its high costs, particularly in Western India.

Markets.

Business on the jute market has been on a much reduced scale: with mills taking little interest, rates have sagged and, even with buyers prepared to deal at the lower level, few transactions are recorded. Gunnies have been quiet in sympathy, but closed steadier with a fair amount of buying going on. Piece-goods remain neglected. Tea sales have been satisfactory and the market is stronger, particularly for the cheaper descriptions; although no official figures are yet to hand, it is understood that stocks are down another nine and a quarter maunds for October, and that a reduction of a somewhat similar amount is anticipated for November—factors which should place the industry in a healthy position.

A somewhat steadier tone characterised most sections of the Stock Exchange at the close, and a very fair amount of business is reported. With the better tendency in the market for the manufactured material, jute shares were the turn firmer, both the speculative issues and the higher priced denominations participating in a slight hardening of prices. Interest in cottons has revived during the week, with a resultant general marking up of rates. That most of the demand came from Bombay may be looked upon as significant; but, with the industry in its present condition, it is early to predict the future course of share values. Both coals and teas have been dealt in only on a small scale, and at round about previous quotations; rubbers continue upwards, the slight reaction in the price of the commodity having been outweighed by the news that the restriction allowance would be raised from November by not more than ten per cent. The miscellaneous market has revealed no feature, but a fair business in investment stocks has been put through. Money continues easy and Exchange, after falling on account of outside buying orders, reacted and closed steady.

THE INDIAN MAIL.

The Currency Commission.

It was mentioned, in last week's notes, that the agitation against the Currency Commission was still being carried on in Bombay, in spite of its initial failure. The public meeting took place, as advertised, on November 3, and passed by acclamation a resolution of protest "inasmuch as the Commission does not adequately and effectively represent the interests of India," demanding that

Digitized by Google

more Indian members should be appointed to it forthwith, so that such representation might be secured. The leading Anglo-vernacular newspaper of Bombay, which has made the fight against the Commission peculiarly its own, describes the proceedings as a "most moderate and dignified" protest against the "devil-may-care recklessness" of the Finance Member, Sir Basil Blackett, that "implacable enemy of Indian interests." One of the moderate and dignified protesters said that the British administration of India was "based on that pernicious, blood-thirsty imperialistic principle of exploitation and self-aggrandisement" and assured his hearers that "this exploitation, this organised or disorganised loot, will continue until they have drained your last penny." There was, he said, a law called the Indian Companies Act, enacted to protect the interests of shareholders and to prevent profiteering by directors; but when they demanded legislation to protect a whole nation from being ruthlessly exploited by another foreign nation, the Government replied, "You cannot demand legislation that touches our pocket where the interest of our country clashes with yours. We are a nation of shopkeepers, we only care for £ s. d. We will make hay while the sun shines, we do not care a jot for commercial morality, honesty or straight dealing: it is only when we have drained the whole wealth of India, and nothing is left for further exploitation, that we will concede your demand for self-government and bid goodbye to India as no longer profitable." This particular form of dignified moderation was specially relished by the audience; since, the speaker's time limit having expired at this point, there were uproarious calls for him to continue.

Two days later, the special public meeting of the Indian Merchants' Chamber took place, called on a requisition signed by 31 members of the Chamber—eleven of whom had, however, withdrawn their signatures on the ground that they had been obtained "on false representations." The local newspaper already referred to, while regretting that the Chamber should be ruled by "purse-proud plutocrats" and that "underhand influencing should be going one, to cajole or coerce the members of the Chamber into tamely registering the fiat of their big-wigs," expressed its confidence in the "sturdy common sense and genuine patriotism" of the members as a whole, and its certainty that they would support the requisitionists in their attempt to vindicate the national self-respect. This confidence, however, proved misplaced. The resolution, which omitted the previous demands for an Indian chairman and an Indian majority, and for the resignation by Sir Purshottamdas Thakurdas of his seat on the Commission, and merely demanded that the Chamber "should not tender evidence before the Commission, but should issue a statement regarding the mismanagement of the currency," was lost by a large majority.

This marks the end of the anti-Commission campaign in Bombay. The Indian Merchants' Chamber is the most influential body of its kind in India: and it is generally believed that other similar bodies have been awaiting its decision, with the intention of following its lead. The definite failure of the boycott movement in Bombay should certainly result in the absence of any attempt to revive it elsewhere: and a smooth path for the Commission seems now to be assured.

The Howrah Bridge.

The mail brings the news of a fresh development in the long drawn controversy about the Howrah Bridge. At a meeting of the Bengal Association of the Institute of Engineers, a resolution was passed that a two-pier bridge is both feasible and desirable, and that, before any further steps are taken in connection with any other type of bridge, full investigation of this opinion should be made. The meeting recommended that a working tidal model of the river should be made, for the testing of its action on a pier bridge: and that if, after seeing the results of the experiment with the model, the Port Commissioners were not satisfied that no harm would accrue from the presence of piers in the river, a full year's test should then be carried out, in the Hoogly itself, with temporary piers of the full size required.

Up to now, expert engineering opinion has been almost unanimous that a pier bridge would inevitably produce an amount of silting that would probably be disastrous, as it might lead to the shoaling, or even possibly to the diversion, of the Hoogly: and this *volte-face* is remarkable. It appears that about sixty engineers attended the meeting, and that the resolution was not unanimous, though no information is forthcoming as to the size of the minority. The cost of a two-pier bridge is understood to be estimated at four crores of rupees (about £3 millions): that of a cantilever at six crores, and of a floating bridge at three crores—the latter being the limit of the sum that Calcutta considers that it can afford to spend on a bridge. If the recommendation, apparently made with authority, receives consideration, this will entail a certain amount of delay: if the experiment is actually carried out, still further delay will result; which, if it should prove unsuccessful, would be time altogether wasted. There has already been such an inordinate amount of delay that the Calcutta public will not be surprised if the Engineers' resolution should be made an excuse for still more: and, in the meantime, it is beyond question that the existing bridge of boats is in a parlous condition, and it would surprise no one if, at any moment, it were to break down altogether. The *Statesman* certainly voices the general feeling of hopeless exasperation when, in commenting on the Engineers' proposal, it writes that it is difficult to say whether its effect will be to expedite or delay a settlement; but that the probability is that matters will remain just where they were before. "Not till the present bridge has been irrevocably swept away is there any prospect of 'getting a move on' to this weary controversy."

Central Railway Termini.

Schemes for a Central railway terminus both in Calcutta and Bombay are now under consideration. In the former city a committee of two officers was appointed to prepare a report, in the latter the decision was left to a single investigator. Both committees have reported: the Bombay officer in favour of Victoria Station, the present terminus of the Great Indian Peninsula Railway—a decision which has met with the strongest objection from the other great railway serving Bombay, the Bombay Baroda and Central India Railway: the Calcutta officers in favour of leaving things as they are. In Bombay, the B.B. and C.I. Railway, though not satisfied with their existing terminus at Colaba, wish to build a new one of their own: in Calcutta, two lines—the Bengal Nagpur and the East Indian—have their terminus at Howrah, while the third—the Bengal North Western—has its terminus at Sealdah, on the opposite side of the Hoogly. The Calcutta report appears to declare theoretically in favour of Sealdah, where room for a Central terminus, which is lacking at Howrah, could be found; but the position is complicated by the perennial controversy over the Howrah bridge—for a satisfactory terminus north of the Hoogly, a permanent bridge, that would carry railway traffic, is necessary, and there seems to be no prospect of such a bridge being built in the reasonably near future. One of the chief reasons that led the Calcutta Committee to report against a change seems to have been that, to quote a phrase in their report, "the Calcutta public appear to be satisfied with the existing arrangements"—a dictum that would strike a foreign observer to be—as, indeed, it doubtless is—"distinctively British."

It is not so very many years ago that an American Ambassador in London said that one of the things that had struck him most forcibly in England was that, if any Englishman were asked why he did a thing in a particular way, the answer was "because we have always done it in that way": and why he did not do a thing in such-and-such a way, "because we have never done it in that way": and that, in both cases, the reason was—to the Englishman—unanswerable. But the Briton abroad has always prided himself on his freedom from any such attitude of hide-bound conservatism: on his willingness to examine any new suggestion, and to decide for or against it on its merits, regardless of precedent.

It is only in Government Secretariats that precedent

Digitized by Google

holds sway: whenever a ruling is asked for from them, the first thing they do is to look for a precedent. If one can be found, it governs the ruling: otherwise, it is odds that no ruling is given, though they sometimes cautiously commit themselves to a "provisional" one that is subject to alteration if necessary: that is, no doubt, if further search should reveal something that can be construed as a relevant precedent. Outside the Secretariats, especially among European non-officials, precedents are treated as they deserve—usually, that is, without respect; but to move an apathetic public is a more difficult task. There is always a large section of any community opposed to any change: who, like John Fry in "Lorna Doone" are "never in any hurry, and would zooner stop nor goo on, most taimes"; but no one who is acquainted with the energetic and progressive non-official European community of Calcutta will imagine them accepting a decision that would justify opposition to any scheme for improvement of any sort: and it may be confidently expected that they will demand better reasons than this one, before accepting the report as satisfactory.

INDIAN COMMERCIAL NOTES.

We now know where we stand in regard to Indian imports and exports during the six months, April 1 to September 30, 1925. Imports at 108 crores point to a total, when the year is completed, approximating to the total of imports of 1923-24 (217 crores) rather than to those of 1924-25 (243 crores). It must not be forgotten that the fall in world prices which has occurred during the past year, coupled with the rise in the sterling value of the rupee, has reduced the rupee values of many foreign goods. It is not unlikely that the lower value of imports this year, as compared with last, conceals a higher total quantity; for which, however, statistics are unfortunately not available.

On the export side, the total for the six months, April to September 1925, is 186 crores. This is not far short of its proper proportion of the 1924-25 total of 398 crores, a large proportion of which was transacted during the three concluding months of the year, January, February and March. So far as present estimates go, India's export trade is likely to be well maintained during the forthcoming busy season, and it is quite on the cards that a new record of 400 crores will be reached by the time that the current trade year is completed on March 31, 1926.

Net imports of gold reached a record of 74 crores in 1924-25, but stand at only 16 crores for the six months April to September, 1925. Imports of silver have shown comparatively little fluctuation during the past few years. They stood at 15 crores during the year 1921-22 and, during the three successive years, at 19, 18, and 20 crores respectively The pre-War average of India's net imports of gold and silver was 29 crores of gold and 7 crores of silver. The advance in silver transactions, as Indian trade stands to-day, is much greater than that in gold; for, whereas net imports of gold during the past six months stand at little more than half the net annual imports before the War, the same six months' imports of silver have already exceeded the average annual trade of 1909-1913.

In the result, India's balance of trade in merchandise and treasure has dropped from 96 crores in 1923-24 to 61 in 1924-25, and to 54 for the six months April to September 1925; all three being in favour of India. It is just this strength of the Indian trade position which has led to the gradual appreciation of the rupee during the past three years from 1s. 4d. to over 1s. 6d. The strength of the rupee has materially assisted the Finance Member of the Government of India to arrange for his annual remittances to the Indian Office, which increased from 34 crores in 1923-24 to 57 in 1924-25, and already stand at 29 crores for the six months April to September 1925.

INDIAN EXCHANGE.

London, November 30.

Since the date of our last report, business has been very quiet, and Rupee Exchange in Calcutta and Bombay has been quite steady at 1s. 6 3-16d. T.T., although the rate has not been so freely offered on the Bombay side. This may be due to the smaller inquiry on the part of importers, who appear to have bought all they require for the time being.

In Calcutta, the supply of export bills has been considerably in excess of the demand for bank remittances, and the banks have again had to rely upon Government, who have been purchasing more freely during the past week, and are reported to have done about £800,000. Three months' credit in both places are steady at 1s. 6 7-16d. for delivery to the end of the year, and we understand that merchants have settled a fair amount, chiefly against jute and other shipments from Calcutta.

The pressure for money is, perhaps, a little more pronounced, and in the last weekly statement of the Imperial Bank of India, the trade demand has gone up to 180 lakhs.

Forward quotations are unchanged at last week's figures, which were 1s. 6 3-16d. T.T. from December to February, and 1-32 down per month, March to May.

Forward business is, however, neglected, and, so far as we have been able to ascertain, transactions have been confined to moderate amounts for April and May at 1s. 6⅛d.

In the London market there is no change to report. Buyers of T.T. are unable to procure much under 1s. 6 7-32d., and at this rate they are only prepared to settle what is really required for immediate or near delivery.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K., Continent and India.

The engagement of land transport for Cargo to towns in the interior of Mesopotamia and Persia undertaken on behalf of Shippers of Through Cargo to BAGHDAD and AHWAZ.

NOTES AND NEWS.

170, *Strand, London, W.C.2.*
Tuesday Morning.

A New Oil Company.

Details will be found in another column of the new oil company which Sir Charles Greenway informed the shareholders of the Anglo-Persian Oil Company at the recent meeting would be floated to deal with the new oil area of Naft Khana. This area, where the existence of appreciable supplies of oil have been definitely proved, is on the borders of Persia and Iraq in what are known as the "transferred territories." The Anglo-Persian Company possesses the oil rights there by virtue of an international agreement executed in 1913, since ratified by the grant by the Iraq Government of a formal concession of these rights. At the meeting referred to, Sir Charles Greenway stated that drilling was steadily continuing in that field with a view of proving definitely the existence of oil to such an extent as would justify the cost of laying a pipeline linking the field with the seaboard.

Egyptian Cotton.

Judging by the reports the Egyptian Government seems to be in two minds regarding intervention on any considerable scale in the cotton market this season. It has been able, owing to favourable conditions, to intervene successfully three years running, and the net result of the transactions has been a very handsome profit. But the circumstances are very different now from what they were, and the indecision of the Government suggests very forcibly that the possibility is clearly realised that purchases on a large scale this time will result in not a profit but a very considerable loss. The fact is that the Egyptian Government is not in a position to control the market successfully, and any attempt to do so can only make the authorities appear ridiculous. The price of commodities can only be regulated successfully when, as in the case of rubber, the intervening Government really controls the bulk of the world's production. When that is not so the certain ultimate effect will be a most unpleasant repercussion on the intervener.

Suspension of Indian Cotton Excise.

The news of the suspension of the Indian cotton excise duty as from December 1 is not likely to occasion any great surprise even in Lancashire, as it was known that the duty was to be abolished as soon as financial considerations permitted. The official announcement issued by the Governor-General in India states that the Government of India are satisfied that there would be no serious risk of a large deficit on the current year if the duty were suspended, and that step has therefore been taken, and it is proposed, unless the financial position as disclosed in the Budget estimates for the next year substantially fails to confirm the present anticipation, to place before the Legislature, at the time of the Budget, proposals for the abolition of the duty. I suppose that it is probable that we shall hear protests from Lancashire at this decision, but it is to my mind extremely doubtful whether the removal of the duty will affect the cotton county to the extent that Lancashire would appear to anticipate. Lancashire's trade with India is in the better class cotton goods while India manufactures cheap cottons, and the only way in which Lancashire could be affected would be if the price of the lower quality goods was so reduced that buyers were attracted to them to the exclusion of better goods.

Agriculture and Trade.

I referred last week to the excellent harvests in South-Eastern Europe and their incidence on the general trade position. The growth of industry during the past century has very largely been allowed to obscure the fundamental importance to the world of agriculture, and the fact that we have had to await universally good crops for the revival of the purchasing power which will enable the wheels of trade to revolve more freely is a timely reminder of agriculture's place in the scheme of things. The current issue of the *Westminster Bank Review* contains an interesting article on harvests and the trade outlook, in which it is pointed out that perhaps the greatest omission made by the optimists a year ago was to overlook the fact that the world's harvests were inferior. Bad harvests, it is emphasised, affect the source of trade development, while good harvests have the effect of the application of fresh oil to the cogs of rusty machinery.

The Outlook.

This year not only in South-Eastern Europe but in practically the whole world, with the exception of the United States, the harvests have been very good. That means that there will be an all-round increase of purchasing power which will be reflected in growing imports of manufactured goods, and if the British manufacturer takes an adequate advantage of this opportunity the next twelve months should witness a very marked improvement in the trade position here. It is to be hoped that the fullest attention will be paid to the markets of South-Eastern Europe. These have suffered to a greater extent than any as a result of the lack of purchasing power, and they offer a correspondingly greater scope for rapid trade development. It is a fact that throughout the region in question the quality of British goods is greatly appreciated, and if the price is not allowed to interfere with business—in other words, if our traders can quote reasonable terms—very good trade ought to be done.

British Overseas Bank.

A satisfactory report is forthcoming from the British Overseas Bank for the year ended October 31 last. The net profit amounted to £126,015, an increase of £20,467 on the figures for the previous year, and it is now proposed to pay a maiden dividend of 3 per cent. on the "B" shares. The allocations are £25,000 to the general reserve as against £55,000, and £5,000 to premises as before, leaving £60,346 to be carried forward as against £54,330.

BANK OF ROUMANIA LIMITED

A Challenge to the World in Quality & Price!

TRADE BUYERS

throughout the world are cordially invited to attend the great national

BRITISH INDUSTRIES FAIR

Organised by H.M. Department of Overseas Trade and held at

LONDON (WHITE CITY) *and* **BIRMINGHAM** (EXHIBITION BUILDINGS, CASTLE BROMWICH)

from February 15th to 26th 1926

THIS enormous exhibit of British Goods will constitute a challenge to the whole world in quality and price. Make your plans *now* to attend both at London and Birmingham. Practically every kind of British manufacture will be on exhibit. Admission is free to Buyers and full particulars and Invitation Ticket can be obtained from

ANY BRITISH LEGATION, CONSULATE or TRADE COMMISSIONER,

or write to

The DEPARTMENT OF OVERSEAS TRADE, 35, Old Queen St., Westminster, London, England,

or the

SECRETARY, CHAMBER OF COMMERCE, Birmingham, England.

Copy of the Catalogue of the Fair will be sent on the application of Trade Buyers.

SCHEDULE OF EXHIBITS.

LONDON
(White City)

Musical Instruments.
Furniture and Basketware, Sports Goods, Toys, etc.
Jewellery, Silverware, Cutlery, etc.
Scientific and Photographic Goods.
Chemicals and Drugs.
Stationery and Printing.
Fancy Goods.
Travelling Requisites, etc.
Brushware.
China, Earthenware, Stoneware and Glassware.
Foodstuffs and Beverages.
Fancy Leather Goods, Leather, etc.
Clothing and Allied Trades.

SCHEDULE OF EXHIBITS.

BIRMINGHAM
(Exhibition Buildings, Castle Bromwich)

Brassfoundry, Hardware, and Ironmongery.
Metals.
Construction, Building and Decoration.
Power, Lighting, Heating.
Cooking and Ventilating.
Engineering in all Branches.
Agricultural Machinery.
Mining Appliances.
Motors, Motor Cycles, Cycle Accessories, Perambulators.
Guns, Saddlery and Harness.
Fishing Tackle.
Brewing and Distilling Appliances.

The B.I.F.

The news which has recently been forthcoming that there is to be an East African Section at the British Industries Fair holds out interesting possibilities for the development of this annual event. I understand, as a matter of fact, that invitations have been generally extended to the various countries in the Empire to take part in the Fair. Whether we shall see the Near East represented there this time is as yet uncertain. The Sudan, Palestine, and Cyprus have all been able to realise very clearly the benefits of the publicity derived from exhibitions and fairs through their experience at Wembley, and to take part in the Fair would merely be to continue the work of trade development to which the British Empire Exhibition has given so great an impetus.

COMMENTATOR.

BRITISH INDUSTRIES FAIR.

An example of the facilities and opportunities afforded by exhibiting at the British Industries Fair has just been furnished to the Department of Overseas Trade by an exhibitor at the 1924 Fair.

While discussing the forthcoming Fair, which is to be held in London and Birmingham in February next, a firm of manufacturers informed a representative of the Department that as a result of exhibiting at the 1924 Fair they had secured an order amounting to £1,200 and that since the Fair this order had been renewed each month for the last 18 months and was still continuing. The firm in question have decided to exhibit again and will probably book space in excess of the amount secured in 1924.

Of the number of applications received up to November 23, over 25 per cent. are from firms who have exhibited at more than five previous Fairs, nearly 50 per cent. are from firms who have shown at more than one Fair, and nearly a third are entirely new exhibitors.

ANGLO-PERSIAN OIL.

Formation of New Subsidiary.

The new company which Sir Charles Greenway, Bart., stated at the general meeting of the Anglo-Persian Oil Company would be formed to deal with the new oil area of Naft Khana, was registered as a private company on November 27.

Its title is the Khanaqin Oil Co., Ltd., and it has a nominal capital of £1,000,000 in £1 shares. The objects are: To acquire from the Anglo-Persian Oil Co., Ltd., the property, rights, and assets comprised therein; to adopt an agreement with that company; to acquire any petroleum or oil-bearing lands in Iraq or elsewhere, or any interest therein, or any rights of or connected with the getting or winning of any natural gas, petroleum or other oil, bitumen, asphalt, or ozokerite or other similar substances, and the products thereof, and to carry on the business of dealers in and refiners and transporters of the above substances and products and other fuels, mine owners, merchants, carriers, wharfingers, ship and barge owners, shipbuilders, lightermen, factors brokers etc. The subscribers (each with one share) are: J. Bennett 2, Bond Court, Walbrook, E.C., clerk; E. J. Alldis, 2 Bond Court, Walbrook, E.C., clerk. The number of directors is not to be less than three nor more than 15. The subscribers are to appoint the first.

The Government of Iraq are entitled to appoint a Commissioner, who will be consulted by the directors. The Treasury have the right at all times to be represented on the board by two ex-officio directors. Every director must be a British subject. An ex-officio director has the right of negativing any resolution proposed by the board or a committee of directors, provided always that in the event of such right being exercised it is open to the directors to submit the proposed resolution to H.M. Government, and if the Government determine that the resolution ought to be given effect to it shall be deemed to have been duly passed at the meeting at which it was proposed. For the purposes of this clause H.M. Government means the Treasury and the Admiralty, acting jointly, and notice of any submission is to be given both to the Treasury and the Admiralty. The registered office is at Britannic House, Finsbury Circus, E.C.2.

AN IMPOSING CONVOY.

Last week an imposing convoy of thirty 4-ton Leyland lorries was due to leave Beyrout under the auspices of the Nairn Transport Company for Persia. These lorries have been supplied to the Food Supply Department of the Persian Government. The route to be taken by the convoy was via Tripoli, Homs, Palmyra and Baghdad. The French authorities in Syria had undertaken to supply an armed escort. In the meantime the motor mail service follows the Jerusalem-Amman route to Baghdad, and it is interesting to note that bookings are very heavy at the present time, in some weeks more applications for seats being received than can be met.

Mr. Arthur William Watson, C.B., C.B.E., of Vicarage Gate, Kensington, W., and late of Dormans House, Dormans Park, Surrey, Principal Assistant Secretary and Director of Establishments at the Ministry of Labour, formerly of the Indian Civil Service, and successively Sessions Judge in Calcutta, Secretary to the Bengal Legislative Council, and to the Bengal Government in the Legislative Department, and during the War Deputy-Assistant Secretary to the Ministry of Munitions, who died suddenly on October 9, aged 50, left unsettled property of the gross value of £2,782 with net personalty £2,452.

IMPORTS & EXPORTS

The financing of the world's commerce has become one of the most intricate of machines ever constructed, and under the banker's hands lie all the cogs and controls necessary for its efficient running. It is of the utmost importance that the merchant should clearly understand the working of its mechanism in order that he may make the fullest use of the bank's facilities, not only for his personal benefit, but also for the increased commercial prosperity of the country. To assist its customers, the Westminster Bank has now prepared a booklet explaining the many ways in which the commercial man may use the bank for the furtherance of his business, and how he should proceed so as to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and combine with progress and enterprise the necessary security and caution.

Copies will be issued on application to the Secretary, Head Office, Westminster Bank Limited

41 LOTHBURY, LONDON, E.C.2

COMPANY NOTES AND REPORTS.

BURMAH ELECTRIC TRAMWAYS.

The report of the Burmah Electric Tramways and Lighting Company for the year ended July 31 last states that the receipts from tramways, lighting and power and sundries, Mandalay, amounted together to £50,023, and the expenditure to £30,056, leaving a profit of £19,967. To the latter sum is added, profit on exchange £2,899, and sundry other receipts £1,592, together with the balance of £4,672 brought in, making a total available balance of £29,130. The sum of £11,606 is carried to the general reserve and depreciation fund, and a final dividend of 4½ per cent. is proposed on the ordinary shares, making 7½ per cent. for the year.

OILFIELDS OF EGYPT.

The report for the year ended March 31, 1925, states that of the amount outstanding on call account at March 31, 1924, £100 was collected during the year. Endeavours were made during the year to dispose of the whole of the company's plant, machinery, and stores in Egypt, and sales of a few items were concluded. Subsequent to the date of the accounts the whole of the plant was sold for £1,900, to which figure it has been written down. In view of the inaccessibility of the area in which the company's properties were situated it was considered advisable to dispose of the plant and stores even at this low figure rather than continue the expense of maintaining watchmen on the properties. Since March 31 last a proportion of the company's funds has been invested in an oil proposition in Venezuela, and in view of the favourable nature of the reports received, it is hoped that this investment will prove of value to the company.

BURMA CORPORATION.

The annual meeting of the Burma Corporation will be held at Rangoon on December 30, when a resolution will be submitted altering the articles of association. It is further proposed to define more clearly the respective positions and duties of the Rangoon and London directors and to reduce the number of directors to retire each year, at the same time providing that the director resident in Burma shall not be liable to retire.

Bombay received a visit last Thursday from the cruisers Cairo, Captain E. O. Cochrane, and Colombo, Captain H. T. England, of the East Indies Squadron. This force had its principal base at Bombay at one time, but since the War has made its headquarters at Trincomalee. The cruisers will remain until December 9, when they leave for Colombo.

Shipping Intelligence.

SUEZ CANAL TRAFFIC.

The present year has seen a very marked expansion in the Suez Canal traffic. For the first nine months the tonnage of shipping transiting the Canal amounted to 20,332,000 tons, or 2,143,000 tons more than the total for the corresponding period of 1924. The movement of merchandise amounted to 20,243,000 tons, which is a record, and it it interesting to note that while the first quarter of the year showed an increase of 919,000 tons and the second one of 739,000 tons, in the third there was a decrease of 43,000 tons. The net increase was 1,615,000 tons, and this was entirely due to the homeward traffic, which showed an increase of 1,865,000 tons. Shipments of wheat largely contributed to the increase in the homeward traffic. They totalled 1,819,000 tons as compared with 1,037,000 tons for the corresponding period last year. Other important increases in respect of cereals took place in rice (1,323,000 tons as against 1,033,000 tons), and maize (209,000 tons as against 186,000 tons), while barley declined from 438,000 tons to 124,000 tons. Crude petroleum showed a further expansion, rising to 919,900 tons as against 889,000 tons, while benzine rose from 634,000 tons to 739,000 tons. Among minerals, manganese declined from 712,000 tons to 639,000 tons, but zinc showed an increase of 54,000 tons at 189,000 tons. It is satisfactory to be able to record that British tonnage using the Canal fully kept pace with the increased traffic, and, as a matter of fact, the British total for the nine months (12,141,000) came up to the previous record for a year.

NEW ANCHOR LINER.

This week sees the launch of the Anchor Line's new vessel, the Britannia, which has been built by Messrs. Alexander Stephen and Sons, Linthouse, and is intended for passenger and freight service between Liverpool and Bombay. A vesssel of 8,500 tons, the Britannia is 460 ft. in length, with a breadth of 58 ft. 9 in. and a depth of 34 ft. 9 in. She has been built specially for the Indian passenger trade, and has accommodation for 109 first-class passengers on the bridge deck in state rooms and similarly on the starboard side of the upper deck for 45 passengers.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Massilia for Bombay (Liverpool, December 7). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—M.v. Somersetshire for Port Said, Colombo, Madras and Calcutta (London, December 12).

Bibby Line.—S.s. Warwickshire for Port Said, Colombo, and Rangoon (Birkenhead, December 16).

British India Line.—S.s. Hatimura for Colombo, Madras, and Calcutta (London, December 5); s.s. Gharinda for Bombay and Karachi (London, December 19).

Cunard Line.—S.s. Brescia for Patras, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, and Sulina (Swansea, December 14).

Ellerman "City" Line.—S.s. City of York for Calcutta (Birkenhead, December 11).

Johnston Line.—S.s. Kenmore for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, December 5); s.s. Quernmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, December 26).

P. and O. Line.—S.s. Ranchi for Bombay (London, December 11); s.s. Nankin for Colombo, Madras, and Calcutta (London, December 12).

Prince Line.—S.s. Tartar Prince for Malta, Alexandria, Jaffa, Haifa, and Beyrout (London, December 4).

Motors and Motoring.

By G. B. B.

Slippery Roads.

The subject of slippery roads is one which has attracted considerable attention of late, and not only have the road makers been condemned vigorously by the less well-informed section of the daily and weekly Press and by motoring journalists generally, but even authorities on road matters have spoken as though the surfaces of many of our roads were too smooth and have suggested the use of coarser materials for surfacing or the gritting of the road surfaces after the top coating of bitumen compound has been laid. In my view, as a motorist, this question of road slipperiness has been and is being viewed from an entirely wrong standpoint, and I have no hesitation in saying that what we want is a road surface that is glass hard and as smooth as it can possibly be made.

Roughness of a road surface makes for friction, which means loss of power and it also makes for tyre wear. The more uneven the surface, the greater the friction and the greater the wearing effect upon motor and other tyres. Tyres at the present time are not worn out by any other cause than road friction, save in those few instances where under-inflated tyres give way at the beads through the constant and continued friction of the component cotton threads due to the over-inflated condition of the tyre. Our tyres wear out, not so much because of the power they transmit or the load they carry, but because of the friction which takes place between the surface of the road and the surface of the tyre cover.

Let us instance a ball or roller bearing which will carry a very severe load with a minimum of friction. It does this because, in the first place, both the ball and the two surfaces between which it revolves are as hard as human science can make them, and because, in the second place, both the surface of the ball and of the bearings is planished to the highest possible degree of smoothness. Imagine a ball which was neither hard nor smooth being used for bearing work, and imagine, further, that the surfaces between which it worked were rough and uneven. It requires no effort of the imagination to visualise the amount of friction that would be set up and of heat that would be generated in such a bearing as soon as it was called upon to bear a heavy load.

The Tyre Position.

We are in much the same position to-day, as regards tyres, as we should be if we essayed to use soft steel balls in roughened bearings to carry any appreciable load. The road maker has developed his art to an astonishingly high degree. To those of us who can remember the rough, water-bound macadam roads of twenty years or so ago, roads that were loose-surfaced, rough and uneven, the smooth, even-polished, bitumen-coated roads of to-day represent a marvellous advance. Nothing like them was imaginable in the early days of the motor industry; we could none of us have hoped, in our wildest dreams of progress, for such ideally perfect roads. Smooth and even, it is possible to travel along them at a high speed without the slightest jar or vibration due to road surface causes; the absence of inequalities, bringing about a diminution of friction, has reduced petrol consumption until we can now cover an immensely increased mileage to the gallon; it is possible for us to use lighter chassis and lower powered engines and to motor at a far cheaper rate than we could travel by any other means of transport.

And now that all this has been attained and obtained, now that we have the practically perfect road, we are to be asked to sacrifice some appreciable measure of our success and to resort to roads with rougher surfaces for one reason and for one reason only, which is—

With a few notable exceptions our tyre makers have failed lamentably to keep abreast of current developments; they have made no serious attempt to keep level with the work of the road maker; they are giving us the same kind of tyres they gave us twenty years ago!

It is true that they have improved the quality of rubber and canvas to some slight extent but that is all they have done. It is utterly absurd for any protagonist of the tyre industry to point out that before the War 6,000 or 7,000 miles was considered a long life for a tyre, and that to-day we expect to get, and do get, 20,000 miles' service from a cover. The increased life of the tyre is not due to the success of any belated efforts that the tyre industry as a body has put out with a view to increasing life—of course there are a few honourable exceptions to this statement—but it is due to the improvement in road surfaces, which has reduced the wear the tyre was called upon to withstand and to the improvements in engines and chassis, consequent on that road surface improvement, which has reduced the load they have been called upon to carry.

I am aware that everyone who reads my defence of the polished road surface will tell me, and rightly so, that motoring is dangerous, even in dry weather, on some of these bitumen-coated roads, and that in wet weather they are veritable death-traps by reason of their slipperiness. But I would ask them what it is that slips? Is it the road that slips away from a perfectly made tyre, or is it an imperfectly made, badly designed, utterly unscientific and out-of-date tyre that slips across or away from the perfectly made road?. We slip when our cars are shod with unsuitable tyres; as unsuitable for smooth roads as smooth horseshoes would be for frozen roads or as dancing pumps would be for Alpine snorts or as hob-nailed shooting boots would be for ballroom use. There is no need to labour the subject; the facts speak for themselves, and I say and maintain that in this year of grace 1925 we ought to be able to buy anywhere, instead of only from a few firms, tyres that would be suitable in every way for the road surfaces on which we have, and wish to motor.

A New Wolseley.

A short time ago I had something to say about the new 11-22 h.p. four-seater Wolseley car, and I am now able to give a friend's opinion as to its behaviour on the road. He tells me that it is a powerful car, handled so easily that a child could drive it: that its petrol and oil consumption are as low as could be desired, and that the engine runs

smoothly and with an entire absence of vibration at all speeds. He added that he got the best results when he allowed the engine to run at a fairly high speed, but that even at the lowest engine speed the drive was as smooth as could be desired. The clutch is simple in operation and the gear change is quite easy, and a feature of the model is the excellent and smooth acting brakes with which it is fitted. I have not yet driven the car myself but I can testify to the smart appearance of this new and entirely British production.

COTTON AND RICE IN IRAQ.

The respective merits of rice and cotton cultivation in the Diala region are the subject of an interesting little brochure* which has just been issued by the Department of Agriculture of Iraq. It is pointed out in a brief introduction that the summer months in the Diala Liwah are extremely dry and intensely hot during the day, and the extent of the area cropped in summer and the success of the crop depends on the judicious distribution of canal water and its economic use. In view of the importance of the water factor the Director of Agriculture instituted an inquiry into the relative gross receipts from Mesowhite cotton and from rice. When the investigation was instituted it was anticipated that cotton would sooner or later supersede the rice crop in the Diala Liwah.

Rice growing has been carried on for a considerable time in the region, but there was a marked extension in the areas under this crop during and after the War. The view has generally been expressed by local cultivators that rice will yield a hundred-fold on moderately good land, but concrete examples of such excessive yields are, it is pointed out, extremely rare. In 1923, an admittedly exceptionally good season for rice, only one field yielded more than one hundred-fold, while the yield of the second best field was 75 times the weight of seed sown. In both cases the seed rate was relatively low and an abundant supply of fresh water was always running into the fields. A field near Qizil Robat yielded about 50 times the weight of seed sown, but most of the fields yielded considerably less. A large landlord worked out the proportion of the yield to the seed at 9.5 times for 1922 and 9.9 times for 1923.

Mesowhite cotton is a relatively recent introduction, and the cultivators still have a good deal to learn about its proper cultivation. In 1923 the preparatory tillage of land was commenced in January, and from two to three ploughings were carried out before sowing time. About half the total area under cotton in 1923 was prepared in ridges, and the conditions varied even in the same plantation. Those who had grown the crop before benefited by their practical experience. Sowings commenced in the last half of March and were completed before May. Early in the summer, prior to the preparation of a temporary dam in the river at Jabel Hamrin, there is always a serious shortage of water in all the canals, and at this period the rice fields always receive first attention. The neglect of the irrigation requirements of Mesowhite cotton at this stage has been a great drawback each year this crop has been grown. In 1923 the crop in a few fields was absolutely ruined on account of drought. Locusts did a certain amount of damage, and spotted boll worm also appeared, though no serious damage was done by this pest. Though the 1923 season was not a favourable one the profits made by the cultivators were fairly satisfactory, and a comparison of the relative value and the profits derived from the various summer crops have led them to the conclusion that cotton is the most paying of all crops raised by them.

In 1923 thirteen fields of rice were measured, and from this area the crop realised Rs. 26,315-1. The average value of the rice crop per donum ($\frac{5}{8}$ acre) amounted to Rs. 26-11. The total area sown under Mesowhite cotton was 2,155.20 donums. Of this total 357.75 donums were destroyed by locusts and 289.21 donums were abandoned. The produce from the remaining 1,508.24 donums realised Rs. 98,447-3 or an average of Rs. 65-4 per donum. It is therefore apparent from the prices of the two commodities, it is pointed out, that the gross value of the cotton crop per donum is two and a half times that of rice. It is, however, essential to consider the relative water demands of these crops before arriving at their respective merits. It is the custom as regards rice to allow a continuous flow of water from the time the seedlings are established in June until the crop is dried off in October, while the cotton crop normally needs about 15 irrigations between March 15 and October 15 and during July and August water should be applied at intervals of not more than ten days. It is a conservative estimate that the rice crop is given at least four times as much water as is required by the cotton crop. Therefore it is evident, it is maintained, that not only do cultivators and landowners lose a considerable amount of money each year through the wasteful use of water in rice cultivation but the Government revenues also suffer, while rice cultivation in the absence of drainage increases the rate at which cultivated lands may become so saline that crops such as cotton can no longer be grown.

It is urged in conclusion that it has been definitely proved that the conditions of soil and climate in the Diala zone are particularly suited for cotton cultivation and that lands yield much greater profits and give greater employment in the summer than when water is used for rice cultivation. It would appear, therefore, it is stated, that it would be sound policy for the Government to encourage cotton cultivation and to limit the areas put down to rice on the Diala canals.

* The Economics of Rice and Cotton Cultivation in the Diala Liwah. By Khan Sahib A. A. Soofee, Assistant Agricultural Circle Officer, Diala. Government Press, Baghdad.

The locust bean crop in Cyprus has been gathered, and it is now estimated that it will amount to about 50,000 tons, as against an original forecast of 55,000 tons.

Near East Markets.

SMYRNA FRUIT MARKET.

Messrs C. J. Giraud and Co., report as follows for the week ended November 14:—

Saltanas.—The arrivals are estimated at 18,200 tons and the sales to date are put at 16,600 tons. Closing prices, Smyrna, per cwt. c.i.f., London and Liverpool: type 12, 53s.; type 13, 55s.; type 14, 57s.; type 15, 59s. type 16, 64s.; type 17, 71s.

There is no change in prices from last week's level. The gradually declining tendency hitherto marked appears this week to have reached its bottom limit. Demand still continues slow. We are not inclined, however, to anticipate any further reduction in values. A reaction upwards may quickly follow on any improvement in demand. This should be regarded as more than a possibility in view of the comparatively light stocks on most consuming markets.

Figs.—The arrivals are estimated at 189,060 bags, and the sales to date are put at 182,318 bags. The stock consists mainly of "Hordas," only about 120 tons being genuine quality.

DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, in their report dated November 30 state:—

Currants.—Although showing signs of improvement in the early days of the month, the market developed renewed uneasiness later, under freer offerings. The feature of importance has been the action of the Greek Government in introducing a scheme to purchase the surplus of the crop on a sterling basis, in place of the Greek currency. Prior to the receipt of this news a certain amount of nervousness was apparent in view of the sharp fluctuations and preponderating decline of the Greek exchange. The action of the Government, consequently, had a beneficial effect in stabilising prices. Apart from this, unfortunately, there has been nothing whatever to stimulate buyers to activity, the response from the country continuing to be most disappointing. We have been well supplied, cargoes arriving per Sea Glory, Andalusian, Assyrian, Lisbon and Pavia. The trade passing was most centred in cleaned varieties—Pyrgos, cleaned, selling at 31s. to 31s. 6d.; good cleaned Provincial and Amalas, 32s. to 33s. 6d.; cleaned Patras, 34s. to 36s.; Gulf, uncleaned, 35s. to 36s.; Gulf, cleaned, 35s. to 38s.; Gulf, small cleaned, 35s.; Zante, 33s. to 35s. Vostizza have been pressed for sale, good qualities changing hands at 40s. to 42s.; Shade Dried, ordinary, 42s. to 43s.; good, 45s. to 46s.; fine tip-top parcels, 48s. to 51s..

Quotations:—Pyrgos and Amalias, 31s. to 33s.; Patras, 34s. to 36s.; Zante, 32s. to 35s.; Gulf and Panariti, 34s. 6d. to 38s.; Vostizza, 40s. to 51s.

Australian.—The advantage gained from the advertising propaganda has assisted the holders to unload their stock, and considerable progress has been made at 28s. to 30s.

Sultanas.—A good deal of pressure was felt during the early part of November, holders displaying an excessive desire to unload. This was not due to influences in this country, where stocks are light, but was attributable solely to the existence of lower values in Smyrna, and immediately reports were received of a 3s. advance abroad, a change for the better quickly developed here. We close with a firmer tone, and with more interest being taken in the article.

Quotations are: medium to good, 68s. to 75s.; fine, fine, 80s. to 90s.

Greeks.—Holders realising that in order to make progress against the decline recorded in Smyrna, reduced their ideas, and business was done at:—medium, 68s. to 70s.; fine bleached, 90s.

Australian.—The few parcels remaning were disposed of at 66s. to 75s.

Figs.—Remaining stock consists of small boxes only, which are being gradually disposed of at 85s. to 90s. Bags Genuine, 45s.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street. S.W.)

EGYPT.

Bunting, Etc.—The Secretary-General, Ports and Lights Administration, Arsenal, Alexandria, invites tenders for the supply of bunting, ropes, canvas, hose, etc., required for 1926-1927. February 4.

Clothing.—The Egyptian State Railways invites tenders for clothing, summer and winter, for the year 1926-7. December 30. (D.O.T.)

Clothing, Etc.— The Chief Inspector, Customs Administration, Alexandria, invites tenders for the supply of clothing, boots and tarboushes required during the year 1926-1927. February 5.

Clothing, Etc.—The Secretary-General, Ports and Lights, Administration, Arsenal, Alexandria, invites tenders for the supply of clothing, tarboushes and boots required during the financial year 1926-1927. February 1.

Hose Pipes.—The Superintendent of Stores, Saptia, Cairo, invites tenders for the supply of 1,250 hose pipes without couplings, 1,000 rolling rings and 9,060 joint rings. December 15.

Lock Bridge.—The Egyptian State Railways, Telegraphs and Telephones, invites tenders for the construction of the new lock bridge over the Mahmoudia Canal at Alexandria. This bridge is designed with a superstructure for two railway tracks and a road bridge. It will be built on the existing masonry which will have to be modified in consequence. Tenderers may submit such offer as they deem best according to the information they may obtain from the general drawings of the Administration, suggesting three solutions of swing bridges and a solution of a lift bridge. February 16.

Paper and Stationery.—The Central Stationery Stores, Ministry of Finance, Cairo, invites tenders for the supply of paper and stationery required for the year 1925-1926. January 9.

ROUMANIA.

Chemicals.—The Direction Generale of the Roumanian State Monopolies invites tenders for the supply of chemicals of various kinds. December 12. (D.O.T.)

THE SUDAN.

Hull and Cabin Work.—The Inspector-General of Irrigation, Sudan, Khartoum, invites tenders for the supply of hull and cabin work only for two launches. January 25.

Supplies.—The Inspector-General of Irrigation, Sudan, Khartoum, invites tenders for supplies required for the Floating Workshop "El Nasheet": (a) Electric generating set and fittings for electric light—supply only. (b) Oils and paints. Contractors may tender for one or both of the above groups. December 7.

The Wanganui Harbour Board (New Zealand) have placed an order for the construction of a twin screw fire and salvage tug with the Dublin Dockyard Co (Vickers-Ireland, Ltd.). The vessel's dimensions are 110 ft. by 24 ft. by 12 ft., and the machinery consists of two sets of triple expansion engines developing 800 i.h.p. This is the second order placed by New Zealand Harbour Boards with the Dublin Dockyard Company during the last month.

Cotton and Cotton Goods.

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Ottoman Bank for the week ended November 28 states:

Trade has not expanded during the past week and in all quarters operations are reported to be of small dimensions. There is no longer the excuse of inadequate cotton supplies and the conclusions to be drawn seem to be either that Lancashire's competitors are cheaper or that prospective buyers lack faith in present prices.

Yarn. Whilst it is believed that a large proportion of the spinners of American cotton voted in favour of further curtailment of working hours, the result of the ballot does not, in the opinion of the Federation, justify such a step and the hours will therefore remain as at present, viz., 39¼ per week. It is not possible to record any improvement in this section. Buyers continue to operate with extreme caution and for neither American nor Egyptian spinnings is there any business of special interest to refer to.

Cloth. Demand has been on a low scale. It appears that there is some difficulty in disposing of goods ordered when prices were higher, and this, of course, is an unfavourable factor for the moment. Indian inquiry has been very sluggish. A moderate business has been done for China but Egypt and the Near East have been dull.

Raw cotton.—The American Agricultural Bureau Report published on Saturday afternoon last gave the indicated yield of the crop at 15,298,000 bales, a reduction on the estimate of a fortnight earlier of 88,000 bales. The number ginned up to the 13th instant was 12,250,000 bales. Following the receipt of these figures prices were raised about ⅜d. per lb., an increase which seems somewhat out of proportion to the reduction in the crop estimate. Since then the market has been very steady. The Egyptian Government is said to have made modest purchases of cotton in Alexandria day by day but has not operated to an extent which would materially affect prices. This policy of Government interference with the normal play of the market is much resented in Lancashire. Closing quotations yesterday were as follows:—American Middling 10.74, Egyptian Gully Good Fair 19.75.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company in their report for the week ended November 19, states:-

Since our last report the futures market has been quiet. The net changes on the week are the following: Sakellaridis 1.24 dollars up for November, 1.15 dollars up for January, 1.17 dollars up for March, 1.10 dollars up for May, 1.12 dollars up for July, 0.60 dollars up for November 1926; Ashmouni 0.27 dollars up for December, 0.30 dollars up for February, 0.30 dollars up for April, 0.50 dollars down for October.

There is little fresh to report. The market was relatively firm at the close but this firmness is principally due to the rumours that the Government intends to buy considerable quantities of Sakel contracts; so far nothing official has been published.

The demand from abroad has been moderate, but spinners have continued to show an increased interest for Sakel. The improved demand for Sakel has induced operators to close out straddles, buying back Sakel and selling Ashmouni, and the consequence has been a widening of the difference between the two varieties.

Local speculators are still, in general, committed to the bear side, but they appear to be more cautious, whilst, in view of the better demand on the spot market hedge selling by the banks against their clients' cotton has not been as heavy as it was last week.

The Government has bought on the spot market a further few hundred bales of Sakel round about Fully Good Fair and we estimate the total bought by them since they first came into the market at about 3750 bales.

In the interior, business is rather dull. The merchant in general have lost a good deal of money, and are chary of making further purchases, especially as growers, particularly the more important ones, are not free sellers considering the present level of prices too low; this holding back policy explains the falling off in the figures of the daily arrivals. Our opinion is that, for the time being we are not likely to see any big change in prices.

The week's receipts amount to 301,875 krs. against 233.814 krs.; the stock stands at 1,819,321 krs.

Spot: Minet el Bassal has been moderately active this week and sales amount to about 27,300 bales, of which we estimate 15,200 bales Sakel, 9,500 bales Uppers 1,900 bales Zagora, 500 bales Pilion 200 bales White and a few bales of Brown. The Egyptian Government has bought about 750 bales of Sakel about Fully Good Fair in quality.

Sakellaridis: has been in good demand and all styles have been dealt in, with the medium styles in most request. Spot differences are without much change generally but inclined to ease for the better grades.

Ashmouni and Zagora: A good business has been done covering all grades. With the exception of Fully Fair and below, which are easier, spot differences are without change.

Pilion: has been in fair request. Spot differences are generally rather easier.

Brown: Only a few bales have been done. Spot differences are rather cheaper.

White: A moderate business has been done at a rather cheaper basis than last week.

The League of Nations Commission of Inquiry into the Balkan frontier dispute arrived in Belgrade last Thursday from Sofia, leaving for Geneva on November 28.

TURKEY'S TRADE IN 1924.

The value of imports into Turkey during the first eleven months of 1924 was £T171,194,875 as against £T144,788,671 for the year 1923, while exports were valued at £T137,670'698 and £T84,651,190 respectively. Imports exceeded exports in the period under review by £T33,524,117, as compared with £T60,137,481 in the whole of 1923 while during the first eleven months of 1924 imports exceeded those for the whole of 1923 by 18 per cent. (says the British Commercial Secretary at Constantinople in a recent report). On the other hand, however, the value of exports increased by no less than 63 per cent. over the same periods, and the excess of imports over exports was decreased from 71 per cent. in 1923 to 24 per cent. in 1924. In view of the fact that Turkey has lost a considerable extent of territory since 1914, no accurate comparison can be made with the pre-war trade returns, which of course comprised the whole of the Ottoman Empire. For the year 1329 (1913-14) imports into the whole of the Turkish Empire amounted to £T40,809,682 (gold) and exports to £T21,436,120 (gold).

With regard to articles imported during the eleven months under review, cotton goods again head the table with a value of £T57,769,138, or 34 per cent. of the total imports, as compared with £T53,939,768 or 37 per cent. of the total imports, in 1923. Large increases are also shown in the imports of woollen goods, metals, machinery and vehicles.

As regards the principal countries exporting to Turkey, Italy again heads the list with goods amounting in value to £T36,724,748 as aginst £T28,352,941 in 1923, an increase of £T8,371,807, or 29.5 per cent., while those from the United Kingdom amounted to £T31,118,762 as compared with £T23,063,477 in 1923, an increase of £T8,055,285, or 35 per cent. Germany's share advanced from £T9,222,073 to £T16,708,092, an increase of 81 per cent. and those from Roumania were more than doubled. It should be stated, however, that imports from Roumania, which consist mainly of grain, necessarily vary with the extent of Turkey's harvest. Other contributors included France, £T16,864,772; the United States, £T9,162,557; Belgium, £T7,562,773; Syria, £T6,783,047; the Soviet Union, £T5,948,390; Egypt, £T5,934,445; Holland, £T5,694,849; Czecho-Slovakia, £T5,182,038; and Japan, £T3,010,002.

As regards exports, the most striking increase is that concerning tobacco, the value of which advanced from £T20,482,517 in 1923 to £T38,784,180 for the first eleven months of 1924. The value of exports of fruit increased from £T20,833,387 to £T33,315,680 during the same periods.

In the distribution of Turkey's exports during the eleven months under review Italy was the chief customer with goods valued at £T27,768,304 as compared with £T15,200,671 in 1923, but it should be stated that a considerable proportion of Italy's imports, in particular tobacco, are in transit only, and are in reality consigned to Central European States via Trieste. Exports to the United Kingdom increased by approximately 30 per cent., i.e., from £T15,756,670 to £T20,612,887, and consisted principally of dried fruit, mohair and nuts, while exports to Germany were more than doubled due mainly to increased shipments of low-grade tobacco and fruit.

Mr. Edward Dudley Vergette, late Judge (Colonial Service), at Cyprus, of the Royal Societies Club, St. James's Street, S.W., and of Sierra Leone, West Africa, who died on August 17, aged 47, left estate of the gross value of £1,349, of which £1,075 is net personalty.

Sir Robert James Black, Bt., of Midgham Park, Berks, chairman of the Mercantile Bank of India, Limited, and the Anglo-French Textile Company Limited, and a director of the Shell Transport and Trading Company, Limited, and of other companies, who died on September 28, 1925 left unsettled property of the gross value of £535,471, with net personalty £483,205. He appointed the Alliance Assurance Company, Limited, as sole executor.

CHESS.

Problem No. 24.
White to play. What result?

Solution to Problem No. 23: 1 . . . . Kt—B3; 2, Kt—K2, P—B4; 3, K—B3, P—Kt5; 4, P—B4, Kt—K2; 5, Kt—Q2, Kt—Kt4; 6, K—Q3, Kt—Q3; 7, K—K3, Kt—B5 (ch.); 8, KtxKt, PxKt; 9, K—Q2, P—Kt4 and wins.

The death of Mr. Amos Burn, the famous master, who since 1913 has been Chess Editor of the *Field*, came as a great shock to the chess world, for his health had been maintained to the last. His death deprives English chess of the last of the three masters who so ably enabled this country to hold its own against foreign masters in the 'seventies and 'eighties. For many years past he had taken no part in competitive chess, one of his last games being that in the cable match of 1911, when he defeated Marshall in brilliant style, and in recent years he had delighted in off-hand games. He was always ready to proffer kindly advice to aspiring players, and the list of those who owe much to his encouragement would be long indeed. His work as a chess editor needs no eulogy from me. His annotations were world famous, and his passing leaves a gap in chess journalism that it will be impossible to fill.

A REMARKABLE TESTING MACHINE.

One of the most interesting and important scientific inventions relating to the testing of hardness in materials of all kinds is to be seen at the Shipping, Engineering and Machinery Exhibition at Olympia, at the stand of Messrs. Vickers-Petters, Ltd. It is known as the Vickers diamond hardness testing machine, and, as a result of its use, a degree of accuracy in recording hardness is reached which hitherto it has been impossible to obtain. The machine is being demonstrated by experts throughout the run of the Exhibition.

THE BRITISH INDIA CORPORATION LTD. CAWNPORE :: INDIA

The British India Corporation, Ltd., comprises an extensive group of industrial concerns including the Cawnpore Woollen Mills, The New Egerton Woollen Mills, Cawnpore Cotton Mills, Cooper, Allen & Co., The North-West Tannery, The Empire Engineering Co., and the Nani Tal M.T. Co. These Firms, by pooling their resources and centralising control, form a corporation which is able to supply Government Depts., Railways, Police and Armies, with every form of woollen and cotton clothing, boots and all kinds of equipment of a quality and price which would not be possible for an individual undertaking.

Reference to the particulars below will give an idea of the Corporation's activities. Correspondence is invited from wholesale merchants, and may be addressed to the Corporation or direct to the Branches. Inquiries and applications for samples will receive immediate attention.

LALIMLI PURE WOOL

Makers of the famous Lalimli Pure Wool Products. Manufactures include: Rugs, Blankets, Lohis (shawls), all classes of Knit goods, Flannels Tweeds, Serges, Worsteds, Broadcloths and Greatcoat Cloths. All requirements in Wool at lowest prices consistent with quality.

CAWNPORE WOOLLEN MILLS CO., CAWNPORE

Kakomi Cawnpore

These Mills produce the well-known Kakomi Cotton Goods.
The following articles are among their manufactures: Cotton Yarns, Twills, Table and Bed Linen of all kinds, Tents, Durries, etc.

CAWNPORE COTTON MILLS CO., CAWNPORE

COOPER, ALLEN AND COMPANY

This Company is one of the world's largest manufacturers of Army Boots, supplying the armies not only of India, but the world. Makers of all types of Boots, and every kind of Saddlery and Leather Equipment.

Everything in Leather.

COOPER, ALLEN & CO. CAWNPORE

Dhariwal

Manufacturers of Dhariwal "Long Life Wool Wear."

Productions include:
Serges, Tweeds, Broadcloths, Blankets, Rugs, Worsteds, and Woollen goods of all kinds.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Country Makes Up Its Mind.

The decision of the Council of the League of Nations is likely to be made known while this issue of THE NEAR EAST AND INDIA is going to press. Opponents of British policy in Iraq have made an eleventh hour effort to rally support to their way of thinking, but the measure of their success can hardly be up to their expectations. The hatter of Carmelite Street has this in common with the three tailors of Tooley Street that he is able to speak for the people of England. "This country," we learn from the *Daily Mail*, "has quite made up its mind about Mosul. It does not mean to stay in Mesopotamia, and still less does it mean to burden itself with Mosul." Apart from the fact that we should be tempted to rate our contemporary's influence higher than it does itself, and should have imagined that, as a prey to quite unjustifiable misgivings, the country had not yet been able to make up its mind, we are happy to accept the comfortable assurance. As for the country's resolve not to stay in "Mesopotamia" in these days with journalism of a rather breathless type in vogue, when there is no time to verify statements or to study the subject written about, and when leading articles are merely a re-hash of dozens that have preceded them on the same subject, we cannot expect a popular organ to know that Mesopotamia changed its name to Iraq several years ago here it falls into line with the British Government's policy of leaving Iraq to the Iraqis as soon as its independence is reasonably assured. In regard to Mosul, there is not, and there never has been, the least intention of allowing it to be a burden on Great Britain. If the advocates of an immediate or early "scuttle" from Iraq were to have their own way, there would be a grave danger of Mosul's proving a serious burden on this country, for the simple reason that Iraq's independence would at once go by the board, Turkey would once more extend to the Persian Gulf, and it would become worth some Power's while to use the Turks again as a weapon against the British Empire. So long as Turkey is confined to Asia Minor, the country inhabited by Turks, she has an opportunity of living her own life and of developing in accordance with the genius of her own people. No real friend of Turkey, therefore, can wish her to regain Mosul, which has now been incorporated within Iraq for the last seven years, and in the days to come the service rendered to the Turks by successive British Governments in opposing their rulers' artificial campaign for the recovery of the Mosul vilayet will be recognised by the wiser heads among them.

The Opposition to Mosul.

The curious features of the opposition raised in certain quarters to the fulfilment of Great Britain's pledges to Iraq have naturally given rise to speculation as to the motives behind it. Without doubt, the ugliest suggestion, at first whispered and now broadcast, is that the whole opposition revolves round a group of would-be concessionaires, who hope by the restoration of Mosul to Turkey to see the Turkish Petroleum Company's concession rescinded and to secure it for themselves. It is a serious charge to bring against a group of British business men that for their own personal ends they will intrigue with a foreign Power behind their Government's back and against the national policy of three successive Governments. Nowhere have we seen it stated that the opposition is a deep-laid scheme on the part of a daily newspaper, which, having failed in the matter of prescribing the British nation's headgear as signally as it fails so often in prescribing its policy, hopes by currying favour with the Angora Government to offload on the fezless feckless Turkish people the vast quantity of hats which in the popular belief must still serve the purpose of megaphones in the newspaper's office. We prefer, therefore, to fall back on the inference that the opposition means well, but is merely ignorant. During the past week various attempts have been made to justify the unpatriotic attitude. An evening paper, whose speci-

Digitized by Google

ality is the echo rather than research, announced that the opposition to Mosul took its stand (1) "on the fact that the League has already decided that Mosul belongs by right to Turkey," and (2) "that Mr. Baldwin in May 1923, gave a distinct pledge that our mandate in Iraq should terminate in 1928." Now, both these statements are demonstrably untrue, and although English journalism has fallen from the high position that it once held in the world's esteem, it has not sunk quite so low, even in the most soulless journals, deliberately to make untrue statements that cannot fail to be detected. Quite obviously the paper in question has never read the report of the Mosul Commission: as its province is to echo and not to indulge in independent thought, it has merely repeated what its morning paper has printed.

The Mosul Commission's Report.

It is, of course, untrue that the League of Nations has decided that Mosul belongs by right to Turkey, for the reason that the League had not, when the statement was made, passed judgment in the matter. What had happened was that an advisory Committee had recorded its opinion that, strictly speaking, territory taken from a country is regarded in the eyes of international law as belonging to that country until it formally renounces its rights. Reference is made to the subject in three passages in the report: "The territory occupied by the British and Iraq authorities still belongs *in law* to Turkey until she renounces her rights . . . ." "It is indisputable that Turkey retains her *legal sovereignty* over the disputed territory so long as she does not renounce her rights . . . ." "The Commission is of opinion that *from the legal point of view* the disputed territory must be regarded as an integral part of Turkey until that Power renounces her rights." That the Commission in so saying is merely humouring a legal purist is made clear by the fact that a few paragraphs further on the report states: "The Commission . . . . is of opinion that important arguments, particularly of an economic and geographical noture, and the sentiments (with all the reservations stated) of the majority of the inhabitants of the territory taken as a whole, operate in favour of the union with Iraq of the whole territory south of the Brussels line." It is difficult to understand why the "scuttlers" should pay such touching devotion to an *obiter dictum* of the Mosul Commission and at the same time ignore the force of its actual findings. Again it is to be hoped that only ignorance prompts some of the "scuttlers" to base their opposition on the lofty ground that Mosul was occupied by the British in violation of the Armistice. On this point the Mosul Commission was very clear, for it refused to examine the contention in view of the fact that "the occupation of the city of Mosul and of all towns in 'Mesopotamia' in which there were Turkish garrisons was permissible under Article 16 of the Armistice." Little wonder that some people look for disreputable motives when anyone claiming to be British continues to bring against his own country charges that have been shown by independent authority to have no foundation. In regard to the alleged pledge supposed to have been given by Mr. Baldwin, which is usually described as a "definite" or a "distinct" pledge, it is now admitted that the only foundation for the "pledge" were the words used by Mr. Baldwin when introducing a Treaty which specifically provided for a new Treaty at the end of four years, to the effect that "it was ridiculous to suppose that we were under a pledge for all time to protect Iraq"; but it is naïvely added, "everybody in the House of Commons then understood this to mean that we should not remain in Mesopotamia a day later than 1928." A very definite pledge, and a very distinct one. May it be long before the British public yields to a campaign that can enlist neither honesty nor intelligence in its support.

The Syrian Revolt.

The first military operation of any significance after the arrival in Syria of M. de Jourvenel, the new High Commissioner, has met with complete success. Hasbeiya, where the Druses had established a provisional Government, has been captured by the French, and those of its defenders who survived the attack have escaped towards Mount Hermon. It was from Hasbeiya, which is the headquarters of the Druse religion, that the Druses had hoped to give a more distinctly religious turn to their movement by enlisting the support of all the Molsem communities in Syria. They are now left with two main centres of revolt, the Grand Lebanon and the Hauran, the latter of which is to receive attention first from the French. Guerilla warfare continues in the neighbourhood of Damascus, where the insurgents have developed a surprising capacity for keeping the French garrison in a state of high nervous tension.

The Jarabub Oasis.

It is greatly to the credit of Zewar Pasha's Ministry that, in spite of the anxious time through which it is passing, it has not failed to come to an arrangement with Italy over the Jarabub Oasis. This oasis, which is strategically important for the Italian colony of Cyrenaica, in which it will now become incorporated, was the subject of an agreement between Great Britain and Italy in 1921: but on receiving her independence Egypt was unwilling to be bound in this matter by an Anglo-Italian understanding. An attempt has been made to work up an agitation in Egypt over the Jarabub question, on the ground that it would be a betrayal of Egypt's interests if any of her territory were ceded to Italy. The Government, however, has adopted a more reasonable attitude, and has followed in the main the solution arrived at between Lord Milner and Signor Scialoja. Egypt obtains in the north certain wells lying to the west of Sollum that are necessary for the well-being of that town, and gives Italy the oasis of Jarabub. At the same time the agreement provides for arbitration in all cases of dispute between the two countries.

Russia and Afghanistan.

The report that the Russian railway from Bokhara to the Afghan frontier is expected to be completed by the end of this month, when Tarmez on the Oxus will have been reached, calls attention to the strenuous efforts now being made by the Soviet Government to gain a footing in Afghanistan. Two distinct forms of Soviet enterprise can be recognised in this sphere; on the one hand there are the measures taken to secure the Ameer's friendship by providing him with funds and to cover the country with Russian concessions, and on the other hand there are the racial activities among the border peoples designed to spread disaffection among their kinsfolk within Afghanistan with the ultimate aim of bringing about the Ameer's overthrow and Sovietizing his kingdom. The exploitation of Afghanistan by Russian concessionaires possibly fits in with the Ameer's reforming zeal, and it may be that he is shrewd enough to know how far he can use the Russians without jeopardising his own or his country's interests.

Military delegates from Czecho-Slovakia, Yugoslavia, and Roumania, who for some time past have been examining problems of international railway transport, have concluded their labours. It is stated that the transit of arms and ammunition between the States concerned was also discussed, and an agreement reached on all points. The clauses of the Convention, which still waits signature, was kept secret.

THURSDAY, DECEMBER 10, 1925.

THE MACEDONIAN FRONTIER AWARD.

The report of the Rumbold Commission on the Græco-Bulgarian frontier incidents follows very closely the lines that had been anticipated. It establishes the fact that the Demirkapu affair was really nothing more than a frontier incident which could and should have been quickly settled on the spot; but the matter was complicated by the false news of a Bulgarian attack with a battalion—news that "was rather too readily accepted by the Greek General Staff on October 20"—and the consequent fear, genuinely entertained by the Greek Command, of an invasion in force of its territory. The Commission find that the Bulgarian Government acted in conformity with the Covenant of the League, whereas the Greek Government, by occupying part of Bulgarian territory with its troops, violated the Covenant. Accordingly, the verdict of the Commission is that: (1) The request for an indemnity made by the Greek Government cannot be considered, with the exception of an indemnity for the Greek captain who was killed while advancing under a flag of truce; and that (2) the Greek Government is responsible for the expenses, loss and suffering that the invasion by Greek troops caused the people and Government of Bulgaria, and owes reparation to the latter on this head. The total amount of the reparation due, under the three headings of property actually destroyed, loss of life and wounds, and moral and material damage, is fixed at thirty million leva, or about forty-five thousand pounds. Although this verdict will cause lively disappointment in Greece, where the people had been led to believe by the first official reports that the country had been in grave danger of a Bulgarian invasion, there is really no need for it to be taken too seriously to heart by the Greeks. The whole episode was a blunder, and the best course to adopt is to face the music, to pay the fine imposed, and to forget all about it. The Commission has succeeded in making out a better case for the Greeks than seemed possible at one time. Its verdict amounts to little more than the charge of excess of zeal; it is clearly stated that there was no premeditation on either side, so that allegations of a carefuly prepared violation of the peace of the Balkans fall to the ground. If scapegoats are to be found, they should be restricted to the frontier officers who forwarded unverified reports or deliberately distorted them. Conditions on a Balkan frontier call for level-headed officers with a full sense of their responsibility; and if an example were made of those who have laid their country open to being mulcted in a sum of twelve million drachmæ, others might realise that the best service that they can render Greece is to keep a cool head even under provocation. In this connexion a word of praise is due to the Greek captain who met his death when advancing between the firing lines, apparently with the object of holding a friendly discussion with the Bulgarians.

After dealing with the particular incident that was the immediate cause of its report, the Commission recommends the adoption of certain measures with a view to preventing the repetition of frontier collisions. It suggests the formation of a special body of frontier guards, to which a neutral officer should be attached, on both sides of the frontier. If an incident should occur, the Commission considers that its effect can be localised by the formation of a Conciliation Commission composed of representatives of both sides—that is, a Greek and a Bulgarian officer, and a neutral officer, under the chairmanship of a fourth member, either a neutral officer or a member of some organisation engaged in the Balkans under the auspices of, or having relations with, the League of Nations. At the same time the Commission lays stress on the necessity for political action, in order that two causes of discontent may be removed. It wishes to see the hastening of the complete fulfilment of the convention concerning the voluntary exchange of Greek and Bulgarian populations, together with the avoidance of any vexatious measures in this connexion. A second cause of discontent would be removed, in the Commission's opinion, if the Greek Government would compensate a number of persons in Bulgaria of Bulgarian race who have at different times come from Greece, where they have left property. Under the Minorities Treaty these people have the right to return to Greece; but Greece can no longer receive them and their property has been disposed of to refugees from Asia Minor. In return for the compensation these people would have to renounce their right to return to Greece.

There is much sound sense in these "political" recommendations, although it is not easy to imagine that a Greek Government will be eager to provide further compensation for Bulgarians, after having paid the reparations fixed by the Commission. Yet the prospect of a peaceful frontier would have a definite monetary value for every Balkan State. The Rumbold Commission has evidently satisfied itself that the *komitajis* do not follow their calling for their personal amusement, and that frontier incidents are not indulged in from a mere lust for raiding. In other words, the permanent peace of the Balkans depends on the removal of definite grievances. That most of these grievances are nursed by Bulgarians is not exclusively their fault. The Allies in the West have discovered that vindictiveness after victory can be overdone. It is not that they have modified their attitude towards the crime for which penalties had to be imposed; but that the welfare of every country in Europe is so inter-related, that not one can be penalised beyond a certain point without prejudice to all the others. In the Balkans this axiom has not yet been learnt. The Rumbold Commission was not actuated by any tenderness for Bulgaria; it examined the situation impartially and discovered what has long been apparent to other observers, that it is far more important for the victorious States in the Balkans to concentrate all their attention on their future prosperity than to waste their time nursing old grievances. Those with most knowledge of the Balkans have realised that it was of little use to attempt to force the pace of reconciliation; but it so happens that the Balkan States are being hurried along despite themselves. They cannot remain altogether indifferent to the Locarno Pact; the Græco-Bulgarian incident did not appear at first sight a stepping-stone to a more firmly-established peace in the Balkans, yet the report of the League of Nations' Commission will, without doubt, have brought the various countries appreciably nearer their goal, if only because there is in each nation a growing body of opinion that wants to have peace with neighbouring States and, consequently, a more abundant opportunity for internal development.

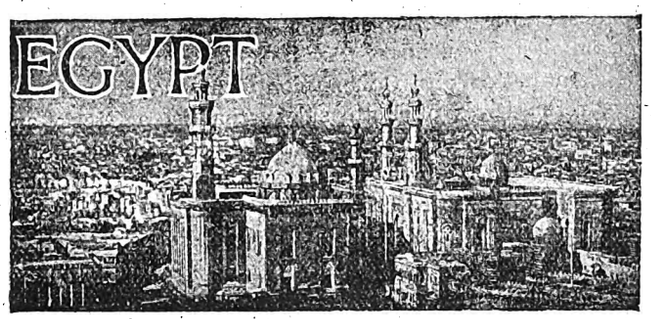
The Near and Middle East*

From Our Own Correspondents.



Cairo, November 29.

The Political Tangle.

During the past week there has been in political circles an atmosphere of suppressed expectancy. The Opposition, exultant over their successful defiance of the Government in the matter of the meeting at the Continental-Savoy Hotel of ex-deputies and senators, declared that, in face of the expression of opinion then given, the Ministry must resign immediately. But the Ministry has not resigned, and, at the moment gives no sign of resigning, although it is increasingly probable that changes will be made in the distribution of portfolios; and possible that a strengthening will be effected by the introduction of fresh blood. One Ministry (Wakfs) has been vacant for months past, while another (Finance) would also be unoccupied, were the wish of Yehia Pasha Ibrahim, who has for some weeks past been somewhat seriously ill, and who is anxious for a rest, to be granted.

Whether it will be possible, in present circumstances, to secure as recruits in the present Cabinet the kind of Ministers who are necessary, if the Government is to be sufficiently strengthened for the certainly difficult times ahead, remains to be seen: for men like Abdel Khalek Sarwat Pasha and Ismail Sidky Pasha, whose collaboration at the present juncture seems particularly desirable, are not desirous of assuming the responsibilities of office, until they are assured that there will be no repetition of the events which led to the Cabinet split of last September. At that time it was clearly foreseen by many people that driving the Liberal Constitutionals out of the Ministry and into the arms of the Zaghloulists would sooner or later land the Government in serious difficulties and utterly defeat its declared object of destroying the influence of Zaghloul Pasha. That is exactly what has happened. Zaghloulism, which, six months ago, seemed to be definitely losing its grip on the affections of the masses, is now, if possible, stronger than ever, and the two parties which formerly lent the Government their help in combating the Wafd are now on the opposite side, doing everything in their power to reinforce the popular belief that Zaghloul Pasha is the real master of the situation.

The return of Zaghloul Pasha to office is, of course, unthinkable, and Zaghloul has himself declared during the past week that he would never again lead a Ministry, even were he asked to do so. He realises, he said, that in accepting the task last year he committed a great blunder, and he will not make the same mistake twice. Although what the Opposition combination now probably has in mind is a Coalition Cabinet drawn from the three Opposition parties, there is probably in the Wafd camp a thorough realisation of the fact that even this alternative is extremely unlikely to materialise, and a readiness to accept a neutral Government, provided that its policy in regard to internal affairs shows a marked change from that of the present Unionist Cabinet.

The battles of the near future seem likely to be fought over the question of elections. The Government Press announces that the drafting of the new Electoral Law is at last completed and that elections will be held during the next few months. The Opposition declares that it will recognise no new law excepting that passed last year by the Chamber of Deputies, which embodied the principle of direct and universal manhood suffrage. The dissolution of the Chamber last spring, says the Opposition, was illegal: therefore the Chamber still exists, and the meeting at the Continental-Savoy Hotel was in order, and should be recognised as such. The old Chamber should be summoned to reassemble, and it should be left the task of framing new electoral legislation. If this course is not adopted, and if the Government persists in holding new elections, then those elections will be boycotted, says the Opposition.

The position, on the face of it, is an extremely difficult one, and it is hard to see how any neutral Ministry could go to the extreme lengths apparently necessary to conciliate the Opposition. On the other hand, the Wafd and its allies are almost certainly "talking big," and too much importance need not be attached to their threats of boycotting elections and continuing to assemble, despite the Government, what the Opposition professes to regard as the still legally existing Parliament. In point of fact, the Opposition is so anxious to be rid of the domination of the Unionist Party that it might well display an unusual reasonableness, if it came to the question of supporting another Ministry, composed mainly of men having no definite party affiliations. For the moment, it is impossible to do more than speculate, for, although there is general agreement that something important must happen soon, and the Cairo air is nearly as full of rumours as of dust, even those most advantageously placed for gauging the direction the political wind is likely to take profess complete uncertainty.

A Sensational Trial.

A remarkable trial began in the Assize Court last week, when four prisoners wers were charged with attempting to murder Sheikh Mohammed Maraghi, President of the Superior Mekhemeh Sharia, at Helouan, last January, by throwing vitriol over him, while a subsidiary charge was brought against another accused man of accepting a discharge for a debt of £E32,000, in return for a promise to use influence with Sheikh Maraghi to induce him to favour a particular party in litigation before the Mekhemeh Sharia. Interest in the case arises chiefly from the fact that one of the four first accused is Henri Sakkakini, son of the late Count Habib Sakkakini Pasha, and heir to his estate, said to be worth nearly half a million sterling, while the subsidiary charge is laid

against Hamed Pasha el Bassel, Vice-President of the Wafd and formerly Vice-President of the Chamber of Deputies.

The late Count Sakkakini Pasha had no children, and adopted a boy from a waifs' home. This boy grew up to be to the Count as much as any natural boy could have been. The lad's influence over the older man was absolute. But, under the laws of inheritance of the Catholic Church, the adopted son could not inherit the Count's estates. The Count, therefore, swore an affidavit before the Mekhemeh Sharia that Henri Sakkakini was his real son. On the death of the Count, the latter's sisters brought an action in the Catholic Patriarchal Court, and were adjudged the lawful heirs. Henri Sakkakini refused to recognise the jurisdiction of the Partriarchal Court and took the matter to the Mekhemeh Sharia which, on the strength of the affidavit previously sworn by Count Sakkakini Pasha, adjudged Henri the lawful heir. Thus arose one of those conflicts of jurisdiction which are so common in Egypt.

The case was, in fact, as far from being settled as ever. So Henri Sakkakini began a new action in the Patriarchal Court, producing, to the astonishment of the opposing parties, marriage and baptismal documents purporting to show that the late Count, forty years ago, had secretly married a woman in an Austrian village, and that Henri was a lawful child of that marriage. Nobody in Egypt had ever before heard of that woman or her marriage to Sakkakini Pasha, and the sisters of the latter instituted searching inquiries, with the result that the Vatican investigated the question ordered the Cairo Patriarchal Court to dismiss Henri Sakkakini's application, on the grounds that the documents produced were forgeries.

Henri Sakkakini again went to the Mekhemeh Sharia, and again secured judgment in his favour. The sisters of the late Count thereupon appealed to the Superior Mekhemeh Sharia, of which Sheikh Maraghi is the president, and secured cancellation of the lower court's decision, Sheikh Maraghi and his associate judges holding that the Mekhemeh Sharia had no jurisdiction to hear the case at all, both parties being subject, in questions of personal statute, to the jurisdiction of the Patriarchal Court. Henri Sakkakini entered against this judgment an appeal in the form of a *requête civile*, which is practically an application for stay of execution on the grounds of legal inaccuracies in a judgment. A *requête civile* is normally heard by the same judges who have given the decision appealed against. On this occasion the *requête civile* was to have been heard by Sheikh Maraghi, but, on the morning of the day on which the appeal was to be called, whilst he was leaving his house to go to the Court, Sheikh Maraghi was attacked by a man who threw a bottle of vitriol over him, inflicting serious injuries for which Sheikh Maraghi, as *parti civil* in the present prosecution, claims £E10,000 damages from Henri Sakkakini.

It is not alleged that Hamad Pasha el Bassel had any part in the vitriol attack, the prosecution basing its charge against him on the allegation that he accepted a receipt for £E32,000 which he owed the estate of the late Count Sakkakini Pasha, in return for a promise to influence Sheikh Maraghi to give judgment in favour of the sisters.

As may be imagined, the case is arousing very great public interest. The leading Egyptian barristers are engaged, and the throngs daily seeking admission to the Court are reminiscent of the scenes outside the London Law Courts when an important trial is in progress.

ALBANIA.

Tirana, November 29.

Independence Day.

Yesterday was Independence Day, celebrated throughout the country by processions, patriotic speeches, banquets and fireworks. Here, unfortunately, the celebrations were much spoilt by rains. The triumphal arches erected over the streets took on a somewhat forlorn aspect, while there was no course but to abandon the firework display. Processions, however, headed by bands marched and countermarched up and down the town undaunted throughout the day; while the President, after receiving the congratulations of the Diplomatic Corps, passed contingents of the Gendarmerie and of the Militia in review, and distributed decorations.

Concessions and Commissions.

The chief political interest at the moment is centred on the Parliamentary Commission which is inquiring into the alleged malpractices of the late Foreign Minister, Mufid Bey Libohova, in connexion with the negotiations which led to the establishment of the National Bank and the Societa Italo-Albanese for the economic development of the country, and to the granting of the Loan. Mufid Bey is not only accused of receiving bribes from the Italians, but also of concealing from Parliament several supplementary agreements connected with the above. It is not yet possible to say whether there is any truth in these allegations. It is highly probable that the ex-Foreign Minister did indeed receive a commission for his pains, but granted that the agreements entered into are soundly drawn and in the interests of the State, a lenient view should be taken of this, for it represents, alas, the common practice in the Balkans and, in fact, in many other countries that are small and poor. Libohova Bey is probably less to blame than his enemies try to make out; for the agreements themselves appear to be perfectly sound. The statute of the Bank is a guarantee of the seriousness of the undertaking, while there is nothing objectionable in the provisions governing the concession granted to the S.I.A. The latter is given the option for undertaking at competitive prices various public works, such as roads and bridges, for which the expenditure of the loan is earmarked. It is, therefore, absurd to allege, as is done by the enemies of the present régime, that the country has thereby been sold to Italy. As for the loan, the sum to be advanced is £1,500,000 in cash, issued in the form of a £2,000,000 loan at 75. The interest to be charged is 7½ per cent. on the nominal value, and is accordingly equivalent to 9.4 per cent on the cash advance. After further deductions by way of commissions the total interest to be charged on the cash advance amounts to 10 per cent, which though high is not extravagant, considering the extreme dearness of money in many countries, such as Italy herself, where it is easy to obtain perfectly safe investments yielding 8 per cent.

Probably Mufid Bey deserves to be congratulated rather than censured for piloting these provisions to safety. In other respects, however, his conduct is held to be censurable. He is stated not to have played straight with his chief, and to have used his position to intrigue against the President. Possibly this lack of loyalty is the real cause of his downfall. The President's great difficulty is to find able and at the same time loyal collaborators; and those who agree to work with him and then fail in their trust deserve to be publicly censured. Betrayal of the President, who is undoubtedly doing his best for the country, comes, as things are for the present, very near State treason.

Drilling for Oil.

The Anglo-Persian Oil Company are hard at work with their first well at Ardenitza. A depth of 200 metres has now been reached. It is not expected, however, to strike oil before a depth of 700 or 800 or even 1,000 metres. Several more months' work will, therefore, be required before it is known whether oil in commercial quantities is available.

Preparations for the drilling of a second well at Patos are nearing completion. Drilling here should begin early in 1926. The Italians, too, are completing their preparations for their first drilling at a point between Valona and Fieri. It will be a race between them and the Anglo-Persian's second well as to which of the two will start drilling first.

GREECE.

Athens, November 21.

Political Tranquillity.

Things have been quiet in Greece during the last fortnight. The only political events which call for comment are the appointment (universally approved) of M. Rouphos as Minister for Foreign Affairs, and the holding of a conference, at the invitation of the Prime Minister, of most of the party leaders, to discuss the elections for the new Senate.

Journals Suspended.

Newspapers that have been temporarily suspended during the period are the *Eleftheron Vema*, the best-written and most widely-read of Greek papers, the *Skrip*, and the *Demokratia*, organs of the Monarchists and the Democratic Union respectively. Of these, the *Eleftheron Vema* reappeared after a few days.

The Frontier Incident.

Interest in the frontier incident, never very great, is kept alive by leading articles in the papers on the subject of *komitajis*. Even a bomb-throwing incident at Flórina, which occurred at the moment when the Rumbold Commission was being lavishly entertained at Athens, failed to attract the attention that might have been expected. It was even suggested that the incident was staged and timed for the occasion, but, in this connexion, one may be permitted to observe first, that, in that case, the actors exceeded their instructions, seeing that a large number of people were wounded, and secondly, that genuine incidents are always likely to occur in that particular district, which is one of the few remaining strongholds in Greek Macedonia of true Macedonians.

Transit of Commissions.

Meanwhile, Commissions come and go. The Rumbold Commission has departed, the Inter-allied Commission for the assessment of war damages has almost completed its arduous labours, and the Commission for the Settlement of Refugees is reported to be "closing down" shortly, as the previous loan is exhausted, and no new loan is forthcoming. Happily, a flying visit from Mr. Morgenthau did not disturb the exchange as in former days, when his arrivals and departures were invariably reflected in fluctuations of the drachma. The glamour which surrounded and still surrounds his personality in Greek eyes (he has just been awarded a Doctor's degree at the University of Athens), and which made his career in Greece a kind of triumphal progress, should not be allowed to obscure the solid achievements of his successor, Mr. Howland, and of his assistants—for whom things have not been made easy—nor the fact that it was largely British money that has made the loan a success.

The Peneios Bridge.

The inauguration by the Prime Minister on Sunday, November 15, of a new bridge to be built over the Peneios between Larissa and Trikkala in Thessaly, is an event, seemingly unimportant, but is, in reality, a clear indication of the fact, often emphasised in these letters, that the present Government takes a practical interest in the improvement of the country. This particular bridge has been a subject of dispute for many years, during which heaven knows what conflicting local interests have prevented its erection, and during which the inhabitants of the district have had to put up with great inconvenience during the rainy season. Nothing impresses one more, in wandering about Greece, than the neglected or unfinished roads, broken bridges, and general absence of communications. The inauguration of this bridge, which, it is hoped, will never be added to the list of the unfinished, is therefore a sign of the times.

Floods.

Quite as important as the improvement of communications, is the question of the control of rivers and mountain torrents. Every year, in some or other parts of Greece, these overflow their banks after heavy rains, or change their courses and devastate the countryside. This was well illustrated on Monday last (November 19), when one of the heaviest storms within living memory broke over Athens. One-eighth of the total average yearly rainfall fell in an hour and ten minutes, the Ilissus overflowed its banks, 150 houses and huts were swept away, some fifteen persons were drowned, innumerable houses were inundated, and the lower-lying parts of the city and Piræus were converted into lakes. The damage is estimated at fifteen million drachmæ. The makeshift drainage arrangements of Athens were not equal to the demands made on them, and, in many cases, the natural outlets had been obstructed by raised tram-lines, and even by buildings. The refugees, as usually happens in such cases, suffered most.

A Severe Penalty.

The long drawn-out trial by Court Martial of a group of persons accused of forgery and embezzlement of public money has just come to an end. Most of the accused were found guilty and condemned to varying terms of imprisonment; three were condemned to death by hanging. The sentence is to be carried out in public just outside Athens to-morrow (November 23) at 9 o'clock. Barbarous, perhaps, in moments of excitement, the Greeks are essentially a humane people, and the severity of the sentence, the circumstances in which the executions will take place, and the scenes which are bound to occur, are alike repugnant to their feelings. The Prime Minister has missed, it is felt, a great opportunity in refusing to exercise clemency towards the condemned men.

The Greek Navy.

The new Naval Academy was opened on November 19, and there is a note of sincerity in the speeches made on the occasion, that speaks well for the work of the British Naval Mission. The reorganisation of the Greek Navy includes the construction of three new submarines, in addition to the two already under construction, also of a training-ship, which will be built in England and ready in nine months. The repairs to the cruisers Lemnos and Kilkish will be finished in two months while the four large destroyers have just been completely overhauled. Under the direction of the present Mission, the future of the Greek Navy seems assured.

The British School.

The *Messager* for November 18 gives prominence to the Report of the British School at Athens, presented at the annual meeting at Burlington House. The work of

GEORGE J. KAYAT
Howard Str., Jaffa, Palestine,
Estate and Land Agent. Commission Agent, Import and Export,
Wishes to represent British Firms and Shipping Companies in Palestine at reasonable rates, giving entire satisfaction

Digitized by Google

this institution is too little known and appreciated in England. Primarily a school of archæological training and study, it possesses a first-rate library, which covers every branch of Greek history and thought, mediaeval and modern, as well as ancient, and which is open to all English residents and visitors. In addition to trained archæologists, it produces, year by year, students with an intimate first-hand knowledge of the country. It has always enjoyed the happiest relations with the Greek authorities, whose consideration and kindness have been unfailing, and its existence is a factor of real importance in preserving the traditional friendship between the two countries. Its usefulness, and even its life, depend, however, on more generous support at home.

ROUMANIA.

Bucharest, November 26.

The Political Situation.

The political situation at the present moment is difficult to represent with any clearness. On the one hand, a large part of the population appears tired of the Liberal régime, but it would be tired of any régime, however excellent, which imposed heavy taxes and kept the population on short commons in order to balance the State Budget. It is here that the Liberal régime is open to severe criticism at many points, but it cannot be denied that they have done a very great deal to bring about more settled conditions and to establish the national economy on a sound basis. The most difficult thing to understand in men of considerable ability and experience is their blindness to the disadvantages of banishing foreign capital from a country which has vast openings for further industrial development and insufficient money even to carry on the industries she already has.

As regards the probable successors to the Liberals when their term of office automatically expires in February next, there seems to be a divided opinion. Some believe that General Averescu will be asked to form a Government, as he can be trusted more or less to carry on the financial policy of the Liberals with certain modifications. Others believe that the Coalition Party of M. Maniu and M. Yorga will have a majority of votes at the election. This party again is a complex of semi-opposed principles and aims, and is said to have at least 30 members, all of whom wish to receive Ministerial portfolios should the party come into power. It has also several hot candidates for the position of Prime Minister. Altogether the internal condition and administration of this party are so unsettled that one must regard its accession to power with certain misgivings, as a lack of unity in its own ranks may lead to its early fall, and nothing can be worse for a country's economy than the want of confidence and security engendered by constant changes of Government and policy.

THE NEAR AND MIDDLE EAST ASSOCIATION.

Halide Edib Hanoum, who was the Minister of Education in the first Cabinet of the Turkish Republic, is lecturing to the Near and Middle East Association on December 17, at 5.15 p.m. The lecture, which, by kind permission of Mrs. James Conchie, is to be given at 27, Great Cumberland Place, W.1., is to be on "The Turkish Woman of To-day," and will be presided over by Lord Lamington. Tickets, price 5s. 6d. each (including tea at 4.30 p.m.) can be obtained through members of the Association or direct from the Secretary, 7, St. James's Terrace, N.W.8. (Tel., Hampstead 5297).

The Yugoslav-Italian Commission, which has been engaged in the delimitation of the frontier, has finally completed its labours in the Castua- Fiume sector.

THE ORIENT IN MUSIC.

It is, one supposes, the fate of all pioneers to be misunderstood or incompletely understood, so that one was scarcely surprised to find the Æolian Hall but scantily filled last week when M. Haig Gudenian gave another of his recitals of Oriental compositions. Readers of these columns know already my high opinion of the work that this Armenian artist is doing in interpreting to the West the soul of the Islamic East; and I shall not reiterate that. But it must be emphasised that M. Gudenian is attempting to do in the realm of sound, not what was done by other musicians, such as Rimsky-Korsakoff, Borodine, or Balakireff—who reproduced for Western ears only the picturesqueness or the barbarity or the fanaticism of Islamic peoples—but something of what poets like Burton and Flecker have achieved in the medium of words. The musician's task is, of course, infinitely more difficult than that of the user of colour or of words: so hard is it, in fact, that some Western observers have thought, wrongly, that Oriental music should always be subsidiary to word and to colour, as, for example, Delius in "Hassan" was subsidiary to Flecker and to Compton-Ricketts. But one feels quite certain that M. Gudenian's music is self-sufficient, even if at first hearing it be not quite self-explanatory.

Of M. Gudenian's technical mastery there can be no doubt whatever. It is infinitely greater than that, say, of Burton, whose "Kasidah" has confessedly inspired M. Gudenian in much of his work; it approaches, in its unusual exploitation of the potentialities of instruments such as the violin, the viola, the oboe, and gipsy and gong drums, to something of the exquisite pregnancy of Flecker's verse and prose. By his use of the piano, an instrument so wholly the product and the reflex of Occidental culture, one is not yet so convinced.

This artist's most obvious successes are in his employment of what may, without reproach, be called the cinematographic method. The dance of the Dervishes, the home-coming of an Eastern schoolboy, the pictorialisation of a desert scene (with abundant use of "close-up" memories—"The light of moon has grown to noon, has paled with eve, and now farewell! Go, vanish from my Life as does the tinkling of the camel's bell"),—in such as these the East comes before one certainly, fascinatingly, and memorably. Where it is much more difficult to follow M. Gudenian is in his philosophical representation of the Orient. By the use of such things as remote melodies (which he claims as the oldest known: one wonders whether they go back to pre-Islamic and pre-Christian times, or even to the Hittite period), unexpected rhythm in drums, and so on, he easily creates the atmosphere, but what do all his repetitions, questionings, comments, mean? Do they amount to such an interpretation of the East as Burton gave us? For the present this section of his compositions present a mystery. One is baffled as was the *hajji*—

> Gazing beyond the thin blue line that rims the far horizon ring,
> Our sadden'd sight why haunt these ghosts, whence do these ancestral shadows spring?

K. W.

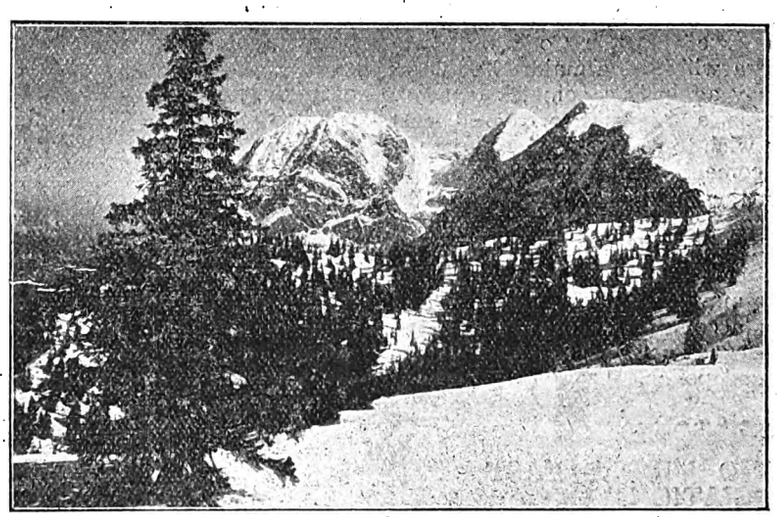
Winter Sports in Yugoslavia

In Slovenia, as in Switzerland, last winter season was more calculated to bring out the Christian virtues of patience under disappointment and fortitude under adverse conditions than to add to sporting records. After a mid-winter that almost made up for the rigours of the preceding summer, March came in, neither a lamb nor a lion, but with a smirk and a frown, and a message from his elder brothers that he would do his best to compensate for their shortcomings. Clean north winds blew, plenty of fresh powdery snow fell; the sporting community took heart of grace and made the most of a belated season. For Slovenia is essentially a sporting centre of Yugoslavia. If you want sports dependent upon water, you must of course go to Dalmatia, or the littoral, where good sailors are bred, and some of the world's best swimmers may be seen disporting themselves in waters that are never really cold. But for an all-round interest in sport the Slovene still ranks first among Yugoslavs, though Serb and Croat offer no worse material, and the spirit of brotherly emulation becomes keener with every year. There are good practical reasons why Belgrade and Zagreb should be the headquarters of Yugoslav motoring and football respectively; but for winter sports Slovenia offers the best terrain in the country, and Liubliana is the only suitable headquarters of the *Yugoslavenski Zimsko Sportni Savez* —Y.Z.S.S. for short— or Yugoslav Winter Sports Association.



Grintovetz and Kochna, from the Krvavetz.

Slovenia is an Alpine region, with a climate at once more temperate and more northerly than Switzerland. I do not know why this should be so. I merely state the fact. Its share of the Julian Alps includes the Triglav massif with most of its approaches. The Italian frontier as now delimited certainly runs over the actual summit, but only at the extreme end of the long crest. The Karavanke south of the watershed (this line includes the famous narcissus fields of Golitsa), and the rocky fastnesses of the Kamnik (i.e., *Stone)* Alps, are also in Yugoslav territory. The highest summits of the Julian Alps come within the line of eternal snow, but even the Karavanke and the Kamnik Alps may drape themselves in white at any moment of the year. So it must be a very poor winter indeed when there is lack of ice for the skaters, or of snow for the ski-runners and tobogganers (or ought it to be tobogganists?).

Skating has an honourable record in Slovenia. Dr. Gilbert Fuchs, a native of these parts, won the world's championship for skating at St. Petersburg (now Leningrad) in 1896. He repeated his record at Munich in 1906, and was unquestionably for many years one of the finest skaters of his generation. During the War, Dr. Fuchs settled permanently at Kranye, not far from Liubliana. As an active member of the Sports Club *Iliriya*, he is the acknowledged patron of the art of skating in Slovenia, and has done more than anyone else to arouse an interest in this graceful, if exacting, winter sport in Upper Carniola, and to improve the standard of performance. He is still a beautiful skater; and on any fair frosty day, when the Iliriya tennis courts are flooded and frozen, admirers of skating may have the pleasure of watching the veteran champion and discovering that even in sport there is a finish, a reposeful assurance bestowed by maturity, which mere youth and vigour cannot hope to possess. Last year's skating competition for the Slovene championship took place on January 18, in the Iliriya grounds and under the auspices of that club, as usual. Improvement upon the standard of former competitions was noticeable, and the number of entries was satisfactory. The first place went to M. Bloudek, civil engineer, of Liubliana. The contests which were to decide the championship for all Yugoslavia were to have been held a week later in Belgrade, but had to be abandoned on account of the sudden wave of warm weather which played havoc with all winter sporting fixtures, and brought the skating season to an untimely close. It will be interesting to watch what further improvement the coming winter will show, if the ice conditions are anything like normal. The best skating near Liubliana is to be had on the lovely Lake of Bled. As a rule this lake is frozen fast for some time during the season, when it is every whit as attractive to skaters as in its summer mood it is to swimmers.

The favourite terrain for tobogganing here is round about Bohinye, the other beautiful lake resort at the foot of the Julian Alps. It used to be well known even in pre-War days for its winter attractions, and it boasts a proper artificial toboggan run—quite an old institution. In the winter of 1922-23 there was a big winter sports meeting at Bohinye, with toboggan and ski-ing races and contests. Any normal winter, there is, of course, plenty of juvenile tobogganing to be had on countless inviting slopes all over the country. And it is to be hoped that the coming winter will bring at least an average allowance of snow.

During recent years ski-running has slowly but surely become an easy first favourite among winter sports. The reasons for this are many and obvious, and there is no point in going into them here. Ski-ing as a sport was

Digitized by Google

introduced into Slovenia just before the War. As an ordinary means of winter locomotion, the natives of the Slovene Alpine village of Bloka have been in the habit of using skis—or *smuise*, as they are called here—for several hundred years. I have seen native skis in use at Ratetche, but, strange to say, the use of them is, on the whole, confined to the neighbourhood of Bloka; everywhere else racket shoes are worn for walking on soft snow. The native skis are stumpy and rather wide and the bindings are quite primitive.

The credit for introducing ski-running in Yugoslavia must go in the first place to M. R. Badiura, of Liubliana, author of the standard guide books for the Slovene Alps and a book on ski-running. What with suitable terrain readily accessible and a series of good winters, the sport soon grew exceedingly popular. Of the various sports clubs in Liubliana, three come into consideration in connexion with it—the Liubliana Sports Club, the oldest of its kind in the place; the Iliriya, second in age; and the Tourist Club Skala (Rock), a post-War institution, but very enterprising. At this moment the Liubliana Sports Club can claim the best ski-runner whom Yugoslavia has so far produced, M. Zdenko Shvigelye, as one of its members. M. Shvigelye was one of the four Yugoslav entrants for the Winter Olympiad at Chamounix. His colleagues on that occasion being M. Zinaya and M. Vladimir Kayzelye (Slovenes), and a Croat whose name I cannot for the moment recall. M. Kayzelye is a member of the Skala. Miss Bloudek, who holds the ladies' championship for Yugoslavia, is a member of the Iliriya.

We take our ski-ing very simply in Slovenia, and our ski-runners are, like a conscript army, recruited from all walks of life. We see none of the expensive Solomon-in-all-his-glory woollies that look so fascinating in coloured fashion plates, and—to judge by Swiss photographs—are actually worn. Our uniform is tunic and trousers of navy blue cloth, with a peaked cap to match. A touch of colour in the little puttees and the fancy cap that is sometimes worn for coolness relieves the severity of the dress—which, by the way (oh, may none of our *smutsari* read this!) at a first glance is not unlike the uniform of the Yugoslav Nationalist Organisation; so like it, in fact, that on one of our excursions I overheard an argument as to whether we were the *Oryuna* out to inaugurate a banner, or the *Skala* out for their ski races. . . . Those of us who have not invested in the regulation dress, make shift with ordinary mountaineering kit, both men and girls. Most of our skis are of Yugoslav make, and not expensive; but there are some fine Norwegian pairs to be seen, too—and the rest of us feel jealous.

In 1923 there was excellent ski-ing to be had just outside Liubliana, and this, I beg to state, is what may be expected in normal winters. Last season, of course, we were forced to travel a few stations up country to one or other of the neighbouring mountain resorts. And this is even in good years our usual week-end entertainment in winter. As often as not, we go to Kranyska Gora or Ratetche, two Alpine villages lying within four miles of each other at the very head of the Sava valley in an angle "where three States meet." Both have good terrain in the immediate vicinity; both are convenient starting points for any number of excursions into the Julian Alps, the Karavanke, across the Italian frontier to the famous White Rock Lakes, or to the Austrian side of the Karavanke. Permission to cross and re-cross the frontier can easily be obtained for *bona fide* tourists, and I have never seen anything but the most cordial civility shown to them by frontier guards and police everywhere. Ratetche lies opposite the Planitza Glen, beloved by Sir Humphry Davy: stretches of undulating meadow-land, radiant in spring with gentian and cowslips; dark pine forests clinging to the knees of protecting mountains; and above them the frieze of jagged peaks, stark rock and snow—silver-grey and opal—and at the far end the truculent bulk of the Yalovets walling us in up to the very skies!

The villages round about are accustomed to invasions by hosts of cheery ski-runners. The natives are thoroughly broken in to their ways. They have grown used to the spectacle of trousered females in their streets; they have learned to tolerate even the Sabbath-breaking propensities of their guests—probably on account of the economic uses of the latter—and no attempt is made to soothe the pangs of outraged propriety by exaggerated charges. One's headquarters are established at one or other of the homely inns, where essential comfort is provided, though luxury is neither available nor demanded. Wet clothes are draped around the big green-tiled stove without which no Slovene habitation is complete; the bench that runs round it is at once occupied by the worthies of the party; someone may even hoist himself (or herself, for that matter) on to the top—an excellent place for warmth, and quite roomy. Relays of glasses of hot weak tea, very sweet and with a dash of rum or lemon, are the staple refreshment, the prelude and conclusion of every meal. For Din. 12 to 18 (10d. to 1s. 3d.) you can have quite a good hot meal, or you may bring out your own provisions and even have them cooked for you. The overflow of visitors from the inns is billeted on the farmhouses round about (the average charge for a night's lodging being Din. 15, or about 1s.), and I can assure you that most of us have known far worse quarters than Slovene farmhouse lodgings. The Slovene keeps his house dry and warm in winter; he believes in plenty of bedclothes, the linen is always spotless and often beautifully trimmed and embroidered.

Somewhat similar conditions prevail at Rakek, the frontier station on the way to Trieste, where there is fine hilly terrain at a fair height above Liubliana Plain. In 1923 the ski races for all Slovenia were held here. Last year the snow was unkind and Rakek deserted. A like fate befell Bohinye on the Lake, an old favourite, which needs no fresh praises here. There is also good terrain, reminiscent of our own border, in the Karavanke round Trtsitch, where Colonel Blair lies buried.

For those who do not shirk a little preliminary trouble, there are two favourite "objectives" in the "houses" of the S.P.D. (Slovensko Planinska Drustva—Slovene Alpine Society) on the Velika Planina and the Krvavets on the edge of the Kamnik Alps. These mountains, whose names might be rendered by Great Fell and Bloodstain Fell respectively, are hilly plateaux at an average height of about 5,500 ft., and usually the ski-ing there is good from the first snowfall until Easter. The House on the Velika Planina is provided with a caretaker all the year round. It is one of my particular haunts. Getting there means four hours' tramp from the station at Kamnik, one hour by rail from Liubliana; but the path is well laid out, and the view over the forest-clad hills on the one side and the wide, mountain-girdled plain on the other is very beautiful. The Planina (Fell) itself has something of the charm of an island. On all sides but one it falls away abruptly into surrounding glens; and when river mists rise from below, as is very often the case, and the white welter of cloud comes up to within a couple of hundred feet of the level of the plateau, the illusion is complete. A remote, inaccessible-looking place it is, with more to interest a visitor than even ideal ski-ing terrain, an exquisite view of the main block of the Kamnik Alps and the strath of the Sava, with the Triglav and its foothills beyond. Its sheltered folds are dotted with quaint, tent-shaped wooden huts (*bayta* is the native name)—the last, so I am told, which preserve the style and construction of those built by the first Slovene settlers in these parts. The outer "tent" encloses a cube-shaped cabin, which is the real dwelling. The space between the two is used as

Digitized by Google

a storehouse or byre. There is no chimney. When a board rots, it is replaced, and so the building remains unchanged. "But these particular huts are not old," the caretaker informed me; "not much more than two hundred years." One end of the plateau is pitted with deep caves and swallow-holes. The natural accumulations of snow in these pits come in handy for melting down in summer, when a colony of cowherds inhabits the *bayte* and cattle graze on the fell till autumn returns. For, despite its superficial resemblance to a Scottish moor, the Velika Planina is only a big limestone rock thinly covered with turf, and "who can find water on the top of a limestone rock?"

An excursion to the Krvavets can fairly be classed as something in the way of winter mountaineering. The approach leads through a secluded but cultivated valley and a forest belt, both lovely with spring flowers long before the snow on the top has gone. A welcome half-way house is provided by the rambling farm buildings that cluster round a lonely white church just under the actual ascent. Here the indispensable tea and also a night's lodging can be had. This season the new house on the Krvavets will be one of the best-appointed of the S.P.D.'s shelter huts. On the plateau you are face to face with the massif of the Grintavets, king of the Kamnik (Stone) Alps. Cut off from the Julians, yet higher than the intervening Karavanke, the "Stone Alps" are not so much foothills, not a suburb of the greater range, as a toy Himalaya with a titanic character all their own. Deep forest-clad glens and secret valleys; gaunt slopes where deer and chamois brouse; desolate stony peaks, bleak enough in their southern aspect, blankly precipitous to the north—they take some wooing and some winning, the Kamnik Alps, but to my mind they are worth it.

These excursions and others like them are not beyond the powers of a beginner in ski-running. For the expert there is the wide-flung mountainous region in every direction with every variety of terrain. It would be hard for him to find a domain more beautiful than the Valley of the Seven Lakes above Bohinye, and there, as in all the Triglav approaches, good ski-ing may be counted on until Whitsun, when narcissus-laden trippers from Golitsa meet at Yesenitse with the more austere lovers of the snows. As regards accommodation, the shelter huts of the S.P.D. are everywhere available for ski-runners and winter tourists. Fuel there is, but parties must carry their own food. Off the beaten track, the traveller may safely be recommended a night's lodging at any farm or inn he may find; and a perfectly comfortable night (as I know by experience) may even be spent in one of the tiny chimneyless shepherd cots which are to be found on practically every clearing.

Although the interest in ski-running was greater than ever last season, there is little to tell as regards sporting events. Most races had to be abandoned, owing to adverse snow conditions. Indeed, the only races I know of were those of the Tourist Club Skala at Planitsa on March 15. On that occasion M. Kayzelye (generally considered second or third for all Yugoslavia) came in first, narrowly beating M. Ogrin, who—despite lack of training—acquitted himself creditably at the Central European Ski Races in Bohemia. The course at Planitsa was 12 km., rough going.

This season's most important winter sports event will probably be the fifty kilometre ski race with which the Skala intends to celebrate its fifth birthday next February. This race will be the first of its kind on so large a scale in Yugoslavia. The course, snow conditions permitting, will pass through and around Bled, which has much to recommend it for such an event. It is an attractive spot in itself: good terrain is near at hand: and there is ample and suitable hotel accommodation available for competitors, public, and—last but not least—for the staff of helpers needed along the course.

With ski-ing has grown up an increased interest in winter mountaineering. Always beautiful, the "lonely hills" are never more splendid than in winter, when their greater inaccessibility, the arctic purity of the air, the added spice of danger—in short, the lure of the wild at its wildest, always irresistible to certain temperaments—all tend to make winter mountaineering a well-loved sport with Alpine climbers. I had the good luck to be taken for a real winter expedition at New Year to the highest of the shelter huts on the Triglav range, the House on the Kredaritsa, some 8,000 ft. above sea level. I even established a modest record by being the first woman who has paid Triglav a mid-winter visit. My guides on that occasion were two undergraduates, M. Prevets and M. Hudnik, well-known climbers. It was they, by the way, who last summer piloted Miss Rebek, the first woman climber to scale the famous North Wall of Triglav—a bold and honourable record for all three.

And here a word as to guides. There are a few professional ones, but they are never employed for any trip at all out of the way, and none of them go in for ski-running as yet. In fact, they are little more than carriers. The responsibility of acting as guides on any given occasion is undertaken by any of our "star" mountaineers who are considered authorities on that particular tour. By this time most of them are also ski-runners. Of course, the services of these men are given purely as a matter of courtesy. A stranger coming here and anxious to see the Slovene mountains, on ski or on foot, would have to be shown the ropes and get into touch with native mountaineers. There would be no difficulty about that. The Slovene loves his mountains unselfishly, and delights in showing them to a friend. He is also the soul of hospitality and good-fellowship, patient with beginners, an admirer of pluck and perseverance quite as much as of actual achievement. In any of the clubs I have mentioned (Liublianski Sportni Klub, Iliriya, Turistovski Klub Skala) there are men who would prove efficient and reliable guides.

At this moment it seems as though the forthcoming season could not fail to be good as regards snow. Owing to the lateness of last winter, there has been unusually much snow in the mountains throughout the summer. At this time of writing, the cold rain outside tells a tale of fresh heavy falls in the hills. When the sky clears again, we may expect winter.

The director of the International Labour Office, in his report, mentions the fact that, although the Turkish Republic is not a member of the International Labour Organisation, constant relations are maintained, primarily for the mutual exchange of information, between the Office and the Angora Administration and the diplomatic representatives of Turkey abroad.

NOTES ON PERSIA.

(From a Tabriz Correspondent.)

[We publish the following letter, dated November 14, as it was written to us.—ED.]

"HIS MAJESTY."

Ordinarily, when anything extraordinary takes place in Persia, *the Bazar is at once closed!* This is the Persian style of an English strike! But not on this occasion, altho the occasion is one of the extraordinariest of the extraordinary! A telegram from the Capital announces the following:—"By a vote of 80 members of the Mejliss the Shah is *dethroned*, and the *temporary rein* of the Kingdom of Iran has been trusted to *His Majesty* Riza Khan Pahlevi. The name of the permanent Ruler of the Kingdom will be announced shortly."

The occasion was one of unusual, but not universal, rejoicing! *The Bazar is open!* The shops and magazins adorned with drapery, mirrors, lamps, manchester calico of kleidoscopic colors, rugs and ruglets. This is on daytime. At nights an illumination is added to them, the illuminating instruments or vessels being old-fashion castor-oil wicks, candles and high-priced Warshaw-made lamps and lanterns!

O Jove! Persia is being churned into cream and yet the Bazar *is not closed!* The golden-apple, inscribed on this occasion not "to the most beautiful," but "to the strongest and ablest man in Iram," has been rolled into the Royal Squar of Teheran, but the Iris is sleeping and the would-be owner of it in temporary hiding! I said the rejoicing is unusual but not universal! The commercial class, the Bazar folk and the commons in general rejoice in getting rid of Kajar Dynasty, rejoice that a change has, or is going to, take place in the Ruling and Riening Dynasty. But the rejoicing is *not shared* by the Royal Princes, noblemen, clergy, ulema, and at least by one half of the Army, altho they have no means of expressing themselves!

"His Majesty" and "Khan" are not compatible, but there are, at least, two instances, as precedents, in the History of Persia, where a Shah has been called also a "Khan" or an Agha (Lord). One of these is Karim Shah of "Zand" Dynasty, who reined in Shiraz, and Agha Mohammad Shah, the Eunich and the invader of Georgia, who prefered to keep his former title of "Agha," after ascending the throne of Persia. "His Majesty" and "Riza Khan" sound rather resonant to ones ears, but it is quite an easy matter to drop a minor title for a major one and make it "His Majesty Riza Shah Pahlevi" which would sound more familiar and more to the liking of the Anti-Kajar party, which has been formed since the days of Mozaffer-ed-Din and Mohammad Ali, when they were Crown Prince in Tabriz.

At present everything looks rosy and peaceful, but will it last long? And how long? We hope it will last long if "long lives His Majesty Shah Riza Pahlevi"!

* * * *

"The Shah of Persia and his suite have arranged to leave Paris to-day, sailing to-morrow from Marseilles for Bombay, en route for Teheran." This item of news was in THE NEAR EAST AND INDIA for October 1, and we read it in Tabriz on the 20th of the same month. *The next day the Bazar was closed!* This was just the way it ought to have been. It was like Tabriz itself! I went to Bazar. People and shop-owners were strolling here and there, usually everyone in front of his shop! I enquired one of the first loafers who met me—

"What is the matter, why is the bazar closed?"

"I do not know," was his cut reply.

I made the same inquiry of another man, an intelligent-looking one, who seemed to have a "knowing" face.

He at once replied

"We don't want the Shah"!

"What is the Shah's sin, what has he done?"

"He has been putting on his crowned head frangi straw-hats, eating Ermani*-made bread and spending our money with frangi women! Do you want any more?"

"None of them is a sensible-enough cause to close the bazar and not want the Shah. All our Ambassadors and Consuls are using straw-hats and Ermani-made bread, then they all ought to be fired of their posts, no?"

"They are not Shahs with a crowned head, they are common rayats. A head that can use a two-kran straw-hat is not worthy to wear Nadir-Shah's crown!"

"Has the unfortunate Shah any other faults?"

"Yes! He is a Kajar. Kajarieh have ruined Iran and our best manhood!"

"Whom do you want in his stead; who is to be our next Shah?"

"I do not know."

"Do the people want a Shah, any Shah?"

"I do not know."

"Do they want a republic?"

"I do not know."

"What do they want, anyway?"

"We want nothing. We want to remain and to be just as we are. We have peace and quiet-enough to satisfy us!"

"Then the people want Riza Khan Pahlevi to remain at the head of the State for life?"

"He is second to no man in the Kingdom!"

"Do the people want to see him a Shah?"

"'Pahlevi' is a nice-enough name for a Royal Dynasty!"

"Then, long live Aala-Hazrat* Riza Khan Pahlevi."

"Amen!"

"Long live Iran!"

"Amen!"

The current of opinion is that Riza Khan will soon proclaim himself as the Shah of Persia (with the consent of the Mejliss), but he will be a Shah for life only. He is not to have a crown Prince, nor he is going to be an hereditary King. The next King, after his death, will be elected by the people, again for life only, without an heir! In other words, hereafter we are going to have, as our ruler, a *crowned President* for life!

Did Solomon say "there is nothing new under the sun"? This, certainly, is new! And United States of America might learn something from the old and hoary Persia! This would save them tons of wasted energy, hundreds of speeches and hundreds of thousands of dollars, altho they may have no need of the last!

We are rapidly imitating some of the American ways and manners, at least in the matter of shoes and neckties. In her turn why America should not appropriate a few of the political ways and manners of the antiquated Persia?!

A few weeks ago the *bazar was closed* again. In this instance the closing was by "order from on high," not by the own will of public as usual. A Government orderly now visiting each shop, one by one, and informing the individual shop-owner—"Close your shop at once and come to the X Mosque, a mass meeting is going to take place there to protest against the desacration of our holy cities by the infidels." Another *maamoor* of the High-Priest was informing them—"Come to X Mosque, a *mourning* meeting is to take place there for the Destruction of the holy sepulcre of our holy prophet in Medina by the d—— infidels."

The word "infidel" in both cases refers not to Wahhabis, but to the English, by whose aid, claim the Persians, Wahhabis have destroyed Medina and the prophet's grave!

Another instance of the anti-British spirit of the people is the following:—

Recently a Christian merchant, after receiving a certain sum from a Mohammedan merchant, offered to give him a cheque on the Imperial Bank of Shah-in-Shahi. But the Islam merchant refused it, saying—"We are praying day and night for the downfall of the English Empire and the closing of the doors of the English Bank, do you suppose I would do *anything* to help *that* English Bank to make money at my expence?"

* Armenian Christian.

* His Majesty.

BOOK REVIEWS.

ITALY AND THE DESERT.

"IF THE GODS LAUGH." By Rosita Forbes. (London: Thornton Butterworth. 7s. 6d. net.)

Mrs. Rosita Forbes has made use of the knowledge she has gained from travel to write a novel in which Italian society and Arab life form the background and in which the scene is alternately the African desert and the houses of the aristocracy in Rome, and in these two contrasted worlds she has described the experiences of a girl of mixed English and Italian descent. The characters of Mrs. Rosita Forbes's book are not living persons but literary conventions who have no existence outside the realms of fiction, and her three protagonists might be called respectively the convention of youthful inexperience, the convention of romantic chivalry, and, by a process of naturalisation, the convention of the strong, silent Englishman turned Italian. As a consequence there is a lack of reality for which the freshness of the setting and the fluent facility of the authoress's style do not compensate. A strong love interest, issuing in a happy conclusion, pervades the story, which is yet one more version of "the eternal triangle."

ANOTHER THESIS.

"THE INDUSTRIAL EVOLUTION OF INDIA IN RECENT TIMES." By D. R. Gadgil. (Oxford University Press, 7s. 6d. net)

It is a good thing that so many Indian advanced students—using the word "advanced" in the technical sense—should be devoting their attention to the economic condition of their country, but we are not quite sure that they are wise in rushing their successful theses into print, for work which satisfies examiners will not necessarily interest either serious scholars or the general public, and those of them who eventually become advanced students in the strict sense will probably live to be very sorry that their crude scholastic exercises should have seen the light. Mr. Gadgil, we suspect, will be one of these. The book before us is "except for a few verbal alterations, almost in the same form" as the thesis which, satisfied the examiners for the Cambridge M. Litt., and we cannot say that the examiners were wrong, but there is nothing in it either to attract the general reader or to interest economic students, and some of it is very crude indeed. The most amusing example of this fault is the chapter on the decline of handicrafts. Mr. Gadgil wrote this under the impression that the term covered only what are usually called art-industries, and he built it up in the usual way on quotations from Royle, Birdwood, Watt, and other familiar authorities. Then he discovered his mistake, and in a last minute note he made a gallant, but unsuccessful, attempt to tackle the production of cloth, metal goods, and other staple products, which should have been the main subject of the chapter. The rest of the book is better. The author has read widely, though he has missed much that is important. He writes easily, his generalisations are commendably cautious, and his work shows no signs of the political obsession which vitiates so many products of modern Indian scholarship. He never gets far below the surface, he is apparently ignorant of nearly everything that happened before his chosen period, and he makes a good many slips in matters of detail: these faults are natural in a thesis of the kind, the subject being too extensive for thoroughness in the time allowed, but they detract rather seriously from the value of a book. When he has leisure, we hope the author will learn how to spell the name of such a classical authority as Voelcker.

SMALL NATIONS IN EUROPE.

The tenth anniversary of the inauguration of the School of Slavonic Studies at London University was celebrated on December 2, when Dr. Edward Benesh, Foreign Minister of the Czecho-Slovak Republic, delivered a lecture on "The Rôle of Small Nations in Europe since the War." Lord Oxford, who presided, said that the liberating of the small European nations was one of the first objects of the Great War—a liberation which had been realised nowhere more interestingly than in Czecho-Slovakia.

Dr. Benesh dealt at first with the work that Professor Masaryk, now President of the Czecho-Slovak Republic, had performed in making known the ideals of his nation. In discussing the world War, the lecturer stated that the aims of the Central Powers cut right across the demands of nationalism, whereas of the Allies, Britain, France, Belgium, Italy, and America, which had been through the fires of and had tested democracy, the small nations in Europe became the natural friends. Tsarist Russia, with its mediæval economic system and corrupt bureaucracy belonged, he said, by sentiment rather to the Central Powers. Turning to the foreign policy of the small States, he believed that there would be progress in the direction of good order and close economic and cultural co-operation: sooner or later there would be a Locarno for the States of Central Europe. It was, incidentally in their contribution culturally, to the ideas of the world, that the strongest potentialities of the small States lay.

In referring to the foreign relation of the small States, Dr. Benesh pointed out that Hungary, which had changed its mediæval economic system in no way, and which appeared to have undergone no spiritual regeneration as a result of the War, must be looked upon with suspicion. Czecho-Slovakia, nevertheless, had done much in the way of co-operating with Hungary.

The existence and rôle of the small States always depended on the situation and policy of the large States. In the first place it was vitally important for the small States that the League of Nations, in which the deciding factors were and always would be mainly the Great Powers, should be complete, and it should be respected also by the Great Powers. In the second place it was of vital interest for the small States of Central Europe that co-operation with Russia should be arrived at as soon as possible, and that a spirit of mutual loyalty and co-operation with Russia should be created just as it was created at Locarno in regard to Germany.

Finally, while Soviet Russia had awakened a number of nations to racial consciousness at home, its present revolutionary propaganda was doing the same thing on a large scale in Europe, Asia, and Africa, and was thus exerting a very marked influence upon the world-wide aspect of this problem. For the time being he left on one side the question whether this was a good thing or not from the point of view of the common good, but he was fully aware that the Bolshevist ideal was an anti-democratic ideal.

The question of Russia, its definite organisation, its speedy adjustment to the normal political life of Europe and the world as a whole was so important because without this normalising process neither the small Central European nations nor the greatest nations would have peace or certainty, for the question of small nations and of minorities would continually constitute a revolutionary ferment with extensive bearings upon present-day international politics. Russia was the direct or indirect neighbour of a number of small Central European nations. Its influence upon them was, therefore, considerable, and until conditions in Russia were peaceful and normal, those nations would always be in uncertainty about their future. Moreover, Soviet Russia itself was composed of several greater and smaller nations which by its policy from the Bolshevist revolution until to-day it had awakened to national life and consciousness. How these questions were to be solved was an important problem for Russia and for Europe as a whole. The definitive organisation of the small European nations would hence be partly and indirectly influenced by the manner in which Russia dealt with her own nationality question at home.

M. Jan Masaryk (the Czecho-Slovak Minister) and Sir Bernard Pares also spoke.

PERSONAL AND GENERAL.

TO-DAY

December 10, 1925 (New Style).
November 27, 1925 (Old Style).
Jumada I., 24, 1344 A.H., of the Moslem Calendar.
Kislev 23, 5686, of the Jewish Calendar.

The Aga Khan has left the Hotel Ritz, for India.

Princess Andrew of Greece left London last Saturday for Paris.

Princess Ileana of Roumania will leave for Bucharest on December 19.

Prince Stirbey arrived at the Carlton Hotel, London, last week from Bucharest.

M. Simeon Radeff, Bulgarian Minister to the United States, was a passenger in the Homeric, which sailed from Southampton on December 2 for New York.

Mr. Justice Gad Frumkin, of the Supreme Court, Palestine, who is at present on a visit to England, is staying at the King's Court Hotel, Lancaster Gate, W.2.

The High Commissioner for India and Lady Chatterjee have been called to the South of France on private business. Sir Atul Chatterjee is taking leave during December.

Sir John and Lady Harrington, accompanied by Sir Milsom Rees and Lieut.-Colonel C. P. B. Wood, left Cairo for Khartoum recently on a shooting trip on the upper reaches of the White Nile.

The Prince of Wales received at St. James's Palace on December 1 her Highness the Nawab Begum of Bhopal and Colonel Hamidullah Khan and Mr. H. M. Lidderdale (Director, Imperial Institute).

Mr. W. E. O'Reilly (who kissed hands upon his appointment as his Majesty's Envoy Extraordinary and Minister Plenipotentiary at Durazzo) was received in audience by the King at Buckingham Palace on December 1.

Earl Winterton, M.P., the Under-Secretary for India, was entertained last week by Lieut.-Colonel H. Gidney and the members of the Anglo-Indian deputation, who came to this country to discuss the future of the community with the Secretary for India.

The King has been pleased to approve the appointment of Mr. Jean Louis Rieu, C.S.I., I.C.S., to be a member of the Executive Council of the Governor of Bombay, in succession to Sir Maurice Henry Weston Hayward, I.C.S., whose term of office will expire on January 4.

The Jam Sahib of Nawanagar gave a luncheon party at the Ritz Hotel on December 2 before his departure from London for India. The Countess of Birkenhead and Lady Eleanor Smith, Lord Southborough, Sir Warden Chilcott, Major-General Seely and the Hon. Mrs. Seely, and Captain Wilson were among the guests.

Among the passengers who left London last Thursday for Bombay by the P. and O. special train were the Right Hon. George Lambert, P.C., and Sir John and Lady Simon. Sir Malcolm Hogg, the Raj Kumar Sahib of Vizianagram, Sir Dhunjibhow and Lady Bomanji, and the Jamsahib of Nawanagar embarked in the Rawalpindi at Marseilles.

Mr. Justice Guy Rutledge has been appointed Chief Justice of the High Court of Judicature at Rangoon, in the vacancy caused by the resignation of Sir Sydney Maddock Robinson, Kt., Barrister-at-Law, and Mr. Robert Edward Otter, Barrister-at-Law, has been appointed a Judge of the High Court of Judicature at Rangoon, in the place of Mr. Justice Rutledge.

EGYPT
FOR SUNSHINE AND PLEASURE

When making plans for your Winter Holiday remember the Call of Egypt, a country ever bathed in golden sunshine, warm, health-giving, cheering. Added to this are the unique attractions of imperishable monuments of a glorious past and the kaleidoscopic life of Oriental cities, where visitors find the acme of comfort in modern hotels and diversions of every kind.

Now is the best time to visit Egypt, the climate is ideal and special cheap facilities for visiting Luxor and Assuan are available.

Egypt is only four days from London

Particulars of fares, tariffs, etc., of all principal Travel Bureaux and Tourists' Agencies. Write for "Egypt and the Sudan," a copiously illustrated brochure, free on application to Egypt Promotion Association, 9 Quality Court, Chancery Lane, W.C.2, or Post Box 990, Cairo.

THE WEEK AT HOME.

London, Tuesday Morning.

The Locarno Spirit.

It is a sign of the feeble intelligence of our time that refuge is taken by the cloudy-minded in the loose fashionable words of the day. All the political talk used at one period to be of "sanctions"; then one babbled of "exploring avenues" or of "finding formulas"; and now it is the application of the "Locarno spirit" that is ubiquitously necessary. The assumption underlying all this phrase-making is, of course, that there is a unity somewhere, could men but discover it, that all things are soluble, were only the dissolving agents sensible enough.

Now, to be quite frank, one is a little tired of this Locarno talk. There is still in Europe as much of the Fred Karno (as one used to say in the Army) as of the Locarno touch. Such and such a State does yet, whatever the politicians may chorus, profoundly suspect such and such a State; nor is the post-War spirit of reconciliation very evident even in our internal politics, where bad motives are freely enough imputed to those whose opinions differ from one's own. That there has come over our time a genuine realisation of the folly of anything less than co-operation among former friends and foes is a dream of both noble and shallow minds: it is not yet a fact. There is, however, something to be said for the optimists.

The Irish Agreement.

Mr. Amery has called the agreement by which the Free State, Ulster, and the British Government have appeared to settled the serious problem that had arisen over the findings of the Boundary Commission, an "Irish Locarno," and there can be little doubt that he is right. Not many people would have prophesied that the two Irish States, the one in a commanding position, the other in an impossible one, would have shown such wisdom, and it is particularly gratifying to record that Ulster has made the most magnanimous use of her unexpected opportunities.

The decision to retain the old boundary is an important one, the decision to renounce our debt owing from the Free State in return for that is also an important precedent, but even more important than these, from the long political point of view, is the step that has been taken towards the unification of Ireland. On this subject it is difficult to write before Mr. Baldwin makes his statement in the House to-day on the legislation that is necessary to give effect to the new agreement, but what is quite clear is that the Irish Council, consisting of representatives from both the Free State and Ulster, which was framed in the Government of Ireland Act of 1920, is once more, though in a different way, to function. If this Council, which never had a chance to be born, is called into being by the Northern Government, on that day may the creation of a unified Ireland be said to have begun.

The matter may perhaps be seen in better perspective if Mr. Amery's illuminating parallel he used. This Irish Agreement, he said, bore the same relation to the 1921 Treaty as did the Locarno Treaties to that of Versailles. The Dublin Government, like Germany, has accepted the frontier, although with natural grumblings; and the Befast Government is now rid of the fear of its boundary line. It is a quite definite step towards the realisation that Southerners and Northerners are not enemies, but a people whose interests must increasingly approach one another.

Controversy among Liberals.

No impartial observer can deny that, of all the three parties, the Liberal Party has the worst luck. At a moment when long-sought unity has been attained, when the end of sacrifices on the part of both the "Wee Frees" and the "Nationals" has been reached, when, in fact, the millenium (with the passing of Lord Oxford and of Mr. Lloyd George) was confidently anticipated, is thrown the bomb of dissension. Upon which both sides returned hastily to their pre-unity retreats, thence to call down curses on the enemy.

But out into the chilly open, between the older and younger Liberals and the Lloyd George Liberals, comes, with the white flag of truce, that venerable chirurgical expert, Lord Oxford. He points out to the contending hosts how futile are their quarrels, when in reality their cause is one. Whereupon Mr. Lloyd George offers, would it but resolve the dispute, to resign. The obvious refusal having been made, Mr. Runciman and those who with him opposed the Land Scheme relapse into the gloomiest and most significant of silences.

Somewhat naturally, but rather brutally, these later-day differences have been magnified by the opponents of the Liberal Party; and equally naturally, but somewhat naively, they have been minimised by the Liberal Press. To the ordinary Liberal (if there still be such a creature) whose loyalty towards Lord Oxford detracts not a whit from his admiration of Mr. Lloyd George, the events of the past week have been most distressing: Sisyphus himself could have been no more disappointed. But indeed the Liberals are in the least enviable plight: if they take Mr. George's Land Scheme together with his funds, they become (it seems) a mere annexe of the Socialist Party; and if they do not, they are like to die of starvation. Whither should the hungry flocks go?

The Labour Van.

The Liberal Party is not the only one with its troubles. Some of the fiery steeds in the Labour Party conceive the pace set by the staider nags to be altogether too slow, and there has been formed within it a group of about twenty-five members who shall have the delightful and congenial task of "gingering-up" their fellows. Naturally the ubiquitous Mr. George Lansbury is in this van which is to "make the party more effective for Socialism," but it also, and more significantly, includes two ex-Cabinet Ministers, Mr. Wheatley and Colonel Wedgwood. These two men, whose ability is hardly recognised in Conservative and Liberal circles, are to desert the front Opposition bench for the back bench seats. The results may be profoundly interesting.

There can be small doubt that this "cave" (it denies the name, but that is what in all probability it will develop into) will have on the main Labour Party far more influence than, say, the "Radical" group under Mr. Runciman has on the main Liberal Party. It may shortly be found that this "Ginger Group" will constitute the real vanguard of the Labour Party.

The Bury By-Election.

As those who knew prophesied, the Conservative candidate easily defeated the Liberal aspirant in the Bury St. Edmunds by-election last week. Much more inter-

esting than the return of the Minister of Agriculture, however, is the fact that considerably fewer votes were polled at Bury than at the previous election. This fact is to the political student more significant than a mere reiteration that Liberals are not wanted at the moment. Decreased polls are becoming a feature of our political life; in other words, parliamentarism is on the down grade.

Nor is England the only country thus tacitly to disapprove of its present system of electing members: discontent with representative institutions is said to be a feature of Continental political life, and everyone will remember that in Australia recently the citizen was compelled by law to exercise his vote. Is the world moving to a Syndicalist conception of the value of the vote?

The General Medical Council.

Personally, I believe the syndicalist idea to be much more deeply rooted than is often imagined. One finds it, for instance, in the Church, wherein one may hear clergymen stating that they would sooner obey the Church than the State; one finds it in the legal profession, which is to all intents and purposes as tyrannical or efficient—it depends on the point of view—as the mediæval Guild; and, most notably, one finds it among Doctors.

The world seemed rather surprised last week when the General Medical Council reasserted, in face of some popular protest, its traditional right of "sacking" medical men guilty of self-advertisement. I, for one, do not query the Council's wisdom and sense; but it is well to remember, when we review the economic system of this country, that our comments might possibly not have been so generous had a Trade Union Council done what the General Medical Council has just done. It is so much easier to suppose of the doctors that they know exactly the limit of their duties to the public than of, say, the railway-men.

The Bank Rate.

The Bank Rate appears to change with amazing frequency these days, so that the decision last week to raise it from four to five per cent. surprised but did not stagger people. The change was in effect the admitting of a mistake. Many judges held the lowering on August Bank Holiday of the rate from 4½ to 4 per cent. to be an error, and they seem now to be justified. The truth is, of course, that the Bank of England is as much in the dark in the present abnormal conditions as is a less august institution, but it has to live up to its reputation for omniscience.

It is said that the Bank of England is in close co-operation with the Government for the furtherance of trade, but that the loss of £15 million since the rate was last lowered has been too much for it. But I am a child in these dark matters. The idea of such infallible things as Governments and Banks of England experimenting is too much of a shock.

Fog.

Such a fog come over London last week—and not only London, but most of Southern England—as could be enjoyed only by the omnivorous foreign visitor or by the philosophical chimney-sweep. True, it was not a pea-souper; no flares were used, nor did one ask a blind man to lead one across the road; but it blackened life. It attacked one's every vulnerable spot, so that one's nigrescent handkerchiefs were shameful to see and one's throat became full of hoarse objurgations. It impartially swarmed round motor-buses and the shops' Christmas decorations, so that the speed of the one and the dazzlingness of the other equally became a myth.

Oxford v. Cambridge.

This week, to-morrow and on Thursday, in fact, the two University football matches are due to be played. It is futile to prophesy upon the result, not only because they are 'Varsity matches, but also because this year's elevens and fifteen do really appear to be very equally matched.

At Rugger Cambridge have an advantage forward, but it is not so large as it should be (though the Oxford backs, I happen to know, are anxious about the number of times that their forwards will heel the ball), but behind the scrum the Light Blues will have to be very much better than they were last year if they are to make any impression upon the very good Oxford backs. As far as one can see, the game will resolve itself in what since the War has become the traditional way into a struggle between the Cambridge forwards and the Oxford backs. Pray, therefore, for a fine or wet day, according to the soundness of your views.

Nor is there much apparent difference between the Soccer sides. Oxford's forwards are probably better than the experimental Light Blue line, but Cambridge has the pull in the line that matters most—the halves. One notable feature of this match is the number of Blues which have been gained by the less known schools.

An Old-Fashioned Winter.

Winter, such as our fathers knew and our poets described and as Christmas-cards illustrate, is not only upon but in us. It has us in its grip and seems, after all these years of absence, to like the feel of England. From Southern England it is true the snow has largely gone, but the ice is everywhere, from the railway carriage to the milk-bottle. There has been nothing like it here since the end of 1916. Then, one recalls, there was in a training camp at Newmarket no water for days, so that a hut which caught fire was simply left to blaze merrily.

Everyone has rushed to his box-room to hunt for boots and skates, for, though the ice is not of the finest quality, skating is not so frequent a delight that it can at any time be scorned.

ALTER EGO.

THE WAR AGAINST MALARIA.

One of the primary objects of the founding of the Ross Institute and Hospital for Tropical Diseases, Putney Heath, S.W. 15, was to create interest throughout the Empire in waging a relentless war against malaria. There is possibly to-day no disease causing more suffering and financial loss than malaria. Over twenty-five years ago Sir Ronald Ross made the discovery of the carrier of this disease, and although the successful application of his discovery has rendered certain tropical areas comparative health resorts to what they were at one time, proportionately little progress has really been made throughout tropical and semi-tropical countries.

Sir Ronald Ross, in addressing recently members of the Ceylon Association, proposed a scheme calling for the co-operation of all Plantation Companies, believing it should be possible, within a short time, to drive malaria right out of Ceylon. He is leaving for Ceylon on the Yorkshire to-morrow.

In certain parts of Malaya, Southern India and Assam, groups of Plantation Companies are dealing effectively with malaria, but if Sir Ronald Ross's mission succeeds it will not be a question of small areas being cleansed but the whole country. It is his intention to group Plantation Companies geographically, and each group will be dealt with by a resident malarial expert, who will carry out malaria control measures according to the conditions peculiar to his particular group, and report from time to time to a Central Committee the progress made and difficulties encountered. Every facility will be given to individuals effectively to combat the disease.

Sir Ronald Ross, K.C.B., K.C.M.G., F.R.S., is Director-in-Chief of the new Ross Institute and Hospital for Tropical Diseases, and it is hoped that his visit will create world-wide interest in the urgent necessity of dealing drastically with tropical diseases generally. This will be very beneficial to the Empire and will hasten its profitable development.

Riza Khan Pahlevi, the Head of the Persian State, last Sunday afternoon opened the Constituent Assembly in the presence of the chief clergy and military, the Cabinet, former Prime Ministers and Ministers, representatives of the administrative offices, members of the Diplomatic Corps, and other foreigners.

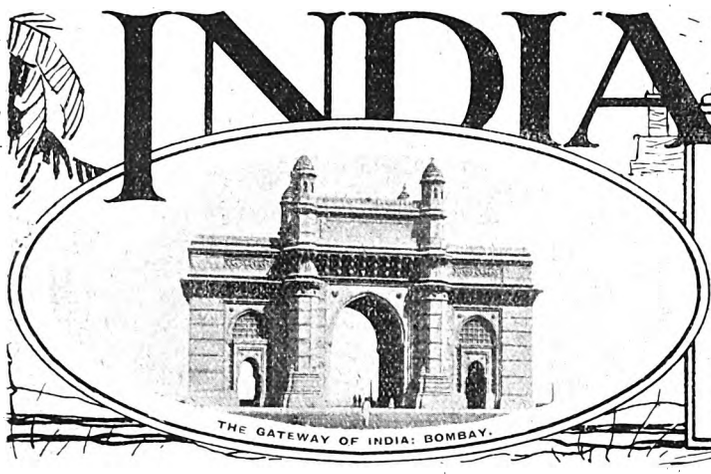
INDIA



THE GATEWAY OF INDIA: BOMBAY.

THE VICTORIA MEMORIAL: CALCUTTA.

THE COTTON EXCISE.

The decision of the Government of India to suspend the excise duty on cotton from December 1 was briefly mentioned last week: and the full statement, made by the Viceroy in announcing the decision, is printed elsewhere in this issue. This statement mentions that, when the resolution advocating immediate suspension was moved, last September, in the Legislative Assembly, the Government spokesmen explained that, if the resolution were carried, this would be taken to mean that the Assembly considered the total abolition of the duty to be urgently necessary: and announces that the Government of India intends to adhere to that position. Though, when the Assembly passed the resolution, the state of India's finances did not admit of the immediate suspension of the duty, it was decided that it should be suspended the moment that they did admit of it; and it was also decided that, as soon as possible after suspension proved to be feasible, proposals should be put before the Assembly for complete abolition, which can only be brought about by vote of the Legislature, though temporary suspension can be, as in this case it has been, effected by an ordinance issued by the Governor-General in Council. The Viceroy's statement says that effect will be given to this decision by the introduction, as early as possible in the next session of the Assembly, of the necessary legislation, "unless next year's budget estimate substantially fails to confirm the present anticipations." Matters having gone so far already, it may be taken as certain that abolition will be proposed, and voted, before the end of the current financial year, even if this should entail some difficulty in balancing the budget: and that the cotton excise duty has gone for good. The yield of the duty forms a comparatively unimportant part of the total revenue of the Central Government, amounting approximately to two crores of rupees (1½ millions sterling, at the existing rate of exchange): thus the suspension, for the last four months of the current financial year, will reduce the Government's income by half a million pounds.

There had been no general import duties in India since 1882 when, in 1894, a general *ad valorem* duty of five per cent. was imposed as a means of raising revenue, without any idea of protection. The Government of India wished to include cotton goods, forming as they did a large and valuable proportion of India's imports; but the Home Government, in the interests of Lancashire, refused to allow them to do so, and cotton goods were exempt. Strong representations were made by the Indian Government regarding the necessity for including so productive a duty: and, in the following year, the Home Government sanctioned an import duty of 3½ per cent. on cotton goods, but saddled the sanction with the proviso—still in the interests of Lancashire—that it should be set off by a countervailing excise duty, of the same amount, imposed on all cotton goods produced by Indian mills. In 1916 the Viceroy (Lord Hardinge) gave a pledge that the cotton excise duty should be abolished as soon as financial considerations permitted. It is, of course, possible that, when making this statement, he was also thinking of the financial effect that would be produced by the simultaneous abolition of the import duty on cotton goods, the imposition of which had only been sanctioned by the Home Government on condition that a countervailing excise duty was also imposed; but it is more probable that the Home Government authorised the pledge without any such condition. This conjecture is supported by the fact that, in the following year, when the general import duty, which included cotton goods, was raised to 7½ per cent., no corresponding enhancement of the excise duty took place, in spite of the representations of a Lancashire deputation to the Secretary of State. It is generally believed that the view of Lancashire, as expressed by that deputation, helped to encourage the boycott of Manchester goods which was one of the main planks in Mr. Gandhi's programme; though it is to be remembered that his "khaddar" campaign went further than this, since it was in favour of hand-spun cloth, and was directed not only against imported cloth, but against the products of the Indian mills as well. In 1921 the general import duty was raised to 11 per cent., still without any enhancement of the excise duty: and, in 1922, it was proposed to raise it still further, to 15 per cent., though the proposal was rejected by the Legislative Assembly, not on its merits but as part of the policy of refusal of supplies: and the Finance Bill was passed without it. The pledge to abolish the excise duty as soon as financial considerations permitted was repeated by the present Viceroy; who, on his return from leave in England, received a deputation from the Bombay millowners, which declared that, if the excise duty were not abolished, it would be necessary for them to reduce the wages of their operatives. A reduction of 11½ per cent. in wages was announced, to come into effect with the wages payable on October 15; but the mill hands struck against the reduction in September, the date chosen being obviously the result of political manœvres; since it synchronised with the introduction, into the Legislative Assembly, of the resolution in favour of immediate suspension of the duty. The effect of the suspension that has now been announced has been the end of the strike; since the millowners have notified the retoration of the previous rate of wages; though the mills have not yet resumed work, since the great majority of the workmen left Bombay for their homes shortly after the strike was declared, and some little time must necessarily elapse before they return. Moderate Indian newspapers acclaim the suspension of the excise duty as a triumph for constitutional agitation: extremist newspapers hail it as a victory for labour—that the workers' threat of a permanent strike has won, where the millowners' threat to reduce wages failed; and claim that it is yet another example of the doctrine that they regularly preach—that nothing is to be got out of England except by threats, and that the most efficacious threat of all is one that touches British pockets. Whichever view is right, it is undesirable that the excise duty on cotton exemplified a policy by which England, in her own interests, forced on India—and, be it noted, on the British Government of India also—a tax which was economically disadvantageous to India besides being distasteful to her Government: and the removal of the duty not only brings with it a measure of justice, however

Digitized by Google

tardy, to India, but evidence of a change of policy that should have far-reaching and beneficial results in the domain of politics. As to the opportuneness of the time chosen for the announcement, opinions differ. Some will acclaim it as an act of statesmanship performed at the psychological moment, since it not only ends a long-standing injustice but also settles a widespread strike: others will represent it as yielding to clamour, and will hold that it would have been better to wait until the duty could be abolished by legislation, rather than to prejudice the result of legislation by a temporary suspension granted in such circumstances. It is, of course, easy to be wise after the event; but, after all, it is the business of a statesman to foresee: and, when it has been decided to offer what the accepted phraseology of India calls a "boon," the exact moment when it becomes advisable to do so should be selected before its necessity has become apparent to the general public. To avoid even the appearance of making concessions under compulsion, it is better to run some risk—such as the financial risk run in this case—to ensure that they shall be realised to be spontaneous.

As a matter of fact, it seems unlikely that the abolition of the excise will seriously affect Lancashire, except perhaps indirectly. Its most serious effects should be felt by Japan, and one may reasonably suppose that this is what is intended. As things are, Japan, who buys most of her cotton from India, is able to sell her cloth in India at a lower price than the product of the Indian mills themselves, in spite of the import duty and the freight both ways. This is due to a combination of circumstances. India is loyally carrying out the International Agreement that limits the working week to 60 hours: it is said—up to the present, without contradiction—that the Japanese mills are working 22 hours daily, in double shifts, and that women and children are working at night. The dispatch of Japanese products to foreign countries, including India, is assisted by the practice of granting shipping subsidies, followed by the Japanese Government: Japanese industries competing in foreign countries are at an advantage owing to the fall in the sterling value of the yen, while India is at a corresponding disadvantage owing to the rise in the sterling value of the rupee, besides her direct handicap in the matter of the excise duty. The removal of the latter may just make the difference, especially as the exchange value of the yen is already showing signs of improvement. But, if this turns out to be so, and Japanese cotton goods will no longer be able to compete with Indian products locally, it will stimulate Japanese competition with Manchester goods, not only in India but in the other Eastern markets where they compete already. It has been argued that the present import duty of 11 per cent., against Lancashire goods, does not really act as a protection to India at all; since the rise in the value of the rupee from 1s. 4d. to 1s. 6d. amounts to an increase of about 12 per cent. in the purchasing power of the rupee, when expended on British goods. But, in fact, for a considerable time past, there has been but little direct competition between India and Lancashire: the Indian mills, using short staple Indian cotton and employing relatively unskilled workmen, have already ousted Lancashire in the coarser cloths; and the latter's imports are now practically confined to the better classes of goods. The abolition of the excise duty is unlikely to make any appreciable difference in retail prices in India, so that matters, as between India and Lancashire, are likely to remain very much as they are with one important exception. On the whole, Lancashire has accepted the decision philosophically: she recognises that she will now, more than ever, have to concentrate on the finer goods, and hopes that the removal of the excise duty will bring about an improvement in trade that will put more money into the hands of her Indian customers, and that they will spend more on her superior products; though she does not intend to refrain from asking for the removal, or at least the reduction, of the present rate of import duty. It is generally believed that one of the chief handicaps to the cotton industry in India is over-production a belief that is borne out by the calm with which the millowners, who had a large accumulation of stocks on hand, at first accepted the strike. The removal of the excise duty is likely to lead to even larger production, which should soon do more than fill the gap left by the disappearance—if that takes place as expected—of competing Japanese cloth, now amounting to appriximately 5½ per cent. of the production of the Indian mills: and it is at least not improbable that the Indian consumer, finding at his disposal a plethora of cheap goods, will be slow to open his purse for more expensive fabrics. Though it is probably true that India and Lancashire do not at present compete directly, to any appreciable extent, and that they are likely to do so even less in future, it is also true that the loss of potential orders, through the customer being content to put up with an inferior article, is only less serious than the loss of actual orders. Japan is already beginning to compete with Lancashire in the finer cloths—it is reckoned that only 70 per cent. of her imports are in direct competition with the products of the Indian mills. If, as seems likely, the removal of the excise duty makes that competition no longer profitable, it is to be expected that she will increasingly compete with Lancashire. In that case, Lancashire's chief hopes would seem to rest on an Indian policy of Imperial preference: but it will have to be an Indian policy, and not one dictated from England; so that Lancashire's request for a reduction in the import duty will have to be addressed to India. At present, political India is strongly opposed to any scheme of Imperial preference: and Lancashire's special duty, at the moment, would seem to be to persuade India that that attitude is wrong. The removal of the long-standing injustice of the cotton excise duty appears to present a favourable opportunity for the inception of such a campaign; though, as already remarked, it is a pity that the removal could not have been invested with a greater appearance of spontaneity, and made to look less like the implementing of a promise, long admitted in theory to be binding, but only in fact tardily yet hurriedly redeemed in response to clamour.

CURRENT TOPICS.

A New Political Party.

Recent cables from India announce a new movement among advanced Indian politicians who are in revolt against the domination of the present leaders of the Swaraj Party. This movement appears to have been brought to a head by the dissensions that followed on the acceptance, by the Central Provinces Swarajist, Mr. Tambe, of appointment as Executive Councillor in the local Government. The immediate result of Mr. Tambe's action was a movement in favour of "responsive co-operation"; the policy of considering Government proposals on their merits, in preference to the Swarajist method of meeting them with blind obstruction. Several important members of the Swaraj Party resigned, on this issue: one at least of the Provincial Congress Committees passed a resolution in favour of responsive co-operation: and personal recriminations ensued between the leaders of the Swaraj and Independent parties in the Legislative Assembly. The present proposal is that the Independents, the seceding Swarajists, and the Liberals shall form a coalition to fight the Swarajists at the next general election, due to take place a year hence: and meetings, in furtherance of this proposal, have been held at Bombay and Calcutta. The result of the former has not transpired, though it is stated that "an agreement was reached": at the latter, it was resolved to form a coalition of all those who are prepared to work for full Dominion status by constitutional means, as opposed to direct action; to undertake educative propaganda along these lines; and to call an All-India Conference.

It seems unlikely that the Liberals will be prepared to work along with the Independents and ex-Swarajists, as it is almost certain that the leader of the new party would be drawn from the ranks of one or other of the latter; but, if the dissentients are really in earnest, they would perhaps be willing to sink their own individual claims to

Digitized by Google

leadership, and offer it to one of the Liberals. If they can bring themselves to do this, they will have taken an important step towards the coalition of those Nationalist politicians who resent Swarajist pretensions and domination, and a still more important step towards meeting Lord Birkenhead's condition for a further instalment of the Reforms. It is only the most obstinate among the Swarajists who refuse to admit that the British Parliament has the right, as well as the power, to decide the future destiny of India: and who decline to take notice of the fact that the sands are running out, that 1929—to say nothing of an earlier date—is not far away, and that persistence in their refusal to face facts is bound to react unfavourably on their prospects when the time comes for the promised Parliamentary Commission on the Reforms to formulate its proposals.

It is certainly a matter of real importance that a number of advanced Indian politicians should have awakened to the facts, and should have shown a disposition to adjust their actions accordingly. Whether or no they succeed in forming a cohesive party, their future progress will be watched with sympathetic interest by all who have the real interests of India at heart.

Indian Forestry.

In a paper read by Professor Stebbing before the Indian Section of the Royal Society of Arts, on November 20, the lecturer gave an interesting and important account of the progress of forestry in India. A great deal of the paper was technical, but a number of points of general interest emerged from it. He expressed the opinion that the progress recently achieved, in every Province, was so remarkable as at times to be almost unbelievable: and that the Indian Forest Department is at present, in some respects and in some localities, in a position professionally second to no other in the world. Among the examples that he adduced in support of this opinion, perhaps the most striking was that of the afforestation work achieved in the United Provinces—in "a howling waste of hot ravine lands" that had become barren owing to the sinking of the bed of the Jumna River, had been scoured into deep ravines during the heavy monsoon rains, and was swept by fiery winds during the hot weather. Experimental work started in 1912, and this was continued on a large scale in 1919. Since the latter year, about 12,000 acres have been afforested, and about 2,300 acres are being planted annually. "This," said Professor Stebbing, "is perhaps one of the most remarkable pieces of afforestation work that has ever been undertaken, even more remarkable that the planting of the sandy tracts of the Landes by the French Government, for long considered to be the classic example."

The lecturer's remarks on the recent policy of the Government of India of making the Indian forests a Provincial subject and appointing Provincial Chief Conservators, independent of the Inspector-General—the retention of whose office has, for several years past, been "under consideration"—were of special interest, due to the fact that they were uttered with authority and obviously after full consideration of the subject. He said that the Indian Forest Department controls an area of 224,000 square miles, approximately one-fifth of British India, and that the net revenue, in the financial year 1922-23, amounted to nearly 1½ millions sterling. The fact that, in several Provinces, forests are already a transferred subject under an Indian Minister, leads to a general belief that the other Provinces are sure to follow suit before long. There are many people, well qualified to form an opinion, who think that this would be a mistake; but, even if they are wrong, it still seems vitally necessary that the Central Government should retain the services of an officer who would be their agent in the matter of the general control of forest policy, from which they would be most unwise to dissociate themselves. Professor Stebbing declared that the history of most of the Forest Countries of the world furnishes evidence that, when a forest policy common to the country as a whole has been absent, sooner or later waste and bad management have inevitably supervened, terminated at length by the central authority taking change: and that decentralisation in forest matters, at so early a stage in the new form of Government, would at least imperil the fine work of sixty years, and might well spell disaster. It would appear, he said, of the first importance that the Government of India should announce a general forest policy and should definitely lay down the extent of Provincial control and the point where it will have to give way to that of the Central Government.

There can be no doubt that Professor Stebbing does speak with authority, and with a knowledge of his subject which few can boast: and much as one may, on general principles, deplore the fact, yet it is not to be wondered at that he is of a similar opinion to that of practically all experts in any of the great departments of the Indian Government. All freely admit that it is fitting that Indians should be given a greater measure of responsibility, and that this is the inevitable result of the policy that has now been embarked on in the governance of India; but each is definitely of the opinion that the particular department, of which he himself has expert knowledge, is not a proper subject for such an experiment. Opinion, indeed, seems to be hardening in the direction of subordinate responsibility—of its extension in a limited sphere, and subject to strong supervision, preponderatingly if not exclusively British, during the period of tutelage, the completion of which must be a necessary preliminary to an advance to full responsibility.

Six Months' Cotton Imports.

The report of the Senior Trade Commissioner in India, which has just been issued by the Department of Overseas Trade in London, on the import trade of India during the six months April-September, 1925, contains some figures that, in view of the suspension of the cotton excise duty, are just now of special interest.

The report says that the total imports of cotton yarns, when compared with those of the corresponding period of 1924, fell from 30 to 27 million pounds in quantity and from 541 to 409 lakhs in value. The decrease in the British share was more than the total decrease, since it fell from 10¾ to 7 million pounds, while the share of Japan rose from 17½ to 19 million pounds. In spite of the rise in the Japanese quantity, its total value fell by over 22 lakhs of rupees, "as a result of the exceedingly low prices at which the business was booked."

In cotton piece-goods, the total imports fell in quantity from 875¾ to 775½ million yards, and in value from 3,398 to 2,698 lakhs. The decline in British imports accounted for a little more than the total fall, being from 790¾ to 634¼ million yards in quantity, and from 3,007 to 2,243 lakhs in value. Japanese imports improved from 65½ to 98½ million yards in quantity and from 247 to 324 lakhs in value. The Japanese advance was entirely in piece-goods unbleached, and coloured, printed or dyed: her imports in bleached piece-goods showing a slight decline. The report says that "Japan is forcing the sale of her cloths at such low rates that both the Indian mills and importers from Lancashire are finding it practically impossible to compete with her in those types of cloth in which she specialises."

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, November 19.

Obstruction to Go.

To co-operate or to obstruct is the burning question of the hour. Its prominence is due to the campaign which has been started in Bombay by two Mahratta Swarajists, Messrs. Kelkar and Jayakar, for "responsive co-operation." None the less true Swarajists, by their declaration that non-co-operation and obstruction are useless weapons, these gentlemen appeal to the common sense of the public by their statement that, ever since the Swaraj party adopted the principle of Council entry, they have been virtually co-operating responsively. In a speech at Poona, Mr. Jayakar outlined the steps which had been taken to this end. In 1924, Pandit Motilal Nehru told the Government "We have come here to offer

Digitized by Google

our co-operation if you will have it. If you care to have us, we are your men." Subsequently, changes in the Swaraj policy had tended toward the abolition of obstruction in practice; but, while the Pandit himself had been following a co-operative policy, he had so far refused to give it that name. The speaker prophesied that, within the year, the Pandit would be advocating responsive co-operation.

The decision of the Bombay Swarajists is being watched keenly in Bengal. The *Bengalee* welcomes the gesture as a step in the right direction, and is of the opinion that Liberals and Independents should offer the right hand of cordial fellowship to the honest and courageous efforts of Messrs. Kelkar and Jayakar. "Let us waste no more time in irritating verbal disquisitions. Let us concentrate our scattered forces, and, in God's name, settle down to work," is how it concludes its editorial. *Forward* seeks consolation in the hope that before long they will be welcoming the delinquents back into the Swaraj fold in their old position: and proceeds to point out that, if anything could hasten their return, it would be the welcome they have received at the hands of the enemies of Indian aspirations. Pandit Motilal Nehru is busy giving explanations of this, that and the other, which is his usual line when he finds himself in difficulties. His bombastic attitude is not adding to his popularity, and consequently his fervid appeals are losing their power. India desires self-government; the party which calls itself the Swaraj Party has proved itself a negative influence in the attainment of the popular ideal. India is waking up to the fact that the measure of self-government which has been offered to it is no small thing. The gesture which has come from Bombay has its origin in two years' experience in the Bombay Council. Is it not implied that its originators have begun to realise their own limitations? If so, it is a healthy sign.

A Protest Against Swarajist Dictation.

Discontent in Swaraj circles is not confined to the Bombay Presidency. Sen Gupta, the leader of the Bengal Swaraj Party, has succeeded in raising a protest in Dacca, where it is reported that he has issued a mandate calling meetings of the party. The members of the Swaraj party have resented his dictatorial manner, and have intimated that they propose to hold meetings as and when they consider them necessary. A further cause of trouble is that, in August last, Sen Gupta agreed to an arrangement by which the election of office bearers of the Dacca District Congress Committee was set aside and, while those in office were to remain in power until the middle of November, a fresh election was to take place in which Sen Gupta would not interfere. As a result of his issuing a circular, ordering the election of office bearers on definite dates, the Committee have closed the door in his face. They will hold their election, but he will not be allowed to have any hand in it. In Calcutta, too, he has brought himself into disrepute by moving the Chief Executive Officer of the Corporation to prohibit members of the public from crowding about the Council Chamber. The curiosity of the Indian is proverbial, and it is one of the customs of the country that, if it is possible to pry into affairs of either public or private interest, this is a perfectly legitimate thing to do. It is not so long ago that the Swarajists were glad to have unofficial onlookers during their proceedings; a chorus in the gallery, and round the verandahs, of the Corporation Council Chamber formed a good setting in which to create the impression of unanimity: and some of the papers may well ask who will cry *Bande Mataram* if the crowd are not permitted to follow him wherever he goes. It is surprising that, with the expressed hatred of the bureaucracy of the Swarajists, Sen Gupta and Pandit Motilal Nehru are not more careful in their bearing with their followers. But the leaderships which they both enjoy have been the result of chance, not of fitness for the distinction. Beggars in ideas are on horseback at the moment.

Markets.

Both the jute and gunny markets have ruled very steady during the past week, with a tendency at the close for a firmer tone for jute; business has been on a small scale owing to sellers standing out for top prices. The piece-goods market continues weak and unsettled. The tea market may almost be described as buoyant; sales here have shown most satisfactory results, almost all descriptions participating in a substantial rise: and, with stocks almost on a par with last year's, and the probability of a substantial decrease for November, there is every likelihood of a further enhancement in prices. The decrease for this month is estimated at about fifteen million maunds: and, if these figures are correct, the market should be in a sound and healthy position.

The outstanding features in the Stock Exchange have been the strength of Teas and Rubbers; a large business has been done in the former shares at hardening prices and, with sellers holding off, the more popular scrip has been difficult to obtain. Rubbers have continued their rise, the dollar shares being particularly in demand. Jute shares have appreciated all round, with Bombay paying a keen attention to the better class investment stocks. The revival of interest in cotton shares has been more than maintained, there being a more open market for the shares. Coals continue an almost neglected market.

Money rates have remained unchanged with Exchange steady.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, November 20.

The Mill Strike.

The Municipality took the extraordinary course of voting a lakh of rupees from Municipal funds for the relief of the strikers, after a most instructive debate in which the strike was described as a reflection on modern civilisation. The Government was accused of taking a morbid pleasure in the sufferings of the poor millhands, and the Corporation was urged to remember the prevalence of sickness in the city. The supporters of the resolution do not seem to have been quite clear in their minds as to whether they wanted to give doles or to institute something in the nature of famine relief works.

Mr. Clayton, the Municipal Commissioner, pointed out, first that a very large proportion of the hands had left Bombay, and secondly that, probably for that reason, the health of the city was, in fact, better than it had been for thirty years. He then went on to deal with the question of relief works. There is a regular scale, laid down by Government, for wages on such works, which is dependent on the prices of foodstuffs: and Mr. Clayton pointed out, no doubt accurately, that the rate at present would be something in the nature of six annas a day, as against the wage of at least double that amount that labour can earn by resuming work.

The debate had its humorous side. Not only are several of the Council themselves millowners, but the Corporation is in itself naturally a very large employer of labour in the public utility services, and the precedent that it has created for itsef, by eventually passing this resolution by a small majority, would be quite funny if it were not so serious. But the debate obviously afforded the speakers an almost unlimited opportunity of attacking the Government. While one side was able to accuse the Bombay Government of callous indifference to the sufferings of the strikers, the other party once again pointed out that all would be well if the Government of India would only remove the Excise Duty. So everyone had their fling: and, as presumably the expenditure is entirely illegal under the Municipal Act, everyone will be satisfied in the long run.

Meanwhile the strike continues, and the end seems more remote than ever. But there is no real sign of distress in the mill area, and it is probable that a very large proportion of the strikers are still in their villages. It must be remembered throughout that conditions are very widely different from those that obtain in any centre of industry in Europe. The percentage of regular hands who have their homes definitely in Bombay, and who are dependent solely on their work in the mills for their living, is no doubt increasing every year. But still the very

Digitized by Google

great majority have at no time the intention of working for more than two or three years at a spell, after which they rejoin their villages for a rest and change. Consequently, even when circumstances arise which force them all to take their holidays at the same time, the disturbance of the ordinary routine is very much less than it can be in communities where the cessation of work leaves labour with nowhere to go and nothing to do. This is the fundamental difference between labour conditions in Europe and in India: one that naturally escapes the notice of itinerant labour leaders from Home. India is still an entirely agricultral country, with a population which is not averse from earning money by spells of work in mines, factories and tea-gardens, but of which, at present, only an insignificant percentage is in any way at the mercy of the employers of labour.

I had expected, myself, that the pinch would come about the middle of November: but there is no sign of it as yet, and the time of serious distress, and possibly of disturbance, still seems remote.

The Weather.

As a rule we cease to take any interest in the weather after the end of September, when the anxiety about the rains is ended one way or the other; but this year conditions are rather abnormal throughout India. In Bombay, we have chiefly to comment on the fact that the temperature has not fallen below the true hot weather figure, and is now about six degrees above the normal for the time of year. Up-country, there have been heavy rains almost all over India. The immediate result is uncertain; but, in the long run, the more rain that sinks into the subsoil of India, at any time of year, the better. It is expected that these late rains will eventually increase the size of the cotton crop to an appreciable extent. But early arrivals are likely to be later than usual, owing to the mud in the country roads, and of disappointing quality, owing to the wetting of the plucked cotton. The weather is due to an unusually heavy storm, which has done much damage to the fishing boats down the Malabar Coast. These boats, which are always beached throughout the moonsoon, are not built to stand any heavy weather: and a sudden storm in the fair season, which catches them afloat, always has disastrous consequences.

SUSPENSION OF INDIAN COTTON EXCISE.

(India Office Communiqué.)

The following announcement has been issued by the Governor-General in India:-

In August last, when replying to a deputation which waited upon me on behalf of the millowners of Bombay and Ahmedabad to urge the relief of the mill industry from the cotton duty, I affirmed that the Government of India stood by the letter and spirit of the pledge given by my predecessor, Lord Hardinge, that the Excise duty would be abolished as soon as financial considerations permitted. At the same time, while fully recognising the special difficulties with which the cotton mill industry in India was faced, it was necessary for me to explain that it was impossible to grant this request in the middle of the financial year, before the year had fuly declared itself and before the commitments and prospects of the next year were known.

Again, on September 18, 1925, when a motion for the suspension of the cotton Excise duty was debated in the Legislative Assembly, it was made clear on behalf of the Government that suspension must inevitably be followed immediately by abolition, and abolition ought to be considered only in connection with the finances of the year as a whole: that is, at the time of the Budget, when the claims of the cotton mill industry could be balanced against rival claims.

It was definitely stated that a vote for the suspension would be taken by the Government as an expression of the view that abolition of the cotton Excise duty should take precedence of other claims. The Assembly accepted by a large majority a motion for suspension.

The time has not yet come when a detailed estimate of the revenue and expenditure for the current year or of the prospects for 1926-27 can be made; but the final results of the monsoon are now known, and it is possible to make a more reliable estimate of the financial position than in September. On such information as is now before them, the Government of India are satisfied that there would be no serious risk of a large deficit in the current year if the cotton Excise duty were suspended for the rest of the year, and that there is a reasonable prospect that the Budget for the year can be balanced without assistance from the cotton Excise duty, in the absence of any big change for the worse in the next few months.

I and my Government have therefore come to the conclusion that the moment has arrived when financial considerations permit of the abolition of the duty. This can, however, be finally accomplished only by the passage of the necessary legislation by the Indian Legislature.

In the meantime, having regard to the emergency caused by the grave difficulties confronting the industry, to the pledge given and reaffirmed, and to the expressed views of the Legislative Assembly, I have decided that, with effect from December 1, 1925, the duty shall be suspended by Ordinance. It is the intention of my Government, unless the financial position as disclosed in the Budget estimates for the next year substantially fails to confirm the present anticipations, to place before the Legislature, at the time of the Budget, proposals for the abolition of the duty.

THE INDIAN MAIL.

Durbars.

The cabled report of a speech at Lucknow, delivered by the Governor of the United Provinces, which represented him as expressing doubt whether there was still sufficient reason for a provincial Governor to hold official Durbars, and whether it would not be enough for him to express the views and policy of the Government through the Legislature, aroused a certain amount of interest at the beginning of November. In particular, it prompted that very distinguished ex-Governor of the Punjab, Sir Michael O'Dwyer, to write to *The Times* strongly upholding the value of "the time-honoured Oriental Durbar": which, he said, affords those who attend it an admirable means of representing their views and their needs to the representative of the Sovereign, and offers to the Governor an easy opportunity of publicly announcing the policy of Government, of rewarding good service, of tendering authoritative advice or timely warning in times of crisis or difficulty; so that its discontinuance would not only be an error, but one that would be deeply resented by those who have been accustomed to attend it. He expressed the opinion that the Durbars, that he himself had held in the Punjab during and immediately after the War, had proved an invaluable method of maintaining confidence between the Administration and the people: and that it was largely through their agency that the Punjab made such a splendid response in the War, by providing 360,000 out of the 680,000 combatants raised in India.

The last mail brought a detailed report of the speech of Sir William Marris on the occasion referred to. It shows that Sir William's views on the subject coincide with those of his critic: and that he put forward the suggestion only to reject it. His actual words, indeed, were in many cases almost an exact paraphrase of those used by Sir Michael O'Dwyer in his letter to *The Times*. He said that he felt a doubt "whether the old and honoured ceremony of the Durbar should not henceforth be reserved for wholly special occasions like the visits of Royalty or the Viceroy": but that, after consulting his advisers, he had reached the conclusion that "there were still advantages in the practice by which the Governor occasionally sought an opportunity of assembling and directly addressing the notables of the Province": and that he had been impressed by the fact that the Durbars held by his

Digitized by Google

immediate predecessors "had been of great value in stimulating the immense effort which the Provinces made in men and money during the Great War."

Fortunately, therefore, there seems no prospect of the discontinuance of the formal Governor's Durbar. The Oriental always loves a "tamasha"—a spectacular display: and, though the advent of the motor car has done a good deal to reduce the splendour of official progresses, the Durbar itself remains a show that is—or, at any rate, can be made spectacular as well as popular. The Indian idea of a Governor's state arrival at a public function is still what it was in "the good old days"—that the great man should ride an elephant and be attended by an escort of cavalry. That this sort of thing does not happen nowadays is a deprivation to the man in the street; but his more fortunate brother, who is entitled to entry to the Durbar itself, is still able to enjoy a brilliant feast of display and colour, as well as the more solid advantages claimed for such a function by Sir William Marris and Sir Michael O'Dwyer. Unfortunately, it not seldom happens that the Governor himself is not obviously the central figure in the spectacle: one has often thougnt that a special uniform, of surpassing brilliance, should be designed and provided by Government for the highest officials, to enable them to look the part as well as act it. The writer of these notes was once at Calcutta when Lord Curzon attended a Proclamation Parade: and his servant went to see the "tamasha." On his return, he was full of the fine spectacle that he had enjoyed: but said that, since he had last seen him, Lord Curzon had grown a long pair of moustaches. His employer denied this, and the argument waxed quite warm; until it occurred to the writer to ask what clothes the Viceroy was wearing. "Oh," was the reply, "he had on a fine uniform, all red and gold, and covered with medals and stars." When it was suggested that this was the Commander-in-Chief, the servant looked thoughtful. "Well, now you say so, I believe you are right—yes, of course you are right, and it was Power Sahib" (Sir Power Palmer). "But where was the Viceroy?" "He would have been in front of the Commander-in-Chief, wearing a black coat." "Well, well—there *was* a Sahib in a black coat, out in front, but I didn't look at him: I thought he was the Padre Sahib."

A "Country Party."

The speech of Sir William Marris at Lucknow, besides its reference to the question of the continuance or discontinuance of Governors' Durbars, contained an interesting exposition of his views regarding the future of the landowning class—the "zamindars." The speech was specialy addressed to the "Taluqdars," or Barons, of Oudh the great territorial magnates of that part of the United Provinces. The Governor pointed out that, with the inauguration of the Reforms, it had become the accepted policy that the actions of the Government were ultimately to be decided according to the wishes of the individual affected by them—not by those of the people of Great Britain, nor according to the expert views of trained administrators, whether European or Indian; but by the wishes of the Indian "man in the village," who formed, in the aggregate, 97 per cent. of the people and 91 per cent. of the registered voters. Though there is no immediate prospect of the rural voters showing themselves capable of playing the predominant part in politics which the constitution has ultimately assigned to them, yet all the indications point to the fact that the transfer of power, from the classes that at present enjoy it to the rural voter, is only a question of time. Ignorance, poverty and disorganisation may delay the process, but will never stay it in the long run. The Indian legislatures are at present mainly composed of professional men and landlords: and, though there is no reason why this should not continue to be so, as it is in the case of most representative Parliaments eleswhere, it is undoubted that, whoever the actual legislators may be, they will come to feel the pressure of the electors behind them much more exigent than they feel it at present, and that policy will ultimately come to conform to the wishes of the village voter.

Some people feared, said Sir William, that representative government would, in time, involve the disappearance of the landlord order. However well a good landlord might treat his tenants, he could not outbid the extravagant promises held out by popular agitators, who promised the peasant and the workman the total abolition of rents and taxes—"incomes for all but burdens for none": a future calculated to make a great appeal to men incapable of forming a practical judgment for themselves. The ignorant elector must be saved from becoming a danger to himself and to others: and, in a country like India, whose social structure has been based for centuries on religious and aristocratic principle, on deference to sanctity, merit, birth, power and position, while it would be a calamity if the landlord order should disappear, it was peculiarly their duty to realise that privileges involve service, to show that they were the sympathetic allies of the peasant and the working man, and to play the great part, that was open to them, in educating their fellows. If the world situation to-day pointed any moral, it was that power in ignorant hands is a danger: and it behoved all without distinction—landlords, public men and the whole order of public servants—to strive earnestly to make good what was, at present, a palpable and dangerous deficiency, and to "educate their masters." The most obvious lines on which progress should advance were those of agriculture and education: it was a matter of good augury that the Minister who had been selected to fill the office of Viceroy had been specially concerned with both: the problem was a great one, but it needed to be grappled with in earnest: and for this was necessary the co-operation of all public men, none of whom would deny the need for such an effort.

For some little time past, there has been a growing desire to bring into existence a "country party" in Indian politics: to be composed of men with a real stake in the country, particularly of the landholding and commercial classes. Some English observers in India prophesy a great future for such a party, and believe that events are shaping in the direction of its early formation: if started by the right people, and on the right lines, it should soon prove itself a valuable counterpoise to the coterie of professional politicians who now preponderate in the Indian legislatures: and the age-long ideas of Indians, confused though they have been by the "slogans" of professional agitators, should, when such a party has proved its value and power, afford it increasing support. If the speech of Sir William Marris assists the inception of this campaign as it appears to have been intended to do—it will have performed a great service not only to his own Province but to the whole of India.

The End of Obstruction.

A new recruit to the growing number of Indian politicians, who are expressing dissatisfaction with the Swarajist programme of obstruction, has appeared in the person of Mr. Yakub Hasan, a Madras politician of extreme opinions and a prominent supporter of the Khilafat agitation at the time that it attained its maximum. He has given notice of a resolution that he will move at the next session of the Indian National Congress, due to be held at Cawnpore in Christmas week. This resolution states that the previous Congress resolutions in favour of non-violent non-co-operation are no longer operative, and that the scheme based upon them should be unreservedly withdrawn; though by this "it is not to be understood that the Congress necessarily extends its hands of co-operation to the British Government in any of their schemes for the governance and administration of India, particularly in the working of the Reforms."

As a prominent supporter of the Khilafat agitation, it is interesting to observe that Mr. Yakub Hasan expressed the opinion that the conclusion of the Treaty of Lausanne "does not leave any grievance against Great Britain that requires redress through such a drastic measure as that of non-co-operation." He also declared that the Swaraj Party had deliberately acted in opposition to the non-co-operation campaign by entering the Councils, and that many Congress members had done the same by voting for Swarajists at the elections. His argument amounts to

Digitized by Google

admitting that non-co-operation is dead: and, if it is dead, why not say so?

It is true that the resolution, and its explanation, are ambiguously phrased. Non-co-operation is to cease, but the action that will replace it is not to be called co-operation. Great Britain's guilt in the matter of the Khilafat has been purged—though not wholly: grievances remain against her in the matter, but not of so serious a nature as to require "drastic action"—presumably all that is now needed in what Mr. Dooley called "a strong diplomatic protest—such as Tut Tut, or Well, I declare!" But, whatever the phraseology, the intention is clear. Swarajist obstruction has served its purpose—if it ever had one: and its continuance will not only serve no purpose, but will be a hindrance to all who have a purpose to serve. It remains to be seen whether the solid phalanx of Swarajist admirers will be capable of carrying through the programme of their leaders at the Cawnpore session of the Congress—a programme that is now purely negative. But, even if they suceed, it will be a "paper" success only. Towards the end of Lord Chelmsford's administration, many extremist newspapers came out daily with the displayed heading C.M.G.—which stood for Chelmsford Must Go. It amused them, and did not hurt him: even the most flamboyant among them knew that it did not, and could not, mean that Chelmsford would go; but any newspaper in India that headed its front page with the motto O.M.G.—Obstruction Must Go—would have the satisfaction of knowing that it not only must go, but is going: for all practical purposes, indeed, it has already gone.

English Surnames.

A Calcutta newspaper observes that the new Viceroy's name will be more easily pronounced by Indians than those of some of his predecessors, and is unlikely to undergo any more serious mutilation than "Ood." Lord Reading's name—except that it was often pronounced as if it were the the present participle of the verb to read—presented no difficulty; Lord Chelmsford's was not so easy, and usually required an extra syllable—Chellumsfort, with the accent on the last syllable, was the popular variant. The Indian usually coins a name of his own when confronted with a really difficult one—Labillière was always "Lublubi," and Meiklejohn was always "Jan Michael." One of his most noticeable difficulties, in this respect, is a consonantal diphthong, especially when it begins a word, and particularly when the first letter is S. "Smith," for instance, is always "Ishmitt." Some years ago, it happened that a British regiment in India contained two young officers of the name of Hastings, one of whom was plain Mr. Hastings, while the other was the Honourable Mr. Hastings. The Indian surmounted the difficulty of distinguishing between them by naming one "Ishtink Sahib," and the other "Horrible Ishtink Sahib."

It is not an infrequent practice, among small Indian traders, to assume an English name for commercial purposes. There appears to be a law in India (of the lèse-majesté type, one may suppose) that prevents them from assuming the name of a Viceroy or Governor: for a Bombay firm, who, during Lord Curzon's Viceroyalty, assumed the style of "Curzon and Co.," were restrained, by legal process, from doing so. It fell to a Judge of the High Court, who may be called Mr. Justice Stareleigh, to pronounce the veto. The firm bowed to the decision and, the next day, put up a new sign: Stareleigh and Co. If Mr. Wood follows a number of recent examples, and retains his own surname in his title as a peer, it may perhaps be difficult to object to the assumption of the style of "Wood and Co." by Indian firms; since they might reasonably argue that their choice of so "ordinary" a name had no personal significance.

INDIAN EXCHANGE.

London, December 7.

Movements in Rupee Exchange during the past week have been insignificant, and the quotation in Calcutta and Bombay has remained stationary at 1s. 6 3-16d. T.T., at which there has only been a moderate inquiry. This has obliged Banks and some other remitters to have recourse to Government again, who have been purchasing quite freely in the Indian markets, at the rate, and Government remittances must amount to close upon one million pounds. To-day markets are quieter there, with Banks disinclined to sell for ready or near delivery over 1s. 6 5-32d.

It is interesting to note that Government purchases in October amounted to £4,653,000, and their total purchases since April 1 come to £25,201,500. Of this amount, two million pounds were remitted on account of the paper currency reserve. In consequence of the increase in the Bank of England rate, and the consequent rise in Discounts in our market, the quotation for three months' credits has widened, and in both places it has been raised to 1s. 6 15-32d., at which, however, little business has been reported.

During the week the Imperial Bank of India has advanced its rate to 6 per cent., and it may be assumed, therefore, that the demand for money to finance arrivals of cotton is beginning to be felt. Forward quotations are easier and are called 1s. 6 5-32d. T.T. from now on to the end of February, with next to no business passing.

In the London markets rates are perfectly steady at 1s. 6 7-32d. T.T. available freely and no indication of anything better at the moment.

In connexion with the suspension of the Indian Excise Duty of 3½ per cent. by the Government of India, although the decision will have an adverse effect upon shipments from Lancashire, a representative meeting in Manchester of spinners and manufacturers issued an official statement a few days ago, to the Press, accepting the decision as a reasonable and generous act for the good of India.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K., Continent and India.

Commercial and Financial Section.

NOTES AND NEWS.

170, *Strand, London, W.C.2.*
Tuesday Morning.

The Bank Rate.

It cannot be said that the change in the Bank Rate took the commercial world by surprise, for it was realised that the continued efflux of gold was rendering such a step inevitable; in fact, the change took place later than was expected. Opinions seem to differ very much as to the effect of the alteration on trade, but very obviously it must place a further handicap on enterprise, because the bankers will charge more for accommodation; and the increase is, therefore, in a sense a tax on profits. Clearly it will also have the effect of making the London market less accessible for foreign loans, and will thus tend to counteract the raising of the embargo on these issues. But perhaps that is not a very important point at the moment, for there has not been (and, be it added, no one expected that there would be) any immediate rush for accommodation here. But it is vital that no unnecessary obstacle should be placed in the way of commercial expansion at the present time, and it may be hoped that the effect of the 5 per cent. Rate will be so immediate that it will be possible in the near future to retrace the step. That, however, must remain to be seen.

The P. and O. Report.

The outstanding feature of the P. and O. report for the year to September 30 is the way in which this great organisation has maintained its earning capacity despite the exceptional difficulties of the period under review. The profits after allowing for depreciation amount to £1,273,533 as compared with £1,346,938 for the previous twelve months, and I think it will be agreed that in the prevailing circumstances a reduction of only slightly over £117,000 is a very good showing indeed. As already recorded, a reduced final dividend on the deferred stock is recommended, making the distribution 10 per cent. as against 12 per cent. last year, and this the Board explain has been done, because they "consider it prudent in present circumstances to husband the company's resources." The proposed allocations include £261,607 for debenture stock redemption as against £249,150, bringing the provision in this respect up to nearly £700,000, and £40,000 to the provident good service fund, and the carry forward will be £142,143 as compared with £101,034. At the general meeting which takes place to-morrow Lord Inchcape will, no doubt, have something to say with regard to the general outlook not only for shipping but for industries in general, and it may be hoped that he will be able to confirm the view, to which utterance has been increasingly given of late, that the signs really point to the gradual improvement in trade, and that at long last the corner of the trade depression has been turned. For shareholders in the P. and O. Company the outlook is bright indeed when trade revives, for if the company can hold its own as it has been doing in the most adverse circumstances, it is assuredly in a position to reap a handsome return with the renewal of commercial activity, and the knowledge of that fact will be compensation for the present reduction of 2 per cent. in the deferred dividend.

Egyptian Salt and Soda.

Considerably improved results are reported by the Egyptian Salt and Soda Company for the year ended August 31 last. The gross profits amounted to £E29,920 as compared with £E7,244 for the previous year, while the net profits were £E20,443, as against £E243. The amount brought in was £E44,789, making the disposable surplus £E65,232. It is proposed to pay a dividend of 5 per cent., leaving £E40,966 to be carried forward. Last year no dividend was paid, and as the company in the past has paid dividends ranging up to 60 per cent., it will be realised how it has been affected by the factors referred to in the report—trade depression and competition.

The Tea Position.

In recent years tea companies have enjoyed considerable and increasing prosperity, and the statistical position combined with the evidence that consumption of this commodity continues steadily on the up grade suggests that the outlook for the producers is most promising. An interesting review of the situation is given in the annual report of Brooke, Bond and Co., in which it is pointed out that in September the market was very depressed, as at that time the crop in Northern India showed an increase of more than 22,000,000 lb. Conditions have since undergone a great change, and it is now thought probable that the crop will be from 10,000,000 lb. to 15,000,000 lb. below that of last year. Conditions in Java have also been unfavourable, but the reverse has been the case in Southern India and Ceylon. China, as was to be expected, has not been an important factor this season, and it is suggested as probable that of the surplus of 40,000,000 lb. that London carried last summer, half to three-quarters will have gone by June next. As regards consumption, the figure for Great Britain and Ireland is now 8.76 lb. per head, while in the United States the total for last year was .93 lb. per head as compared with .87 lb. for the year before. Since then, however, there has been a strenuous campaign in favour of the British national beverage in America, and it may reasonably be assumed that subsequent figures will show a much more striking advance. Russia is still not a considerable importer, but if conditions in that country improved and tea was again taken on the pre-War scale the possibility of a shortage of the commodity would have to be envisaged. But that is, of course, the case in respect of other things besides tea.

Correct.

For once in a way the temptation to say "I told you so" is too strong to be resisted. Some four week ago (I write without the book, so I may be a week out either way), discussing the future of the rubber market, I said that whatever happened in the intervening weeks I was certain that the beginning of December would see a sharp

upward movement in the shares. My reason for this view was that a very large sum fell to be distributed last week in War Loan dividend, and I was confident that the attractions of rubber would be irresistible when it came to reinvesting some part of that amount. The share movements in the last few days of last week and especially yesterday, when there was something approaching a scramble for shares, have fully borne out my view. Even now at the prices reached I am not inclined to go over to the bears, and I see no reason why, with the inevitable fluctuations, the market should not continue to improve for another month or so. February 1 will see the companies at liberty to produce up to 100 per cent. of their capacity if they can (and very possibly to the limit of their productive power, though it may be, of course, that further increases will be regulated under the scheme) and the increased output should at least compensate for any decline that may take place in the commodity. And as consumption continues on the upgrade, the outlook is unmistakably bright, and would be distinctly rosy if one knew that there would be no trouble over the coal question here in the spring. That is unfortunately the uncertain element in every business equation.

COMMENTATOR.

ROUMANIAN NOTES.

(From Our Own Correspondent.)

Bucharest, November 26.

Grain Exports.

Greater activity is reported at the ports, especially as regards shipments of grain, owing to a general improvement in the grain market. This improvement, however, is not so marked as to have prevented three of the largest flour mills in Bucharest from deciding to close down until greater facilities are offered them for the export of their surplus stocks. This decision has been taken after a trial had been made to work eight hours a day instead of twenty-four as they normally do.

Miscellaneous News.

Great hopes are expressed in the Press that the negotiations now going on in England in regard to compensation for petroleum wells destroyed during the War will result in a settlement of this long outstanding and very sore question to the advantage of Roumania.

The Roumanian delegates who attended the recent conference of the Succession States at Prague to discuss the question of the distribution of the Austro-Hungarian pre-War Public Debt, have returned, having refused to sign the arrangement proposed. The Roumanian argument is that as the total sums to be received by Roumania under the Peace Treaties, as War indemnities from Austria and Hungary, have not yet even been fixed, there is no reason why Roumania, as a victorious ally should be required to make payments to these countries on account of their pre-War public debts.

Interest in the Moscow Tournament has been sustained right up to the end; indeed, I can scarcely call to mind an event in recent years which has provided such possibilities of a dramatic finish. M. Bogolgubow now stands out as one of the world's best players, while Dr. Lasker has shown that he is still as good as ever he was. After a very poor start Senor Capablanca made a wonderful recovery, and to finish with the score he did was, in the circumstances, a very fine performance. His record suggests that he is a better match player than a tournament player. *En passant*, I see that it is suggested that the Russians will endeavour to arrange a match between the winner of the tournament and Capablanca for the championship.

Reuter reports from Washington that the Roumanian Debt Commission have accepted the terms offered by the American negotiators for the funding of the Roumanian debt to the United States.

THE ROUMANIAN BUDGET FOR 1926.

The following is an explanation of the Roumanian Budget for 1926, given by M. Vintila Bratianu, Minister for Finance.

The estimated revenue of the 1926 Budget amounts to 28,250 million lei, to which must be added 1 milliard lei available surplus from the 1925 Budget, making a total of 29,250 millions, an increase of 6,205 million lei compared with the Budget for 1925.

This increase is derived from the general augmentation of the various items of revenue included in the present Budget, and in addition to these a sum of approximately 1,300 millions under the following new headings:—

(a) About 400 millions from the new Stamp Law, which will be laid before Parliament within the new few days.

(b) About 400 millions by the increase of postal tariffs, which at present are much below those of other European countries.

(c) About 500 millions from various modifications in the details of the tariff on products of the State Monopolies.

The only heading under which the revenues show a reduction is that of export taxes, and here the proposed policy of a gradual reduction of these taxes is expected to diminish the revenues by about one milliard lei.

The estimated expenditure amounts to 23,912 million lei, that is to say, 23,517 millions for ordinary expenses of the various departments and 395 milions as a subvention from the State to the communes and districts, under the terms of the new Administration Law.

This year, owing to the new (autonomous) organisation of the Railways, the Railway budget will be entirely separate from that of the State. The Railway Administration will henceforth have its own Budget, which this year will amount to between 8 and 10 milliard lei.

Thus the estimated revenues amounting to 29,250 million and the estimated expenditure to 23,912 millions, there will be a surplus balance of about 5,300 millions, which has been distributed as follows:—1,300 millions for the opening of extraordinary credits, a fund which has been increased this year (although the requirements of the railways are no longer included) in order to provide for the settlement of the Inter-Allied Debts now in course of arrangement.

The greater part of the available surplus, i.e., 4 milliard lei, has been earmarked for the increase of the salaries of State officials and employees. Of this sum 3 milliards will be distributed at once, on January 1, 1926, and 1 milliard on July 1, 1926, that is to say, after the final closing of the 1925 Budget. This sum of 4 milliard lei will permit of an increase of the salaries of State officials and employees by about 65 per cent. as compared with their present salaries.

The Budget of 1926 is influenced by several new factors:—

(1) One of the most important is the law for the decentralisation of administration, the effects of which are already beginning to be felt and will become more and more important as time goes on. The sum of 400 millions above mentioned as having been allotted to the districts and communes, must be considered only as a beginning in the scheme of decentralisation. The Ministry of Finance has suggested to the Council of Ministers that this sum be allowed to the departments and communes, and that the extra quotas of the tax on agriculture for the districts and on buildings for the communes be augmented, in order to provide these institutions with the possibility of financial autonomy, and to enable them to benefit by an eventual increase in revenues.

(2) An important modification in the new Budget is the separation of the Railway Budget from the general Budget of the State. This could not be done till the position of the railways had reached a stage when their receipts balanced expenditure. This point has now been reached, and the railways are entering upon an independent existence.

(3) The application of the Pensions Law also represents an important modification, as the Pensions Budget has also been separated from that of the State generally. For the moment this modification is more a formal one, for owing to the "war pensions and dear living allowances," which remain at the charge of the State, the subvention paid by the State Treasury to the Pensions fund is still a large one.

(4) The carrying out of the Commercialisation Law and the Mining Law has already begun to bring in important new revenues, which on the one hand serve to meet the expenses of the Ministry of Industry and Commerce, and on the other permit of the payment into the fund for the liquidation of State issues (National Bank) of a sum of more than 600 million lei, which is in effect an advance redemption of part of the internal public debt.

(5) The new organisation of the departments which, in several cases, has already been put into application, has begun to bear fruit, but the real results cannot be estimated until all the reorganisation laws and the law for the co-ordination of salaries have been passed. This last event must also be awaited before the final adjustment is made of the salaries of State officials: hence the delay till the end of 1925 Budget year, i.e., July 1, 1926.

With the 1925 Budget past obligations have been entirely liquidated, and thanks to the experience gained during the last four financial years it is possible henceforth to estimate both the requirements and the available Budget resources of Greater Roumania.

The sums allowed in the Budget for the liquidation of past and present debts have increased during these last years.

With the consolidation of the Budget assured, however, and all obligations known and their payment assured by ordinary budgetary resources, the Government can now for the first time consider, without apprehension, a new stage in the development of the country, and the utilisation of foreign loans.

So long as Roumania was still a debtor with unpaid bills, or had debts of which the amount was not known, she could not seriously think of engaging the credit of the country, already severely compromised.

But although the Roumanian Government may not consider raising loans abroad, its policy in this connexion must be extremely prudent, as the budgetary policy has been hitherto.

With a credit not yet entirely established, it can only embark upon the most urgent and strictly necessary loans at short terms which should not in the meantime exceed three years.

The most urgent requirements fall into the following four categories:—

(1) The more speedy execution of the programme laid down in the recent Conventions with the National Bank, with a view to currency consolidation, and in order to strengthen the guarantee for the fiduciary circulation. A foreign loan might provide a fund for the more rapid

liquidation of the debt of the State to the National Bank, which must be effected within 15 to 20 years.

The revenues from this fund and the discounts from the State petroleum royalties would facilitate this operation.

(2) The consolidation for a longer period of certain short term obligations which are a heavy charge on future Budgets up to 1930. (Debts to Skoda, Ringhoffer, Baldwin (which is consolidated for 5 years), and the Belgian loan of 1919.)

(3) Co-ordination of the railway system and the opening up of new points of access to the Black Sea and the Danube; works in the ports, etc.

(4) Education and Public Health. Such a loan would be supplemented by the annual payments of 80 millions made by the State into the "Caisse des Dépôts" for the special fund for Education and Public Health, created by the law of direct taxation by a tax of 3 per cent. on movable property.

Other needs might be mentioned, but in contracting engagements in the future the Government must not neglect to profit by the experience of other States which, having contracted large loans, the redemption of which was therefore, spread over a long period, have found that the third, and even the second instalment of the loan has been refused them.

Shipping Intelligence.

KHEDIVIAL MAIL LINE.

Renewal of Cyprus Mail Contract.

The Khedivial Mail Company's mail contract with the Government of Cyprus has been renewed and will come into operation from January 1 next. Under the new contract the company has undertaken to provide a weekly mail service throughout the year between Egypt, Cyprus and Syrian ports. The service will be maintained by the steamers Belkas and Bilbeis, with departures from Alexandria on Tuesdays and from Port Said on Wednesdays for Cyprus, Beyrout, Tripoli, Lattakia and Mersina, the weekly steamer returning via the same ports (with a call homewards at Alexandretta) to Famagusta, Larnaca, Limasol (Cyprus), Port Said and Alexandria. A call at Paphos on the return voyage will be substituted for the call at Larnaca every fourth week. The new weekly service is timed to connect at Port Said outwards and homewards with the weekly P. and O. steamers to and from India, etc.

Under the contract now expiring the company maintains communication between Egypt and Cyprus at intervals of ten days only, and it is known that the more frequent service will be especially welcome to the community of Cyprus.

The former separate services from Egypt to Cyprus and from Egypt to Syria will thus become merged into one, which besides offering an interesting itinerary for tourists, wil establish direct communication weekly in both directions with advantage to the commercial houses of Cyprus and Syria and to the traffic by the desert motor route between Syria and Baghdad, etc. For the Palestine ports of Jaffa and Haifa separate arrangements are under consideration by the Khedivial Mail Company.

FRANCE AND DANUBE SHIPPING.

The part played by France in the shipping traffic of the Danube is very much deplored by the French Press, which points out that the port of Sulina received, in October last, 77 vessels measuring 122,561 tons net, of which two were French vessels measuring 4,460 tons. Outwards, there were 64 vessels representing 104,977 tons, of which six only were French, of a total tonnage of 10,603 tons.

The principal exports of the port of Sulina were, in the second fortnight of October: wheat, 4,700 tons; maize, 6,820 tons; barley, 2,623 tons; beans, 8,219 tons; millet, 1,040 tons; wood, 63,112 cubic metres. In these shipments, France's share was: wheat, 1,296 tons; maize, 3,282 tons; barley, 477 tons; beans, 5,168 tons; wood, 9,383 cubic metres. It is pointed out that France can justly be described as one of the two or three principal clients of the Danube exporters and it is all the more regrettable to see the insignificant part played by the French flag in the traffic of Sulina.

SECOND-CLASS SLEEPING CARS IN ITALY.

The London office of the Italian State Railways and State Tourist Department announces the introduction not only of second-class sleeping cars on the chief night trains from Milan, Turin, Venice and Triest to Florence, Rome, Naples, Brindisi, and from Rome to Taormina, Syracuse and Palermo and vice versa, but also of trains composed entirely of first and second-class sleeping cars. The second-class compartments have all the amenities of, and are only slightly smaller than, the first-class compartments. This new consideration to travellers in Italy, it is stated, is proving very successful.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Elysia for Bombay (Liverpool, December 23). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—M.v. Somersetshire for Port Said, Colombo, Madras, and Calcutta (London, December 12); s.s. Malakuta for Port Said, Colombo, Madras, and Calcutta (London, December 24).

Bibby Line.—S.s. Leicestershire for Port Said, Colombo, and Rangoon (Birkenhead, December 30).

British India Line.—S.s. Gharinda for Bombay and Karachi (London, December 19); s.s. Mashobra for Colombo, Madras, and Calcutta (London, December 19).

Cunard Line.—S.s. Brescia for Patras, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, and Sulina (Swansea, December 16).

Ellerman "City" Line.—S.s. City of Birmingham for Calcutta (Birkenhead, December 24).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, December 26).

P. and O. line.—S.s. Nankin for Colombo, Madras, and Calcutta (London, December 12); s.s. Kaisar-i-Hind for Bombay (London, December 24).

Prince Line.—S.s. Syrian Prince for Malta, Alexandria, Jaffa, Haifa, and Beyrout (Manchester, December 24).

According to a message received in Belgrade from Tirana, the Bank of Albania was inaugurated on December 2.

Motors and Motoring.

By G. B. B.

Every day brings fresh rumours as to the advent of the really cheap car, and, although at present these seem to have little or no foundation, it may be taken that a marked reduction in the price of some of the smaller models will be announced before long. Every manufacturer is paying increased attention to the high speed, high efficiency car engine and its possibilities, particularly the type of engine which uses heavy oils as fuel. I do not mean to say that in the near future overseas buyers will be able to buy British-made cars, at a low price, fitted with engines of the Diesel or semi-Diesel types, but there is a distinct and decided trend in that direction. The advantages of the heavy oil consuming engine are many; heavy oil is cheaper than petrol for one thing and can be obtained in many localities overseas, as in the Near, Middle, and Far Easts, far more easily and cheaply than can good quality petrol. The actual cost of running, therefore, is lower and there is less fear of interruption to a journey through running short of petrol, whilst other advantages are that electric ignition is done away with altogether and there is consequently no possibility of trouble through magneto or sparking plug faults, or breakdowns. The risk of fire is also eliminated.

Some Other Factors.

At the same time there are certain points in connection with the heavy-oil engine as adapted for motor car service which have to be borne in mind, and which do, to some extent, act as deterrents to buyers and so delay the coming of the heavy-oil engined car. Of these, perhaps the most important is the difficulty of starting such an engine from cold, and it will be noted here that it is of little use to devise means whereby the engine can be started up on petrol and changed over to heavier oil as soon as the cylinders are warmed up. The whole idea of the engine is to produce a more efficient power unit than the petrol engine and to do away with the use of the lighter fuel. If one has to carry a tank of petrol for starting purposes, one might as well carry a tank of petrol for power purposes; and again, if it is difficult or impossible to get petrol for power, it will be, probably, just as difficult to get a supply with which to start up the engine. Consequently special apparatus must be incorporated in the design or used as an auxiliary for starting the heavy-oil engine when it is cold. It may be mentioned also that designers have not been able, so far, to give us a heavy-oil engine with a sufficiently wide range of speed for pleasure car purposes, and as the point which is at fault is not the maximum speed but the range of speed, it is evident that the last word has not yet been said in connection with the design of this type of engine.

Indian Roads.

Some few days ago a writer in one of the motoring journals which usually is extremely well informed said, regarding India, that there are probably not more than ten miles of paved highways in India. It is not easy to understand why so extraordinary a statement should be made. Of course, the word "probably" allows a loophole for escape; the writer can reply to any forthcoming critics that he had not made a definite statement, but had only given an opinion. It would seem to me that where this matter of overseas trade is concerned every writer should be particularly and peculiarly careful lest anything he may say may have a prejudicial effect on the overseas trade of this country. This specially applies to India, where there is a large and waiting market for motor cars, provided our manufacturers will offer the kind of vehicle that is needed. As it stands, the statement referred to above seems to imply that India is "hopeless so far as the sale of cars is concerned as the roads are uniformly bad; in fact, there are not more than ten or twelve miles of paved road in the country." That, I say, is what was implied in the statement, and anything further from the truth could hardly be imagined.

The Facts.

One need not point to the very large sales of Rolls-Royce, Napier, Sunbeam, and other "luxury" cars in India and emphasise the fact that such cars would not have been bought in such numbers had there been no roads in the country on which they could travel. Nor need one point to the quantities of American cars that have been sold in India, or remind British manufacturers of light cars that they, also, have in the past done good business in India. It is sufficient to say that any large firm of makers of road-making machinery and plant will tell him that large quantities of machinery for the production of tar-macadam for roads have been imported into India, and that one of the big technical expert papers runs, or ran, a regular feature of "Indian Notes" dealing with the progress of road-making and road-paving in India.

Further, to go into particulars, I would ask the writer whether he has ever heard of Calcutta with its scores of miles of made, paved, and tarred roads; or the big main road from Calcutta to Chandernagore, nearly 50 miles in length and beautifully surfaced throughout; or the miles of fine motoring roads round Bombay, and of the splendid stretches of paved highways in and around Madras, which is one of the best paved district of India: or of the excellent road system in the vicinity of Allahabad? I would ask that writer whether he is aware that many Indian newspapers make a feature of giving as full information as they can to their readers on motoring subjects, and would ask him whether he things any sane editor would give that space to motoring of there were no roads in his district on which people could motor? Then, across the great plains of India are tremendously long stretches of road which, though certainly not tar-macadamised, are perfectly suitable for light cars and which to-day compare favourably with the average second-class roads of this country before the tar-spraying era set in.

I have said before, and say again, that there is a big market in India for the British light car provided our manufacturers will study, and seek to fill, the requirements of the Indian market, and it would be a thousand pities were any of these manufacturers to gain an impression that there are no paved roads or roads suitable for motor work in India.

Cotton and Cotton Goods.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company, in their report for the week ended November 26, state:—

Since our last report the futures market has been rather firm for Ashmouni and dull for Sakel. The net changes on the week are the following: Sakellaridis, 1.12 dollars down for January, 1.17 dollars down for March, 1.20 dollars down for May, 1.12 dollars down for July, 0.83 dollars down for November 1926; Ashmouni, unchanged for December, 0.05 dollars up for February, unchanged for April, 0.42 dollars down for October.

We have had rather quiet sessions this week, and the relative firmness of Ashmouni compared to Sakel must be attributed to straddling operations between these two varieties.

Nothing further has been heard regarding the projected intervention of the Government in the futures market, and it is understood that the project has been dropped, at least for the time being. Newspapers report that the Decree restricting cotton acreage to one-third of the total area of cultivated land will be published next week.

On the 21st instant a further official estimate of the American crop was issued, the figure given being 15,298,000 bales against 15,386,000 a fortnight ago; this figure was within the expectations of the market and accordingly had no effect on prices.

The demand from abroad has been somewhat smaller than during the last few weeks. Spinners do not show any great anxiety to buy, but should the market steady itself at about present levels, we think that a much larger business will result.

Egyptians in Liverpool still keep firm, especially Ashmouni; it is probable that the present premium of Liverpool over Alexandria will increase, as the existing quantity of tenderable cotton in Liverpool is rather low and Fully Good Fair spot price considerably dearer than Fully Good Fair futures.

On the third tender day of November, 1,250 kantars dockets were issued.

The movement of the crop in the Interior continues to be slow and, as a result, the daily Alexandria arrival figures compare unfavourably with the figures of the corresponding period last year. The big growers think that present prices are too cheap and accordingly are not, for the present, marketing their cotton.

The week's receipts amount to 198,116 krs. against exports 209,575 krs.; the stock stands at 1,807,862 krs.

Spot: Minet el Bassal has been rather less active this week and demand from abroad has fallen away a little. Sales amount to about 22,000 bales of which we estimate 11,200 bales Sakel, 8,500 bales Uppers, 800 bales Zagora, 200 bales Pilion, 50 bales Brown and 250 bales White.

The Egyptian Government has bought during the week under review about 600 bales, of which 450 bales Sakel Fully Good Fair, and 150 bales Uppers Fully Good Fair.

The movement in the Interior has been much smaller this week, due partly to transport having been interrupted by bad weather and partly to the unwillingness of growers to market their crops at present prices.

Sakellaridis: has been in fair request and all styles have been dealt in. Spot differences are generally without much change.

Ashmouni and Zagora: A fairly good business has been done, covering all grades. Spot differences are steady and unchanged.

Pilion: A small business has been done at last week's rates.

Brown: has been in retail demand without change in prices.

White: A fair business has been done. Spot differences are unchanged from last week.

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Ottoman Bank for the week ended December 5 states:—

Whilst the volume of business has again been unsatisfactory, a more hopeful feeling prevails. The final American Bureau Report is due on Tuesday next, and the market will be very glad to have these disturbing publications at an end.

The suspension by the Indian Government of the 3½ per cent. Excise Duty on cotton goods has been taken with equanimity, although, of course, it is recognised that it cannot but be detrimental to Lancashire's interests.

Yarn.—The turnover in this sector has again been poor. It is said that very low prices have been taken by some sellers, presumably because they must clear superabundant stocks. Both for American and Egyptian yarns inquiry has been on a low scale and quotations are weaker.

Cloth. The only feature of the week has been the renewal of the Indian demand for dhooties. For other classes of goods inquiry from that market continues to be disappointing. There is no business worthy of mention from China, but rather more activity has been displayed by Egypt. A fair business has again transpired for the Continent, but the Home trade has been the best section.

Raw Cotton. A weaker tone has been in evidence and quotations are substantially reduced. The weather reports from the United States have been favourable and Tuesday's Bureau Report is awaited with interest and a sense of relief that it is the last. Actual business in Liverpool has been on a small scale. Reports from Egypt have also been favourable, but the crop does not seem to be moving freely as yet. The moderate Government purchases have been without effect in checking the decline in prices. Closing quotations yesterday were as follows:—American Middling, 10.43; Egyptian Fully Good Fair, 18.90.

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co. report as follows for the week ended November 21:—

Sultanas.—The arrivals are estimated at 19,300 tons and the sales to date are put at 17,650 tons. Closing prices, Smyrna, per cwt. c.i.f. London/Liverpool: Type 12, 55s.; type 13, 57s.; type 14, 59s.; type 15, 61s.; type 16, 65s.; type 17, 72s.

A marked change in the situation has developed in the course of the week. About 1,000 tons of fruit has been bought and the demand remains active at progressively advancing rates, prices showing a net gain of about 3s. (fls. 3). The close is very firm. Statistically the position is becoming interesting and merits watching. So far as this side goes, the figures given above show that about 17,650 tons have been liquidated, not calculating local consumption, which may be assessed at about 1,500 tons additional. Stocks remaining available for export are estimated at round about 9,000 tons. Supplies on consuming centres are generally light. Continental advices would indicate that a buying movement may be looked for towards the end of the year or during January. U.K. stocks as per Board of Trade returns figure as under to October 31 for sultanas and raisins combined:—

	1925	1924	1923
Tons	7,800	12,550	17,500

Remaining stocks of sultanas in Greece are estimated at: Cretan, 1,000 tons; Greek, 600 tons.

Figs. The arrivals are estimated at 190,832 bags and the sales to date are put at 186,357 bags.

COMPANY MEETING.

ANGLO-BELGIAN COMPANY OF EGYPT, LTD.

At the twentieth ordinary general meeting of the Anglo-Belgian Company of Egypt, Ltd., held on December 1, Mr. Francis FitzGerald, C.B.E., Chairman of the company, presiding, the directors' annual report and accounts were adopted and the retiring director, Mr. F. Casimir-Lambert, together with two new directors, Henri Naus Bey and Mr. Elie Mosseri, were elected to the board.

At a subsequent extraordinary general meeting the directors' proposals to eliminate from the balance-sheet the debit balance on profit and loss account, by a reduction of capital to the extent of £2 10s. on each of the 69,138 issued shares of £5 each, were also duly carried.

The Chairman, in moving the resolutions, explained that the debit balance referred to was due to the accumulation of annual deficits in past years occasioned by interest charges on loans to the company and the loss borne in the past two years by the realisation of certain investments.

He further explained, in reference to the creation of 69,138 new shares of £2 10s. each, that this was a formal procedure designed to preserve the original nominal capital of the company at £1,000,000, and stated that no emission of these shares, or of any of the shares at present unissued, was contemplated.

The resolutions adopted at the meeting will be submitted for confirmation at a further meeting of shareholders to be held on December 16, and will be further submitted to the Court for final approval as required by law.

COMPANY NOTES AND REPORTS.

P. AND O.

The report of the Peninsular and Oriental Steam Navigation Company for the year ended September 30, states that the accounts show that after providing for depreciation there is a credit balance on the year's accounts, including £101,033 13s. 8d. brought forward from last year, of £955,002 10s. against £1,072,997 2s. 4d. in the previous year. The directors propose to deal with this amount as follows: (1) 5 per cent. Dividend on the ferred Stock (of which 2½ per cent. was paid as Interim Dividend), £152,000; (2) 10 per cent. Dividend on the Deferred Stock, free of Income Tax (of which 6 per cent. was paid as an Interim Dividend), £359,251 16s.; (3) Reserve for redemption of Debenture Stock £261,607 10s.; (4) Provident Good Service Fund £40,000; (5) To carry forward to next year £142,143 4s. £955,002 10s.

The poor state of trade generally, the unrest in China, and the loss caused by the labour troubles compel the Board to recommend a reduction in the dividend on the Deferred Stock from 12 to 10 per cent. as they consider it prudent in present circumstances to husband the Company's resources. The Sinking Fund for the Debenture Stock repayable at the Company's option between 1930 and 1940 now stands at £693,757 10s. and this is invested in Government securities.

The "Assaye" has again been chartered by Government for the trooping business, and continues to prove an efficient and suitable steamer for this class of work. The "Ranpura," "Ranchi," Rawalpindi" and "Razmak" have been delivered during the year and are now giving effective service between London and India. They have been built specially to cater for the Indian Mail and Passenger Service, and have already shown their suitability for the work, both in regard to speed and in their comfort to passengers. A new feature in these ships is the provision of small refrigerating chambers for the conveyance of fish, fruit, etc., for which there is a demand, and it is hoped this will become an important business. The "Cathay," "Comorin" and "Chitral," built expressly for the Australian Line, have also been delivered during the year. They have made successful voyages to Australia, and the experience of their working already shows that they are well suited for the service for which they were specially constructed.

The "Rajputana," a sister ship to the "Ranpura," etc., was launched on August 6, and is now fitting out at Greenock. She is expected to be delivered at the end of the year in time to take her place on the London-Bombay Line in January. The "Caledonia," "Sardinia," "Sicila" and "Soudan" have been sold for breaking up purposes, the two latter since the accounts were closed. These ships, especially the "Caledonia," which in her day was the fastest ship of the Fleet, gave good service during the years they were running. The prices realised were considerably in excess of the book values, and the difference goes to the depreciation of the rest of the fleet.

The P. and O. Company's ships have been navigated without any serious accident during the year. The Insurance Fund shows an increase of £60,197 19s. 10d. at September 30 last. Nothing has been brought from the fund into Profit and Loss.

Since 1850 the Company has had a wharf at Singapore in what is known as Keppel Harbour, which was used by the Company's steamers. The Harbour Board in Singapore being anxious to acquire the wharf to extend the facilities of the Port made an offer for it which has been accepted. The Board relinquished this property with regret, but felt they could not stand in the way of improvement of the port of Singapore which will soon be one of the most up-to-date ports in the world.

The Mail Service has now resumed its full pre-War programme.

The Directors can repeat what they said this time last year as to trade conditions in all the Company's spheres of operation; things have been very difficult during the past twelve months, and it is well-known that until the exports of the country increase this state of affairs must continue. The Company and other British Shipowners trading to Australasia and the Cape have lately been involved in a serious shipping strike of an unofficial character, with lawlessness and breaches of agreements. This strike has involved the Company in very serious loss.

In China the outstanding feature is the continual quarrels between the various Chinese politicians, together with the influence of Russia in South China and the anti-Foreign movement due to the strike which started in Shanghai in a local Japanese Cotton Mill. Until things settle down the Directors can look for no improvement in our trade with China. The homeward trade from India has been active but rates have been unremunerative.

As regards the passenger traffic this continues satisfactory, and with the new and large steamers put on the various lines, together with the considerable activity in short sea traffic to the Mediterranean and Egypt, there has been an increase in passenger traffic in the past year. No efforts are being spared to make passengers comfortable and the steamers attractive.

Two Directors, Sir Walter Roper Lawrence, Bart., and the Hon. Alexander Shaw, go out of office by rotation and being eligible, offer themselves for re-election at the Annual Meeting.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

At Geneva.

The chief actors at Geneva, where the Council of the League of Nations is wrestling with the Mosul question, are inclined to keep their own counsel, with the result that those whose business it is to discover what is happening or going to happen draw different conclusions. All that is clear for the moment is that the Turkish delegates have continued their traditional tactics, and, in the face of their repeated declarations that they will not accept an arbitral award, the Council left the matter last week in the hands of the sub-committee of three members representing Sweden, Brazil and Uruguay, in the hope that it would be able to bring the Turks to a more reasonable frame of mind. Unless the latter experience an eleventh-hour conversion, the sub-committee will have had to report this week its lack of success, and while these lines are being printed the Council will record its decision in whatever form it can achieve unanimity. Unless that decision is a clear-cut delimitation of the Mosul frontier, the dispute will not have been advanced from the position which it occupied at Lausanne. From that circumstance Turkey's present rulers are entitled to derive what satisfaction they like. They may be inclined, however, to modify their views when they find that Great Britain, having hitherto treated with them as equals in intellect and international comity, but to no purpose, leaves them alone and allows them to take the next move.

Britain and Iraq.

The Iraq controversy is to form the subject of a debate in the House of Commons this week on the motion of the Liberal Party; but it will be unfortunate, as far as the completeness of the discussion is concerned, if the debate takes place in the absence of the Colonial Secretary, who has had charge of the British case before the Council of the League of Nations. Mr. Amery's directness of speech would seem to be necessary, if the debate is to be removed from the realm of fancy or "might-have-been" and brought down to the stern logic of actual realities. In dealing with occasional questions in the House, Mr. Baldwin has been too kind to those who identify themselves with a would-be policy of pledge-breaking. He did remind the House that, when in May, 1923, it was informed that the Iraq Treaty in its present form would terminate at a certain date, since fixed as 1928, it was also told that the terms of the Treaty stipulated that negotiations for a new treaty to regulate the relations between the two countries would be opened before that date. It has been entirely in keeping with the dishonesty of the tactics employed by the advocates of a policy of "scuttle" from Iraq that this essential provision of the Iraq Treaty of 1923 has been deliberately suppressed, and the more ignorant section of the public has been told, without any foundation in fact, that the termination of the Treaty in 1928 was synonymous with a "pledge" to evacuate the country. One or two Members of Parliament, whose conscience has stricken them, have since made out that Mr. Baldwin's original statement in May, 1923, which referred in the clearest possible terms to the negotiations before 1928 for a further treaty, was "interpreted" by a large number of Members as a pledge to evacuate. The country, however, is not bound by the "interpretations" that certain Members may choose to place on perfectly plain statements. Thus when Mr. Amery was asked by the Council of the League of Nations whether Great Britain would accept an extension of the Iraq Mandate for twenty-five years, he replied that an extension would be accepted, but the British Government did not consider that it would be necessary to bind itself for a period of twenty-five years. Yet this statement is also deliberately misquoted as committing Great Britain for twenty-five years. Thus the Member for Leith asked the Prime Minister last week whether he was aware that the Colonial

Digitized by Google

Secretary had said that we were prepared to take a Mandate for twenty-five years. Mr. Baldwin was content to reply that if Captain Benn were to read very carefully what the Colonial Secretary had said, he would find it would be difficult to extract that meaning literally. A very correct form of reply, no doubt, from the point of view of the dignity of the House; but, having regard to the deliberate falsification and misrepresentation with which the campaign against the Government's policy in Iraq has been conducted, we fear that more vigorous tactics will be required in this week's debate, if the more unscrupulous protagonists of the "scuttle" policy are to be convinced of the error of their ways.

Riza Shah Pahlevi.

Persia and her new ruler are to be congratulated upon being resolved to call a Shah a Shah. In spite of an epidemic of despotic republics, the Persians have decided that the proper term for one-man rule is a Monarchy. Accordingly the Constituent Assembly in Teheran has introduced the necessary amendments to the Persian Constitution, and Riza Khan Pahlevi has been formally proclaimed Shah and the founder of a new dynasty. This development we hold to be far more in keeping with the genius and traditions of an Oriental people than an artificial attempt to sow republican ideas among them. Already, before ascending the throne, Riza Khan has done more for the country than three generations of his predecessors, and in spite of his humble origin he has satisfied the Persians of the day that in him they have found, if not the ideal ruler, at least one who is head and shoulders above his contemporaries. By investing the succession in the eldest son of the Sovereign the Persians are taking the best possible precaution against the civil strife that sooner or later will rend the new republics of the East as soon as the strong man who has forced his way to the leadership of the country has been removed.

The Roumanian Political Riddle.

The new electoral law submitted by the Government to the Roumanian Parliament has now reached the administrative committee of the Senate, and as soon as the measure has been passed by both Houses the term of office of the present Parliament comes to an end. The current session has passed more quietly than was expected before the opening day. So much uncertainty envelops the future that political parties appear to have been too engrossed in manœuvring for position in regard to the elections to carry out their threatened attacks on the Government. M. Bratianu is well known to be tired of office, and the Roumanian system provides that he should recommend to the King his successor, whose Government will then proceed to hold the elections. It is generally understood that M. Bratianu's choice has already fallen on General Averescu, even if there is no formal agreement on this point between the two politicians. In view of the state of parties in Parliament and as a result of the closing up of the ranks of the official Opposition, the proposed nomination of General Averescu is stoutly challenged by the National Party of M. Yorga and M. Maniu. The Roumanian electorate is notoriously partial to changes of Government, and the Nationalists claim that there have been ample indications that popular feeling has veered round towards them. If, therefore, they were given the opportunity of "holding" the elections, they would be sure of a working majority in the next Parliament. On the other hand, they argue, the People's Party under General Averescu has no chance of being able to carry on the Administration on its own merits. It is more than likely, therefore, it is urged, that immediately after the elections General Averescu will have to resign and that he will retire in favour of the National Liberals, who would thus come into power again, supported by the People's Party, in direct opposition to the will of the nation. As far as Roumania's interests abroad are concerned, she needs to realise that the very definite policy of the brothers Bratianu has carried her steadily along the path to financial equilibrium, and she should make up her mind not to allow political strife at home to interrupt the liquidation of her foreign indebtedness and the stabilisation of her exchange.

The Fall of Medina.

The surrender of Medina to the Wahhabis is an important landmark in Sultan Ibn Saoud's conquest of the Hejaz, and lends additional force to his invitation to various Mohammedan States and communities to send representatives to Mecca to discuss the future administration of the Holy Places. King Ali has now left to him only Jeddah, Yanbu and Wejh on the coast. His position at the former may, from a strictly military point of view, have shown some improvement with the relaxation of the enemy's pressure; but it is plain that the Sultan of Nejd has satisfied himself that he is master of the situation and that he is content to wait until his victory over the Hejaz can be completed without further bloodshed, or with as little as possible. Accordingly, the main interest in the affairs of the Arabian Peninsula shifts from the condition of stalemate as between the forces of King Ali and Sultan Ibn Saoud to the scheme propounded by the latter for the future government of the Hejaz. He has, it is true, invited representatives of the Moslem world to discuss the matter, but it is evident that he expects his own scheme to be carried out. By this plan, after the expulsion of the Hashimite family, the Hejaz is to have internal autonomy under a Governor chosen by the people, who will be under the control of a representative Moslem Commission. The experiment, if carried out, will be watched with the closest interest. The Hejazis will, no doubt, accept eagerly any proposal that promises them better government than they have hitherto enjoyed; but the people who stand to benefit most are the pilgrims who were the chief sufferers under the Hussein régime.

Heavy snowfalls in Yugoslavia and in the Trieste region of Italy have been causing delays of from four to five hours to the Orient express.

The *Vreme*, says a Belgrade message, understands that the next meeting of the Little Entente will be held at Ragusa at the end of January.

The Times Jerusalem correspondent reports that Captain T. F. Burke, D.S.O., British Gendarmerie, has been killed in a motor accident on the Jerusalem-Nablus road.

The Emir Zeid, who had been acting as Regent of Iraq until the return from London of his brother, King Faisal, arrived in Cairo by air last Saturday from Baghdad. The Emir was the guest of Lord Lloyd at the Residency and left for England the following day.

TURKEY AND THE LEAGUE.

A recently published story-book for girls has chosen for its heroine a clever, spirited girl who by virtue of a scholarship goes from a National School to one very much higher in the social scale. There she proves a serious problem to her schoolfellows, for she is spirited, undisciplined and plebeian; clever enough at work, but a female Ishmael out of school hours, insubordinate to prefects, using bad language and crowding into the day a wonderful variety of things that "are not done" in a decent school. No tale could offer a more faithful allegory for Turkey's appearance as a "new boy" at Geneva. The past week has seen the Council wrestling with the problem of trying to make the undisciplined un-Westernized representatives of Angora see things from the Western point of view. So far its efforts have been in vain. Secure in the knowledge that corporal punishment is not practised at the school, the Turkish representative imitates the bad girl who swears and puts out her tongue at prefects, by flouting the judgment of the Hague Tribunal, by presuming to dictate to the League itself, and by many other acts which are among the things not done in polite international society. (In these very trying circumstances the Council is to be congratulated on having followed the dignified course of displaying the utmost patience and forbearance.) Although it may not have convinced the Turkish delegates of their own shortcomings in a gathering composed of representatives of more advanced countries, it will have satisfied the rest of the world that, in so far as she chooses to be represented by the men sent by the Angora Government, Turkey remains on a level by herself below the plane occupied by all other civilised nations. She is, however, one of the nations, and her case is by no means hopeless. The girl in the story-book found salvation through a new junior, who gave her self-respect by crediting her with its possession already and by taking it for granted that she would behave as a rational girl should behave. In time she did. As soon as Turkey can free herself from certain demoralising influences, she too will realize that it is more advantageous to conform to the standards of the rest of the world than to imagine that the bazaar methods of an Asiatic tribe can set the standard of diplomacy for civilized nations.

Owing to the blocking tactics adopted by the Turkish representatives the Council of the League of Nations was unable last week to record any final decision on the subject of the Mosul frontier. It did resolve to adopt the opinion of The Hague Court that its verdict must be an arbitral award; but in face of the refusal of the Turks to accept such an award it deferred its pronouncement on the subject in the hope of being able to avoid the complications that it feared might follow from an attempt on the part of the Turkish Government to repudiate the Council's award. Some of the members, it is understood, are so timorous of jeopardising the League's position that they are now reluctant to pronounce an arbitral award, and the necessary unanimity may for this reason be not forthcoming at the last moment. In this case the Council might find itself obliged to be content with a unanimous recommendation, which would save the face of the Turkish delegates by leaving it to the Angora Government to decide whether it will act upon the recommendation or not. The result in the long run would be the same. It is inconceivable that the Mosul vilayet should be handed back to the Turks, and no sane person, after the publication of General Laidoner's report, will expect a body of responsible men to recommend that the Turks should be allowed to advance one yard beyond the line that they now hold. A recommendation, however, in contradistinction to an award, would leave the question of the frontier still open to a bargain, from which the Turkish Government hopes to benefit. They are unlikely to attempt to advance in force beyond the Brussels Line, but they would hope to receive a financial *quid pro quo* for their formal recognition of this boundary. From the outset this has been the obvious solution, and it is probable that, if the Turks had been as Western in their methods and outlook as they are anxious to be regarded from their adoption of Western headgear, a settlement on these lines could have been reached more than a year ago. They have preferred to bluster and to threaten, to prevaricate and to procrastinate; they refused to face facts at Lausanne, and hoped to achieve the impossible in separate negotiations with Great Britain; when they found themselves defeated in these as well, they had recourse to the League of Nations, only to repudiate its authority as soon as they realized that its verdict too must be against them. In the end they will flatter themselves that they have gained the goal that they really had in view all the time, ignoring the fact that more than a year has been lost by their foolish tactics—a year that with a settled Turkish-Iraqi frontier would have been as valuable to them as to Iraq.

There is nothing new in the Turkish tactics to cause surprise; but it is disappointing to those who want to see the new Turkey forging ahead to find Angora unable to realize the injury done to Turkey's interests by the tactics adopted. In England public opinion cannot be divided into anti-Turk and pro-Turk, as there is a general attitude of good will towards Turkey, which, strangely enough, no unfriendliness on the part of the Turks has hitherto succeeded in estranging. The Mosul dispute has not actually raised the question of personal feelings towards the Turks; any difference of opinion that has been displayed has turned solely on the question whether Great Britain should or should not remain true to her treaty pledges to Iraq—the point studiously ignored in anti-Government quarters, where the attempt has been made to injure the Cabinet by raising the bogeys of finance and war. In the carrying out of this campaign the anti-Government forces threw themselves with much zeal on the Turkish side of the dispute, and out-Turked the Turks in seeking to prove the injustice of the British case. Since the publication of General Laidoner's report on the fate of the Assyrians north of the Brussels Line there has been a complete abandonment of any championing of the Turks. Indeed, one newspaper that has consistently sought to undermine the British case and to bolster up Turkish intransigences now pathetically complains that people are still talking about the frontier and where it should be instead of concentrating on the British evacuation of Iraq. In other words, it is recognised that after General Laidoner's report the anti-British champions of Turkey in this country must refrain from appearing to support the Turks. A sounder policy on the part of the Turkish Government would have put the Mosul controversy out of the way eighteen months ago, and there have been no opportunity for this reversion to atrocities, which has been responsible for the reluctance of European Powers to treat Turkey as civilised, must less as an equal. Those who believe that the Turks are capable of better things are constrained to denounce the folly of their rulers, who have thus deliberately retarded the day when Turkey will take her place as an equal in the comity of nations.

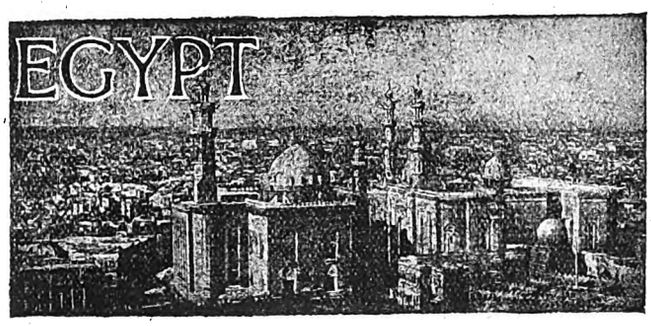
The Near and Middle East*

From Our Own Correspondents.



Cairo, December 6.

Exchange of Portfolios.

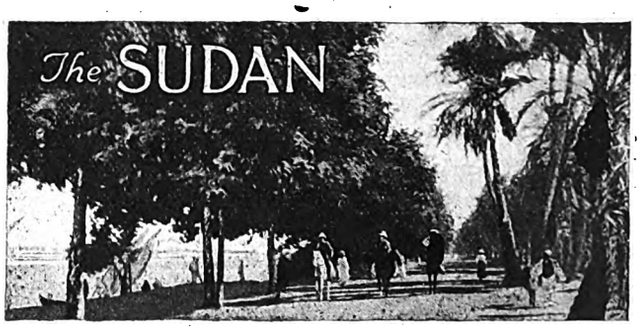
The redistribution of Ministerial portfolios, announced on Tuesday last, by which the Prime Minister becomes also Minister of the Interior, displacing Hilmy Issa Pasha, who returns to his former Ministry, of Communications, *vice* Tewfik Rifaat Pasha, transferred to Wakfs, would have occasioned no surprise had it come a little earlier. For Ziwar Pasha, while still in Europe, had stated that he intended to make these changes at the earliest possible moment. But after recent developments in the political situation, notably the Opposition's successful defiance of the Government's prohibition of the meeting of members of the late Parliament, the Ministry's position had seemed so much weakened as to need something more than a mere exchange of portfolios. The re-inclusion of one or more of the Ministers who left the Cabinet last September, or the addition of other influential neutral ex-Ministers, seemed eminently desirable, and that this was the opinion of Ziwar Pasha was indicated by his public declarations. But nobody has shown the least anxiety to join a Ministry whose chances of long life are so problematical, and so the Government is going to do without the support which would have been so valuable in facing the several difficult problems now presenting themselves for solution.

Problem of Jarabub.

One of these problems is Jarabub, for, although the Italian delegates to the recent Italo-Egyptian conference on the question have recommended the Egyptian Government to accept the Italian proposals regarding the frontier in the neighbourhood of Jarabub, provided that Egyptian reservations in connexion with the tomb of the Senussi founder are agreed to, and provided also that Egypt receives advantages in the way of boundary readjustment in the vicinity of Sollum, the Ministry is finding difficulty in making up its mind to this course. This Jarabub question is indeed a thorny one for the Cabinet, since agreeing to what is called in Egypt the "cession" of Jarabub will afford the Opposition an opportunity for rousing popular feeling against Ziwar Pasha and his colleagues while, on the other hand, refusal to agree might mark the end of Italian patience and lead to the seizure by force of what negotiations had proved ineffective to obtain. In that event Egypt would presumably not obtain the territorial compensations now being offered in return for Jarabub. Whichever way it decides, the Government's position is not enviable, and for that reason there is no display of haste in coming to a decision. The Ministers were meeting yesterday from early in the afternoon until late in the evening, but, according to this morning's Arabic newspapers, they were not then able to reach finality and unanimity of views.

M. de Jouvenal in Egypt.

M. de Jouvenal's visit to Egypt, during which he seems to have made the best impressions upon all who met him, concluded with an unfortunate little "incident" that made it necessary for him to administer a somewhat sharp lesson to one of the several politically active groups of Syrians domiciled in Egypt. The particular group in question, the Syro-Palestinian League, had been given the opportunity, through a delegation, of expressing its ideas to the new French High Commissioner, who had asked that the opinions he had heard might be embodied in the form of a memorandum. The League thereupon produced an extraordinary document, the tone of which could scarcely have been more arrogant had the League—which is not even the most important of a considerable number of this Syrian agitation centres in Cairo—represented a victorious Power that had just defeated France in war and was now dictating terms of peace. M. de Jouvenal lost no time in making clear to the misguided Leaguers that they had lost their heads and that the propagation of ideas of the kind contained in the document submitted to him was the surest way of preventing the realisation of what he and they were both aiming at, namely, the restoration of peace.



Khartoum, November 24.

Armistice Day.

There must always be, in a country like the Sudan, an additional feeling of solemnity about the celebrations of the eleventh hour of the eleventh day of the eleventh month. At home, one is liable to think only of the England that emerged into safety on that morning after long years of trial, and one loses sight of the countless numbers belonging to other races who also found security in the events of that day. But for the Armistice of November 11, no hospital ship "Lady Baker" would have been launched to bring magic cures into lands where western medicine and surgery had never before penetrated: there would have been none of the many new dispensaries and hospitals that are springing into being all over the Sudan; there would not have been a thousand things that

have brought understanding to replace mistrust and prosperity to replace insecurity.

As was only appropriate, the collection at the service of Commemoration at All Saints' Cathedral went to the greatest of the War's sufferers—the blind of St. Dunstan's. In the afternoon, sports and a very successful fête were held in the grounds of Gordon College, followed by a Victory Ball in the evening, from both of which events Earl Haig's Fund will derive substantial benefit.

Return of the Governor-General.

H.E. the Governor-General and Lady Archer arrived in Khartoum on November 12, and were met at the station by the Acting Governor-General, the Colonel Commandant of British troops, and the Acting Kaid el 'Amm. After inspecting the guards of honour, Sir Geoffrey proceeded to the Palace, where he was welcomed by members of the Council, and afterwards received in the grounds of the Palace the Heads of Government Departments, the principal officers of the Army, and the leading notables.

Foreign Press.

A point of rather curious interest at the moment is the amount of attention that the Sudan is receiving in the German Press. Undoubtedly the confidence in the country that is felt by those responsible for its administration and development is shared by many of Britain's trade rivals on the Continent, and study of the Continental Press, of which I have only referred to one example, could teach many people in England lessons that they would do well to take to heart.

The Khartoum Season.

The coming season promises exceedingly well. The Grand Hotel re-opens on December 1 this year, under the management of the Sudan Government Railways and Steamers Department, and the bookings are good. The opening meeting of the racing season was held on the 20th, and proved highly successful. And one sees many new faces in the streets after the arrival of each mail train.

Death of the Queen Mother.

The universal sorrow induced by the news of the death of H.M. Queen Alexandra was, for many in Khartoum, rendered even more poignant by the fact that she was Colonel-in-Chief of the Green Howards, whose first Battalion is at present stationed here. The memorial service held this morning was of the most impressive character and was attended by H.E. the Governor-General and practically the whole of the British community. The choir stalls were occupied by the Battalion Band, and I doubt whether any in that large congregation will forget the Regimental Funeral March which preceded the British and Danish National Anthems.

CYPRUS.

Nicosia, November 24.

Administrative Economies Proposed.

The Legislative Council should be adjourned on November 27. In discussing the estimates, elected members recommended various economies, not all of a wise nature. Amongst them it was proposed that the office of the second assistant to the Colonal Secretary should be abolished, that the number of District Commissioners should be reduced from six to three, and that their salaries should be reduced. The island is divided into six administrative districts, with a British Commissioner in charge of each. The proposed reduction has been contemplated, or considered, on several occasions, but has not been deemed desirable, even by the natives themselves. An increase of the grant for education was asked for, and also one for the Public Works Department for roads; also an increase of medical officers for rural districts, and a reduction of postal charges for papers.

Afforestation.

As regards the forests, it was proposed by one member that all felling of trees should cease. It is true that a large, perhaps extensive, cutting of timber took place during the late War, for the needs of our troops in Palestine and Egypt. But this was an exceptional and pressing call; and it is satisfactory to know that in many, if not most, mountain areas there is an excellent growth of young trees, and much reafforestation by natural process. The proposal shows how times are changed. Only a few years ago there was nothing but grumbling over the severity of the Forest Laws, and the exclusion of flocks from the State forests. An amalgamation of the Departments of Agriculture and the Forests was recommended, but this would be distinctly injudicious. It has been tried in some past years, and was far from being a success. There is plenty of work for both Departments in Cyprus, and any changes, if adopted, should be in other directions. An annual contribution, for ten years, is made to the School of Forestry in London, which will continue to take two students from Cyprus.

Alternative to the Fez.

The substitution of a cap for the fez for the Military Police was again recommended, and, in view of the changes adopted by Turkey, under Mustapha Kemal, more weight might now be given to this proposal. An increase of the allowance to Members of Council was suggested, and regarded favourably in respect of travelling expenses and hotel charges.

Cyprus and Wembley.

The Governor referred *inter alia* to the benefits already derived by Cyprus, and probably to come, from the Wembley Exhibition. As an example, it might be mentioned that the excellent brandy made by Messrs. Hajjipavlou Bros., of Limassol, which now has a wide reputation, is to be used for the medical needs of the British Army, and will probably be shortly introduced also into other Services, and find on its merits increasing sales in Great Britain. The silks, lace, and other products of Cyprus industry met with much favour, and many articles were admired and purchased by Her Majesty the Queen and other members of the Royal Family.

Miscellaneous.

It is probable that the petitions for annulment of the elections of certain members of Council will be dropped, as a deposit of £400, in each case, is required as guarantee in the event of failure.

The Governor in a recent interview with the Greek Archbishop is understood to have discussed various matters of local importance.

A student of archæology is now in England, as an exhibitioner of the Cyprus Museum at Nicosia, in order to qualify as Curator, and for other work in Cyprus. It

would appear that in order to take a degree three years more of study will be required. The Museum cannot bear the cost unaided, and the question of a Government grant will probably come up for consideration.

Sofia, December 8.

The Rumbold Commission Report.

The report of Sir Horace Rumbold's League of Nations Inquiry Commission into the Græco-Bulgarian frontier dispute was received here at the end of last week, and has caused great satisfaction throughout Bulgaria. First, because the report recognises that Greece overstepped her rights in invading Bulgaria, secondly, because Bulgaria's action in appealing to the League is shown to have been right, and thirdly, because Greece is recommended to pay a money indemnity of thirty million levas. Regarding the suggestions made by the Commission for the avoidance of future trouble of this kind, these will be discussed at Geneva this week. The authorities here favour the idea that neutral officers should be attached to the respective frontier commanders. As to the suggestion, however, that a distance of one kilometre shall separate the Greek and Bulgarian frontier posts, it is pointed out such is neither practical or desirable. Partly because *komitajis* and other types of brigands will be able to operate with more impunity than before, and partly because the loss of land involved by creating a "zone" of one kilometre will be considerable.

The League and the Balkans.

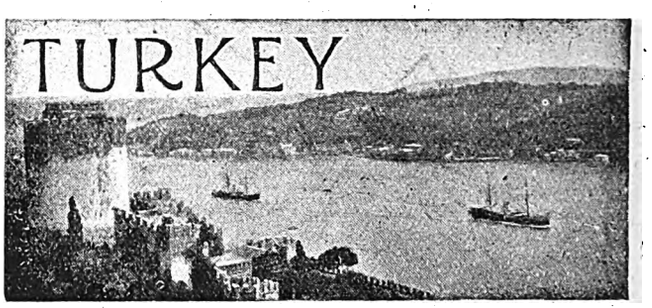
There is no doubt that the prompt manner in which the Council of the League acted at the beginning of this dispute, and the Rumbold Commission afterwards, has greatly impressed Balkan opinion. It may in fact be said that for the first time in its history the League has become a living reality for the Near Eastern nations. It has shown that it possesses authority and it is probable that in future no Balkan State will dare to have recourse to arbitrary methods without first of all appealing to Geneva.

The Bulgarian Attitude.

As regards the purely Bulgarian attitude, there is no doubt that the Commission's report is a great encouragement for those people who advocated an appeal to Geneva, and a corresponding setback for the "Firebrands" who wanted to go to war and disregard the consequences. The only criticism that is levelled against the report is that the money indemnity demanded for damage caused by Greek troops should not have been admitted in full. Bulgaria asked for thirty-one and three-quarter million levas, and the Commission recommends that only twenty should be paid. But the final word rests with the League's Council, and at Geneva to-day this body will give its decision.

The Mosul Dispute.

A good deal of interest has been evinced in Bulgaria over the Anglo-Turkish dispute regarding Mosul. Since Bulgaria is a neighbour of Turkey she is bound to interest herself in this matter, although there are no grounds for believing that any conversations have taken place between Bulgarian and Turkish statesmen. If, however, the dispute is not amicably arranged, then Bulgaria's situation might become rather invidious as the Treaty of Amity she concluded with Turkey at Angora two months ago has never been published. Here again there are no reasons to believe that anything secret exists, but the fact remains that the Treaty has not yet been made public, and this gives rise to suspicion which may, or may not, be well founded.



Constantinople, December 1.

Iraq and Turkey.

In view of the approaching renewal of the League of Nation's activities, Mosul is again taking a conspicuous place in the columns of the local newspapers. The reception here of what The Hague considers to be the League's competence was the signal for the usual outburst of criticism on the Court of The Hague and the League of Nations as institutions of international justice, and the opinions—as expressed at the time the League referred the question to The Hague—upon the influence exercised by England on these institutions were repeated and reproduced. The Court of The Hague is described as being another of England's victims, and complete indifference to what the former says is assumed. The war trumpet is not, however, being sounded as loudly as it was during the last Geneva discussions, and to judge by the readiness with which any publication in the British Press which suggests or envisages a mutual compromise by the two interested parties is reproduced without the customary abusive comment, it would appear that such a settlement is considered as acceptable, if not satisfactory.

Reaction in the North-East.

Trouble has again broken out in the North-Eastern Provinces, and again the fanatical and recalcitrant elements appear to be in for a bad time. It is difficult to judge the real seriousness of the situation, as any sensational rumour is immediately denied by the official agency, which invariably reports that calm and perfect peace reign throughout. Nearly two hundred arrests have, however, been made, and executions are becoming a daily occurrence. The reactionary movements are stated to be caused by an aversion on the part of a portion of the populations of these districts from the recently adopted hat, and these factions have selected the means of sticking up posters on the walls of public buildings to manifest in impolite terms their desire to go on as before

and submit to no new and—to them—unnecessary reforms. In Erzeroum, Sivas, and Marash the Courts Martial have commenced to wield the small tooth comb, and the *Hamidie* has gone up to Rizeh so as to be on the spot in case of necessity.

This movement is, as all movements derogatory to Turkish interests, no exception to the rule, inasmuch as its instigation, according to some papers, is to be attributed to the machinations of England, proof for such attribution being held to be the close proximity of the Mosul discussions. To-day, however, telegrams from Angora point to the discovery of yet another instigator and describe an attack in the Grand National Assembly yesterday on Noureddine Pasha, an anti-hatwearer, which was made by Refik Bey, the proposer of the law envisaging the closing of the *tekkes*. Noureddine Pasha's objection to the passing of a law making the adoption of the new head-dress obligatory which he manifested in the Assembly some days ago has been seized upon and held by Refik Bey as being sufficient to give heart to a trouble-loving few to flaunt the Government's orders and rebel against the efforts at reform. This accusation, whilst in some measure clearing England from the childish and ridiculous charge, has the appearance of possessing serious consequences for Noureddine Pasha, as his accuser suggested that his place was beside that of a leader hanged three days ago at Sivas. Whether the attack on Noureddine Pasha because of his unfortunate championing of the fez will have any other result than that of getting him expelled from the Assembly remains to be seen, but it is certain that inquiries will be made in order to ascertain, now that the possibility has been suggested, whether any connexion exists between the outbreak of trouble in Erzeroum and the simultaneous objection to the obligatory wearing of hats.

The Lira.

A question which is occupying the Government's serious attention at the present moment is that of the insecure position of the Turkish Lira. Since the announcement of the Turkish Government's intention to replace the money which is at present in circulation and which was issued under the Imperial régime by a new emission of Republican notes the Turkish Lira has suffered a very considerable drop. In spite of the Government's repeated assurances and explanations that only the exact number and value of notes actually in circulation will be substituted a fairly large portion of financiers are either fighting shy of the possibility of being left in the lurch or are taking advantage of the present easily adaptable situation for frenzied speculation. During the last week something of a record was established when the pound sterling rose to 920 piastres and in the same day dropped back to 883, subsequently closing at about 894. This fluctuation was too much for some banks, which simply could not keep up with the rapid changes and suspended operations of their exchange departments. The Authorities have now made speculation a very difficult and risky (from the point of view of the arm of the law) undertaking, as measures have been taken to watch for all offenders who will, it is threatened, be sent for trial before the Angora Tribunal of Independence. Rumour has it that as a last resort the Government intends to purchase abroad a large amount of sterling (effective) and to flood the Constantinople money market in an attempt to stabilize Turkish currency, but the truth of such a rumour would appear as much open to doubt as the success of such an effort.

The annual celebration of the liberation of Jerusalem from the Turks in 1917 was held on December 10 in St. George's Cathedral, Jerusalem, on the anniversary of the signature of the surrender of the city by the last Turkish Governor, who was then residing in the Anglican Bishop's house adjoining the Cathedral. The service was attended by the Greek and Armenian Patriarchs and the heads of other Oriental Christian bodies, and also by the leading Moslems and Jews. Portions of the service were in Hebrew, Arabic, Greek, and Armenian.

ART AND HISTORY.

Although there is very much more, in Mr. William Walcot's exhibition of water-colours and etchings at the Beaux Arts Gallery, Bruton Street, W., than the reconstruction of history, it is to that particular branch of his notable art that readers of THE NEAR EAST AND INDIA will most eagerly turn. For there they will find, preferred before their very eyes, scenes with which, through Gibbon and Flaubert, they must have long been familiar. Nowhere, so far as one knows, have the "Decline and Fall" and "Salammbo" been so vividly, so masterfully illustrated, for Mr. Walcot has gone not only to the text of the historian and of the novelist, but to the spots of which they have immortally written. Rome in the Dark Ages and ancient Carthage are actually recreated by him.

It seems hardly necessary to touch upon the spacious ease with which Mr. Walcot moves in edificial monuments of Christian times: his interiors of churches are perennial proof of that. But he seems to be in an especial position to interpret pagan times and their gradual dissolving into the Christian era. Whether it be ancient Babylon or Egypt or Greece, he draws with delightful certainty and power. So forcible are his reconstructions, in fact, that he could almost bring to life the "Cambridge Ancient History." And his etchings of such things as the wedding of Justinian to Theodora or the interior of Carthage are infinitely more illuminating than all the learned annotations of Gibbon or of Flaubert.

For mere pedantry is abhorrent to Mr. Walcot. He is essentially a seer, not an historian; alike in his personages and in his shadows, he selects and sifts evidence judicially rather than scientifically. It may be objected, perhaps, that these things were not as he makes them: his answer is easy—men saw them so. But you must see these drawings and etchings (especially the etchings) for yourselves. The exhibition is open until December 23.

The Rev. P. T. B. Clayton, Padre of Toc H., arrived in Jerusalem on December 7 in order to found Toc H. groups in Palestine. He left last Thursday so as to arrive in London in time for the birthday of Toc H.

By 257 votes to 3 the Persian Constituent Assembly last Saturday elected the former Prime Minister, the Sardar Sipah Riza Khan, as Shah of Persia and made the Crown of Darius hereditary in his family, limiting the succession to sons born of a Persian mother. His Majesty was then proclamed as Shahinshah (King of Kings) Riza Shah Pahlevi.

SARAYEVO.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—I should like an opportunity of referring to Miss Edith Durham's book; "The Sarayevo Crime."

At a time when the League of Nations is putting forward its most earnest endeavours, and at a time too, when the so-called "Locarno spirit" is in the air, it would seem to be reprehensible for anyone to be a party to the perpetuation of feud or discord which is opposed to that spirit of constructive value that a wounded Europe needs at this time, and particularly the perpetuation of feuds that carry with them such bitterness as Miss Durham's book exhibits. At the same time it seems to me that Miss Durham's book has served, and will serve a very valuable and important purpose as being a record of historical fact which it is important should be recorded, if a high moral code is to be recognised as of value in International affairs. Unless history is allowed to speak, it seems to me that our standards of right and wrong will have to be re-adjusted.

I entirely agree with your critic that Balkan ethical standards are not ours, and cannot be expected to be—the Balkan peoples apparently have no dread of the verdict of history: they do not mind if a record is given against them, so long as they achieve their purpose.

It is, however, just a question, as to how far this policy of "hushing up" should be carried out in the interests of right—a matter that I think the Press of this country should consider carefully, as also on the other hand, those of us who are devoted to individual causes, should consider how far, even with the best intentions, we may be doing harm by perpetuating feud and stories of injustice and wrong.

I have no doubt whatever that this practice of "hushing up" any disclosure of the state of affairs in the Balkans has been adopted in the interests of pacification and construction as opposed to what one might call the destructive criticism of a nation newly formed; but is outrage to remain unregarded? Is history to be perverted? Is murder and unlawful annexation and cruelty to be permitted? Outrage after outrage has laid desolate a simple mountain people, and even if success has crowned these methods, are we to ignore the facts of truth in favour of the otherwise noble sentiment of "Let bygones be bygones"? I would ask:—"What about the poor victims, and above all things what about the present suffering that is still going on?" One can understand regret: one can understand expressions of sorrow and attempts at pacification, and a desire for justice and right in place of old wrongs, but to stand aside and calmly to witness these atrocities and to put everything on one side from motives of pure policy is an argument that is beyond me, and that makes me sympathetic to Miss Durham's book and to the record of history that she has disclosed to the world. As to the truth of history:

"If this fail, the pillared firmament is rottenness,
And earth's base built on stubble."

I am, etc.,

ALEX DEVINE.

Northwood Park, Winchester, December 8.

[In a portion of his letter that has been omitted our correspondent cites in support of what he calls the policy of hushing-up the case of an article appearing in the first edition of a morning paper which contained a series of paragraphs describing the state of Montenegro to-day that were omitted from the second and later editions.—ED.]

To the Editor of THE NEAR EAST AND INDIA.

Sir,—May I be allowed to congratulate you on the sound sense which distinguishes your review, in your issue for December 3, of Miss M. E. Durham's book, "The Sarayevo Crime"? There is a deep-felt reaction in these days against the War, and in this mood Miss Durham's propaganda, if taken at its face value by the war-weary public, might do a great deal of harm. Miss Durham has a habit of quoting as gospel the evidence of all and sundry whose statements fit her *ex parte* case. But for the fact that one fails to see what good could come of it, one could set to work collecting and annotating evidence which would show that certain sections in Berlin, Vienna, and Budapest no less than in Belgrade, had reasons in 1914 for welcoming the sudden death of the Arch-Duke Franz-Ferdinand. There was considerable opposition in these capitals to the Arch-Duke's plan for reconstructing the fabric of the Austrian Empire upon a liberal basis which included the setting up a triune system, in which the Slav minorities would have participated, in place of the old dual system of the Austro-Hungarian administration. Also, after the unofficial warning of the Serbian Minister in Vienna, the Austro-Hungarian authorities took no steps adequately to protect Franz-Ferdinand.

The full story of those dark days covers much wider ground than is covered in Miss Durham's Serbophobe book. But one hesitates to follow Miss Durham's example and drag more skeletons from the cupboards of the tragic past at a time like the present when all the more constructive minds in Europe are bent upon removing past bitterness and seeking to build a happier future in Europe.

Miss Durham's book is, however, skilfully compiled, and, in the absence of any official reply from Belgrade, it might well produce a deplorable effect upon the mind of the lay reader who cannot be expected to know at first hand the intricate workings of Near Eastern politics. I think, therefore, that it is in the interests of truth to point out that Miss Durham's book is not so impartial as she would have her readers suppose. As Dr. Seton-Watson wrote in the *Morning Post* early this year, "the connexion with German propaganda is quite open." Dr. Watson referred to the fact that Miss Durham and her friends contribute to the German *revangiste* paper *Die Kriegsschuldfrage* (War Responsibility), which publication exists for the purpose of exculpating the Central Powers.

All the fresh light Miss Durham throws upon Sarayevo leaves the major question of war-responsibility in the outer darkness. She has made much of M. Liouba Yovanovitch's careless personal jottings. She has nothing to say of the admission of the late Field-Marshal Count Conrad Von Hoetzendorff, Austraian C.-in-C. during the War, and Austrian Chief of Staff before the War, who admitted that during the years immediately preceding the outbreak in 1914 he repeatedly urged the Vienna Cabinet and the German Great General Staff to attack Serbia in order that Austria-Hungary might combat the "ethnic claims" of her Slav minorities.—I am, etc.,

Book Reviews and Notes.

ANCIENT SEA POWER.

"SEA POWER IN ANCIENT HISTORY." By Arthur MacCartney Shepard. With a foreword by Admiral William A. Moffatt. (London: Heinemann, 15s.)

Two motives have combined in Mr. Shepard to produce this book, the absence of any work in English dealing adequately and exclusively with his subject, and the fascination which the subject itself exercises over him. He has set out to make himself the naval historian of ancient Greece and Rome, to disentangle his subject from the mass of contemporary general history, and to present clearly and concisely the nature and influence of ancient sea-power. In doing so he has laid himself open to the obvious criticism that, by concentrating solely upon one aspect of events, he has given a distorted view of their importance, a criticism against which he defends himself by the plea that "his subject is special writing and cannot hope to stand alone." This is undoubtedly true, but it serves merely to call in question the usefulness of his book. To those who have only a nodding acquaintance with Greek and Roman history Mr. Shepard's book would be the most dangerous of guides, while the serious student will prefer to go direct to those authorities, ancient and modern, that Mr. Shepard has consulted. For Mr. Shepard, as we understand him, makes no claim to original research or discovery. He has simply rewritten those chapters of ancient history that specially appeal to him, and by omitting all other relevant factors, has drawn his picture of ancient naval warfare in a false perspective. Important to Athens as her fleet was, her history is more than the history of a series of naval defeats and victories. But it is in dealing with Rome, that essentially military power, that Mr. Shepard's method is open to the greatest objection. Readers must judge for themselves whether, in Mr. Shepard's words, they gain "through the separate presentation of a large and vital phase of Greek and Roman annals a clearer and fuller appreciation of classical history and civilisation as a whole," or whether on the other hand, they find their impression blurred and distorted.

H. L. C.

BUDDHISM FROM THE FOUNTAIN HEAD.

"SOME SAYINGS OF THE BUDDHA, ACCORDING TO THE PALI CANON." Translated by F. L. Woodward (Oxford University Press 5s. net.)

Historians of the Roman Empire in decadence tell us that a multiplicity of exotic religions superseded the national cult established by August Cæsar. The self-same phenomenon characterises the troublous times in which our lot is cast. Neo-Buddhism struggles with theosophy for acceptance; but both are far removed from the teachings of the royal mendicant. Professor Woodward has laid earnest seekers after truth under a lasting obligation by giving them the gist of early Páli tests in the form of a pocket volume. We see the Buddha seated in a deer-park, near Benares, or in a Hall with a peaked gable, or in the park of Anáthapindika, "Feeder of the Poor," and hear him expounding his doctrine to disciples. Existence, he told them, was an unmixed evil, inasmuch as it involves an endless succession or re-births into a world of pain and sorrow by subduing earthly passions and stirring for self-perfection. There was no room for a personal God in the precepts which fell from the Master's lips. He held that all phenomena were produced by a chain of causes and effects; and that salvation could be attained only by the individual's persistent efforts. Nor did he hold out any hope of a personal existence in the hereafter; but he vouchsafed the following reason for his silence:—

> This is a question not concerned with profit or with the first principles of the holy life. It does not conduce to aversion, disgust, cessation, calm: to supernormal powers, nor yet to perfect wisdom, nor to Nibbána (Nirvána).

Primitive Buddhism is evidently a science rather than a religion: and regarded in that light it was an advance of its age by twenty-five centuries at least. Extremely interesting are the Master's incursions into the realm of autobiography; and the following passage proves that, in one respect at least, human nature has not changed since the days when he enunciated a creed which, in a more or less diluted form is still professed by a quarter of the world's population:—

> There are five characteristics possessed of which a sick man is hard to nurse. He will not take remedies, or he observes no moderation taking remedies, or he does not follow the drugs prescribed; does not disclose the real nature of his ailment to the nurse who desires his welfare, nor does he tell him whether his sickness wains or waxes, or stands still; lastly, when he is impatient of his bodily feelings that arise, painful, cutting, bitter, grievous, unpleasant, life-destroying.

F. H. S.

IN THE HEART OF ASIA

Truth.—"Those who lament the alleged loss of Great Britain's prestige in the Orient should read The Heart of Asia . . . I hardly know which the more to admire, the remarkable nature of these achievements or the singular modesty with which Colonel Etherton relates them in this extremely interesting book."

CONSTABLE : LONDON W.C.2.

HIDDEN TREASURE.

"SNOW RUBIES." By "Ganpat." (Edinburgh: Blackwood 7s. 6d. net.)
"THE TREASURE OF ALI MUBARAK." By Raymond M. Clark (London: Hutchinson. 7s. 6d. net.)

These are both stories of adventure in the East. One tells of the search for a forgotten ruby mine in the mountains of Tibet, and the other of search for hidden treasure in the Egyptian desert. "Ganpat's" book can be described as simply an adventure story. It begins with the arrangements for the search, and ends with the return of the return of the four travellers to Kashmir after many exciting experiences. The idea of a valley which is inhabited by a race of former slaves, who have been cut off from communication with the outside world, suggests a Rider Haggard romance. The characters are sufficiently real for us to be interested in their hairbreadth escapes, but we do not feel that even their creator takes much interest in them apart from their place in his plot.

On the other hand, Mr. Clark, although he gives the authentic treasure-hunt appearance to his book by adding a map and a glossary of Arabic words, seems to be most concerned with the character of his hero, Guy Hayward. Hayward's escapades as a boy on the Kentish coast, which make up the first chapters, and his courage at the end when he is back in England, an invalid waiting for death, remain quite as vividly in the mind as do the desert scenes.

Both these books are enjoyable to read and provide many thrills while the nature and whereabouts of the mysterious treasures are being discovered.

THE WEEK AT HOME.

London, Tuesday Morning.

The Reconstruction of Vickers.

Although business quarters affected to show no surprise at the announcement last week that Vickers were to be demobilised and reconstructed, the general public were hardly cheered at seeing the £1 shares of this great firm drop in a twinkling to 6s. 8d. But subsequent consideration of the functionings of this conglomerate company, which, unlike the Lever concern, had no magnetic personality at its head, enabled one to see how inevitable this reconstruction was. It was the War which dominated Vickers, and when Peace arrived no man was found who knew the secret of selling enough sewing-machines to make up for one battleship.

How this vast accretion of interests will prosper now that motor-cars and machinery are, for many years at any rate, to replace armaments, it is difficult to guess. It is the opinion of many judges that the depression in the iron and steel industry is at an end; if they are right, Vickers will have shown to the world a notable example of unloading ballast and of tacking their ship at precisely the right moment.

Admiralty and Dockyards.

The Admiralty's decision to close the Rosyth and Pembroke Dockyards was confirmed last week by the House of Commons, not, however, without some opposition. This opposition came for the most part from the Labour Party, which, curiously enough, appears to approve of every naval reduction except one on shore. The reasons advocated for the retention of work at Rosyth and Pembroke ranged from the suggestion of Mr. MacDonald that the Admiralty were economising here only that they might spend prodigally at Singapore, to the threat of Mr. Adamson that the closing of Rosyth was the first step in a Scottish demand for Home Rule.

The debate, from the very fact that Rosyth happens to be in Scotland and Pembroke in Wales, was not without its amusing side. The idea that England gains enormously from these two countries was played with most ingeniously; no one even so must as hinted that these two countries derived the slightest benefit from England. England is not to be omitted (has she ever been?) from these persecutions, which inevitably entail hardship on somebody. It is a distinguishing mark of our "nationalisers" that that somebody must always be somebody else. Truly Parliament suffers as much from our "Have it both ways" as from our "Facing both ways."

British and Continental Trade Unions.

The representatives of British Trade Unions have been getting into hot water on the Continent. Their proposal whole-heartedly to support the "Red" Trade Unionists of Russia has been unequivocally turned down by Continental Trade Unionists at Amsterdam, and one might have thought that subsequent consideration of the Amsterdam International's judgment would have been long and deep. Not so, however. The British and Russian delegates have fallen even more closely into each other's arms at Berlin, and have issued a joint manifesto which is quite definitely hostile to Continental Trade Union opinion.

In all probability this Berlin decision on the part of the British to get the Russians lined up with the Amsterdam International will cause much trouble here in Britain. The General Trade Union Council is, it seems, still more deeply committed to joint propaganda with the Russians—the very Russians whom the British Labour Party so definitely refused to countenance at Liverpool. It looks as though the conflict between the "economic" and the "political" Socialists here is very far from finished. With Continental support, however, the "politicals" are in a very strong position.

The Kitchener Chapel.

The figure of Kitchener, whatever smaller men may say, will always be a commanding one; to this generation, at any rate, he appears infinitely great. There was, therefore, very general interest taken in the Kitchener Memorial Chapel (in the base of the Bell Tower of St. Paul's Cathedral), which was ceremonially opened last week. The chamber is a permanent addition to the art of ecclestiastical building, the architect being Mr. Detmar Blow and the sculptor Mr. W. Reid Dick. What posterity will say upon this chapel it is useless to speculate, but controversy upon its appropriateness has already begun.

Nonconformist Catholicism.

Some weeks ago I referred to the Catholic form of services which are being held, under the auspices of Dr. Orchard, at King's Weigh House, a Congregational Church. Dr. Orchard's services have, as I anticipated, raised very considerable discussion: he has found many to dispute both his soundness and his right to use a Congregational Church for Mass, and equally he has found many devoted followers. On the whole, if one may judge from the religious Press, he has found more supporters than opponents, a surprising number of Nonconformists subscribing to his own postulate that there are no limits to the liberty of an independent church, and that so long as he is confirmed in his actions by his church he is within his rights.

If a kind of Anglo-Catholic movement is to thrive in the Free Church, what becomes of the threatened junction of the Broad or Evangelical Church of England with the Nonconformists?

'Varsity Football Matches.

The past week was a good one for Cambridge, who drew the Association match with Oxford, and, on the following day, smothered them at Rugby. The Soccer match at Stamford Bridge was a very bright affair, greatly entertaining the five or six thousand spectators. The game, judged by pre-War standards, showed that in goal-keeping and in centre half-back play the Universities are up to standard, that back play is incomparably inferior, and, most notable of all, the wing halves had not even learned to mark their outside man. And of the ten forwards, Oxford had the only man who really was one. But it was a splendidly hard and fast game, in which, strangely enough, merit was matched with equity.

Of the Rugger match it is scarcely decent to rake it all

up again, so saddened are the Oxford enthusiasts. It is useless to point out the Dark Blues' weaknesses; they simply never got together, and anyone who knows the game realises that that sometimes happens to every side. No one would pretend that the Cambridge fifteen was essentially and potentially thirty points superior, even if on Thursday they might well have been forty-five points ahead. One was of course glad that the right side won; but one was sorry for Oxford.

The B.B.C.

The papers recently have been recording a good deal of adverse criticism of the programmes of the British Broadcasting Company, but the trouble with newspaper critics is that they so seldom know what they want—and negative detractors are the most superfluous, if perhaps the most abundant, people on this earth. It is impossible to classify complaints, but the largest category seems to contain the charge that the programmes are too "high-brow." (Who was it, by the way, who defined a high-brow as the main thing that demarks mankind from monkeys?) Now whatever the B.B.C. programmes are, they are not high-brow. There is not by any process of reasoning the slightest argument for saying that Mozart, for example, is any more high-brow than Oscar Strauss or Berlin. People so much love labelling things that they judge extrinsically, not intrinsically. If, for instance, it were possible for the announcers to make a mistake and attribute to Scriabine a composition by Chaminade, those who intended to listen would recoil in disgust equally with those who did actually listen.

The whole conflict that is supposed to exist between "classical" and "popular" music is in fact largely a fictitious one. Remove the labels and the names of the composers, and you at once get the most amazing results.

Nor are the attacks on the "talks" whilch the B.B.C. give much more intelligent. As often as not, these are judged by the nature of the speaker's voice, just as our social church-goers are apt to judge the work of a sermon by the vocalisation or the delivery of the preacher. It is one's firm opinion, in fact, that the B.B.C.'s programmes must always be chosen by a discerning minority, and that all this talk of bowing to public opinion is so much eye-wash.

THE PROBLEM OF THE DERVISHES.

At a meeting held at 14, Queensberry Place, South Kensington, on December 3, Mrs. Margaret Hasluck read to the Near and Middle East Association a Paper on "The Problem of the Dervishes," Sir Harry Lamb being in the Chair. Mrs. Hasluck began by affirming that in suppressing the dervish orders in the summer of this year Mustapha Kemal Ghazi Pasha attacked a religious institution, which appealed to the majority of Turks. In support of this thesis the speaker adduced the enormous number of the dervish orders, each founded by some saintly man who cared enough about Islam to disagree with his predecessors about its ritual or dogma and to face the opposition his disagreement roused. Each order, once founded, depended entirely on the freewill offerings of the pious living or the voluntary legacies of the pious dead. Lay members as well as dervishes being allowed to join the orders and the worship of buried saints providing almost the only outlet permitted by Islam to religious emotion, nearly every Turk had some more or less definite connexion with the dervish orders.

Moreover, the dervish orders were the only organised religious force in Turkey which touched the hearts of ordinary men and women, and suppressing them was, therefore tantamount to attacking the Mohammedan religion itself. From his experience of the various nationalities which formerly composed the Turkish Empire, the Ghazi cannot but have been aware of the cohesive power of religion in a country such as Turkey.

For these reasons he must have had very strong reasons for interfering with the dervishes, since that interference was bound to rouse hostility against himself and almost to disintegrate Turkey. Neither religious scepticism, current in Turkey under French influence long before the rise of the Soviets, nor a desire to plunder the *tekkés*, seemed so likely to have influenced the Ghazi as did political fear, which is at the root of every trouble in the Near East. When he rebelled against the Sultan in 1919, the powerful Mevlevi of Konia, as the Court party, opposed him bitterly: the sheikhs who organised the recent rebellion in Kurdistan and the agitators now at work round Sivas and Erzeroum were Bektashi, and no doubt enormously helped by the secrecy which surrounded that sect. In such circumstances it was difficult to see what else in self-defence the Ghazi could have done. It was at least to his credit that he did not order a general massacre of them, as Sultan Mahmoud did in 1826 of the Yanissaries and Bektashi in order to rid himself of their political menace.

It was difficult to say how far this suppression was final. If the different orders of dervishes were organised under a single head, as Western orders of monks were subordinate to the Pope, the dervishes could not be suppressed finally. As, however, they lacked a central organisation, the Ghazi's policy had a greater chance of success. On the other hand, he could not live for ever and no strong successor had as yet appeared on the horizon, nor did he seem to be planning anything which should fill the vacuum he had created in the national life of Turkey.

The following were amongst those present:—Prince Mirza Arasteh (The Persian Chargé d'Affaires), First Secretary, Afghan Legation, The Viscountess Dupplin, Sir Henry and Lady Burt, Sir John Foster Fraser, Sir William Clark, The Venerable Archdeacon Potter, The Hon. Mrs. Fielden, Mrs. Stewart Erskine, Mrs. De Bunsen, Mrs. Hugh Spender, Mrs. L. Cobham, Miss Harley Bacon, Monsieur Ardalani (Persian Legation), Major Christie, Captain Bennett, Dr. Ernest Griffin, and Mrs. Charles Hancock.

Colonel D. G. Ridgeway, D.S.O., has been appointed as principal staff officer, G.S.O.I., on the Lahore District staff, where he has been serving as Assistant Adjutant and Quartermaster-General. He is being succeeded in the latter appointment by Colonel C. R. Lloyd, D.S.O. Both officers have been officiating in the appointments now approved, the change arising from the transfer of Colonel E. D. Giles, C.M.G., D.S.O., from the Lahore staff to the 4th Indian Cavalry Brigade as officiating commander.

THE CIVIL SERVICES BILL.

The debate on the second reading of the Government of India (Civil Services) Bill in the House of Commons seems to have disclosed considerable unanimity of opinion in favour of the Bill, in spite of the opposition to it voiced by Labour members. It may, indeed, be confidently asserted that the latter would have regretted the success of their amendment, to defer for three months the second reading of the Bill: it was, of course, obvious that it was brought forward in the full knowledge that it could not succeed. The passing of the Bill during the present session of Parliament does not really affect those of the officials concerned who are now serving in India, since its provisions have already been acted upon by the Government of India, for whom the present Bill is in the nature of an Indemnity Act for the past, as well as an Enabling Act for the future. The necessity for its immediate enaction is due to the need for the continuance of British recruits for the All-India services—this year's encouraging response, after a succession of lean recruiting years at Home, was largely the result of knowledge that the Government had determined to pass the Bill at the earliest possible moment. Failure to carry out this determination might seriously shake the confidence that is only now beginning to return to British Universities: and might even reintroduce, in India, the doubts that the recommendations of the Lee Commission did so much to allay. Sir Henry Craik, the member representing the Scottish Universities, voiced this feeling when he said that, in supporting the Bill, he was not looking at the interests of the Indian Civil Service, but at those of the three hundred millions of India. A stream of worthy recruits to the British services in India was of essential advantage to India: and it was his duty to his constituents—those Scottish Universities which had, in the past, supplied so large a proportion of the members of the Indian Civil Service—to see that nothing was left undone to assure the continuance of that essential stream. An Indian administrator had told him that he had, at a railway station, once said to an Indian, "In the days of your grandchildren and mine, shall we still be here?" The Indian pointed to two water butts on the platform, labelled "For Hindu gentlemen," and "For Mohammedan gentlemen": and replied, "So long as those two inscriptions are there, we cannot do without you." The course of the debate showed that these considerations were present in the minds of the Labour members who opposed the second reading, one of whom struck the same note when he said that it was common ground between the supporters and opponents of the Bill that any unfavourable conditions in the Indian Civil Service would react unfavourably on the Indian people, to whom it was of the utmost importance that the I.C.S. should be a contented, a happy and efficient service. All that the Labour members urged was, that this is not the right way to bring about that result: that to take away from the Indian Legislative Assembly the power to deal with the officials whose salaries they pay is a poor method of showing trust in India and of begetting trust from her in return: that "pin pricks" to Indian sensitiveness, such as the one contained in the Bill, are destructive of the mutual confidence on which the whole future of the connexion between Britain and India depends, and undermine the power for good which the British official in India is able to exercise: and that, if the means now to be adopted are really the right ones to employ, Parliament ought to find the money to carry them out, instead of leaving the Assembly to pay the piper while denying it the right to call the tune. The conclusion is, indeed, irresistible that the Labour opposition was only formal—a gesture that should be satisfactory to Indian politicians, the true significance of which would be perfectly well understood by their British colleagues.

As was probably inevitable, some of the opponents of the Bill represented it to be a racial measure, designed to benefit Europeans at the expense of Indians; but its supporters had no difficulty in rebutting this suggestion, or in showing that it affected Indian and British members of the Service in exactly the same way and to exactly the same extent. Lord Winterton, when explaining the objects of the measure—which, as he said, are very simple, though necessities of draftsmanship have clothed them in complicated phrases—said that it introduced no new principle, but merely gave legal effect to one that found full expression in the Government of India Act of 1919: the intention of which was "to exclude absolutely from the purview of the Assembly the salaries of persons apointed by the Secretary of State": and that all that the present Bill did was to make clear and definite what the Government believed to have been the intention of Parliament at that time. He added that, though it was true that the Legislative Assembly had rejected the proposals of the Government of India to give effect to the recommendations of the Lee Commission, one of which was the point at issue in the present Bill, yet it ought to be remembered that the report of the Commission was unanimous and was signed by every one of its Indian members: a fact that was, in itself, a striking tribute to the way in which Indians and Europeans can work together.

A further objection to the Bill brought, forward as a sort of side issue by one of its opponents, was that it did not go far enough: in that, while it was designed to benefit the Indian Civil Service, it failed to confer similar advantages on others of a more lowly station: and he urged that every man of European origin in India, who is employed in, or in any way connected with, any of the Civil Services, should be entitled to any benefit granted to the higher British officials. As was again probably inevitable, this led to a general attack on the scale of wages paid to the rank and file of Indian "State workers," such as teachers, postmen and railway officials. Colonel Wedgwood, speaking on this point, said that the most unpopular of the many unpopular things that he did in India, was to pay his "bearer" in Calcutta sixty rupees a month instead of the ordinary wages of thirty. It is not unlikely that his estimate of the special unpopularity of this action was correct: he doubtless forgot that the "globe-trotter," whose requirements in India are limited to a single body-servant, lays himself open to serious complaint if, by paying double wages to his solitary servant, he "spoils the market" of residents who seldom find it possible to reduce their total household staff below a dozen. Mr. Wardlaw Milne brought the debate back from absurdity to good sense by championing the cause

of the officers of the Imperial Provincial Services. When the Act of 1919 was passed, what were then known as the Uncovenanted Services were split up into three—the All-India, Central, and Provincial Services. To members of the first two, appointed by the Secretary of State, the provisions of the present Bill undoubtedly apply; but there is a difference of opinion as to whether they apply technically to the third. Mr. Milne said that, just as the Bill, as it stands, is of the greatest importance to secure the future of the Civil Service in India, so is it equally important that the prospects of men in the Provincial Services should be secured: and he appealed to the Under Secretary of State to look carefully into the cases of those men, to consider the extent to which the Bill effects them and, if the conclusion is that it does not affect them, to see whether any amendment can be made in order to bring them within its scope. This is undoubtedly a matter of real moment. There is every indication that, as the Reforms progress, the Provincial Services will become more and more important, even if the progress is not, as many people think it certain to be, in the direction of Provincial autonomy, It may be hoped that the views of those who hold that the affected officers of the Provincial Services are already safeguarded under the Bill, will turn out to be correct: for, at this late stage in the present Session, it appears unlikely that a safeguarding amendment, the wording of which is a matter of much technical difficulty, could be included in the Bill without serious risk of delay that would imperil its passage: and the importance of its early acceptance is too great to allow its supporters, even those most keenly desirous of ensuring that the safeguards enacted by it are fully comprehensive, to run the risk of losing it altogether.

CURRENT TOPICS.

Swarajist Policy.

Cabled reports from India announce that the split in the Swaraj Party has been "healed." The process of healing, however, seems only to consist in an agreement, arrived at after a conference between representatives of the orthodox party and of the apostles of "responsive co-operation," to suspend their respective propaganda until the meeting of the Indian National Congress at Cawnpore during Christmas week. The real point at issue has now passed beyond the distinction between non-co-operation and responsive co-operation; and has become a question whether Indian nationalist politicians shall or shall not agree, in future, to accept office under the existing Provincial Governments. This point has now been deferred for debate by the Congress: which is not the same thing as decision by the Congress; for it is practically certain that, if Congress records an opinion unfavourable to the champions of responsive co-operation, they will continue to pursue their new policy in spite of that opinion; while, if the protesters carry the day, the leaders of the orthodox party, however much in their hearts they may wish to follow the example of their opponents, will find it impossible to make immediate profession of their willingness to do so. It will at least be necessary for them to observe a decent interval before they consent to swallow their principles and to bow to the superior political acumen of their erst-while followers.

Thus, whatever the recorded decision of Congress, matters are likely to remain as they were—for a time. But there can be no doubt that the future is with the dissentients: and there can be but little doubt that the orthodox party have already realised the fact, and are now regretting that they did not have the intelligence to start the movement themselves instead of having to face the only remaining alternative—a period during which they will sulk in their tents until they find it possible, by some process of reasoning such as usually presents no difficulty to the Indian mind, to explain that the new departure is really what they themselves had been working for all along, and that the hasty action of a few hot-heads had effected nothing except the untimely seizure of a position that the wiser heads would themselves have occupied at the really proper moment, if they had been left to do so undisturbed. By some such manœuvre as this, Pandit Motilal Nehru and his admirers will reap, in a dignified manner, the fruits of the victory scored by their opponents, to the accompaniment of the respectful applause of the newspapers that are now violently denouncing responsive co-operation, its devotees and all their works. But, in view of the heated recriminations that have passed between the disputants and the rebukes —variously described by supporters of the protagonists as "dignified" and "petulant"—that have been hurled by the Pandit against Messrs. Kelkar and Jayakar, the two latter are likely to make the most of the time during which the former remains sulking in his tent: and it will not be their fault if the period is not a prolonged one.

Meanwhile, the Bombay Corporation, after a stormy debate, has decided, by a majority of 46 votes to 21, to present an address to the new Viceroy, when he arrives in India. In the attempt to refuse this ordinary politeness, the malcontents were only following the example set by their late Chairman, Mr. Patel: who, before he found grace in the Chair of the Legislative Assembly, had roused his supporters to a fever of adulation by his "independent gesture" of refusing to attend the official reception of Lord Reading when he visited Bombay about a year ago. Mr. Patel has since learned better manners: and the large majority in favour of the address seems to suggest that some at least of his admirers are gradually doing the same. It is amusing to notice that one of the Swarajist speakers, against the resolution, complained of the fact that Bombay was the first city to be visited by every new Viceroy—a fact that he described as a "nuisance": the thought in his mind being, no doubt, that it was disturbing to be obliged always to set a precedent, instead of being able to take credit for following, or refusing to follow, someone else's lead.

The Sporting Spirit.

The correspondent of a London daily, in reporting the result of the cricket tournament at Bombay, says that, though the matches are generally played in a sporting spirit, the worst methods are sometimes employed in Indian cricket. It is to be presumed that this accusation is levelled against the spectators; for, so far as one's experience goes, it certainly cannot be truly made against the players. The correspondent says that, in the Hindu-Parsee match, a Parsee youth was found to be flashing a mirror into the eyes of Hindu batsmen: and that, in the English-Hindu match the final, won by the Hindus after being set the formidable task of making 354 runs in the last innings—one of the English batsman received a note saying "hit out or get out," on which, supposing it to be from his captain, he acted, though it afterwards turned out to be "unauthorised."

There are certain tricks, which Englishmen usually consider unfair, that are not so looked upon by other sporting nations. At baseball, for instance, it is an important part of the professional game to keep up a running fire of comment—always personal, and sometimes abusive —in the hope of putting the oponent off his game and, if possible, making him lose his temper. A more doubtful form of helping one's own side was experienced by a visiting team of English international lawn tennis players —a good many years ago, it is true—when they found that, when an English player was preparing to smash a high lob, a large section of the spectators, by preconcerted signal, all yelled together just as the ball was coming down. "Barracking" has been an experience of first-class cricketers for many years past: and it is, now at any rate, pretty impartially applied; but it was generally considered that a remark once addressed by an enthusi-

astic spectator to a famous English cricketer was "hardly cricket": when he was waiting for the descent of a skier in the long-field, and the breathless silence of the ring was broken by a quiet voice that delivered a personal appeal at the critical moment—"miss it, Archie, and I'll let you kiss my sister"

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, November 26.

The Queen Mother.

The announcement of the death of Queen Alexandra has afforded another instance of the personal loyalty to the reigning family that is still one of the most universal sentiments in the Indian Empire. It is probably true that this feeling, which in the case of the late Queen Victoria almost amounted to a worship, remains almost unaffected by the turmoil of politics and agitation of recent years, and the present has been the occasion of sympathetic leading articles in almost every daily paper. *Forward* says "No woman, perhaps no person, has held the affection of a whole nation, except perhaps Queen Victoria, so deeply and so long as Queen Alexandra." Upon receipt of the news on Saturday last, all sporting fixtures and entertainments for the day were cancelled: and, although Calcutta otherwise appeared normal, there was on all hands an obvious restraint and a sense of personal sorrow. At the meeting of the Corporation last night, the first business was the passing of a resolution of loyal condolence with His Majesty the King Emperor. The day of the funeral has been notified as a public day of mourning, and a special memorial service will be held in the Cathedral while forty minute-guns are fired from the ramparts of Fort William.

The South African Question.

The announcement that the Government of India are sending a deputation of Indian members to South Africa, to gain first-hand information regarding the conditions prevailing there in connexion with domiciled Indians, gives no satisfaction to the extreme parties. Mrs. Sarojini Naidu criticises the personnel and says, "The Indians there feel that a deputation of Government, or the nominees of the Government, will not satisfy them. They would like people in whom they have absolute confidence, and who have a strong backing in India." Apart from the fact that those, who have what she considers a "strong backing" in India, would probably find it a little difficult to convince anyone but themselves of their powers of independent observation, the statement recalls the strong criticisms of certain Indians abroad which were published last year by a returned member of the Congress party. A cable has now been addressed to Mrs. Naidu by the South African Indian Congress, which asserts that a Government deputation will be of no use, and asks her to use her influence to defer its sailing until the arrival in India of a South African contingent. Are Mrs. Naidu and her South African friends afraid of the facts? No one will dispute that political distinctions within the Empire, based upon race, are a difficult subject: and attempts to draw rigid colour lines may easily lead to anomalies and even injustice; but nothing is to be gained by concealing the facts, and no honest thinker or politician can object to any steps which are taken to ascertain them. Government announces that the deputation will not be delayed, and their report will be awaited with considerable interest.

Our Legislators.

At times resolutions proposed in the Bengal Legislative Council are peculiarly illuminating as to the legislative calibre of those who sponsor them. The motions put up for the next session include many which show real capacity and a desire for information or for constructive work; but there are others of all grades on the path to frivolity, or even absurdity. One at least shows consistency in a budding politician, a rare quality indeed in the Swaraj ranks. His proposal is "that the running of all sorts of cycles and motor vehicles invented by foreign brains be prohibited in the Province of Bengal." This is probably a serious attempt at self-advertisement and not a comment on his friends who, whilst attiring themselves in *khadder*, do not scruple to spend travelling allowances on trains and motors and to use the Government posts and telegraphs. As a comment on the political capacity of the member, and the electors who send him to take his part in legislation, it is a priceless gem.

The Freedom Movement of Modern Bengal.

Bepin Chandra Pal, whose name has been mentioned in these letters in connexion with his political contributions to the *Englishman*, has put forward a plea for the formation of a Liberal Independent coalition for the purpose of obtaining self-governing Dominion status for India. In a Press appeal, he argues that both the sections he addresses have main points in common, and suggests the pooling of the forces of both parties in a constitutional effort to gain the common objective. Bepin Babu is taking the campaign seriously and, with "The Freedom Movement of Modern Bengal" as his subject, he is addressing a public meeting to-night. With his able pen to back his oratory, he may succeed in bringing about the organisation of a strong constructive party when the All India Liberal Federation meets in Calcutta in December. Bengal will not be easy of conversion, but Bepin Babu has struck at an auspicious moment; resignations from the Swaraj Party are still taking place, and Pandit Motilal Nehru's short temper has put him into bad favour with all parties.

Markets.

Both jute and gunnies have been firmer markets this week; but with sellers standing out for full prices and operators unwilling to deal at the rates offered, little business has resulted. No change is reported in the piece-goods market. Tea continues very firm here, in spite of the more irregular tendency in the London market; the auctions showing higher quotations for the common descriptions, and a steady rate for other qualities. A further considerable drop in stocks is anticipated for the current month.

Although business on the whole has expanded considerable during the week under review, the outstanding feature in the Stock Market has again been the further all-round improvement in tea and rubber shares. Jute shares have remained steady, with a somewhat better inquiry, especially for the more speculative counters; the tone at the close is firm. With the pessimistic feeling at present obtaining in the coal trade, there seems little chance of any activity in the shares, which are now almost neglected; a more confident tone should be apparent if the companies are successful in obtaining good contracts with the railways for next year's supplies; but, until these have been settled, there appears but a small hope of any material rise in share values. Cotton shares continue in moderate demand at previous rates, with investors willing to operate only on a small scale. Tea shares have not been slow in reflecting the better position of the industry, and this week has been responsible for a marked increase in the turnover in the shares; the demand has been general, and business has been restricted only by the scar-

city of seliers. With the crop shortage and the satisfactory prices obtained at the recent auctions here, a further appreciation may reasonably be expected in the near future. In sympathy with the increase in the price of rubber, the shares have registered a further sharp rise, and conditions almost akin to a "boom" are prevailing in this market; the only factor limiting the volume of business being the scarcity of scrip on offer. Investment stocks have been in keen demand, with buyers willing to pay full rates.

The Bank Rate remains unchanged at five per cent, and money has been comparatively easy, although the trade demand has increased by slightly over a crore and a half. Exchange continues very steady.

CONFLICT OR SYNTHESIS?

By Janus.

Some eminent authorities have been telling us of late that what is going on in India is a conflict between East and West, a conflict in which, as one of them has put it, there can be no temporising or compromise. The matter is rather an important one, and I want to ask whether the diagnosis is altogether accurate. Are we of the West really engaged in a fight to a finish, a conflict in which either Devil or Baker must ultimately win? May it not be nearer the truth to say that we are spectators, interested indeed, but still spectators rather than protagonists, of an effort which is being made by Indians to reach a synthesis on essentials, an effort which involves a good deal of sifting, and for the moment, raises a good deal of dust? It is rather rash, I allow, to enter the lists against those eminent publicists and proconsuls who have been putting forward the conflict theory in the Sunday papers and elsewhere; but I think my view is worth taking into account, if only as presenting another side to a question that has more sides than one: and, to begin with, I ask leave to illustrate the difference in standpoint by a personal reminiscence. One fine April afternoon, I was taking a stroll in Oudh in the teeth of a hot and healthy west wind, when suddenly I found myself involved in a cloud of flying dust and dirt that made it, for the moment, impossible to see clearly. "A dust storm," I said to myself; but, when I had gone a little further, I found that it was only the peasants taking advantage of the wind to winnow their wheat. All the dirt and dust was being blown away, and there on the ground were the rising heaps of pure grain, so pure indeed that it would be necessary by and by to add just a little new dirt to bring it to the standard of the workaday world. My question then is, whether the dust that has been choking us during the last few years may not be in fact the inevitable accompaniment of a process which is necessary, and will ultimately be beneficial.

Let us look back for a moment. The old Hindu polity, with all its glamour, failed decisively and disastrously. Judging by numbers and resources, India could have swallowed the successive waves of invaders in her sleep; but there was nothing in the polity for which men in the mass were quick to fight, and in the last resort to die: and, when you have said that of a polity, you need say nothing more. Anyway, for six centuries Turks and Persians, Afghans and Moguls, did with India precisely what they liked, till at last the time came when a handful of Englishmen, actuated by the national character rather than by any logical process, gave Indians a chance to lift their heads. It was inevitable that the men who first dreamed of national reconstruction should think mainly of copying and borrowing from the West which had brought them the unexpected opportunity; but reconstruction is not so simple a process as all that, and of late the pendulum has swung back, until quite a number of people, with rather piercing voices, say they want to borrow nothing at all. This however is rhetoric, not fact; for the loudest of them borrow a good deal, including much of their method of expression, and not a little of their outlook on life. I can visualise the leader of their rhetoric, as, clad in homespun, he arrives at Kashi or Prayag mounted on a stately elephant; but I read in the papers that he generally comes in a Daimler, and homespun in a Daimler is, to my mind, a symbol, though a crude one, of synthesis rather than conflict. Rhetoric apart, it is not somewhere near the truth to say that all educated Indians want to borrow something from the West, but at the moment they differ greatly as to how much they want to borrow? Is not that one of the chief reasons why even the most homogeneous "group" quarrels so violently in committee, and why the eventual "formula" is always so ambiguous?

Judging by acts rather than words, I take it that at present the idea that divides educated Indians least is the maintenance of the principle of ascendency. It is certainly an Indian idea, for, as far back as we can see, we find a minute fraction of the population enjoying all the good things of life, provided for them by a proletariat living on the verge of starvation and kept under the most rigorous discipline. "India lives like the fishes in the sea, the greater eat the lesser." Such was the verdict of the first Englishman to come in contact with the country. But some Indians say that Englishmen are, and have always been, hopelessly prejudiced; so let us look back to the strong man of the 14th century, the first Moslem to attempt serious interference with Indian institutions. Allauddin the Khalji made a vigorous effort in the direction of equality, and the phrase "that the burden of the strong shall not fall on the weak" runs like a refrain through his public pronouncements. But there is really no need to call witnesses, for the principle is enshrined in the sacred law of Hinduism, the venerable and unchangeable shastras: and the measure of the change in India's attitude may be found in the fact that, while the principle still commands acceptance, nobody would dream of trying to enforce many of the concrete precepts in which it is expressed. As a matter of fact, some of the best men in India are trying to whittle down by degrees this old ascendency, and to bring it more into harmony with that other principle, the potential dignity of man, which they have learned from the West, but which really came to the West from Palestine. That, to my mind, is the very heart of the synthesis towards which India is struggling, and undoubtedly it involves a good deal of dust.

Now there is no doubt that England has done something to help this process forward. We have left social and religious ascendency rigorously alone, but in the field of politics we have provided a fair opening for accommodation. We have not offered to India the principle of natural equality, the biggest lie ever told, even in America where they breed for size. What we have put before India is the principle of an equal chance, and the essence of the present constitution is not an order to abandon the old ascendency, but an invitation to the Indians at the top to maintain their ascendency by brains and character, instead of by whips and the fear of hell. I read recently, in a State paper which has acquired some little notoriety, certain observations to the effect that the Indian civilian must learn how to "explain and persuade, and argue and refute." I think myself that sermon might have been addressed more appropriately to the Indians at the top, for it indicates the lines on which a synthesis is apparently practicable. "Keep your place at the top, but stop ordering people about, and lead instead of trying to drive:" if the best men will only follow that advice, India will get forward much more quickly than she is doing now, and the rest of the synthesis will probably come easily enough.

What will happen if they don't? That question carries us from the one per cent. to the ninety-nine. The top dog may decide to stay on top; but, when the under dog realises how strong he is, he may have something to say. He is realising his strength now, and the process is one which is usually subject to rather rapid acceleration, when once it has started. There is time for a working synthesis to be effected, but there is not very much time to spare, and the alternative is a violent social movement, which, if we may judge from other countries, would place the ascendency in the hands of quite another class of people, for a time, at least, a very unpleasant class, with plenty of grudges to pay off, and very few scruples as to the way

Digitized by Google

of doing so. Looking forward then, it is possible to see India following one of two roads. The first offers a prospect of the gradual establishment of more human relations between the different classes, of more leading and less driving, of the quiet dropping of obsolete taboos, and the assimilation of objects and ideas which prove serviceable on trial. It is not a very easy road, especially for the leaders; mostly rough going, and some steep gradients at the start; but it leads in the right direction, to a new India which will be very much better than the old. The other route probably looks easier, but it ends in a morass, from which, possibly, the remnant of a nation may ultimately emerge, very dirty, and too tired to be of much use in the world. The choice lies with the Indians at the top: all that we can do is to see that the fingerposts are legible.

THE INDIAN MAIL.

The Bengal Anarchists.

In a recent note on the latest development of the revolutionary conspiracy in Bengal, the opinion was expressed that the extremist newspapers in India would affect to believe that the discovery of a bomb factory near Calcutta was a police fiction: and that, if any such discovery had really been made, the incriminating articles found were "planted" by the police, in order to justify their own existence and to assist Government in its policy of "repression." This was a pretty safe prophecy: and our Calcutta correspondent confirmed it by reporting that the leading local extremist newspaper had published a leader which endeavoured to show that the discovery was an engineered one, "although it was clever enough not to say so in as many words." The leading extremist newspaper of Bombay suffers from no such reticence. It says that the deadly scent for plots and anarchists of the minions of the Criminal Intelligence Department is always at fever heat when the cold weather brings visitors to India; that such exploits are customary in Bengal when the Viceory and his Council are at Calcutta: and that, in the present year in particular, the coincidence of the discovery with the agitation against the internment of suspected Bengali revolutionaries was specially striking. That the existence of the C.I.D. can only be justified by ample cases of detection once it is admitted that subterranean plots are insignificant, they are out of commission. That the Indian public are prone to credit the C.I.D. with "an abnormal capacity for fake-moves," and are so used to the alarums and excursions of the police that they are apt to "impute strategic motives to the discoveries claimed"; nay, local opinion suggests that "the whole coup is dependent upon the agility and enterprise of the agent provocateur—a hideous type of character necessary for all irresponsible governments. The line is lucrative, the perils are small: and, in these days of unemployment, it ought to shine as a prize job, with all the amenities of superior service and with the full immunity of pensioned security."

The paper proceeds to suggest that, even if the discovery is genuine, and not the work of a spy, the fact that the nine young men arrested are only alleged to have produced one bomb between them, and to have been found in possession of only one revolver and one pistol, is a proof that they "must have had a very conservative notion of the necessities of anarchical revolt in Bengal": the C.I.D. have now "to exploit the lodgments of one bomb, one pistol and one revolver—a very representative selection. Two or more of each series would have been more impressive: a promiscuous quantity would have been unanswerable." A Government that, instead of making inquiry into the causes of discontent, "prefers to be execrably selfish and autocratic, to keep their ill-gotten power by unscrupulous coercion, and to stifle inconvenient developments by the abrogation of law and equity" because they cannot afford to face independent investigation, naturally has resort to "trumpery stunts of anarchism."

The paper's remarks about the single bomb remind one of the girl's excuse for her baby "a very little one": and, in its suggestion that the "lodgment" of the three weapons was effected by a police agent, conveniently passes over the quantity of bomb-making materials which were seized at the same time. It is, to a certain extent, true that Government cannot afford to face independent investigation into the cases of a number of persons who have been interned, under the provisions of the Bengal Ordinance, without open trial; but their disclination to do so is not due to any tenderness for their own reputation, but is in the interests of those whom it would then be necessary to call as witnesses—if the latter were to tell what they knew, their lives would not be worth more than a few days' purchase. Shortly before the introduction of the Ordinance, two men were arrested for the throwing of a bomb into a Calcutta cloth shop, owned by a man whom the revolutionaries suspected of being a spy. That individual escaped, but his partner was killed: and the man who actually threw the bomb was convicted. But his accomplice, who was arrested with him, was kept for a few days in prison and then released, as the authorities were confident that, whatever the strength of presumption, the evidence against him would not justify his trial. The revolutionaries believed that he had made a statement to the police while in prison, and that he might be called as a witness against his comrade: with the result that his mutilated body was found, a few days later, on the railway line a post mortem showing conclusively that he had been murdered before being placed there.

It is this sort of thing that Government cannot afford to face. And, though the internees have, under the provisions of the Ordinance, been denied an open trial for that reason, the case against each of them was fully considered by an independent tribunal of judges, who personally examined the evidence and invited each accused to make a statement, in his own defence, against the charges in general: every man against whom this tribunal did not consider the charges to be proved was released: the Viceroy himself examined all the cases held by the tribunal to be proved, and it was only in the cases where his examination upheld the judges' opinion that internment was resorted to. The "abrogation of law and equity" necessarily inherent in special legislation of this sort not only, therefore, proves to have been patently necessary, but also to have been administered with the most anxious care; so that the argument, that any adventitious occurrence, such as the recent discovery, was needed to strengthen the position of Government in the matter, is in itself an absurdity, while the suggestion that the discovery was engineered for the purpose is a malicious absurdity.

I.C.S. Recruitment.

Under the heading "Not Fair," the *Bombay Chronicle* draws attention to what it calls the disparity of recruitment for the Indian Civil Service between the examinations in England and India. It says that while, at the last examination held in England, 36 candidates were selected, those successful at the last examination held in India were only five. It sees in this the result of the "University campaign" undertaken in England; but suggests that "even in an ugly game, there should be something fair; for the propaganda for British youths implied a rather foul disparagement of the quality and number of Indians prepared to compete on equal terms." The Lee Commission had recommended that the ratio of the future should be forty Europeans and forty Indians recruited by open competition out of every hundred vacancies in the I.C.S., the remaining twenty being found by promotion from the Provincial Civil Service, until the attainment of a British and Indian proportion of half and half; but now "the deprivation of equal chances for Indians competing in India seems to be a circuitous threat to check the progress of Indianisation." It was only on the acceptance by Government of the Lee Commission's recommendation in this respect, that Indians consented to drop the demand for complete cessation of European recruitment or, in the alternative, for the holding of the examinations exclusively in India: and it is now suggested that this undertaking has been broken.

The number of successful candidates at the recent I.C.S. examination held in England was 36, 21 of whom were Europeans, and fifteen were Indians. If five Indians were apointed as a result of the examination held in India, it would appear that the proportion laid down was quite accurately observed—greater accuracy, in the case

Digitized by Google

of an odd number, could only have been achieved if one of the Europeans were an Anglo-Indian, when it would have been exact. But it is to be remarked that, according to Sir Michael O'Dwyer's analysis in his recent book, 45 Indians were recruited for the I.C.S. during the years 1922-24 in India, and, in the English examination of 1924, out of eleven successful candidates only three were Europeans. It would seem, from these figures, that the boot is really on the other foot: and, as it is impossible to believe that the authorities of the *Bombay Chronicle* have omitted to read Sir Michael's book—if only that they might give it the slating that they must certainly think that any book by such an author deserves—it is obvious that they too must be in possession of the figures given in it; which, so far, they have not attempted to contest. It is seldom that one finds oneself in agreement with the opinions of the *Bombay Chronicle*; but with this one at least, one can quite cordially agree—"even in an ugly game, there should be something fair."

INDIAN COMMERCIAL NOTES.

The annual returns of Joint Stock Companies incorporated in British India are always of interest as showing the lines on which Indian industrial effort specialises from time to time. During the year 1924-25, 33 banking companies were started with an authorised capital of 2½ crores of rupees; 36 printing and publishing companies with a capital of just over half a crore; and 96 general trading and manufacturing companies with a capital of nearly three crores.

But at the moment chief interest is centred in India's textile and tea industries. During 1923-24, nine new cotton manufacturing companies were floated with a capital of just over a crore, and in 1924-25 thirteen with a capital of nearly 1½ crores. There has been no addition to the number of jute mill companies, which is not surprising, as Indian jute mills are at present only working four days a week. In 1923-24 sixteen tea companies were floated with a capital of 81½ lakhs of rupees, and in 1924-25 eighteen with a capital of 65 lakhs. This should be an effectual answer to those critics who claim that India is restricting the production of tea in order to maintain prices. To those who know local conditions in India, it is a matter of common knowledge that the production of tea has increased very considerably since pre-War days. In fact India, more than any other country, has taken advantage of the growing demand for tea in the United Kingdom as well as in North America and the Continent. The exports of Indian tea to these and other destinations, which amounted pre-War to 266 million pounds, increased in 1924-25 to 340 million pounds. Difficulties in the way of further expansion arise not so much from any shortage of capital or land as from restrictions in the supply of efficient labour. So long as labour is difficult to get, slow to train and easily diverted elsewhere, it is obviously more important to employ the existing force in the careful development of gardens in bearing, than to bring additional areas under tea.

It is unfortunate that India cannot take more advantage of the present increase in the demand for rubber. However, production is certainly increasing, for exports of raw rubber from India and Burma amounted before the War to only a little over a million pounds. By 1922-23 they had increased to 12½ million pounds, and by 1924-25 to 18 million pounds, of which 9½ million were produced in the Madras Presidency and 8½ in Burma. Incidentally, rubber is contributing materially to the equation of our annual debt charges to the United States of America. Imports of crude rubber into America from the British East Indies—a term which, of course, includes the Straits Settlements and the Malay Peninsula as well as British India—amounted, during the nine months January to September 1925, to 418 million pounds, valued at 169 million dollars. Allowing 225 million dollars for the full twelve months, and taking the cost of production at the high figure of 75 million dollars, the balance of 150 million dollars practically covers the payment of the year's debt.

INDIAN EXCHANGE.

London, December 14.

We have a very quiet week to report with little change in markets. On the Bombay side there appears to be less inclination on the part of the banks to quote better than 1s. 6 5-32d. for T.T., with occasional remittances at 1-64th higher. In Calcutta the quotation has remained quite steady at 1s. 6 5-32d.; but towards the end of the week, it was possible to obtain 1s. 6 3-16d. T.T. fairly freely for immediate delivery, but the rate does not appear to have much attraction for importers whose requirements have been easy to fill.

Government have been called upon again to make a moderate amount of purchases for ready and near delivery at 1s. 6 3-16d. T.T. but so far as we can ascertain, calls upon them have not been heavy.

Last week the return of the Imperial Bank of India reflected less demand for money, but it may be noted that the notes in circulation have been increased by about Rs. 3 crores against purchases of sterling securities to be retained in London.

The rate for commercial bills has remained quite steady at 1s. 6 15-32d. three months, but the supply of bills seems to have fallen off.

Little activity in the cotton market in Bombay is manifest, and it is unlikely now that much business will be booked before the Christmas holidays. The Indian market for cotton is weaker owing to the recent fall in the American product, and holders' ideas in Bombay have not yet adjusted themselves to the lower level.

In the London market there is no change to report. T.T. is quoted 1s 6 7-32d., with an ocasional seller at 1-64th lower; but the volume of business passing has been limited.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K., Continent and India.

The engagement of land transport for Cargo to towns in the interior of Mesopotamia and Persia undertaken on behalf of Shippers of Through Cargo to BAGHDAD and AHWAZ.

NOTES AND NEWS.

170, *Strand, London, W.C.2.*
Tuesday Morning.

Lord Inchcape on the Position.

As is well known the shipping industry has been particularly affected by the trade depression, and at the meeting of the P. and O. Company Lord Inchcape stated that the present year had been the worst that shipping had ever experienced. The results of most voyages, he declared, had been disastrous, owing to high running costs, heavy dock and labour charges, shortage of cargo, and low rates of freights; while the P. and O. suffered severely as a result of the troubles in China and the unauthorised strike of seamen and firemen in Australia and South Africa. Lord Inchcape, in the course of his speech, dealt with the general trade position, and emphasised the difficulties with which this country was faced in trade development. He is confident that the Peace Pact will in time help the position, but the only remedies in the mean time in his view are increased output, economy in production costs, and reduced taxation.

The P. & O. Dividend.

Dealing with the dividend, Lord Inchcape recalled that at the previous meeting he indicated that unless things improved the dividend on the deferred stock might be reduced. He explained that in paying the interim dividend of 6 per cent. the board had fully anticipated a final dividend of the same amount, but the year's results coupled with the losses of the first three months of the new financial year had compelled a reduction. It will be noted that he stated that the rate of dividend now declared was only made practicable by the investments and reserves that had been built up in more auspicious times. Incidentally he held out little hope for a higher dividend for the current financial year.

Steaua Romana (British).

At the meeting of the Steaua Romana (British), Sir Charles Greenway was able to give a most encouraging review of the position. On the areas of proved State lands which have been allotted to the Steaua Romana Company active drilling is being carried out, and there are now seven wells drilling at Moreni and one at Ochiuri. It is proposed to start work on a further five wells immediately and 20 wells during 1926. "With these developments now well on the way," Sir Charles Greenway added, "we may, I think, look forward with confidence to a considerable increase in Steaua's production in the near future, commencing from the first two well towards the end of 1925 and increasing as succeeding wells come into production during 1926." The production of the Steaua Romana Company for the year ended June 30, amounted to 290,387 tons exclusive of 11,600 tons received in payment of royalties. In October the production was 37,200 tons, and in November 30,240, the reduction being due to the curtailment of production owing to the lack of transport facilities. "It can, therefore, be seen," said Sir Charles Greenway, "that with the new wells shortly expected to come into production at Ceptura, and with the production anticipated from the end of this year on the new lands at Moreni, Ochiuri, and Runcu, the production of the Steaua Romana Company is likely to show a large increase in the near future."

Empire Cotton Growing.

The case for the intensification of efforts to develop cotton growing in the Empire was succinctly put by Sir Edwin Stockton in an address before the textile section of the Manchester School of Technology last night. Pointing out that the position of this country as manufacturers of textiles had changed from what it was before the War and that we no longer possess even half the spindles in the world, he said that if ever America was unable to provide a surplus of cotton for export there would a be most desperate struggle for what there was and no one would be likely to suffer more than Lancashire. It is because of this possibility, as I have often urged in these columns, that it is essential that the work of developing Empire cotton growing should be unceasingly pushed forward. Lancashire might have been affected in the last year or two, as a matter of fact, if there had been any sudden increase in the demand for cotton goods, but the reduced purchasing power of our customers put that out of the question, and for the present season America has a bumper crop of 15,603,000 bales, which will be ample for all contingencies. As other crops are good, cheap cotton seems a certainty this year, and that will help in the revival of trade. Meanwhile the great work that has already been done in developing Empire cotton fields is beginning to yield its results, and another year will find us with much larger supplies of Empire cotton to fall back upon. But we are still far from the ideal of complete independence of America, and that must be our constant goal.

Rubber and Cotton.

How necessary it is that we should be free from dependence on America as regards the supply of cotton is made clear from the attitude taken up by the United States with regard to rubber. The fact that the price of rubber has risen to a rather high level (mainly because the American buyers abstained from making purchases) is a very sore point across the Atlantic. In a letter which has just been published the Secretary for Commerce in America complains that American consumers have been victimised by the artificial raising of the price of rubber. But the restriction scheme, to which he attributes the high prices, was simply and solely introduced to save a great British industry which was in danger of passing into other hands, and as I have pointed out the rise in rubber has been mainly due to the American failure to buy. In the letter referred to the Secretary for Commerce says that he does not favour reprisals but advocates instead what he calls "defensive measures." The measures he suggests are, it is true, confined solely to rubber, but the moral of the letter will not be lost.

COMMENTATOR.

BANK OF ROUMANIA LIMITED
(FOUNDED 1866).

Head Office: **16, GRACECHURCH STREET, LONDON, E.C.3.**

Branch - 11 CALEA VICTORIEI, BUCAREST.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.
(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

EGYPT.

Paper, Ink, Etc.—The Egyptian Government Press are inviting tenders to be received in Cairo by January 23, 1926, for paper, boards, printing ink, cloth, etc. (D.O.T.)

Money Safes.—The Central Stationery Stores, Egyptian Ministry of Finance, invites tenders for the supply of 50 iron money safes, internal dimensions, 18x12x11 inches approximately. Tenders will be received in Egypt up to noon on December 30, 1923.

Electric Motor and Accessories—Manfalout Waterworks Cairo.—The Director-General, Municipalities and Local Commissions Section, Savoy House, Cairo, invites tenders for the supply and delivery of: (a) An electric motor for operating a centrifugal pump at the Waterworks at Manfalout, complete with insulated conductors, switchboard and all accessories. (b) The execution of the foundations for the motor. (c) The modification of the overhead line between the power station and the waterworks. January 20. (D.O.T.)

Clothing, Etc.—The Director of the Police Stores Department of the Egyptian Ministry of the Interior, Cairo, invites tenders for the supply of clothing and necessaries required for the police and ghafir services during the year 1926-27. The following is a summary of the principal stores required:—17,820 pairs of ankle boots, with laces; 11,500 brown woollen blankets; 32,000 non-inflammable shirt collars; 30,000 cotton drawers; 28,500 cotton shirts; 11,000 pairs cotton and woollen socks; 33,000 tarbushes and tassels; 40,000 brown woollen libdas (for ghafir service); 20,000 blue drill drawers and belts (for ghafir service); 15,000 pairs of cotton gloves; 6,920 woollen jerseys; 6,700 khaki drill uniforms; 3,000 khaki serge uniforms; 5,500 pairs of black cloth trousers; 6,950 pairs of breeches (Bedford and khaki cord and drill); 7,860 greatcoats; 17,460 chevrons; 90,000 tins of boot blacking; 100,000 heel-balls; 105,000 pieces of palm-oil soap. February 20. (D.O.T.)

Lock Bridge.—The Egyptian State Railways, Telegraphs and Telephones, invites tenders for the construction of the new lock bridge over the Mahmoudia Canal at Alexandria. This bridge is designed with a superstructure for two railway tracks and a road bridge. It will be built on the existing masonry which will have to be modified in consequence. Tenderers may submit such offer as they deem best according to the information they may obtain from the general drawings of the Administration, suggesting three solutions of swing bridges and a solution of a lift bridge. February 16.

Bunting, Canvas, Ropes, Hose (Canvas and Armoured Rubber), Etc.—The Egyptian Ministry of Communications invites tenders for the above goods. February 4. (D.O.T.

THE SUDAN.

Steam Launches.—The Inspector-General of Irrigation, Sudan, Khartoum, invites tenders for the supply of three steam launches for use on the Upper Nile. January 31.

TURKEY.

Railway Vehicles.—The Anatolian Railway Administration invites tenders for the supply of 12 passenger coaches, 5 postal vans and 250 goods trucks. January 16. (D.O.T.)

Railwty Carriage Parts and Fittings.—The Anatolian Railway Administration invites tenders for draw-hooks, buffers and casings, and complete equipment with safety cords. January 8. (D.O.T.)

THREE SUPREME PRODUCTS of the DUNLOP RUBBER COMPANY

The DUNLOP CORD TYRE

IN the realm of sport Dunlop stands supreme. In motoring, Dunlop Tyres have always led the world, and Dunlop Cord Tyres are supreme to-day. No other tyres, whether British or foreign, have the same record of achievement as Dunlop.

In Golf, the Dunlop "Maxfli" Ball is now recognised as the champions' ball. It is played by practically all the greatest golfers —sufficient testimony to its value.

In Tennis, the Dunlop Tennis Ball has already jumped right into first place, and has been officially authorised. Its peculiar advantages, possessed by no other ball, have made it necessary to every player who wants to improve his or her game.

Success and satisfaction in motoring, in golf, and in tennis, means Dunlop.

The DUNLOP "MAXFLI" GOLF BALL

'fit Dunlop and be satisfied'
'play Dunlop and be satisfied'

The DUNLOP LAWN TENNIS BALL

DUNLOP RUBBER CO. LTD., BIRMINGHAM, ENGLAND.
Branches throughout the World.

THE SUDAN IN 1924.

The "Report on the Finances, Administration, and Condition of the Sudan in 1924," which has just been issued—the last report, incidentally, which will bear Lord Allenby's name—gives a most interesting and, it may be added, most encouraging survey of the economic position of that country. The year in question, indeed, marked a further and most decided stage in the economic advance of the Sudan. The actual surplus on the Budget greatly exceeded the estimates, there was an increase in the external trade, while compensation for the depression in the cattle and sheep trade was found in the exceptionally high prices that were obtained for cotton and gum. It is out of the question owing to considerations of space to cover the report as a whole, but the following extracts will serve to give some idea of the satisfactory condition of the Sudan, and of the undoubted advance that has been made during the period:—

The general scale of economic production is steadily increasing. The inauguration of the Gezireh irrigation scheme in time for the 1925-26 cotton season is now practically assured, and this still remains the dominant factor in the financial situation. It will not affect the accounts for 1925, but in 1926 the Government will, for the first time, have to meet full interest charges on its guaranteed loans out of revenue, and will also receive its share in the proceeds of the cotton produced. It is now hoped that 80,000 acres will be put under cotton for the first season. If anything like the present price level for sakellarides cotton is maintained then, with only a moderate yield, there should be a surplus of receipts over interest charges even during the first year. The Government is, however, prepared for much less favourable results than this. A special reserve fund (which by the end of 1925 will amount to £E675,000) has been built up to meet possible deficits during the first years of working, and as an insurance fund against such possible disasters as burst canal banks, etc., which might entail exceptional loss or expenditure.

Apart from the Gezireh scheme, projects for the cultivation of rain-grown cotton have been started in every province where there is any possibility of economic production. It would be unwise to expect very rapid developments in this direction owing to the scattered distribution of the population and the transport problems which this condition involves. Results so far, however, are most encouraging, and the ultimate prospects are of great importance. If the southern provinces such as the Nuba Mountains, Upper Nile, Mongalla and Bahr-el-Ghazal can only be put into the position by this means of paying for the cost of their own administration, it will have a substantial effect on the financial position of the Sudan as a whole.

Cotton.—The most striking development in production is the large increase in the quantity of cotton and cotton seed exported. The figures for 1923 and 1924 are as follows:—

	Cotton.		Cotton Seed.		Total
	Quantity. Tons.	Value. £E.	Quantity. Tons.	Value. £E.	Value. £E.
1923 ...	5,093	458,188	9,323	71,235	529,423
1924 ...	8,364	1,460,991	18,003	156,669	1,617,660

The most interesting feature has been the large increase in production of cotton of American long-stapled type grown by means of rainfall only. In 1923-24 this rain-grown crop produced only 12,212 kantars as compared with an estimated yield of 44,700 kantars for 1924-25. As this kind of cotton can be grown, roughly speaking, all over the Southern Sudan, which contains two-thirds of the population, the industry has great possibilities. Owing, however, to the primitive condition of the population, its wide-scattered distribution and the consequent difficulties of transport, progress will be slow. Prices at present are remarkably high and attractive, and, in contrast to lower returns from grain, etc., have provided an exceptional impetus, while there is every reason to expect that the advertistment which rain-grown cotton has obtained as a "money" crop will lead to a large extension of its cultivation. It is not anticipated that cotton growing will have any serious effect in diminishing the cultivation of food crops. There has also been an increase in the production of high-grade American cotton on pump areas north of Khartoum.

Dates.—The quantity of dates exported was 4,189 tons, as compared with 3,761 in 1923, values being £E47,324 and £E52,805 respectively. The three provinces of Halfa, Dongola and Berber contain over 1¼ million mature date trees. Economically, the crop is the backbone of these provinces, and the whole question of the industry is now being investigated by Professor Silas G. Mason, of the United States Department of Agriculture, a well-known authority on the subject, who was invited to visit the Sudan and give the Government the benefit of his advice.

Gum Arabic.—The output of gum arabic, though not up to the record export of 1923, was eminently satisfactory. Prices were good and obviously sufficiently high to stimulate collection. Gum is picked in the interval between the end of the rains of one season and the beginning of those of the next. Although, as picking was delayed by late rains, last season was not a good one, the high price brought in gum from districts far afield. Darfur Province, for example, now exports large quantities through El Obeid.

Condition of the People.—A further improvement in the material condition and purchasing power of the people is reflected in the increase in value of public imports from £E2,974,225 to £E3,654,700, and the year has been a good one for the native producer. The increase in cotton production, combined with high prices, has brought an extra £E1,000,000 into the country and, as already stated, the gum trade still remains good and much above average. The sheep trade is depressed, but there has been some compensation for this in a large export of camels to Egypt, while the smaller output of sesame is off-set by an increase in production of ground-nuts. The Sennar dam and canalisation works are still directly employing large number of natives and also indirectly providing a means of income to many others. Dura has been fetching very good prices and exports have been little less than last year. Signs of improved prosperity are to be found in a 10 per cent. increase in sugar consumption and larger imports of tea and coffee; while the value of the import of cotton piece-goods is well maintained.

Foreign Interest in Economic Development.—There are many signs to be observed of the increasing interest which the outside world is taking in economic developments in the Sudan. The approaching completion this summer of the great irrigation works in the Gezireh, which have attracted wide interest, is apparently to coincide with a scarcity of high grade cotton and exceptionally high prices. The opening to regular traffic of the Kassala Railway and the systematic development of the Gash delta under cotton are important new events.

The continuous increase in shipping at Port Sudan is bringing the Sudan into direct touch with almost every country in the world, and an extension of the port has become an urgent necessity. Work is now being begun which will provide two separate coal quays and thus release two berths, formerly used for coal, for general cargo. Funds for these harbour works and for rolling-stock for the railways have been raised by a loan guaranteed as to principal and interest by the British Government under the Trade Facilities Act.

The tonnage of ships calling at the port before the War was about 700,000 tons per annum. In 1924 the tonnage was 2,523,299 and 699 ships entered the port, 669 with a tonnage of 2,478,280 being merchant ships. The port is also being used much more than formerly as a passenger route, and the Peninsular and Oriental Steam Navigation Company and the Bibby Line have recently begun to call there.

Railway Extension and Road Transport.—The question of railway extension, especially in connection with the encouragement of the cultivation of rain-grown cotton, either eastwards across the dam at Sennar or southwards from Kassala, is being carefully investigated. There are now a number of motor-car passenger services run by private enterprise in various parts of the country. Ford cars are almost universally employed. The Government is undertaking experiments in the development of trans-

Digitized by Google

port of goods by motor. The passenger and goods service run by the Government between Rejaf and Aba in the Belgian Congo is carrying an increasing quantity of traffic, and an experimental service has been started in Eastern Mongalla from Mongalla to Torit, which is picking up a number of passengers from Uganda and Kenya.

Forests.—Gum.—The year has not been a particularly good one, and the yield per tree was smaller than last year's yield, which was, however, above average. Distribution of Hashab seed to natives is being continued and steps taken to encourage them to maintain their gum gardens in a productive state. At El Obeid a record has been kept showing the district of origin of all gum brought to the market with the idea of analysing the crops and finding the areas from which the best gum comes and also of keeping a check on changes in quantity. The market system has been successful and is now serving as a model on which to set up markets in Gedaref and Singa districts and in the Nuba Mountains. In the Nuba Mountains, Kassala, White Nile and Fung Provinces attempts are being made to improve the method of gum tapping to increase the supply, and to improve marketing conditions.

Wood Fuel.—The supply to Government steamers, Government Departments and Tayiba and Barakat pumping stations has been maintained and all reqquirements again satisfactorily met. The fire-wood store in Khartoum continues to regulate the price of fuel in Khartoum and safeguards the supply. The contractors at the Sennar dam have this year cut fully 120,000 metres, exclusive of 40,000 metres cut by them in the area to be flooded by the dam. This has been a considerable drain on the resources of that district, and regeneration measures extending over several years will be needed to ensure that on the areas cut a good crop is established. The cutting of scrub for fuel in Khartoum Province has been checked, as the flock owners were complaining of damage to grazing. The general policy being followed is to limit cutting to areas on which regeneration is easy and on which efforts towards it can be concentrated.

Afforestation, Etc.—During the year about 10,000 lb. of sunt seed have been treated in Khartoum and sent to out-stations. In addition, large quantities have been collected at various stations and have been prepared and sown on the spot. On the White Nile 750 feddans of new plantations have been laid down. On the Blue Nile all felled areas are receiving attention. Natural regeneration is encouraged by clearing, fencing and coppicing, and the blank areas are being sown with prepared seed. On both the White and the Blue Niles difficulty has been experienced this year in obtaining labour at reasonable rates, as the men are attracted to the cotton cultivation. In Khartoum Province efforts to obtain river land for a Khartoum fuel forest have again fallen through. Further efforts are being made, as it is most desirable that the encouraging results of the experiments now being conducted locally should be applied to a forest on a commercial scale sufficient to meet Khartoum requirements. In Berber Province a forest reserve has been created in Wad Hamed Basin, where over 2,000 feddans are now protected and producing excellent growth. During the year the Inspector of Forests, Blue Nile Province, carried out extensive forest surveys in the Fung Province, as a result of which most valuable information has been obtained on the extent of untouched forest areas which are likely to become of importance in view of the denudation in the Sennar area. The mahogany which has been lying in the log in Khartoum for some years is being hand-sawn and disposed of locally. There is a steady and increasing demand, and it would seem as if the good qualities of this fine timber were at last being recognised. A representative exhibit of forest products was sent to Wembley Exhibition and has resulted in several important inquiries from traders.

With regard to the future, the main problem which still awaits solution is the establishment of a Khartoum fuel forest of some 7,000 feddans, and as noted above, further endeavours will be made to obtain the necessary land. The White Nile wood supply service is on a sound basis, while the Blue Nile forestry staff, on the completion of work at the Sennar dam, will be available for the regeneration of the cleared areas. Sudan timbers will be developed and an endeavour made to capture for the country a portion of the £200,000 which annually leaves the Sudan to pay for foreign timber of a very low grade.

NEW ELLERMAN LINES STEAMER.

The launch took place recently at the Wallsend Yard of Messrs. Swan, Hunter and Wigham Richardson, Ltd., of the single-screw steamer City of Lyons, built for the Ellerman Lines Ltd.

The City of Lyons, 455 ft. in length, has a cruiser-shaped stern, is rigged as a two-master, fore and aft. schooner, and has five cargo holds with five large hatchways leading to same, served by 18 steel cargo derricks and seventeen steam winches.

All cargo holds, 'tween decks, and bunkers are fitted with steam fire extinguishing pipes, and the double bottom is arranged for carry oil fuel as well as water ballast. Deep tanks are installed abaft the engine room, and at the after-end of No. 2 hold. Electric lighting will be fitted throughout the ship, which was biult to the highest class of Lloyd's. All acommodation will be steam heated, the installation being supplied and fitted by M. W. Swinburne and Sons, Ltd., Wallsend-on-Tyne.

The propelling machinery of the steamer will consist of one set of Parsons' impulse reaction type turbines and single reduction mechanical gearing, which are being built by the Wallsend Slipway and Engineering Co., Ltd., Wallsend, who are also providing the three single-ended boilers to be placed amidships, of the ordinary multitubular type, aranged for working with Howden-Ljungstrom air preheaters and fited with superheaters, the working pressure being 240 lb. per square inch.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Elysia for Bombay (Liverpool, December 23). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Malakuta for Port Said, Colombo, Madras, and Calcutta (London, December 24).

Bibby Line.—S.s. Leicestershire for Port Said, Colombo, and Rangoon (Birkenhead, December 30).

British India Line.—S.s. Gharinda for Bombay and Karachi (London, December 19); s.s. Mashobra for Colombo, Madras, and Calcutta (London, December 19).

Cunard Line.—S.s. Brescia for Patras, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, and Sulina (Liverpool, December 19).

Ellerman "City" Line.—S.s. City of Birmingham for Calcutta (Birkenhead, December 24).

Johnston Line.—S.s. Wigmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, December 26); s.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, January 2).

P. and O. Line.—S.s. Kaisar-i-Hind for Bombay (London, December 24; s.s. Nagoya for Colombo, Madras, and Calcutta (Liverpool, Janury 9).

Prince Line.—S.s. Syrian Prince for Malta, Alexandria, Jaffa, Haifa, and Beyrout (Manchester, December 24).

Motors and Motoring.

By G. B. B.

It is impossible to over-estimate the growing importance of the Indian and Middle East markets, and although practically every British motor car manufacturer knows the value, and the increasing value at that, of the markets of the Near East, he is prone to disregard all information that comes from, say, South-East of Basrah. This, in spite of the fact that one British maker of world-wide repute has repeatedly published news regarding the number and value of cars sold in India by the firm.

Of course, the British manufacturer is obsessed with the idea that there is some political reason why he should not trade with India or why India should not trade with him; he is not sure which. He is prone to agree with those who say India offers a promising field for exploration: but he agrees with the reservation that whilst that may be true of the near, it is not true of the immediate, future. He considers, for some reason, that the country is in an unsettled state and says in effect, that he will consider pushing his wares in the Indian market when the country "has settled down."

Of course, it is far from easy to discern the ultimate economic destiny which forms the ideal of India. On the one hand there is a great and deeply-rooted dread of Free Trade: an apprehension lest India should be flooded with foreign goods of any and every type, dumped down on her shores and offered for sale at any price which it is thought the goods will be likely to fetch. On the other hand there is a vast body of opinion which is anxious to see foreign made goods admitted into Indian markets, and there are those who would restrict the importation of goods from some countries and allow them to come in freely from others. There is, in some quarters, an unwillingness to allow certain Indian raw products to be exported to countries where they are wanted. The fallacies are the assumption that any foreigner, were Free Trade adopted *in toto*, would flood the Indian markets with any goods which he could not sell at a good and immediate profit. As has been said to me by many Indian traders: Indians of a certain school of thought are prone to forget that sellers who wish to protect themselves properly are bound to study the purchasing power of the countries with which they intend to deal and by reason of this very fact it is impossible to conceive of any foreign country pouring manufactured goods into the Indian market unless it was known that a ready and profitable trade could be done forthwith.

Indian Motorists.

Further to my recent note regarding Indian roads and my criticism of a writer who had alleged that there were probably not more than ten miles of paved roads in India, I might mention the activities of the Western India Automobile Association which has been, for the past three or four years engaged in tackling current problems in respect of roads, and road users generally, including pedestrians and the users of commercial motors. The Association came into existence to meet a demand for an organisation which should look after the comfort of its members on the road and champion their interests whenever necessary. I need hardly say so energetic a body could not flourish, as it is doing, in a country where there are no roads for motorists to travel upon. Even so, I hear from an Indian correspondent that energetic as is the W.I.A.A., there are still thousands of Indian motorists who have not yet joined it.

I wonder if it strikes our doubting manufacturers that the mere fact that a powerful Automobile Association is in being in India and that "thousands of motorists have not yet joined it" speaks volumes as to the motor business already done and to be done in India?

Indian Week-Ends.

The week-end habit is growing in India, but one of the difficulties the week-ender at Calcutta has to contend against is that there is little or no elevated or even moderately high ground within a range of about 200 miles from the city. In order to reach a really suitable, cool holiday climate it will be necessary for the motorist to run out to such places as Darjeeling and Shillong, which means a journey of from 10 to 15 hours or more. The roads out are uniformly good, speaking generally, and although there are many steep gradients to be met with few, if any, are more than about one in fifteen and any ordinary car romps up them with ease.

Front-Wheel Brakes.

I have been asked whether I think that the present "craze" for front-wheel brakes is more than a passing fancy and in reply I would express my firm conviction that the front-wheel brake has come to stay. I was one of those who, when the idea first seemed like becoming popular in this country, pointed out that there were certain risks attached to this system of braking if the design, fitting and adjustment were not of the highest class and in perfect order. But British engineers have paid the closest attention to such parts and as a result, whereas, as the *Motor* says, at this time last year criticisms were heard to the effect that many ill-conceived designs had been fitted to cars in a hurry, this year the more prevalent opinions would appear to be that front-whel brakes have reached a more practical and satisfactory stage of development.

Certainly it would seem that the modern front-wheel brake is not liable to affect steering control as to prove in any way dangerous as regards the stability of the car to which it is fitted, and it is certain that by braking on four wheels instead of two the driver experiences unusual immunity, on grease, from skidding.

Steering Lock.

The point has been raised that in many cases the fitting of front-wheel brakes has been accompanied by a diminution of steering lock, which is to say that the car cannot be steered in a circle of so small a circumference as formely. Of course, this has nothing whatever to do with the question of front-wheel brakes, but is merely a matter of fitting. When brake connexions have to be taken to a pivoted wheel, these connexions must be jointed. There must consequently be some jointing method adopted and all this takes up room and it may well happen in some instances that the space taken up in this way interferes with a more extended movement of the wheels and so does reduce steering lock. But, as I said before, this is a matter of design and fitting and has nothing whatever to do with the merits or demerits of the front brake itself.

COMMERCIAL BOOKSHELF.

A Hundred Years Ago and Now.

"FINANCIAL RECONSTRUCTION IN ENGLAND, 1815—1822." By A. W. Acworth, B.A. (P. S. King and Son, Ltd. 8s. 6d net.)

It is a trite saying that history repeats itself, but for the majority of people it is to be feared that the statement is much easier than the comprehension of the fact. The study of comparative politics is said to be the training for statecraft, but we may sometimes perhaps be pardoned for wondering if some modern politicians do not treat events in blissful ignorance that there ever was a similar period. But if that is the case it is perhaps unfair to blame them unduly, for the study of conditions a hundred years ago, when the close of the Napoleonic War gave rise to problems very similar in character to those with which we have been faced since 1918, is not encouraged in this country in places where they teach. Perhaps it is too recent to form correct views, or perhaps history, like wine, gathers bouquet with age. However, it may be, the fact remains that undue emphasis is placed on ancient and mediæval developments in the story of man's progress with the result that modern history has suffered by comparison. Yet modern history, as Mr. Acworth shows in his admirable work has lessons to teach of far more immediate value than anything that can be found in the stories of the Greeks and Romans, and when one reads of the developments following 1815 as he unfolds them and remembers how each adverse happening since the Armistice has been hailed with surprise it is difficult to avoid a smile. Probably if the world should be so unfortunate as to have another great struggle at some distant date it will be just the same again afterwards. With the end of the war miracles will be expected, a trade revival of an unprecedented scale will be looked for combined with far better conditions than existed before the war began, as if the wholesale destruction of life and property and the general disorganisation could make such an outcome possible. But that is what was foretold this time.

Mr. Acworth's book deserves the closest study, for it is indeed a most notable and scholarly survey of a period which in view of present circumstances has become of surpassing interest, and a perusal of it will serve to bring home how close a parallel is possible between the periods from 1815 onwards and the present time. In 1815 the British Government was faced with the same financial problems as in 1918. Expenditure had to be curtailed, taxation reduced, some method discovered for dealing with the oppressive debt, and the currency had to be restored to a stable basis. There was no Press of any significance in those days, but there was none the less a sustained campaign for economy, a thing as difficult to accomplish then as now owing to the nature of the expenditure to be met. The French wars added more than £600 millions to the National Debt, making it at the end of 1815 £861 millions, and some of the remarks made upon the total which Mr. Ackworth quotes bring home very forcibly the similarity between the two periods. I will only give one:—"A millstone which was crushing the country under its weight." A number of proposals were put forward to deal with the Debt problem, among them being one for a tax on capital, or, in other words, a capital levy. The idea of a levy, Mr. Acworth points out incidentally, was first put forward in 1714—after another great war, in fact, that of the Spanish Succession! Of course, there was no more prospect of the proposal being adopted after 1815 than there is now. Mr. Acworth deals in detail with the return to the gold standard and with the re-introduction of gold coin, which, be it noted, was partially commenced in 1820, and was completely in operation three years later. A final chapter is devoted to the general state of the country during the period in question, and this is by no means the least interesting part of the book. There was general distress, widespread unemployment and dissatisfaction, and the position was only slightly relieved by occasional revivals of trade which soon died down again.

The official explanation of the depressed state of the country was "the transition from war to peace"—an explanation that is sound enough in a way. The sudden failure of the war demand for a large range of articles could not be immediately counterbalanced by the recovery of the peace market; and thousands of men were inevitably thrown out of employment. . . . But the "transition" explanation is inadequate—for two reasons. In the first place, almost all industries were affected . . . . In the second place, the distress was so extended in time that "the transition from war to peace" becomes almost farcical as an explanation.

As a matter of fact, as Mr. Acworth points out there was no real revival of prosperity until 1851, but happily through the parallel between the two periods is so exact we need not accept this unfortunate omen for there are a number of favourable circumstances in operation now which did not obtain a hundred years ago: for one thing, the growing importance of the raw materials of the Empire might be cited. One last and most interesting parallel may be given. After 1815 as after 1918 there was a great growth of tariffs. Mr. Acworth quotes a speech on the subject by Brougham who said: "It is not in France merely . . . . that our intercourse enjoys no facilities. In what corner of Europe does it possess them?" The appositeness of this remark in regard to trade in some regions to-day scarcely needs emphasis.

IMPORTS & EXPORTS

The financing of the world's commerce has become one of the most intricate of machines ever constructed, and under the banker's hands lie all the cogs and controls necessary for its efficient running. It is of the utmost importance that the merchant should clearly understand the working of its mechanism in order that he may make the fullest use of the bank's facilities, not only for his personal benefit, but also for the increased commercial prosperity of the country. To assist its customers, the Westminster Bank has now prepared a booklet explaining the many ways in which the commercial man may use the bank for the furtherance of his business, and how he should proceed so as to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and combine with progress and enterprise the necessary security and caution.

Copies will be issued on application to the Secretary, Head Office, Westminster Bank Limited

41 LOTHBURY, LONDON, E.C.2

An order for 23,000 tons of steel rails for the Egyptian State Railways has been secured by Messrs. Bolckow, Vaughan, and Co., Ltd., of Middlesbrough.

Steaua Romana (British), Ltd., are advised that the production of Steaua Romana (Bucharest) for November was 30,240 tons. Production was curtailed owing to lack of transport facilities.

The Rohilkund and Kumaon Railway Company recommends a final dividend of 5 per cent., together with a bonus of 3 per cent., making 13 per cent. The dividend and bonus will be paid, less tax at 2s. 3d. in the £, on January 25.

Company Meeting.

PENINSULAR AND ORIENTAL STEAM NAVIGATION.

Review of Shipping Conditions.

Lord Inchcape's Speech.

Viscount Inchcape, presiding on December 9 at the eighty-fifth annual meeting of the Peninsular and Oriental Steam Navigation Company, said that the present year had been the worst which shipping had ever experienced.

The Year's Results.

The results of most voyages had, owing to high running costs, heavy dock and labour charges, shortage of cargo and low rates of freights, been disastrous, while the troubles in China and the unauthorised strike of seamen and firemen in Australia and South Africa had inflicted on the P. and O., as on many other shipowners, gigantic losses.

The Accounts.

Passing to the accounts, his lordship said that the insurance account, with an increase for the year of £60,197 19s. 10d., stood at £3,278,279 0s. 7d. after payment of claims to September 30. The provident good service fund had been increased by £40,000 to £350,000, a sum in excess of their actuarial liability for pensions. He was sure they, the stockholders, would agree that the pension fund should be treated as a first charge on the company's revenue.

The Fleet.

The fleet now numbered 57 vessels, totalling 584,461 tons of an average age of seven years.

They had been obliged to spend an enormous amount on replacing ships sunk by enemy action and vessels which had become obsolete, builders' prices having been far above the pre-War level; but they had to put the fleet in a condition to fulfil their mail contracts, to maintain their passenger and cargo services and to hold the trades they had served for so many years.

Their post-War building programme had been accomplished, but under most discouraging conditions; but, despite the need to replace older ships, they had called a halt as they could not face present prices.

All the new vessels except the Rajputana were now in commission. The Mooltan, Maloja, Moldavia, Mongolia, Razmak, Ranpura, Ranchi, Rawalpindi, Chitral, Comorin and Cathay had completed one or more voyages and were proving favourites with the travelling public.

From passengers in the Rawalpindi at the conclusion of her maiden voyage he had, he said, received a Radio message—"Passengers Rawalpindi desire to express to you and the directors their appreciation of fine ship and untiring efforts of Captain Redhead and ship's company to ensure comfort." Another telegram from Bombay said that the Ranchi's maiden passage to the East had been most successful.

The Caledonia, Soudan, Sardinia, Sicilia and Nore had been sold to be broken up, at prices in excess of their book value.

The new vessels were all oil burners, and their machinery, seagoing qualities and speed were proving satisfactory. With lower working costs and a revival of trade they should be profitable, but meantime he was afraid many of their voyages would result in debit balances.

The Dividend.

He had indicated a year ago that unless things improved they might be obliged to reduce the dividend and, greatly to his regret, this had proved to be the case. In paying the interim dividend of 6 per cent. they had fully expected to give a final dividend at the same rate, but despite the efforts of their economy committee and the loyal help of their staff, the year's results, coupled with the losses of the first three months of the new financial year, had compelled the reduction of the final dividend to 4 per cent., making 10 per cent. for the year. This they had been enabled to do only through their investments and their reserve, built up in better times. He could, he continued, hold out but little hope of a higher dividend for the current financial year.

He felt perfectly certain they would agree with the board that in view of the state of trade and the gloomy prospects for shipping it was prudent to conserve the company's resources rather than to distribute up to the hilt.

Continuing, he said that their stock exchange securities were not over valued; their investments in allied companies, while they had as a whole appreciated in value, stood at the purchase price; they had not been written up. To write up investments was, he considered, a mistake, as the day might come when they would have to be written down. The P. and O. Company was sound and he thought, despite passing adversities, it would remain so.

After deducting depreciation at 5 per cent. their steamers stood in the books at less than their original cost. Taking from their book value some as yet unappropriated balances of about £1,000,000; their reserve and contingency funds, £2,607,020 and, say, £2,000,000 from the insurance fund (leaving it at £1,278,000, more than sufficient to cover claims and to re-insure current risks), they had £5,607,950 in hand against the book value of the fleet as a provision for the uncertain future. But, he said, he had no need to point out that vessels valued at even nominal figures were, if unprofitable, no good to their owners. That, he said, was a condition which they had to combat to-day.

Safeguarding of Industries Act Condemned.

Without wishing to be dogmatic he feared, unless the progress of the Safeguarding of Industries Act were checked, we should soon become a protectionist country. He agreed with Sir Hugh Bell: if an industry could not carry on without aid from the taxpayer, it was better to let the industry go. Subsidy by the Government could be only a temporary palliative.

These small Islands, unlike America, were not economically independent; and it was preferable to leave industry to work out its own salvation, the Government taking a share of the profits by means of taxes, with no responsibility for losses.

Dominion Tariffs.

It was, he continued, a common cry that we ought to develop trade with the Dominions, but India, an agricultural country with huge potentialities, seemed disposed to shut out our manufacturers by a wall of tariffs or subsidies, the latest proposal being an import duty on British coal.

Again, Australia, whose population had increased from 3,773,000 to 5,435,000 in the twenty years ending 1921, showed in the same period a decrease in her percentage of primary workers from 32 to 25, while the percentage of industrial workers had risen from 26 to 31. It was a safe assumption that in the new census period the process had continued and the figures went to show that an increasing proportion of immigrants into Australia were being attracted to town industries rather than to country occupations, while such industries were being more and more protected against imports.

It appeared to be the aim of both India and the Dominions to manufacture all they required and to import nothing. For this reason Great Britain could not rely on Empire trade, for the Dominions, as they developed their industries, would, he feared, offer smaller markets for British manufactures.

We could not escape our dependence on foreign markets. To bolster up industries by import duties would put up prices and the duties would in fact be paid by the consumers among our own people. Our population could not consume all the products of our factories; if they could, where, he asked, would they get the money to pay for them? Not from the land or from our climate and, as to coal, our only exportable mineral, our competitors at present costs were able to undersell us.

The land policy of which we had lately heard so much seemed only to resemble the idea started a few years ago to plough up the hillsides, the moors and the forests of Scotland.

The Gold Standard.

The nation, he continued, did not want the printing press turned on to meet its obligations, and he was convinced it had been right to restore the gold standard. Although the freeing of gold had threatened a drain on our stocks, the raising of the Bank Rate had steadied the position. A revival of foreign borrowing in our market should help our export trade, for what we lent abroad would, for the most part, be taken, not in bullion or transferred credits, but in goods, manufactures, or, possibly, coal.

With the gold standard restored, London should continue to be the world's financial centre.

Whether or not they agreed with him in the views he had expressed, the board was one in its determination to reduce the expenditure and improve the revenue of the P. and O. Company consistently with the maintenance of efficiency and public goodwill.

Surplus Shipping.

He associated himself with the remarks which recently fell from Sir Frederick Lewis on the subject of surplus shipping. Millions of tons were laid up; and few ships in commission were earning sufficient to cover working expenses.

For the Government under the Trades Facilities Act to advance money to build more ships would aggravate the disastrous condition of the industry, in which millions of the people's savings were invested. All interested in shipping must applaud the Prime Minister's refusal of the proposal. As he, if he might venture to say so, very wisely said: "Such a grant would prove not more than

Digitized by Google

a temporary relief and it is generally believed that there is already a large amount of surplus cargo tonnage in the world."

To substitute, at the expense of the taxpayers, as had been suggested, new ships for old, while it might be an excellent idea for some shipowners, was not likely to commend itself to the Chancellor of the Exchequer.

Trade Adversities and the Remedy.

Heavy production costs were placing this country at a great disadvantage in the world's markets; and while present conditions continued there would be but little hope of regaining trade outlets which we had lost or of finding new ones. The excess over imports of our visible exports, and the shrinkage of our invisible exports, were a grave menace to the country's solvency. Adverse trade balances would, if continued, damage our national credit and, by raising prices, reduce the value of wages. The Peace Pact so ably negociated by Sir Austen Chamberlain would in time assuredly help the position; but meanwhile, increased output, economy in production costs and reduced taxation seemed to him to be the only remedies.

Taxation and Trade Disputes.

Although the Chancellor was making every effort to reduce public expenditure, large sums which would ordinarily remain with industry as reproductive capital were being taken from the taxpayer often for unproductive purposes. There was a general cry for economy; but as Mr. Churchill had said, when it came to touching the pockets of the individual voters, the members of the threatened constituency were up in arms. The Government had stuck to their guns in the case of Rosyth and Pembroke Docks; and a considerable saving would consequently result.

The abolition of submarines, if it could be brought about by international agreement, would effect a material saving in the country's expenditure. Since the War we had spent 47 millions in building submarines. He would remind them, too, that out of a total loss by the P. and O. and associated lines of 504,316 tons of shipping in the War, 400,000 tons were destroyed by enemy submarines.

Continuing, he said, there was no end to the extravagance of some of the municipal authorities, while labour leaders, with one or two exceptions, were pursuing courses which tended to paralyse trade and throw their fellow-countrymen on to the demoralising dole.

In the recent attempt to band the trade unions together, an attempt which, thanks to the good sense of a number of the union chiefs, had not, so far, materialised, there was a latent threat to hold the public to ransom at any cost in order to obtain a decision against employers. One leader had said the slogan of his disciples must be

"Not a cent off the pay,
Not a minute more a day."

Some of the union leaders, he said, appreciated the economic situation as to wages, working hours and output; others did not. The latter refused to recognise that industry could not indefinitely be carried on at a loss and that without a margin sufficient to cover working expenses industries must close down, unemployment be increased and further burdens thrown on the national and municipal exchequers.

One extremist had publicly said "To hell with the Empire." They could afford to regard such an outburst as a characteristic expression of Communist mentality, but when Communists further proceeded to advocate sedition it was satitsfactory to learn that they had been punished for the offence against the law.

Revolution in these islands was, he said, inconceivable. For here the law was administered equally for the rich as for the poor and the overwhelming majority of the population realised that under a Communist regime all private property and savings would be confiscated, liberty destroyed, and grinding poverty become universal. The freedom of the people would be preserved, providing legislation was framed so as to ensure individual liberty; and the Government would have the country behind them in any legal action to get rid of a conspiracy engineered by a handful of anarchists with their headquarters in Moscow.

The Trade Disputes Act.

He believed that not 10 per cent. of the seamen and firemen who recently refused duty and broke their agreement in Australia, New Zealand and South Africa had their hearts in the strike, into which they were intimidated by avowed Communists. It was significant that only vessels under the British flag were involved while foreign vessels were left alone. The extremists had been defeated at the polls by the Prime Minister, Mr. Bruce, a statesman of courage and determination, and they might reasonably now expect a more settled state of affairs. Here, the leader of a miniature opposition union had sought to force seamen into a strike by what is known as peaceful picketing, in which there was little in the nature of peace but a vast amount of terrorism and sometimes brutal assault. It seemed to him to be essential for the law to be altered so that people might be free to go about their legitimate occupations in peace.

Socialism and Communism.

Mr. Ramsay MacDonald in recent speeches had said he was against revolution in this democratic country; so was he, the speaker. Mr. MacDonald had said that the present system of industry worked by private capital had broken down, that it had produced unemployment and an unjust distribution of the amenities of life. Here, Lord Inchcape remarked, he joined issue. Eighty or ninety per cent. of the capital employed in industry was held, not by wealthy men, but by small, thrifty investors. If all commercial and industrial undertakings were to be worked by Government officials, individual initiative would be strangled and the country would rapidly become bankrupt. He was, he said, convinced that Mr. MacDonald would never embark on any such device. Mr. MacDonald had stated that 95 per cent. of people in this country did not understand what was meant by Socialism. Lord Inchcape said he was one of the 95 per cent. They had, however, got from Mr. MacDonald an assurance that Socialism did not mean Communism, and that "to establish Communism would take generations of starvation, industrial ruin and national chaos." To quote the late Lord Fisher, the nation might, as a practical people "sleep quietly in their beds." They would still be able to say "God save the King."

The people of these islands would never succumb to seditious doctrine; and as long as their sons and daughters—especially those from Scotland—were ready to go to the Dominions to test their fortunes he, and he was sure they, his hearers, need have no fear for the solidarity of the British Empire.

Statistics.

Regarding the work done by their combined services during the year under review, there had, he continued, been 434 ships in commission; cargo carried, 14,894,344 tons; the distance traversed, 16,454,430 sea miles; the port entries had numbered 28,556. The number of passengers carried had been 2,006,806; the number of animals, 294,918. The expenditure on wages and victualling of crews had been £4,878,590.

Profit Sharing for Employees.

He had, he continued, for some time sought to discover a scheme by which employees might, without risk, participate in the company's profits; and had hit on a plan which he thought was both simple and practical. The board had therefore announced that employees of the P. and O. and British India Companies might make deposits which would bear interest at 5 per cent. per annum with, in any year when the deferred dividend was 5 per cent. or over, an additional 2 per cent. or, when the dividend was 10 per cent. or over, an additional 2½ per cent. The directors felt that this would be an added incentive to employees, who had so much in their hands, to care for the company's interests, and while ensuring them a reasonable return on their deposits would enable them to share with the stockholders the fruits of anything they, the employees, might do to improve the company's returns. The scheme would be open to all the employees of the allied companies.

Thanks to the Officers and Staff.

He would like, before concluding his remarks, to pay a tribute to the continued devotion of the staff of the P. and O. and allied companies, ashore and afloat, at home and abroad, with whom their relations were of the most friendly character. In the now nearly ninety years of the P. and O. Company's existence there had always prevailed a spirit of kinship, a sense of loyalty, a pride in the company; sentiments which he was glad to believe were to-day stronger than ever. Interviewing, recently, members of the Chitral's crew, who had resisted the efforts in Australia to induce them to join the strikers, he had asked one man how long he had been in the company. The man replied that he had served for thirty years and would remain until he was turned out. He had replied, "We never turn out good men." Speaking of this reminded him that the newspapers had, to his surprise, recently announced that he was seventy-three. Perhaps they would think it about time for him to go. He would, he said, relinquish his burden as soon as he felt unable to bear it, or before then if it was their, the stockholders', pleasure.

Appreciation and Criticism.

The board desired to give the best service possible, but they could not rule the ocean flat; the largest ships must occasionally roll, which sometimes begat a growl. He saw every complaint that reached the

Digitized by Google

company. Some were justified; some were not. All were dealt with courteously and fairly, but letters of appreciation far outnumbered the other kind. One man recently complained that he felt no exhilaration after a whisky-and-soda on board the steamers; they were representing the matter to the distillers, some of whose proclamations announced that they were "still going strong." He appealed to those who wrote to the company to do so in type or legible handwriting and to append readable signatures; much time was sometimes occupied in deciphering such communications.

A Visit to India.

Continuing, his lordship said he and Lady Inchcape were going in January to Bombay by the Ranpura to spend a fortnight in India. They were looking forward to seeing Calcutta and Bombay again, where they had passed many happy years. It was not a bad thing for the chairman of the P. and O. Company to travel in the ships; he saw how things were done, got a useful education and kept in friendly touch with the staff, and it was uncommonly pleasant to spend a few weeks in a P. and O. steamer. But as Lord Grey of Falloden had said, the head of a great business never had a real rest, for his work followed him, wherever he went, like a perennial stream. So far as he, the speaker, was concerned, there was no sweeter water.

The British India Company.

Continuing, his lordship said that all through the Ghandi and Swaraj troubles the business of the British India Company, 95 per cent. of which was done with Indian merchants, had not in the slightest degree been affected, their relations with their Indian clients having remained as cordial as they had always been since the company's inauguration seventy years ago. This was demonstrated by a letter he had recently received signed by the company's principal Indian clients, expressing regret at the contemplated departure from India of Sir William Currie, the head of the firm of Mackinnon, Mackenzie and Co., the British India Company's managing agents. He had assured his correspondents that happy relations with the firm's Indian clients would be maintained whoever might be its head, for all the partners were brought up from boyhood, as he, the speaker, had been, in its traditions. His own inspirations had come from the precepts, the advice and the example of one who was for twenty years his chief, his counsellor, and his friend, the late Sir William Mackinnon.

A Tribute to Lord Reading.

Looking back, his lordship continued, over more than fifty years of intimate association with India, during which ten Viceroys had held office, he felt that none of them had a more trying term of office than had fallen to the lot of Lord Reading, who went to India when the country was seething with opposition to the British Raj and who had with indomitable courage won over the politicians and brought above calm and good feeling throughout the land. He had vindicated the rights of the great Indian Civil Service, which, for more than a century, had borne a proud and unblemished record; and he would moreover leave India financially sound with its credit untarnished. Lord Reading's name would go down to history as one of the wisest Viceroys the country had ever had; and he would leave it more welded to the Crown than it had been for many a day. They would, he was sure, join with him in wishing Mr. Wood, Lord Reading's designated successor in the most responsible office under the British crown outside this country, every success and all good fortune.

I now beg to propose: "That the report and statement of accounts, now read, which have been circulated among the proprietors, be adopted."

Sir Walter R. Lawrence, Bt., G.C.I.E., G.C.V.O., C.B., seconded the motion, and it was carried unanimously.

The Chairman next moved: "That a dividend for the half-year ended September 30 last of 2½ per cent. on the preferred stock, less income-tax, and a dividend of 4 per cent. on the deferred stock, free of income-tax, as recommended in the report, be now declared, and that payment for the same be made on and after the 11th inst."

This resolution was seconded by Mr. H. N. Gladstone, and unanimously approved.

On the motion of the Chairman, seconded by Sir Montagu Cornish Turner, Sir Walter R. Lawrence was unanimously re-elected a director, as was also the Hon. Alexander Shaw, on the proposition of the Chairman, seconded by Mr. A. M. Monteath.

Colonel A. G. Hipwell, C.B., proposed: "That the cordial thanks of the proprietors are due to the Chairman, directors and staff for their continued successful management of the company's business." In doing so, he said that they were indebted to all concerned for bringing the company through a period of stress and strain, and achieving the best results possible in the circumstances. (Hear, hear.)

Mr. A. Pitt said that, as one of the oldest stockholders, he had great pleasure in seconding the motion. It was always an intellectual treat to come to these meetings and listen to the Chairman's address. With their present chairman, aided by his efficient board of directors and backed up by their loyal staff, they could all rest peacefully out of their beds as well as in them. (Laughter and applause.)

The vote was unanimously accorded, and the Chairman, in acknowledging it, said that it was a great relief to him to be received in the way he had been by the meeting, notwithstanding the reduction in the dividend by 2 per cent., and he was very grateful for the way in which his speech had been accepted.

The proceedings then terminated.

STEAUA ROMANA (BRITISH), LIMITED.

Sir Charles Greenway's Speech.

At the fifth ordinary general meeting of Steaua Romana (British), Limited, held on December 9 at Winchester House, Old Broad Street, Sir Charles Greenway, Bart. (Chairman) said that the Steaua Romana Company of Bucharest were carrying out an active drilling programme on the areas of proved State lands allotted to them by the Roumanian Government, and were drilling seven wells at Moreni (two of which, he anticipated, would come into production before the end of the year) and one at Ochiuri. Five further wells were being put down on these lands immediately, and twenty during 1926.

On the very large continuous area at Ceptura belonging to the Steaua Romana Company they had brought into production on August 31, 1925, an exploration well which yielded about 190 tons a day. Three more wells were well advanced on this field; two further wells would be commenced towards the end of December, and five during 1926. To deal with the large production anticipated from this field the construction of a pipe-line (approximately 60 miles in length), was well in hand, from the field to the main refinery at Campina.

A further pipe-line had been laid between the Aricesti field (where in 1924 a rich natural gas source was discovered, and where a further gas well had just come into production) and the refinery at Campina to enable the latter to be worked on natural gas, thus releasing large quantities of pacura for manufacture into lubricants.

To meet its largely increased drilling programme, the Steaua Romana Company had made extensive purchases of drilling material. In addition to their existing plant, two recently acquired rotary drilling outfits were already at work; two more had recently been acquired; and orders had been placed for the delivery of a further eight. All of these outfits were supplied from this country. A large amount of the necessary casing was already on the field, and orders had been placed for the balance.

The Steaua Romana Company's production for the year to June 30, 1925, was 290,387 tons (exclusive of 11,600 tons, royalties) as compared with 237,546 tons (and 6,000 tons, royalties) for the previous year. Production in September last was 31,750 tons, a record figure since the War, and in October 37,200. November production was 30,240, the reduction being due to temporary curtailment of production owing to lack of transport facilities.

Various alterations and additions (including the installation of a cracking plant, etc.) were being carried out at the refinery at Campina, and a further small refinery was being built at Moinesti.

The company's tank vesels were fully employed during the whole of the year, and the company's depots in Bulgaria, Turkey, Greece, Hungary and Italy were working satisfactorily.

The Chairman said that he understood that a provisional agreement had been concluded between the British and Roumanian Governments under which the latter assumes responsibility for compensating the companies for the oil properties destroyed by the Allies in 1916.

He had no information as to the manner in which payment to the oil companies was to be made and could not therefore express any opinion as to the equity of the proposed settlement. The matter was, however, being closely watched.

The general position of the oil industry in Roumania was much improved. The oil production of the country was higher in the first 10 months of 1925 than the total figure in the best pre-War vear, and if, as anticipated, the necessary encouragement was given to the export trade of the country, there were good grounds for looking forward to a material improvement in the value of the leu.

Turning to the account of Steaua Romana (British), Limited, the Chairman said that the dividend paid by the Steaua Romana Company for the year to December 31, 1924, was 100 lei per share. The British company's shareholding in the Roumanian company had been increased at a cost which very substantially reduced the average cost of the shares held. In accordance with the new agreement, to which reference had been made at the previous meeting, the Steaua Romana had assumed responsibility for £450,000 of the advance to the Roumanian Group, and as from the date of the new agreement interest was payable in cash both on that amount by the Steaua Romana Company and on the balance by the Roumanian Banking Group at 6½ per cent. per annum. Trading profits for the year had been increased by over £3,000 and the increasing production of the Steaua Romana Company gave promise of further improvements in this direction. The value of the dividends received upon the company's holding of Steaua Romana shares had also increased. Gross managerial charges for the year had been slightly reduced. Profit for the year was £91,293 3s. 3d., which with the £37,602 0s. 1d. brought forward from the previous year, made a total of £128,895 3s. 4d. After deducting the amount of the company's liability for income-tax and a sum of £8,594 6s. 10d. representing interest which accrued prior to the date of the coming into force of the new agreement, payment of which was deferred, the balance remaining was £68,318 16s. 6d. Out of this the directors proposed writing off the balance of preliminary expenses amounting to £17,897 and an item of £567 4s. 1d. office furniture; paying a dividend on the ordinary shares at the rate of 3 per cent, per annum (less tax), absorbing £46,875, and carrying forward a balance of £2,979 12s. 5d. The Chairman then moved that the report and accounts for the year 1925 be received and adopted, and that a dividend be declared as set forth above, payable on December 16. Sir Albert G. Stern, K.B.E., C.M.G., seconded the resolution, which was carried unanimously.

Cotton and Cotton Goods.

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Ottoman Bank for the week ended December 12 states:—

There is no change to report in the condition of this market. Business continues to be of unsatisfactory dimensions but hope is still strong that a turn for the better is inevitable in the near future. The disturbing American Agricultural Bureau reports are now a thing of the past as far as this season is concerned and prices can hardly be expected to fall much, if any, further. Values have been declining for so long, however, that one cannot be surprised that buyers should wish to make absolutely sure that stability has been reached before committing themselves very far

Yarn. The state of affairs in this section is still discouraging. Only for certain qualities is the demand equal to the production, and in other cases it is feared that stocks are being accumulated. Neither in respect of American or Egyptian spinnings is there anything of interest to report. Shipments of yarn during November amounted to 13,908,000 lb. as compared with 17,856,100 lb. in October and 12,792,000 lb. in November, 1924.

Cloth.—There has been a fair amount of inquiry, the most interesting being again that from India for light goods. Makers of dhooties are now said to be booked up well into the New Year. Shanghai shippers have been disappointed that the auctions were not resumed yesterday as had been hoped; they have now been postponed to the middle of January. Business with Egypt and the Levant has been of only small dimensions.

Shipments of piece-goods during November amounted to 325,912,000 sq. yards as compared with 366,606,000 sq. yards in October and 329,455,000 sq. yards in November of last year. The features of the returns continue to be the large amount of goods taken by Germany and the smaller quantities taken by India and the United States.

Raw Cotton.—The Bureau Report issued on Tuesday afternoon last indicated the probable yield of the crop as 15,600,000 bales, of which 13,858,000 had been ginned at December 1. These figures were larger than had been generally anticipated but they had no pronounced effect on prices. Whilst the quantity of the crop is now assured, there is much doubt expressed in the United States as to whether there will not be a large proportion of low grade cotton. Reports from Egypt continue to be good but growers appear to be holding back the crop. Prices, however, have continued to decline. Closing quotations yesterday were as follows:—American Middling, 10.17; Egyptian Fully Good Fair, 18.10.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company in its report for the week ended December 3, states:—

Since our last report the futures market has been rather quieter with an undertone somewhat weak. The net changes on the week are the following: Sakellaridis 0.60 dollars down for January, 0.65 dollars down for March, 0.70 dollars down for May, 0.70 dollars down for July, 0.72 dollars down for November; Ashmouni, 0.65 dollars down for December, 0.55 dollars down for February, 0.55 dollars down for April, 0.28 dollars down for October.

We have had a series of very quiet sessions, the trade and professionals taking very little interest in the market. The demand from abroad has been moderate; Lancashire and America have been the most active inquirers, the qualities most sought after being the medium grades, both Sakel and Ashmouni. The difference between January Sakel and February Ashmouni remains steady at about the same level as last week, and the same remark applies also to the differences between the prices of our market as compared with those of Liverpool and New York.

The quantity of cotton bought by the Government on the spot market this week has been negligible, only a few bales of Sakel just over Fully Good Fair. To date the Government is estimated to have bought about 4.500 bales, of which 4,350 bales Sakel about Fully Good Fair and 150 bales Uppers about Fully Good Fair. The Decree restricting the acreage under cotton during the coming season has not yet been published, but it has apparently received the sanction of the Mixed Tribunals and is expected to appear at any moment.

On the first tender day of December, 17,000 kantars dockets were issued. The cotton has been fairly easily taken up. The holding back policy adopted by many wealthy growers is being maintained, with the result that the movement of the crop has been delayed still further. Although the yield this year is estimated at about 7,875,000 kantars against 7,250,000 kantars last year, the arrivals since the opening of the season are well over half a million kantars less than the figure for the corresponding period last year.

We consider present prices fairly reasonable; however, we think that no improvement in the tone of our market can be expected just at present owing to the restrained attitude of spinners and the considerable quantity of cotton yet to be marketed. The week's receipts amount to 320,088 krs. against exports 246,540 krs.; the stock stands at 1,881,410 krs.

Spot: We have had a fairly busy week at Minet el Bassal and sales amount to about 26,400 bales, of which we estimate 14,900 bales Sakel, 9,500 bales Uppers, 1,200 bales Zagora, 150 bales Brown and Fouadi, 350 bales Pilion, and 300 bales White.

Sakellaridis: A fairly good business has been done and all styles have been dealt in, with a steady demand for the the medium qualities. Spot differences are generally without change, though Fully Fair and Good Fair are inclined to ease a little.

Ashmouni and Zagora: have been in fair request and all qualities have changed hands. Spot differences are steady and without much change from last week.

Brown and Fouadi: A small business has been done at about last week's differences.

Pilion: has been in moderate demand for all grades. Spot differences are unchanged.

White: A fair business has been done and some attention has been paid to Casulli, which has brought a substantial premium over Fathy and other White varieties. Spot differences are unchanged.

The report of the Alexandria General Produce Association for November reads:

Lower Egypt.—The small quantity of cotton that still remained on the plants in November has benefited by the good weather prevailing during the month. There is practically no more cotton standing. It is now sure that the yield per feddan is superior to that of last season, and the ginning yield, although inferior to that of last month continues to be slightly better than that of last year.

Upper Egypt and Fayoum.—All cotton plants have been pulled up since the end of October and we have nothing to add to our previous information. We confirm our crop estimate of last month about 8 million kantars.

Brigade Surgeon Richard Hamilton Batty, I.M.S., of the East India United Service Club, St. James's Square, S.W., who died on September 1, aged 84, left estate of the value of £40,640, with net personalty £40,583.

COMPANY NOTES AND REPORTS.

ASSAM-BENGAL RAILWAY.

The report of the Assam-Bengal Railway Company for the year ended March 31, 1925, shows gross receipts, including the Mymensingh-Bhairab-Bazar, Chaparmukh-Silghat and Katakhal-Lalabazar Railways, totalling Rs.1,61,55,514, against Rs.1,44,84,265 and working expenses Rs. 97,53,568, compared with Rs.98,11,305 in the previous year. Taking the company's own line separately, the gross receipts amounted to Rs. 1,45,42,504, and the net receipts to Rs.55,95,441. For the half-year ended March 31, 1925, a small surplus has, for the first time in the history of the company, been actually earned. The precise amount of this surplus is still under discussion with the Government of India, but the company has recently been informed that the company's share of it will not be less than about £2,000. The board hopes, therefore, to be in a position to make a small interim distribution on July 1, 1926, in addition to the usual guaranteed interest payable on that date. Meeting, 80, Bishopsgate, E.C., December 22, noon.

NATIONAL BANK OF EGYPT.

Position at the 31st October, 1925, published in conformity with Article 8 of the Statutes. Banking Department, Liabilities: share capital LE.2,925,000 (300,000 fully paid shares of £10 each.) *By authority of the Egyptian Government these Treasury Bills are deposited in lieu of Gold (See "Journal Officiel" of October 30 1916).

EXPORT OF BULGARIAN PRODUCE TO ENGLAND.

(From Our Own Correspondent.)

Sofia, December 8.

With further reference to the scheme for exporting pigs, poultry and other produce to England, it is learnt that the Bulgarian Cabinet nas officially approved this scheme, which is now due to go before the Parliament. The exact conditions of the concession are unknown, but the Government is believed to have promised a certain subsidy during the first few years. All the meat exported will be raw and it is understood that eggs will not, at first anyway, occupy an important place. The advocates of the scheme argue that anything that increases the export trade is good. Its opponents criticise the Government for having granted too good terms to the English company, whilst they also make out that the cost of living will rise if so much meat is exported. No doubt an early opportunity will be taken of fully informing public opinion, and it is to be hoped meanwhile that the first big commercial project in which British capital has interested itself in Bulgaria will be successful.

NOTICE TO SUBSCRIBERS.

As this week's issue of THE NEAR EAST AND INDIA is the 52nd in the current year, there will be no issue next week, i.e., on December 31.

The next issue of THE NEAR EAST AND INDIA will contain a SPECIAL ILLUSTRATED SUPPLEMENT of 24 pages on THE SUDAN, in connexion with the official opening of the Makwar Dam on January 21.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

An Understanding with Turkey?

The Council of the League of Nations has spoken and the provisional "Brussels Line" becomes the northern frontier of Iraq. In ordinary circumstances the famous Mosul dispute would end there, for if the matter concerned only Turkey and Iraq, there would be little more to be said on the subject. Great Britain, however, is a party to the dispute, and she is big enough to be able to afford not to shut her eyes to the realities of the position. She knows the disappointment that the League of Nations' award will have brought to the Turkish Government, the difficulties with which the new Republic has to contend, and the risk of "incidents" begotten of despair, intrigue, or political inexperience. She has no grudge against the Turks, but is in fact just as favourably disposed towards them as she is towards the Iraqis, and for the same reason, that she has no other desire in regard to the Middle East than to see the several countries comprised in it peaceful and prosperous. Iraq, conscious of British good will, has confidently thrown in her lot with Great Britain; she asks for and has obtained independence on a sliding scale, and is content to make use of British advice and guidance until she is ready to rely solely upon her own resources. Turkey feels no need for any similar dependence on British assistance; but she would welcome financial help from Great Britain, if she could find a means of obtaining it without injury to her *amour propre*. In these circumstances is there no way of using the Mosul award to the advantage of both countries and the removal of all friction between them?

A Frontier "Deal."

The Brussels Line deprives Iraq of a strip of territory of some fourteen hundred square miles in extent, which has many advantages for Iraq. The northern line provides a strategically better frontier; the Mosul Commission was inclined to belittle its importance in this respect, but it would seem to have given inadequate attention to the relative military values of the western sectors of the two lines. At the same time the northern line claimed by Great Britain on behalf of Iraq avoids cutting in half areas occupied by certain restless tribes in the eastern sector which are more likely to keep the peace, if brought wholly under the influence of Iraq. From Turkey's point of view the area by itself is of little use; its inhabitants are for the most part Christians, and the Turk has no desire to settle there. Turkey, on the other hand, is badly in need of money, for the material development of the country and in order that the Republic may make good. A fresh discussion between the Turkish and British Governments—the British Secretary of State has already made the preliminary gesture—should pave the way for an agreement which should give Iraq the additional territory that she requires for an ideal frontier and should provide Turkey with some at least of the funds of which she stands in urgent need. It may not

Digitized by Google

even be necessary that the burden of any cash payment should remain for all time on the British taxpayer; it might ultimately become a charge on a prosperous Iraq or royalties of the Mosul oilfields. Any temporary accommodation of this kind is likely to be welcomed as a cheap bargain by those anxious and timorous souls who stop at no misstatement and no craven suggestion from earnest solicitude lest Great Britain should be mulcted in vast payments as a result of war with Turkey.

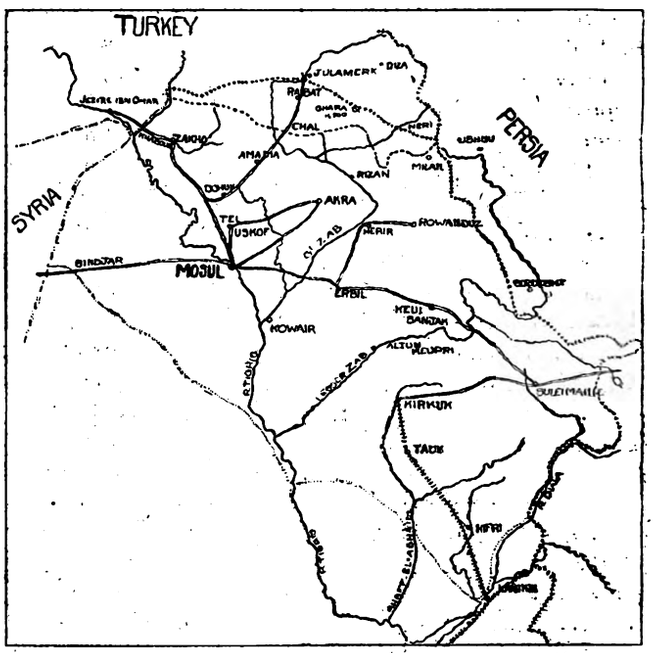
The Debate in Parliament.

The bottom of the agitation, wholly ill-informed and seven-eighths malicious, against British policy in Iraq was completely knocked out in the course of the debate in the House of Commons last Monday. Mr. Baldwin moved "That this House approves the action taken by the representatives of His Majesty's Government at Geneva in accepting the award of the Council of the League of Nations on the Iraq boundary." In the words of this motion the Government sought to bring the Mosul question into its proper perspective, and refused to follow the advocates of a policy of "scuttle" in their attempt to challenge a matter settled several years ago and endorsed by three successive Governments. The debate was notable for the Prime Minister's decisive nailing to the counter of the charge brought against him and Great Britain of personal inconsistency and a violation of pledges. The Labour Party, realising that it had no debating point to make on the real issue, left the House before the debate; but the Liberal opposition remained. After the Prime Minister's speech the advocates of a policy of "scuttle" showed a chastened attitude, which was intensified by Mr. Amery's carefully reasoned statement, and only six Members voted against the motion, which was carried by a majority of 235 votes. The debate confirmed the view that we have always held that, in remaining firm on the subject of Mosul, Great Britain, far from showing unfriendliness to Turkey, was doing the new Republic a good turn. Under the goading of a Press campaign in support of the idea which Mr. T. P. O'Connor rightly described as having been propagated "with mendacity, with want of scruple and with an almost vitriolic fury," Turkey has had considerable provocation. But there is no more reason to suppose that she will declare war on Great Britain for the sake of Mosul than that Russia will do the same, because we refuse to become sovietised. Mr. Cecil Harmsworth fired the last shot of the "scuttlers" in the *Daily Mail* of December 21: "I am not an alarmist, but I doubt if we should emerge from another big war [the reference is to Turkey, as "we are at peace with the world everywhere else"] as a first-class Power." There would seem to be some heroes for whom England is not yet likely to become a fit place to live in. They must re-write the old couplet:

We don't want to fight, for, by Jingo, if we do,
It's wiped from off the map we are by Kurd and Turkey too.

France and the Geneva Award.

As we have often had occasion to find fault in these pages with the failure of French policy in the Near and Middle East to bear in mind the moral obligations imposed by the Entente in regard to "playing the game," it is a source of satisfaction to be able to record the practical results already achieved by what is known as the Locarno spirit. The hurried visit paid by the Turkish Delegate, Rushdi Bey, from Geneva to Paris and the conviction borne in upon him on that occasion that Turkey could no longer count on playing off France against Great Britain will have gone a long way towards reconciling the Turks to the necessity of making the best of the Mosul award. There can be little doubt that in the exchange of views that have been taking place between the Moscow and Angora Governments, stress has been laid by the former on the ineradicable differences of the Western Powers. Soviet Russia indeed has probably derived much of her enthusiasm for a cause already lost from the belief that she has only to hold on her course long enough to enable the quarrels of the Great Powers to complete her work of the disintegration of Europe. The Locarno Treaty will have proved a better pill to her. The very practical application that it has been given in the closing up of the rifts in French and British policy in the Near and Middle East will have shaken Turkish confidence in the infallibility of Soviet Russia and will, we may hope, have caused Turkey to pause in her tendency to imagine that any good can accrue to her by allying herself with Russia against the rest of the world. Those who are interested in the peaceful development of the Near and Middle East and believe that there is ample room there for the activities of all the Powers will be grateful to France for the change of policy which will enable the identity of British and French interests in that part of the world to be stressed.



The Mosul Vilayet as claimed by Turkey. The Brussels Line is shown passing through Chal; the frontier claimed by Great Britain passes through Julamerk and Neri.

The Syrian Revolt.

Although the French Government has loyally championed General Sarrail before the Senate, it must be well satisfied with the prospects of success that its new appointment to the High Commissionership of Syria already opens up. M. de Jouvenel has lost no time in introducing an entirely different atmosphere into the country. Military operations have become intensified with the arrival of reinforcements, but everywhere he goes the new High Commissioner breathes a conciliatory spirit and is quickly convincing the Syrians that France does now intend to give practical effect to the spirit of the Mandate. The work of pacifying the country is being undertaken on more systematic lines, Damascus is to be protected by a cordon of blockhouses connected with barbed-wire entanglements, and the ways of entry to the city are to be restricted to a few broad avenues cut through the orchards. More important still from a peace point of view is the mission undertaken by the Emir Emin Arslan, who has suffered exile at the hands of the French, but has now

THE MOSUL AWARD, AND AFTER.

The Council of the League of Nations has recorded its decision on the subject of the Iraq frontier. That frontier is to be the provisional boundary known as the "Brussels Line," which was fixed in October, 1924, as the line of the *status quo*, to be observed by both parties pending the final decision of the League. The line will become definitive only if Great Britain assumes within six months responsibility for Iraq for twenty-five years or for a lesser period, if Iraq be admitted to membership of the League. On this point of an extension of the treaty relations that at present link Iraq and Great Britain no objection is likely to be raised on the part of the Iraqis, in view of the assurance sent by the Iraq Government last September to the Secretary of State for the Colonies that "the Iraq Nation, represented by its Chamber of Deputies, declares its strong friendship for Great Britain, and expresses its desire to continue in alliance with her after the expiry of the present Treaty." The Brussels Line, it will be recalled, was not the frontier claimed by the British Government. Basing its demand on the ground that its duty was to safeguard both the interests of the populations directly concerned in the area under dispute, and the wider interest of the peaceful development and political and economic progress of Iraq, the Government claimed some fourteen hundred square miles of territory north of the Brussels Line, in order to obtain a satisfactory solution of the problem presented by the persecuted Assyrians. The Commission sent by the League of Nations to study the Mosul question on the spot had rejected this claim solely on the ground that the question "was not introduced into the dispute by the British Government until the Constantinople Conference, and had never been mentioned in the earlier negotiations or in the Treaty of Lausanne," and its verdict has been upheld by the Council. The final decision, therefore, is not the ideal one; but it is at least workable. It retains for Iraq the territory which is essential to its existence as an independent State, and provides it with a frontier, which, if not in all respects the equal of the line claimed by the British Government, can be regarded as sound from a military point of view.

In keeping with their refusal to recognise the Council's right to deliver an arbitral award, the Turkish delegates absented themselves from the meeting at which the Council's verdict was made known. Turkey's attitude, therefore, towards the award remains for the present a matter of speculation. On behalf of Great Britain Sir Austen Chamberlain lost no time in making her a friendly gesture. So long as the dispute was in the hands of the League of Nations there was no common ground for negotiation; but, now that the decision had been given, the British Government, he said, would gladly lend itself to conversations with the Government of Turkey, in order to see whether it would not be possible to render the relations between the two countries easier and safer. With that end in view the British Government was ready to take into consideration any proposal made by the Turkish Government which was compatible with its mandatory duties to the people of Iraq. We should like to think that this spontaneous offer will not be lost upon Angora. Some sympathy is due to the inexperienced administrators of the new Turkish Republic who have, no doubt, been trying to understand British psychology. From all sides they have heard of Britain's goodwill towards Turkey. When, therefore, they found a section of the British Press in violent opposition to the Government, declaring that Turkey had a legal right to the disputed territory and Iraq none at all, that the Turks would fight rather than surrender Mosul, and that any Government in Great Britain which committed the country to war over Mosul would immediately be driven from power, little wonder is it that the Turkish Cabinet persuaded itself that it had only to bluff up to the last, in order to make the British throw up the sponge in Iraq. By now, it is to be hoped, the Turks have realised that they must turn to more reliable quarters than London's penny Press, if they want to gauge the real opinion of Great Britain. That Press bears the same relation to the sober attitude of the country as a whole as did the old Constantinople régime to the Nationalist stalwarts of Angora.

The good will of Great Britain towards Turkey is not linked with any defeatist methods or concession-hunting ends. It rests on surer, more lasting foundations. British policy the world over has as its chief aim the maintenance of peace and the promotion of economic prosperity. If the furtherance of this object in any given territory can be attained only by the acceptance of some measure of personal responsibility, Great Britain is not likely to shrink from it, and when once she has accepted a trust, she will not lightly betray it. The retention of the Mosul vilayet in Iraq may impose additional burdens on Britain for a time, but it is essential to her policy of promoting permanent peace and prosperity in the Middle East that the Iraqis should have a chance of making good in their newly-won independence and that Turkey should not again be the only stepping-stone to be negotiated by a European Power having designs on Britain's Eastern possessions. If the Turkish Government can fit itself into this scheme as an honourable equal, it will always find the right hand of British fellowship held out to it. It will have to realise, however, that both its honour and its equality will have to be proved, and cannot now be taken for granted. There can be little doubt that the determining factor in the unanimity of the Council of Geneva was the infamous maltreatment of the Assyrians on the Mosul frontier at a time when Turkey was seeking to establish her suitability to be recognised as the sovereign power not only over these unhappy people, but also over the whole of the Mosul vilayet. It would not have been difficult, even when the mistake had been committed, for the Angora Government to have dissociated itself from the military excesses; but by denying that they took place it has identified itself with the policy that resulted in those excesses. Some allowance, however, can be made for the difficulties of the Turkish Government's position. The Mosul award can be made to mark the end of a chapter in Anglo-Turkish relations, if Turkey has the will to make it; and in spite of the tendency of her new rulers to go back on their pledges, there will be a desire on Great Britain's part to forget the past and to help the Republic to a better future as soon as the sincerity of any Turkish overtures to this end can be established.

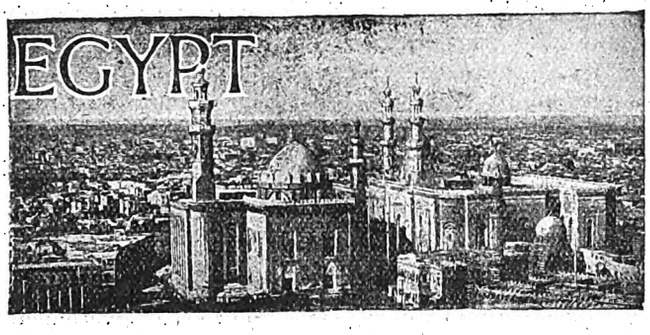
The Near and Middle East*

From Our Own Correspondents.



Cairo, Undated.

Nashaat Pasha's Removal.

The event for which all the forces of Opposition have been clamouring for months past—the removal of Nashaat Pasha from the position in which he dominated Egyptian political life—has happened, but, with a characteristic perversity, the Opposition newspapers are complaining of the manner in which the removal has been effected. Nashaat Pasha's departure from the Palace is attributed to the counsel of the High Commissioner, and that section of the Press which is never satisfied, declares that this is all wrong, and proof positive that so-called independence is a myth. The Liberal Constitutional organ, *Al Siyassa*, takes a different and undeniably ingenious view, arguing that Nashaat Pasha's name has been mentioned in connexion with the Political Crimes Inquiry sufficiently frequently to justify the High Commissioner, or the representative of any Power whose subjects had been murdered in the streets, in asking the King to remove the Pasha from high office. In point of fact, the *Siyassa*, and almost everyone else in Egypt, are frankly glad that a term should have been set to the influence of a young man whose motives may, perhaps, have been of the highest, but whose influence has certainly not had happy results. In declaring that it should not have been left to Lord Lloyd to give the necessary advice to the King, and that the Government should have taken this course long ago, the Opposition is merely seeking another weapon with which to chastise a Government which all parties excepting the now almost negligible *Ittehad* are trying to stampede into resignation.

Ziwar Pasha's Position.

The immediate effects of Nashaat Pasha's transference to other spheres seem likely to be two. First, the *Ittehad* Party, deprived of its creator and inspiration, is likely to melt away, its members seeking re-admission to the political folds which personal self-interest had caused them temporarily to desert. Secondly, the way is opened for the return to active political life for a number of leaders who had determined to remain out of the arena so long as the influence which they so much resented continued to predominate. Prominent among this group are Sarwat Pasha, Sidky Pasha and Doss Pasha. It had been hoped that, with Nashaat Pasha no longer in a position to put his finger into the Ministerial pie, these three, and possibly others, might consent to provide the additional strength of which the Ziwar Ministry so obviously stands in need. But to this they are apparently disinclined, and unless Ziwar Pasha can succeed in persuading them, or others—though it is hard to think of others who would be adequate—to change their minds, there would seem to be no other course open to him than resignation.

Possible Alternatives.

In that event a Ministry under Sarwat Pasha would seem obviously indicated. But Sarwat Pasha is unlikely to assume the burden of forming a Government unless he is assured of the support, or at least the toleration, of the temporarily united Opposition. He might form either a neutral Cabinet, or one drawn from all three Opposition Parties. The latter course would involve delicate and probably long negotiations, and even in the former event it would be necessary, in order to secure the toleration essential to prospects of long Ministerial life, to come to some sort of understanding with the Zaghloulists, Liberal Constitutionals and Nationalists regarding the reassembling of Parliament. All three parties have committed themselves to boycotting new elections and to insisting upon the old Parliament being convoked. But, obviously, it is not easy, when a Royal Decree has been signed dissolving the Chamber of Deputies, to go back on that decree and declare it now inoperative. It may be that certain Opposition elements already regret their haste in having an unofficial reassembling of Parliament but, none the less, the fact that they have committed themselves in this way makes a compromise now all the more difficult. If, as a result of all the complications, Ziwar Pasha still remains in office, and carries on as best he can, for lack of a better way out, there will be much gnashing of teeth among the anti-Government forces, but feelings of relief in the European communities of Egypt, among whom Ziwar Pasha is alike respected and admired for the courage and good humour with which he has managed the country's affairs during many difficult months.

Mr. Cobham in Egypt.

The visit of Mr. Alan Cobham has brought much useful publicity to British aviation which, it must be feared, had during recent months suffered somewhat in Egyptian eyes through comparison of the apparent inactivity of British airmen with the fine performances of French, Italian and Japanese aviators. The successful completion of the Nigerian flight did something to correct this point of view, and now the presence of Mr. Cobham, who has been seeing all sorts of influential people, and has given the Minister of Communications his first experience of aerial travel, has helped on the good work. Mr. Cobham seems to be just the kind of man to carry on this kind of propaganda, his breezy and unassuming personality making an instant appeal to everyone. And it is particularly important that this kind of work should be done now because while the Egyptian Government is considering the training, at State expense, of both civil and military pilots, and is debating the granting of subsidies for an air mail connexion with Europe, Continental aviation enterprises are sparing no efforts to impress upon the Egyptian Government and public that other countries than Great Britain are best equipped to guide Young Egypt's first ventures in the air.

Hamed Pasha el Bassel's Acquittal.

The acquittal of Hamed Pasha el Bassel on charges of fraud in connexion with the trial of the men who attempted to murder Sheikh Maraghi, President of the Superior Mekhemeh Sharia, accorded with popular expectation, though it came as a sad disappointment to political enemies. To everyone else the almost complete lack of evidence made it surprising that the Bedouin chief had ever been charged, much less arrested and kept in prison for some time without being let out on bail. This and other recent cases make it impossible to resist the feeling that arrests in this country are sometimes ordered a little too light-heartedly. And the feeling, justified or not, that there has been an attempt to make political capital through use of the machinery of justice, is liable to create the desire for revenge which finds its outlet when the swing of the political pendulum provides opportunity. But, in the present instance, the grievances of el Bassel Pasha are already forgotten in the new excitement of another *cause célèbre*, this time in the Mixed Courts, where Zaghloul Pasha and Mohammed Pasha Mahmoud are being sued for the respectable sum of 590,000 dollars, alleged to be due to the estate of the late American Senator Folk, for services rendered by him to the Zaghloulist cause during the years 1919, 1920, and 1921. The statement in the claim that the late Senator's efforts contributed to inducing the British Government to make its declaration of February 28, 1922, might surprise some people, but that the suit is not a frivolous one seems to be proved by the fact that one of Egypt's ablest lawyers, Mirzbach Bey, is briefed for Mrs. Folk.

ROUMANIA.

Bucharest, December 9.

The Bessarabian Outbreak.

The judgment of the Court has just been pronounced on 283 persons arrested in connexion with the insurrection which took place some time ago at the large village of Tatar-Bunar in Bessarabia. The verdict was 180 pages long and took four hours to read. Eighty-five of the accused were convicted and sentenced to various terms of imprisonment and hard labour. Only one, Justin Bratiscu, who was proved to be working under the direct orders of the Soviets, was sentenced to hard labour for life. Two others were sentenced to 15 years' hard labour, and the rest to terms of imprisonment varying from six years to six months, the latter term of imprisonment applying to all minors.

Proceedings are now being taken by the Council of War (for Bessarabia is still in a state of siege) against the Mayor of the Commune of Tatar-Bunar, the priest of the commune and the Senator for Cabul, M. Jacob Beluroff, the examinations having shown that they were implicated in the affair. It is satisfactory to note that 198 of the accused have been pronounced innocent, and the fact that more than twice as many innocent as guilty people were arrested shows that the authorities were determined to take no risks in their campaign against Bolshevism.

The Danube Regime.

The sore question of the jurisdiction, and, indeed, of the very existence of the European Commission of the Danube still exercises the public mind in this country, and frequent articles appear in the Press inveighing against the injustice of the Great Powers in this connexion, and more especially against the London Convention of 1883, which decided, among other things, to extend the jurisdiction of the European Commission from Galatz to Braila, further up the river. This Convention has never been recognised by Roumania, as she had only a consultative voice in its deliberations, and the Roumanian Government strongly opposes this extension of the jurisdiction of the European Commission which is at present once more upon the tapis. The Roumanians apparently would prefer to vest all outside control over the Danube navigation in the International Danube Commission with its seat at Bratislava. At present the European Commission (whose seat is at Galatz) is responsible for the dredging of the river mouth at the Sulina Bar, which is apparently an ardous and thankless task, rendered difficult and sometimes impossible by various natural causes beyond human control. Any complaints about the depth of water on the bar are directed against the European Commission and used by the Roumanian authorities as an argument to prove its uselessness. The question is, however, which authority would succeed better.

YUGOSLAVIA.

Liubliana, December 17.

Rifts in the Radical Lute.

For some time past there have been two currents noticeable in the Radical Party, although the unity of the party has been officially dwelt upon time and again. Yet here and there the division within the Radical Party becomes frankly apparent, as was the case at the recent and distinctly stormy meeting of the Radical Club.

The essence of these two currents might be most simply defined as the difference between the adherents of M. Pashitch and those of M. Liuba Yovanovitch. Outwardly this difference is masked by all manner of catch-words; yet not they, but technical and personal motives are essential. Thus M. Pashitch is regarded as the leader of the centralistic and Serbian policy, whereas M. Yovanovitch is looked upon as a pronounced adherent of the Understanding. Nevertheless, it was upon the express approval of M. Pashitch that the Understanding was established, and at the solution of the recent Government crisis it was M. Pashitch, and not M. Yovanovitch, who showed more favour to the Croats. At least, to all appearance. When M. Velia Vukitchevitch, Minister of Education, tendered his resignation, it was the intention of the Yovanovitch group to use it in order to force a far-reaching reconstruction of the Cabinet. There was even talk of a Cabinet without M. Pashitch. M. Pashitch parried the blow very neatly by accepting M. Vukitchevitch's resignation and at once proposing M. Stefan Raditch for the post of Minister of Education. The suggestion was accepted—because to have acted otherwise would have endangered the very policy of the Understanding, of which M. Yovanovitch is the particular advocate.

The struggle resolved itself into a battle of tactics, and as M. Pashitch is a master tactician, he won. However, one cannot bridge serious differences with tactics, and so the tug-of-war in the Radical Party continues, with

the result, that the true cause of it is becoming more and more apparent.

The Supremacy of M. Pashitch.

The authority wielded by the veteran leader is too great. He orders everything; not a step can be taken without him, and therefore conditions became all but intolerable during his recent spell of illness. All business was at a standstill, nothing was done, because nobody dared do anything without the approval of M. Pashitch. People murmured and became impatient. The machinery of government failed to function, and even the most necessary work hung fire. At that juncture M. Yovanovitch took a hand in order to keep the government apparatus going, either with M. Pashitch's approval, or, failing that even without M. Pashitch. But his very first attempt was a failure, and the incident of the resignation of the Minister of Education ended in a victory for the aged Premier.

The second attempt is in progress at this moment. It is difficult to say whether it will prove more successful. For feeling in the Radical Club is still very strong on the side of M. Pashitch. His authority is still great, as was shown by the recent controversy in the Belgrade paper *Politika*. One of M. Pashitch's adherents, discussing conditions within the Radical Club in the *Politika*, took up the standpoint that the Radical Party was identical with M. Pashitch; that a man joined the party of M. Pashitch, not the Radical Party as such. M. Pashitch, in fact, was the Radical Party; it owed all its successes to him, and therefore let M. Pashitch give his opponents within the party short shrift and turn them out. More particularly let him settle accounts with M. Yovanovitch, who opposed him in Zagreb. The consequence of this virulent attack was a denial from M. Yovanovitch, which may be interpreted as a retreat, though an incomplete one.

Of course, M. Pashitch's immediate entourage has a very genuine interest in spurring the Premier on to such drastic measures. For at the moment when M. Pashitch will no longer be at the helm, this entourage will lose all it present importance. And it has grown so used to thriving in safety and comfort in the shadow of M. Pashitch's power, that it is naturally indignant at the prospect of seeing its present status, largely termed parasitic, suddenly put an end to. Yet it is this very position of M. Pashitch's entourage which has caused the present conflict, and that is why the battle must be fought out to a finish. If it should prove impossible to deal with the Premier's entourage within the pale of the Radical Club, a split in the party may very well occur, and a consequence of that would be an alliance between the Yovanovitch group and some other parliamentary groups. In this case the great Concentration Government would be near realisation. In the year of the King's coronation a Government of this type would be very desirable, and therefore it is quite on the cards that it will come.

M. Pashitch, of course, knows this as well as anybody, and so he will take good care not to carry out the neck-and-crop policy advocated by his immediate followers. He will use his tactical skill to render his position so secure that he will continue to be master of the situation.

As the Skupshtina is now prorogued until January 19, no inner-political events of major importance are to be expected. The struggle will be continued behind the scenes, and the public will hear no more of it until Parliament re-opens.

Even then the work on the Budget is likely to delay a decision.

NOTES OF THE WEEK.

(Continued from page 764.)

returned to Syria, to Sultan el Atrash to discuss the possible terms of a settlement. The Emir is accompanied by members of the People's Party, of which Dr. Shahander is one of the leaders, and his task is to find common ground on which insurgents and French can meet with due regard to the dignity of both.

The Slave Trade in Abyssinia.

Those who entertain misgivings as to the probability of Iraq's becoming qualified within a period of less than twenty-five years for membership of the League of Nations should read Command Paper 2,553, entitled "Correspondence respecting Abyssinian Raids and Incursions into British Territory." The documents cover a period from September 1922 to June 1925 and deal mainly with the question of the slave-trade in Abyssinia and with the incursions of Abyssinian tribes into Kenya. Now Abyssinia is a member of the League, but the correspondence suggests that the dignity is not incompatible with elementary standards of administration. Three or four years ago the traffic in slaves reported to be in vogue in Abyssinia attracted attention, and the Abyssinian Government, which had periodically issued proclamations in regard to the slave trade, "confirmed" its previous orders, presumably for the edification of the League, by yet another proclamation. In this, issued under the authority of "the Conquering Lion from the Tribe of Judah," it was pointed out that whereas in the past "the reason why some men were declared slaves was that certain nations were at war with us, and this had caused money to be spent which these nations had to repay by their labour, and this also, that they might learn virtue by communication with Christians," it is quite a different matter to indulge in slave-raids. From the date of the proclamation, therefore, anyone guilty of that practice was to be condemned to die, and for any slave taken and held after the date of the proclamation the Governor and headmen of the province in question were to be fined. It was, no doubt, something in the wording of the proclamation rather than any lack of faith in the good intentions of the Abyssinian authorities that prompted the British Minister in Addis Ababa to anticipate that like its predecessors on the same subject this proclamation would also remain "without appreciable effect."

A Frontier Problem.

In spite of official pessimism, the fact remains that much less is now heard of the slave traffic in Abyssinia. On the other hand the provinicial organisation of that country would seem to fall a long way below the standard that Iraq could easily maintain, even if left to her own devices to-morrow. Both Kenya and the Sudan suffer from Abyssinian indifference to the existence of frontiers; but almost worse than armed invasion for revenue purposes is the problem presented by whole tribes taking refuge in Kenya from maltreatment by Abyssinian Governors and local authorities. There is a limited water supply in the Northern District of Kenya, and it is impossible to accommodate refugees to the number of three thousand adults and thirty thousand head of stock, which was the strength of the Degodia, who fled at the beginning of 1924 from Abyssinian territory. These hapless people accordingly had to be herded back to their own country, and British officials had to do their best, without any confidence in the efficacy of their precautions, to stipulate for decent treatment for the tribe from its own Government. Little wonder that both in Kenya and in Downing Street the suggestion is heard that the question of Abyssinia's shortcomings that are allowed to become a nuisance to her neighbours might be referred to the League of Nations.

The Belgrade Court of Appeal has quashed the sentence of twenty years' imprisonment which was passed recently on the Communist journalist, Maurice Piade.

THE TURKISH WOMAN.

The Near and Middle East Association arranged what proved to be a crowded meeting on December 18, at 27, Great Cumberland Place (by kind permission of Mrs. James Conchie), to hear Mme. Adnam, better known perhaps as Halideh Edib Hanoum, lecture on "The Turkish Woman of To-day." Lord Lamington presided.

Mme. Adnam began by correcting the statement that had been made (in the Near and Middle East Association's notice of the meeting quoted in the columns of THE NEAR EAST AND INDIA) to the effect that she had once been Minister of Education in the Angora Cabinet. This statement was, she said, invented by enemies of the Nationalist Movement in Turkey, with the object of harming Kemalism. The world of Islam, however, had taken the report very kindly, and even since that time she had been known to many Moslems as a onetime Minister of Education. The lecturer then proceeded to the subject of her discourse. The Turkish woman, she claimed, was in all essentials just like Western women. It was true that the romance and the poetry that underlay the Turkish life had attracted such writers as Pierre Loti and Claude Farrère to sympathy with her nation, but that very fact had its disadvantages. For through such writers the notion that all Turks were polygamous, that the Turkish woman reclined in luxury on silken divans and the rest of it, had unfortunately become widespread. In particular, Mme. Adnam attacked the writings of a Greek novelist, Mme. Dimitri Varka, who represented for Western, especially American, readers a wholly false state of affairs. The truth was that polygamy and the harem were institutions confined to the Palace, and that they were to anyone else than the Sultans practically unknown. To prove what were the essential conditions of Turkish society, the lecturer went back to pre-Islamic times, when the forbears of the Turks, the Yuruks, lived in a state where polygamy and divorce were almost unknown. Polygamy and the harem were, therefore, fundamentally non-Turk: they were partly Arab and partly Byzantine.

Coming to the Turkish woman of modern times, Mme. Adnam said that the years of 1839 and 1876 gave a great impetus to the emancipation of woman. This continued steadily until the outbreak of the Great War, when Turkish women, like those of all combatant countries, came very much to the fore, doing all kinds of jobs that had hitherto been reserved to men. Hopes were high when the Armistice of 1918 came, but disappointment followed disappointment. Finally, when the Greeks invaded Anatolia in 1920, it was the Turkish woman who more than any other caused the Nationalists to resist. Having repelled the invader, the Turks were seriously tackling the position of woman in society, and in Anatolia to-day it might be said that perfect freedom existed—girl and boy students, for instance, danced together, played together, and so on, just like any Western community. The young women even were up-to-date in their method of cutting their hair! One thing alone, in fact, demarcated the Turkish woman from her Western sisters—she did not possess a vote. But her education was a very real thing: there was not, for instance, a woman in Constantinople or Smyrna or Broussa who could not read and write, and the progressive movement was fast spreading to the provinces. Alike in dress and ambition and in her general outlook on life, the Turkish woman resembled no one so much as the English woman, whom she so much admired and had consistently striven to imitate.

Among those present were:—The Austrian Minister, the Hungarian Minister, the Albanian Minister and Madame Vrioni, the Polish Chargé d'Affaires, the Egyptian Chargé d'Affaires, and the Persian Chargé d'Affaires, Members of the German and Turkish Embassies, and of the Afghan and Bulgarian Legations, Lady Dunedin, Lord Headley, Lord Edward Gleichen, Sir John and the Hon. Lady Shelley-Rolls, Sir Israr Hasan Khan, the Dowager Lady Boyle, Edith Lady Bradford, Sir Harry Lamb, Sir William Clark, Moukbil Bey, Lady Sprigge, the Vicomtesse de Baillou, Archdeacon and Mrs. Potter, Mrs. Eckstein, Mr. Montague Bell, Mr. J. S. Haskell, Mr. G. L. M. Clauson, Mrs. Van Ryck de Groot, Mr. Allan Ramsey, Mrs. R. H. Foa, Mrs. L. Cobham, Captain and Mrs. E. N. Bennett, Professor and Mrs. Arnold Toynbee, Mr. and Mrs. Robert Rowell, Mrs. Corbett Ashby, Mrs. N. Sen, Mrs. Bruce Dick, Mrs. Hugh Spender, Mrs. Stewart Erskine, Miss K. D. Courtney, Mrs. Chadbourne, Mrs Clifford Hall, Mrs. Roy Devereux, and Captain F. H. C. Armstrong.

THE ABSENT GUEST DINNER MOVEMENT.

The Cairo Y.M.C.A. have received the following message from St. James's Palace, dated November 24,:—"His Royal Highness was much interested in the Absent Guest Dinner Movement, which seems to him a very fine practical expression of the spirit of Christmas. He hopes that the Movement may spread and that it may be the means of providing many who could not otherwise afford it with a real Christmas dinner."

It will be remembered that two years ago this movement was inaugurated in Cairo, and its increasing popularity has certainly merited its growth on a wider scale. The Double Dinner, held each year in Cairo and London, is a modern "Tale of Two Cities," and has about it a charming touch of Christian sentiment. Over 100 members and friends of the Y.M.C.A. in Cairo, having paid 5s. for their tickets, partake of a simple dinner of lentil soup, bread-and-cheese, and water, at an actual cost of 3d. per head. Representatives attend from the Army, the Royal Air Force, and religious, philanthropic, and social organisations in Cairo, while messages are received from various members of the Royal Family, and other distinguished persons interested.

Simultaneously, on December 26, "On the Feast of Stephen" (out of compliment to Good King Wenceslas!) some 300 to 400 unemployed guests, drawn from the poorer districts of London, are entertained, through the offices of the Church Army, to a sumptuous Christmas Supper, provided out of the balance of the Cairo dinner. Hosts and guests toast each other in absence. The same double menu cards are placed on the tables of each dinner. Flashlight photographs are taken at both dinners and wireless cables are exchanged across the distance of over 2,000 miles. It is hoped some time to arrange for the speeches to be broadcasted.

This somewhat novel form of festivity has a taste of the real Christmas spirit, and is a refreshing change from what is too often a mere cold charity. If it could be adopted on a wide scale by such institutions as parochial clubs, social organisations, masonic lodges, boy scouts, and girl guide troops, and so on, it might become a very valuable contribution towards the solution of the problems of unrest and distrust between class and class.

Lord Lloyd, the British High Commissioner in Egypt, paid his first provincial visit on December 16 to Fayum.

Dr. Langdon arrived at Jerusalem last Thursday on his way to Baghdad, where he will conduct the excavations of the Weld and Field Museum Expedition.

Mr. J. S. Wardlaw-Milne, M.P., gave a dinner at the House of Commons on December 16, to meet Mr. Edward Wood, Viceroy-designate of India. Among those present were:—Lord Inverforth, Sir Robert Horne, Sir Henry Burt, Mr. Langford James, Sir Percy Newson, Mr. E. T. Campbell, M.P., the Hon. Julian Hawke, Colonel Constable, Mr. Osbern Grazebrook, Sir Montagu Turner, Sir Henry Craik, M.P., Sir John Hewett, Sir Charles McLeod, Brigadier-General Charteris, M.P., Mr. Sandeman Allen, M.P., Mr. A. M. Samuel, M.P., Sir Campbell Rhodes, and Sir John Power, M.P.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscriptions £1 per annum. Further particulars may be obtained of the Hon. Secretary, 74, Grosvenor St., W.1.

THE WEEK AT HOME.

London, Tuesday Morning.

Christmas.

Voici Nöel, and it seems as though the clime would this year traditionally suit the time. It is long years since we had considerable snow and frost at Christmas-tide; other things, too, such as scarcity of money and uncertainty of prospect have in the post-War years to some extent decreased the magic and the jollity of the season. This year, however, it looks as though Santa Claus may be "realler than ever" for *les petits enfants*; but for the other mortals who are no longer *petits* there are a hundred and one compensations.

The season has been quite remarkable for the number of books that have been bought as presents. Nor have these purchases been the customary indiscriminate kind of thing, when the quality of a volume is judged more by its cover than by its contents. Novelists have done well; so have the people who write decent memoirs; and, of course, those who, like Lucas or Milne or de la Mare, purvey memorable children's books.

Another thing that has been heavily bought as a present is silk. Silk scarves, silk shawls, silk stockings, silk flowers, silk cushions—all these have been shining in the shop windows with a fascinating smile that betrays the satisfaction of the Chancellor of the Exchequer.

But not only in the West End does a special attempt at brightness seem to have been made. In the provincial towns, even, the lights have been twinkling more alluringly than usual, little noses have been rubbed more deeply than ever on the window-panes, and altogether the joy of giving and of receiving has this year been provided a reasonable chance of being indulged. Whether the greater significance of the time is adequately realised is a matter that our kind-hearted English men and women are not greatly pondering over.

The Liberals' Travail.

It hardly seems decent at the time of peace and good will to introduce the jarring note, but so much attention has been paid recently to the painful efforts of the Liberals to extract unity from themselves and, incidentally, wealth from their rich supporters' pockets, that no chronicle professing, however slightly, to indicate political tendencies would be complete without mention of two things.

The first is the rumour that Sir Alfred Mond is willing to step into Mr. Lloyd George's place, and that upon hearing of this the ex-Premier insisted on retaining the leadership of the Liberal Party in the Commons. If this is true, it is an interesting development. For Sir Alfred, who seems to differ very much from nobody who is recognised in Parliament as important except on the questions of Free Trade and Unemployment, is a man who has the essentially party mind; he is, that is, first and foremost a politician. I have heard him described by a prominent Unionist as exactly the kind of Zionist whom a Conservative Administration wants, and by an equally prominent Labour supporter as the future leader of the Labour Party! For the moment, however, all is officially well with Mr. Lloyd George as leader.

The second thing is that the Liberal Party, having definitely renounced the hope of further tapping Mr. Lloyd George's money chest, last week deputed Lords Oxford and Grey to meet the moneyed men of the Party. How successful they were in extracting assistance is unknown, but what fun it would be if, as Mr. Vivian Phillips suggested, the names of the contributors to the Party Funds were published!

Labour's Ginger and Syrup.

The "Ginger-group" in the Labour Party, which I referred to recently, has not got very far—at least in outward appearance. At a meeting last week the older "politicians" of the Party, such as "Uncle Arthur" Henderson, refused point blank to carry on if the Executive were to be occasionally attacked by unauthorised back-benchers. It looked at first as though there might be a storm within the Party, and some fierce mutterings appear to have been indulged in. But under the soothing influence of the more mellow members of the Party the ginger dissolved into syrup, and to the outward world a united front was once more presented, in the way which students of politics, and particularly of recent Liberal politics, know so well.

It was resolved that a complete reconciliation be advertised to the public to have taken place, that the whole strength of the Party be concentrated on the floor of the House of Commons for the purpose of waging war against a "capitalistic" Government, and, in fact, that the attempt to lead the Party from behind would be a disastrous experiment. And there, for the moment, the matter rests. But for how long, it would be rash to guess.

Politicians and the Press.

Quite the most exciting, the most well boomed, and the most extensively reviewed publication of recent days has been Lord Beaverbrook's "Politicians and the Press." It should be explained, for those who might be misled, that by "politicians" Lord Beaverbrook means those men who during and after the War were, either in or out of Parliament, susceptible to Lord Beaverbrook's influence; and by the "Press" is meant, simply, Lord Beaverbrook's *Express*.

Now it is well known that nothing since the War has so saddened men of education in this country as the degradation of the popular Press, by which is implied chiefly the papers of Lord Beaverbrook and Rothermere. The "new type of journalism," the praises of which these two Peers are never fatigued with reciting, has, it seems, been specially invented for the most superficial and uneducated type of mind, the mind which prefers shrewdness above all things, the mind which has, nevertheless, to have the particular importance of a thing indicated to it either in italic or in heavy type; the mind, that is, of the essentially "get rich quick" type.

It is unfortunately true that at one time Lord Beaverbrook did have very considerable influence over certain politicians—"so much the worse," as he himself might say, for our politicians. But nobody imagined that the political degradation into which the Coalition Government plunged our national life after the War could endure; and at last, whether through mere good fortune or whether through inexorable fate, the guiding or impelling hand of Lord Beaverbrook was withdrawn from England's leaders. An honest man is now at the head of affairs, and although an intensified "stunt" might conceivably remove him, the cleansing process that he has started will take some time to be converted into a muddying machine.

Lord Beaverbrook as Imperialist.

In case I should be accused of devoting too much space to the eminent bludgeoner who was once Max Aitken, it should be pointed out that many Conservatives seem to be genuinely afraid of his professions of democratic Imperialism. (Liberals are not afraid of him: they are either subservient or neglectful.) Now it is true that Lord Beaverbrook is an Imperialist, but he is a very ignorant one. He prates incessantly of Empire, but he seems never to have heard of India. Consequently he is entirely at a loss in dealing with British Middle Eastern policy.

And lest it should be supposed that, even in his ignorance, he really holds principles in regard to British policy in Arabia, I should like to quote two sentences concerning Palestine, to revise our conduct in which country he specially visited the Holy Land. On page 100 of his book he says:—"I objected particularly to the Palestine adventure because it subjected an Arab majority to an unjust domination by the Zionists." One saw, on reading this, the tears of sympathy with Eastern Christians and Moslems welling out of Shoe Lane. One's vision was, however, blinded on finding, on page 102:—"If France or Italy care to prop up the Jewish State in Palestine on foreign bayonets, I should not have any objection."

A wonderful man! Why do people keep on reading him? For a rudderless ship at sea was never more completely lost than are the *Daily Mail* and the *Daily Express* in the present ocean of more or less clean politics. Their cries are of hoarse and troubled men, spluttering and intermittent, as of travellers whose familiar means of progress avail them no longer.

The Ulster Embroglio.

Yesterday it was the Free State that was in trouble; to-day it is Ulster. Poor Ireland! Ulster in some ways is even more difficult to understand than Southern Ireland. For in that province, where in the past "loyalty" has been a somewhat over-paraded virtue, there was recently to all intents a mutiny. Part of the "A" Special Constabulary, which was a force enrolled by the Ulster Government (and paid for by the English tax-payer), mainly for the purpose of checking any nefarious activities on the part of the Free State, was in open revolt. The Belfast Government, seeing that the boundary dispute is settled, naturally wished to disband it. With this desire, however, the Constabulary did not see eye to eye. It promptly demanded a bounty of £200 a head, or £700,000 in all.

How Sir James Craig, whose reputation for statesmanship has in recent weeks considerably increased, got over this difficulty, is as yet not quite clear, but the matter, it is stated, has been happily settled.

London Housing.

The London County Council has recently published a grand scheme for the development of outer London. On the Becontree Estate, which is two miles across, 20,000 houses are to be erected, and it is promised that we shall have there "the finest garden city in England." In many other places, too, elaborate plans have been made, and in what are sometimes called the noisome districts of Shoreditch, Stepney, Lambeth, and so on, slums are to be replaced by decent rooms. In all, taking housing and rehousing together, one arrives at the figures of £18,000,000 to be spent on 143,000 people.

In time doubtless we shall see London all planned out—healthy, wholesome and with the rest of those attributes that delight the reformer's heart. There is a type of mind that cannot cease regretting that the London that we know was not better planned, but grew up anyhow. It is passionate in its demand for open spaces, correct sanitation, the straightening out of curves, and so on; that these defects are some of the essentials of lasting beauty it never stops to think. One would expect with more eagerness the achievement of the L.C.C. if one did not know its record on the question of Waterloo Bridge.

Waterloo Bridge.

If any men deserve posthumous ill-fame, the L.C.C. deserve it—and, too, will probably get it. For last week it turned its utilitarian thumbs definitely down on the proposal to save the one bridge that London and visitors to London are abidingly proud of—Waterloo Bridge. The line that seems to have been taken by eminent restaurateurs and other artistically minded men on the Council seems to have been that the Bridge is, as some one said of St. Paul's Cathedral when there was a question of destroying or saving it, a "thing of beauty and an obstruction for ever." It is, indeed, admitted by the vast majority of experts who believe that it is perfectly feasible to save Waterloo Bridge, that it is not at the moment so utilitarian as it might be. But would Westminster Abbey be destroyed if it were pronounced unsuitable for public service?

However, the die is now cast, and for those who wish to see London's most lovely bridge before it falls under the hand of Progress, one's advice is to go at once to it—and then to ponder on the æsthetic virtures of representative government. Democracy, what things are done in thy name!

A Great Cricketer.

I never saw A. N. Hornby, who has just died, but he was one of those great cricketers at whose shrine everyone who knows anything about the national game is ready to worship. In his time ("it's so my father tells of it") the game had infinitely more adventure, more wit and humours and spice; it was romance and uncertainty all the time. I am the last to decry the present-day cricket, but no one would deny that, in the first-class games at any rate, venturesomeness is a declining quality. Modern technique is so highly finished; wickets are far less mischievous than they were; and, to some extent, the development of professionalism has emphasised the prosaic elements in the game at the expense of its poetry.

But Hornby belonged to the school about which poets can and did write. Everyone knows Francis Thompson's lines on him and on Barlow. What Lancashire man of the present day is there over whom one could rhythmically rhapsodise? And what, for instance, did Hornby, watching from the pavilion of Old Trafford, really think of Hallows and of Makepeace? Ah! for the *neiges d'antan!*

English Pronunciation.

Everyone knows that if you wish to hear English correctly spoken you must (according to the Scots) go to Aberdeen, or (according to Mr. St. John Ervine) to Northern Ireland. Others have made this claim for the Universities' accent (whatever that may be); yet others (nearer the truth) for Southern Ireland; and alone but in solitary accuracy comes George Borrow (Cobbett also, I rather think) who put it in on behalf of the people of Norfolk, the only folk in England who know how to pronounce a final "l" or "le."

And now comes another, Sir Richard Paget, who says that in Somerset the purest English is spoken. Sir Richard is intriguingly original. He applies the acoustic criterion, and finds that ,alone of English dialects, the Somerset, with its "v" for "f," and its "z" for "s," can carry. This zeems vurry vine, but who, beyond a Communist or a bookmaker or a bargeman, wants to make his voice carry. To me, at any rate, it seems a doctrine fitter for bedouin than for bourgeois.

But it is rather interesting to guess how the Somersetshire man came to develop this dialect, for it can hardly have come through the necessity of shouting (unless, indeed, it was farmers bellowing at well-cidered labourers who invented it). One would have thought that carrying voices would sooner have been developed by mountainous folk, and, indeed, I have heard people in North Wales claim distinction for their pronunciation on this very score.

ALTER EGO.

The Times Basra correspondent reports that the accession of Shah Riza as Shah of Persia was celebrated in Basra on December 16. There was a special reception at the Persian Consulate, which was attended by Wuthuq ed Dowlah, a former Prime Minister. The Anglo-Persian Oil Company gave free meals in the Mohammerah, Abadan, and Ahwaz mosques to 1,500 poor people.

Book Reviews and Notes.

THE GOLDEN JOURNEY.

"THROUGH KHIVA TO GOLDEN SAMARKAND." By Ella R Christie. (London: Seeley, Service and Co. 21s. net.)

By the present reviewer it should be confessed at once that the very names of Bokhara and of Samarkand are like the distant blue hills that for ever and appealingly call the traveller, names that more any other summon or suggest the romance, the strangeness, the magnetic unknowableness of the East. He would wade through the deepest and least poetic narrative even in imagination to reach those enchanting spots.

And, to be quite frank, it has been rather a wade through Miss Christie's book. One was often stuck in the bog of impertinent padding, or held up by the abundant pools of quotation, or made to stumble over the frequent inconsequent jottings. But all these things, if in the way, can by the reader be made by the way, and if he perseveres he will be well rewarded. Miss Christie apologises, it is true, for her "unprofessional style," and in spite of her obvious reluctance to set down her own impressions and of her readiness to set down others' impressions (or is this merely due to her having written after the War the story of a pre-War journey?), one ends in forgiveness and in gratitude to her for having told us the tale of a gallant and fascinating trek through Russian Turkestan.

Miss Christie started on her first journey from Krasnovodsk, on the Caspian. The train journey thence to Ashkabad was not greatly interesting, but it enabled the authoress to admire the thoroughness with which the Russians in the Tsarist régime renovated the region. Of Merv, once the "Queen of the World," she says that it is now but "a vast plain of shapeless mounds," reserving her encomiums for what the Russian Government did for the afforestation of the country around. It was, of course, largely owing to the efforts of a British engineer, Sir Colin Scott-Moncrieff, that the district around Old Merv (Bairam Ali) became so productive. On she went, along the Transcaspian Railway, to Charjui, whence she resolved to set out by boat, along the Amu Darya (or Oxus) for Khiva. On the steamer north she was given an opportunity of intimate study of the types of the region—Turcomans, Kirghiz, and Sarts. In less than a week Novi Urgentch was reached, whence Khiva is but forty versts.

Khiva was a town of 60,000 inhabitants, yet it had neither telegraph nor postal arrangements of any kind. One rare thing, however, Miss Christie did get there—a hot bath. Her chapters describing this town (where, incidentally, it is stated that the Basmachis have recently been causing trouble to the Soviet military authorities), and of her visit thence to the Mennonite colony at Ach Meshed, are among the best in the book. Khiva appears, however, to be now even further away from being a resort of Cook's tourists than it was before the War, and even then Miss Christie was able to falsify Captain Burnaby's prophecy that Khiva would soon be included in the Cook's itinerary.

From Khiva the authoress went by horse and cart across the desert to Petro Alexandrovsk whence she returned down the Oxus to Charjui. Next she was to come to one of her goals—Bokhara, which, strangely enough, she compares, for its antiquity and colour, with Petra. At the time of her visit to this walled city, the population was between 70,000 and 100,000: how many, one wonders, are there now? And is it still a mixed throng of Sarts and Tajiks and Turkomans and Kirghiz and Jews and Indians?

There is no space, however, to dwell with Miss Christie in delightful Bokhara: we must on to Samarkand, the capital to which Timour moved after the fall of Bokhara, the city whose very dust is a golden glory and whose camel bells are pilgrims' music, the town whose loveliness appealed alike to the sensitive prospect of Lord Curzon and to the imaginative vision of Flecker. It is described in some detail by Miss Christie, who has manifestly read all that she could on the history of this wondrous place, so redolent with the might of Timour, a figure whose like can scarcely rise again.

The next stage of the journey brought the authoress to the end of the Transcaspian Railway, Andijan. After traversing many miles of steppe, Miss Christie found herself in the great cotton-growing centre of Russian Turkestan, that vast area which centres on Khokand. Thence she went to Ush and to Tashkent, and so, by the Orenburg Railway, to Moscow, and home.

But she had not finished with Central Asia. Once more, this time by the rail-line which she had used in returning, she decided to go back—a resolution which enabled her to see a certain distance into the soul of Russia. Particularly, she stayed in Tashkent and the town of Turkestan. And she concludes her book with a reference to events that have taken place since her visit to Central Asia, describing, but at second hand, events under the Bolshevist régime.

It should be stated that this book, which, for all its ineptitudes and somewhat undigested quotation, is, from the very nature of the country with which the intrepid authoress deals, a valuable one, is abundantly supplied with photographs. In fine, it is one of those numerous contributions to the literature of travel which, without being in any way original, have a quite definite and permanent use.

THE KING OF YUGOSLAVIA.

The birthday of the King of the Serbs, Croats, and Slovenes, was celebrated on December 17, at the Russian Church, Buckingham Palace Road. The choral service, which was attended by the Minister, M. Jouritch, and the personnel of the Legation, as well as by a few of the Yugoslav colony in London, was short and impressive.

THE DESERT MAIL SERVICE.

We fear that subscribers to THE NEAR EAST AND INDIA in Baghdad have during the last few weeks been receiving their copies of the paper very irregularly. This circumstance is due to the abnormal conditions with which the motor mail service has had to contend, and in no way reflects on the punctuality of the delivery by our agents, the Government Book Store.

LECTURES FOR MISSIONARIES.

The Board of Study for the Preparation of Missionaries is continuing its usual courses of lectures on Thursday afternoons at the School of Oriental Studies, Finsbury Circus, London, E.C. The Spring Term begins on January 14. The subjects to be taken, as finally arranged, are "Language Problems on the Mission Field," "Current Problems in China and India," "An Introduction to the Study of Confucianism and Buddhism," and "The Practice of Teaching."

Full information on these lectures can be had from the Secretary, Board of Study, 2, Eaton Gate, S.W.1.

FRENCH SELF-TAUGHT, GRAMMAR WITH KEY

By J. LAFITTE, B.ès L., Principal French Master, City of London School.

For learning the Language by the Natural Method. It contains Classified Vocabularies Travelling by Rail, Road and Sea Cycling Motoring Post, Telegraph, etc. Commercial, Naval and Military Terms etc. Conversations, so arranged that they may be learned AT A GLANCE, with ENGLISH PHONETIC PRONUNCIATION, Tables of Money with Illustration of Coinage, etc.

A course of simple and practical lessons in the Grammar and construction of the French language, progressively arranged and fully illustrated with model sentences; useful exercises throughout, and an Alphabetical Vocabulary.

Crown 8vo. 315 pp. Green Cloth, 6s. net. Postage 4d. extra.

Sold by all BOOKSELLERS. Write for Prospectus and Catalogue No. 25.

Jumada II, 8, 1344 A.H., of the Moslem Calendar.
Tebet 7, 5686, of the Jewish Calendar.

The Turkish Ambassador has returned to London from Paris.

Sir Vincent Raven left London last week for India and the Far East.

Sir James Currie left London last Thursday to join Lady Currie at Port Sudan.

Sir Archibald Buchan-Hepburn has left for Egypt and will be away for several months.

Viscount and Viscountess Devonport left Marseilles last Friday in the Ranchi, for Bombay.

Sir Thomas Strangman, formerly Advocate-General for Bombay, left London last Thursday for India.

The Countess of Kinnoull, who has been spending some time in Cairo, left last week for Upper Egypt.

Sir Valentine Chirol has left England to spend two months in Corfu.

Lord and Lady Esmé Gordon Lennox left London last Friday in the Maloja, to spend the winter in Egypt.

Sir Alexander and Lady Kay Muir, who have been staying at the Ritz Hotel, have left London for the country.

Major the Hon. Alastair and Lady Sibyl Fraser left London last Thursday to embark in the s.s. Ranchi at Marseilles for Bombay.

Lord Glenavy was among those who left London for Marseilles last Thursday to join the s.s. Ranchi for Port Said.

Viscount and Viscountess Lee of Fareham left Marseilles last Friday for a tour in India and the Far East. They do not expect to return until the end of April.

Sesostris Sidarouss Bey, Counsellor at the Egyptian Legation, in London, last Thursday, gave a luncheon party at Claridge's in honour of Prince Jemil Toussoun of Egypt.

Lord and Lady Donington and the Hon. Irene Hastings-Campbell last Thursday left London by the P. and O. special train to embark in the s.s. Ranchi at Marseilles for Port Said.

Princess Ileana, youngest daughter of the King and Queen of Roumania, who has been spending some months in England to complete her studies, left London last Saturday to rejoin her parents in Bucharest.

Madame Ferid Bey and H. E. D. George Jouritch (Minister in London for the Kingdom of the Serbs, Croats and Slovenes) were among those who had the honour of being received by the Queen on December 16.

Professor Ormerod has been appointed to represent Leeds University at an archæological congress arranged by the Director of Antiquities for the Government of Palestine, to be held in Palestine and Syria next April.

Mr. H. E. Garle has resigned from his position as representative of the British Empire on the Commission for the Assessment of Damage suffered in Turkey, of which he has been President since September last. Sir Elliot G. Colvin, K.C.S.I., formerly agent to the Governor-General of India for Rajputana and from 1921 to 1924 British Representative on the Bulgarian Inter-Allied Commission for Reparations, has been appointed to succeed him.

MILITARY OPERATIONS IN TRANS-CASPIA, 1918-1919.

On December 10, at the Royal United Services Institution, Lt.-Col. D. E. Knollys, D.S.O., lectured to the Central Asian Society on "Military Operations in Trans-Caspia, 1918-1919." General Sir George MacMunn, who presided, pointed out how important it was for Britain, after the Bolshevist Revolution had left the way to the East open to the Central Powers, to check the flood of Pan-Turkism.

During the War, said the lecturer, Afghanistan, which, in view of the temerity of the forces in India, it was essential to keep quiet, was for all practical purposes only approachable for agents and propaganda work from the north or the west, that is to say through Trans-Caspia or Persia. The former route was closed by the Russians, but the latter was an easy and open road. In order to close this as far as possible a cordon called the East Persian Cordon was established along the eastern boundary of Persia and, in accordance with the pre-War division of that country into spheres of influence, Russia held the northern part of this line and Britain the southern. Several Indian revolutionary agents from Kabul were captured trying to get through this Cordon.

In 1917 came the Russian Revolution, shortly followed by the first signs of Bolshevism, and by the beginning of 1918 the Russian troops in Persia had decided it was time they went to look after their own homes, and incidentally to share in any loot that might be available; and walked out of Persia. The British forces accordingly extended their line north to Meshed, and by March one cavalry regiment (28th L.G.) and one infantry battalion (19th Punjabis) were spread out from Khwash to Meshed, a distance of 800 miles.

Colonel Knollys then described the geography and nature of the country over which the operations took place. From Meshed, he said, a reasonably good road runs to Askabad, a distance of about 160 miles. In addition there are alternative routes, suitable with more or less difficulty mor mules or camels, runing directly north through the mountains from Meshed to Dushak and from Kuchan to Mohomedabad. The portion of Turkestan with which his forces were concerned consists of a flat sandy desert with here and there areas of small sand-hills. In the few places where water is available it is extremely fertile, producing grain, cotton and grapes of excellent quality. The two main oases are those of Tejend and Merv, watered respectively by the river Tejend and Murgab, which, flowing down from the Persian hills, lose themselves in the sand after most of their water has been taken for irrigation. The climate is one of extremes, varying from about zero in winter to somewhere round 100 degrees in the shade in summer and no rainfall at all so far as he knew. The railway is a broad gauge single line running from the Caspian at Krasnovodsk through Askabad, Merv, across the Oxus and so up to Samarkand and Tashkent. Water is only available at a few stations along it, and the remainder are supplied by the trains, for which oil was the main fuel used.

The country had made a remarkable development in the forty years or so the Russians had been in possession of it, and from the point of view of creature comforts, such as electric light and accommodation for troops and the railway employees, compared very favourably with India.

By the beginning of August (1918) a strong Bolshevist centre had been established at Tashkent, and, being dissatisfied with the mildness of the rule of their brothers in Askabad, they sent a Commissar to instil the new gospel into their backward brethren. This he proceeded to do in accordance with the best tenets of Bolshevism by shooting down the representatives of the railway workmen who had come to discuss matters with him. Thereupon the Askabadis gave a practical demonstration of their readiness to learn and shot both him and his wife and set up their own committee, calling themselves Menshevists. This committee was, however, just as Bolshevist at heart as those against whom they were fighting. These Menshevists got together a scratch force and the Bolshevists were driven back beyond Bairam Ali. Reinforcements were sent down from Tashkent, and it was obvious that the Menshevists could not keep them back. At this point they approached the British Mission which had been established in Meshed under General Malleson, asking for moral support.

The world position of Britain at this time was delicate. The Turks were advancing on Baku on the western shore of the Caspian, where another Mission had been established under General Dunsterville but was obviously in great jeopardy. With Baku captured, Trans-Caspia Bolshevist right up to the Capsian—there was the realisation of German dreams, an open road to Afghanistan and the East, and a very serious situation for India.

It was decided that all available troops should be sent up to the border at Mohomedabad to give practical support, and the available troops were assessed at the battalion of Infantry, less one company, and one section Field Ambulance. Accordingly he received orders to march as quickly as possible and endeavour to get astride the railway and do his best. His forces would be nominally under the Russian commander, but could agree to differ if he found it advisable. They should have no line of communication, their sick and wounded must accompany them, the Russians would feed them, and no maps were available. A very pleasant roving commission from which more was hoped than expected.

The route selected for them to pass was via Kuchan and the Allohoa Akbar Pass to Mohomedabad on the border.

Colonel Knollys then described in some detail the gallant fighting that took place at Kaaka, emphasising the unreliability of the "Russian Allies" who for the most were Armenians. His troops performed nobly until they finally captured Merv and Bairam Ali.

Bairam Ali was a model estate made by the Czar to instruct the Tucomans in growing cotton, etc., and was equipped with an up-to-date ginnery. It afforded excellent accommodation for the troops which was badly needed, as by now the weather was extremely cold. Orders were then received that no further offensive action was to be taken by the British troops beyond Merv.

At the end of December General Beatty arrived at the Front with his staff, the pre-runner of a larger force which it was proposed to send up but which was stillborn. and the force was transferred to the control of the War Office coming under General Milne commanding the Army of the Black Sea.

Had general policy permitted there is little doubt that the British force could have driven the enemy across the Oxus without appreciable loss, such was the terror the sowar and sepoy had instilled into them and so suitable was the ground for the offensive. It was, however, not to be and the gallant force withdrew unmolested to Meshed at the end of March, and in a few months all its work was undone and the Bolshevists were in Krasnovodsk, but too late for the German to make any use of their success. And so its task was accomplished.

In subsequent discussion General Dunsterville said that, if his own operations round Baku reminded him of Alice in Wonderland, the experiences of Colonel Knollys were like the Hunting of the Snark. It was remarkable how these two expeditions in Trans-Caucasia and in Trans-Caspia had been fought on mechanical transport, his own force in motor-cars, the Trans-Caspian force in a train. Between the Menshevists (by whom he also was considerably troubled) and the Bolshevists there was nothing to choose: he, in fact, would rather have had the Bolshevists on his side—they had the bigger guns!

SCHOOL OF ORIENTAL STUDIES LONDON INSTITUTION
(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS

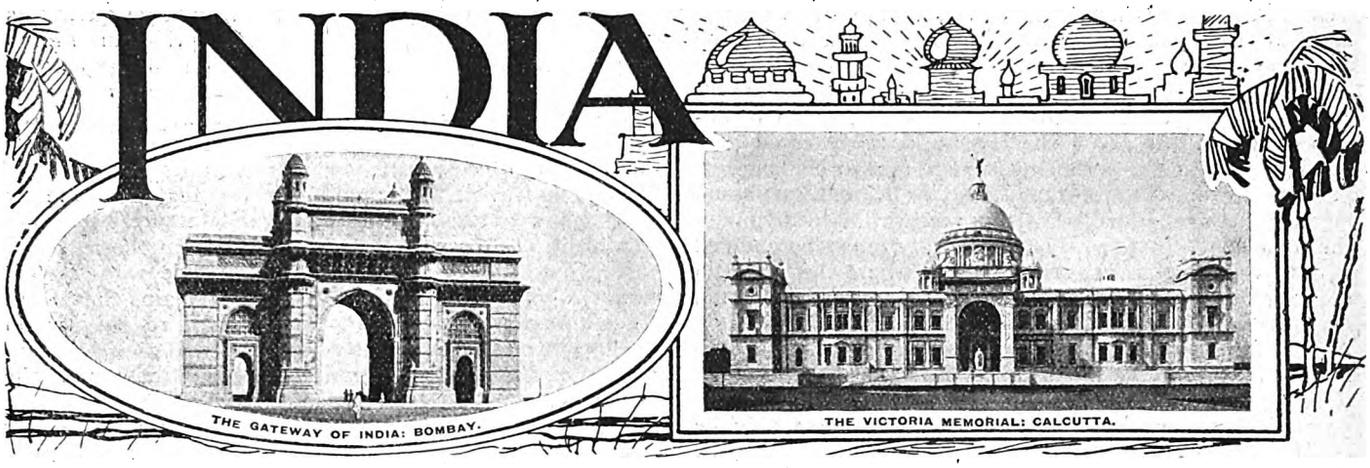
INDIA



THE GATEWAY OF INDIA: BOMBAY.

THE VICTORIA MEMORIAL: CALCUTTA.

LORD READING AT CALCUTTA.

Lord Reading has addressed the Associated Chambers of Commerce and attended the annual dinner of the European Association, at Calcutta; both of these functions being in the nature of farewell meetings with the European non-official community of India. It has been the Viceroy's custom to spend the best part of a month in Calcutta, of late years: a custom which, while it gives rise to a certain amount of official inconvenience, is undoubtedly a most excellent one—especially for the Viceroy and his immediate entourage. The official inconvenience arises from the fact that, for eleven months of the year, the Governor of the most important of the Indian Provinces is the centre round which the political, social and economic life of Bengal revolves; for the twelfth, he has to yield the pas to the Viceroy, and play second fiddle, in his own kingdom, to a more important personage still. It is true that a similar state of affairs occurs at Simla, where the Governor of the Punjab is a much less important figure than he is at Lahore; but, whatever may be the case in the future, the importance of the Punjab is now so different from that of Bengal that even the most fervent Punjabi would probably agree that it was smaller: while Simla is a place entirely official, between which and Calcutta there can be no comparison. Alone among Indian cities, Calcutta manages to convey the impression of a British commercial centre planted in a foreign land: its only real rival, Bombay, conveys a very different impression—that of an Indian city whose inhabitants include a certain proportion of Britons. And this is where the excellence of the Viceregal visit comes in. Ordinarily, the Briton in India lives in an atmosphere that is entirely official, and there are but few places where he can escape from it. In the great days of indigo, the planting community of Behar—now, alas, fallen from their noble estate—inhabited one such place: and it was not only a refreshing, but a salutary, experience for the official to find himself among a set of men who did not care a snap of the fingers for a General, and who could be relied upon to tell a Commissioner exactly what they thought of him, should he, or the occasion, appear to demand it. Another such place is Calcutta; where the most important official soon comes to realise that he is not, as he is in Simla or Delhi, the only pebble on the beach: where he is brought in contact with the men whose forebears made India what it is, and who carry on the work no less effectively themselves. Indian officialdom, which generally lives in an atmosphere peculiar to itself, is apt to overlook the enormous importance of British non-officials—of the shrewd hard-headed men, open-handed and free of speech, whose stake in the country is so great and whose impress on its prosperity has been so lasting. The official, be his period long or short, is a bird of passage: the non-official may be considered as a permanent resident, if not in his own person, at any rate in the persons of himself and his descendants combined.

In his speech at the European Association's dinner, Lord Reading took occasion to assure his hearers that the place of the European in the political, industrial and commercial activities of India would be preserved: to speak in praise of Calcutta which had been founded by British enterprise, developed by British energy, and perfected by British and Indians working together, until it was now a great monument of civilisation and culture: and to congratulate the Europeans on having striven their hardest to provide the two essential conditions called for by the Reforms—the will to co-operate and the will to succeed. He declared that one of the most gratifying and remarkable aspects of the Reforms was the spirit of their reception by non-official Europeans: and paid a tribute to the share, in the political advancement of India during the last few years, borne by Calcutta, where there was a happy fusion of the various interests of the two races in a common purpose that provided the best of auguries for the future.

In his address to the Chambers of Commerce, Lord Reading indulged in a survey of the recent economic policy of his Government. He repeated the explanation of the reasons which had led the Government to suspend the cotton excise duty and to choose, for doing so, the moment that they did choose. In view of the conditional promise officially given, to proceed to the abolition of the duty during the next session of the Legislative Assembly "unless the financial position as disclosed in the Budget estimates for next year substantially fails to confirm the present anticipations," it is interesting to note that, in this address, he said that "it was idle to consider suspension unless it was to be followed immediately by proposals for abolition." As regards the suggestion that the removal of the excise duty might entail some compensation to Lancashire in the form of a reduction in the import duty, it is also of interest to note that the Viceroy said he desired to emphasise the fact that "no conditions, expressed or implied, are attached to the suspension." In a general survey of the economic position, Lord Reading spoke of the steady improvement that had taken place "since March 31, 1921, brought to a close a most abnormal and disastrous year in Indian trade." The process was necessarily slow, but it had to be remembered that "India has no real concern with luxury trades, and the commodities dealt in are connected with everyday needs." Credit was allowed to the monsoon, but was also "due in large measure to the grit and energy with which the commercial community in India had faced the problems before them, and to the steps that the Government had now been able to take for the improvement of facilities for trade and industry." By the latter he appears to have meant the separation of Railway finance from the ordinary budget, the passing of the Cotton Cess Act and the Coal Grading Bill, the projected legislation regarding Insurance Companies, and—perhaps with less justification—the operations of the Tariff Board. He also referred to the improvement in the political situation as a powerful force in engendering a feeling of stability and continuity, and restoring confidence in internal security which "had once more emboldened the timid to new ventures and revived the normal course of trade." As regards agriculture, Lord Reading said that, thought it would be premature for him to make any announcement at the moment, he could state, without betraying any confidence, that he and his Government had been in communication with the Secretary of State for some time past on the question, and that they had invited the views of Local Governments in regard to

Digitized by Google

definite proposals for the improvement of agriculture. The Chambers might rest assured that the subject commanded the attention demanded by its importance to the country in general, and to commerce in particular.

This latter speech is specially interesting as an appreciation, by the one best qualified to give it, of the situation in India. It gives the credit, in fairly equal proportions, to the speaker's Government and to his hearers: perhaps it is only natural that the major percentage should be allocated to the former: with a reservation in favour of the monsoon. In fact, this too might almost be claimed as a Government asset; for, in India, where the "man in the mud hut" accepts Government as all-powerful, and as, even in ways beyond his ken, responsible, in the last resort, for any advantage or disability that accrues to him, a failure of the monsoon is, in some dim way, felt to be due to some fault of commission or omission on the part of Government: who may therefore reasonably be entitled to assume the credit—as in fact, if not in words, they not infrequently do—when the monsoon is a success.

CURRENT TOPICS.

Trade Commissioner's Report.

Examination of the report for 1924-25 of Mr. Ainscough, the Senior British Trade Commissioner in India, already quoted in these columns, shows that it contains some interesting pieces of information besides those previously noted. For instance, it says that, though the share of the United Kingdom in India's total imports is now only 54 per cent., or ten per cent. less than it was before the War, yet, since the total imports include certain raw materials and comestibles in which the United Kingdom has no direct interest, as well as certain lines of manufactured goods in which she does not compete, her actual percentage of the imports of manufactured goods, in which she does compete, is still over 75.

Germany's increasing share, which now approaches closely to that which she held before the War, is entirely due to the cheapness of her products, and her business is secured on the score of price alone: some of her products being of a very low grade, such as no British manufacturer would touch. The abolition of the ban against ex-enemy nationals entering India is likely to be of special advantage to Germany, since its existence caused many of her manufacturers to leave their interests in the hands of Indian agents, some of whom were persons of very doubtful financial standing: with the result that, in the autumn of 1924, the number of repudiated German drafts in the Indian markets was considerable. The report points out that, though Japan and Italy have made a large pro rata advance in their shares of India's imports, the balance of trade is, in each case, very greatly in favour of India: for, whereas Japan's share is now nearly 7 per cent., as against 2½ per cent. before the War, and the value of her exports of yarn and cotton goods increased, during the year under review, by nearly three crores of rupees, yet she took no less than 343,000 tons of Indian raw cotton, valued at nearly 46 crores; while Italy's exports to India were 19½ crores less than her imports. American exporters are paying much greater attention to the Indian trade, are appointing mercantile agents, and are sending specialists to survey the market; they are also able to grant such generous agency terms as to attract British distributors. The United States Government is actively supporting this campaign, having appointed three Trade Commissioners in India in addition to the five existing Consuls: and every effort is made, by reports and interviews, to interest the American manufacturer in the Indian market. American competition is generally in articles of higher grade, particularly in machinery and electrical appliances, where the large domestic market in the United States has enabled American makers to standardise and so to reduce prices.

The Trade Commissioner remarks that Lancashire's opportunity, to translate the latent purchasing power of India into actual buying, came towards the end of 1924, when the price of American cotton fell below thirteen pence a pound. Cabled inquiries for very large quantities of goods were dispatched from the principal Indian markets, in the hope that this reduction in the cost of the raw material would bring about a corresponding fall in the price of cloth: and so open the way to meet the two great present-day requirements of the Indian market —reduction in cost, and confidence in its permanency. So far, however, from making a bid for the trade by quoting lower rates, spinners and manufacturers took the opportunity to increase their margin, so that the resulting business was small. Whether this attitude was justified or not, says Mr. Ainscough, "the fact remains that, from the standpoint of regaining the Lancashire position in this market, an opportunity was lost and the door left open for increased competition from Japan and the Continent."

It is proper to add, that so great an authority as Sir Charles Macara has written to the papers to contradict Mr. Ainscough's assertion that Lancashire merchants lost a great opportunity, when the price of American cotton fell, by "increasing their margins" instead of reducing their prices. He says that, so far from this being the case, there was no margin to increase: that Lancashire had, for a considerable time, been selling to India at a loss: and that the fall in the price of cotton did no more than allow of selling at, instead of below, the cost of production.

The Cotton Excise.

The Executive Committe of the Free Trade Union have passed a resolution in which, "while not challenging the right of the Government of India to fiscal freedom," they describe the abolition of the Indian cotton excise as "a natural fruit of the Protectionist movement in England," and express regret that it should mark "the definite establishment of Protection in the Indian cotton industry, tending to burden the Indian masses and to increase their cost of living."

Any stick is good enough to beat a dog with; but the most friendly sympathiser with Free Trade views may be inclined to wonder why the removal of an excise duty, which reduces the initial cost of manufacture of home-made cotton goods in India by 3½ per cent., should be denounced as "tending to burden the Indian masses and to increase their cost of living." The removal of the excise makes no difference to the price at which imported cotton goods can be landed in India: all it does is to make it, at least theoretically, probable that the cost of Indian-made cloth will be lowered, to the reduction of the burden on the Indian masses and to the decrease of their cost of living. It is, of course, quite on the cards that this theoretical probability will not materialise, and that the retail price of home-made cloth will not fall; but, even in that case, the Indian consumer will be no worse off than he was before. The Lancashire trade has explained that the removal of the excise duty will not affect it to any serious extent, since its products are, for the most part, not in direct competition with those of the Indian mills: to the extent to which they are in competition with Japanese products, the position is unchanged. The only protectionist effect which the removal of the duty may have in favour of Indian cloth and yarn is against Japan; whose competition has been denounced as unfair, owing to the advantages obtained by her from shipping subsidies, the employment of sweated labour, and refusal to accept the International Labour agreement which has been accepted by India. If the principle of Free Trade is so important that it must include tenderness towards competition of this kind, coupled with a refusal to right what has, for many years, been an admitted injustice to India, there is no more to be said; but, to the uninstructed onlooker, it seems permissible to doubt this.

Air Line to India.

It is announced that, as the result of negotiations with Imperial Airways, definite heads of agreement have been signed for a regular air service between Egypt and India. Provision has been made for a subsidy, to be earned by a stipulated degree of regularity in completed flights on each half of the route, to a maximum of £93,600: the

Digitized by Google

agreement is for five years. Owing to the paramount necessity of doing everything possible to avoid forced descents in the inhospitable country over which part of the route passes, it has been decided that the machines shall be three-engined: and this decision has made it necessary for special machines to be constructed, so that it is unlikely that the service will be in actual operation much before the end of 1926. The service will be fortnightly, via Baghdad and Basra: mails, goods and passengers will be carried.

In making this announcement, the Air Minister said that he hoped that the subsidy would prove sufficient to enable the Company to increase the frequency of its service to a weekly basis, as traffic expanded. The flying men themselves are even more sanguine: and look forward to so great a demand as to justify a service twice or even three times weekly. Once the route is fairly established, even on its initial fortnightly basis, there can be no question that it will be extended in and from India. Karachi, though a convenient Indian terminus from the point of view of the Air Company, is by no means a convenient air centre for India: it is none too easy a place to get at even from Lahore or Delhi, let alone Calcutta: while its only present communication with Bombay is two days' sea voyage, or nearly the same amount of railway travelling, involving several breaks of gauge. The actual geographical centre of India lies in the Central Provinces; but the economic centre is Delhi, whence first-class railway lines radiate in every direction. The inauguration of the central Indian air station at Delhi would go far to remove the complaint that the Government of India's new capital has been built in a deserted spot among the tombs of bygone Emperors; for, however slow it may be in coming, there cannot be any doubt that aviation is the transport of the future: and the importance of the central air station in a country of such great distances as India will be such as to lift the place of its location into the very front rank irrespective of all other considerations.

If India will bestir herself betimes, so as to have her arrangements for dealing with internal air traffic ready by the time that the first fortnightly aeroplane lands at Karachi, all should be well. If not, the expansion of traffic, to which the Air Minister and the flying men look forward, will be slow in coming: for the prospect of being set down in Karachi, thence to find the way by land to the other important cities of India, is not likely to be one that will attract anyone except an inhabitant of Karachi itself: and their number cannot be expected to be great enough to make a success of the service unaided.

The Commonwealth of India Bill.

On December 17, Mr. Lansbury introduced in the House of Commons the Commonwealth of India Bill—the authorship of which, at any rate in India, is generally attributed to Mrs. Besant. The Bill was backed by a large number of Labour Members: and it is said that it has been referred, by the Executive of the Labour Party, to a Committee, on whose report the Labour Party will decide whether or not to adopt it officially for discussion next session.

The Commonwealth of India Bill was discussed, at some length, in THE NEAR EAST AND INDIA in July last: and if, as is presumably the case, the Bill still retains the form in which it was then published, it is unnecessary to say more about it than to reiterate the opinion that it is a wholly impracticable measure. As it has no chance whatever of being accepted by the present Parliament—or, one may hope, by any future Parliament—its discussion, in any case, could only be academic; but it is perhaps worth while to refer to the basis on which the bill is framed: that of the self-contained village community which, in the Bill, forms the foundation of the higher political units: on a method somewhat resembling the Soviet system of Russia.

The ancient Indian "Panchayat" system, under which each village managed its own affairs, came into being when rural India was in a very different condition from that which it experiences to-day. Railways were entirely non-existent, and roads were few: so that each village was, in fact, cut off from its neighbours by the practical absence of means of communication. Nowadays matters are very different: the extension of railways, and the improvement in roads which has made possible quicker forms of transport than the bullock cart of past ages, have gone a great way to break down the isolation of the village: and an attempt to revive the old Panchayat system really connotes an attempt to set back the hands of the clock similar to that of Mr. Gandhi when he preached that railways, metalled roads, telegraph and post offices, even modern hospitals—though he himself freely patronised them all—were inventions of the evil one which ought to have no place in the India of which he dreamed: an India which should return to the Golden Age of isolated self-sufficiency, where every man should grow his own food and weave his own clothes, where none should desire to travel and where none should desire any conveniences or products beyond those which he himself could supply.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, December 3.

Suspension of the Cotton Excise Duty.

The intimation of the suspension of the Cotton Excise Duty has produced something more than pleasure in Bombay, not only from the point of view of the politician, but also because the comments of the Home papers, as to the blow which it gives to Lancashire, have confirmed the local opinion that the suspension means the total abolition before long, and a consequent considerable advantage to the local cotton industry. Thus the piece-goods trade, which is already in the last depths of gloom, receives another blow which is being openly hailed in certain quarters as a fatal one.

Business and Politics.

The suspension of the duty has been commented on by all papers. Whilst, on this side, a disposition is shown in the European Press to sit on the fence in regard to the merits or otherwise of the suspension, they welcome it as a sign that the anticipations of the Budget, in regard to increasing prosperity in other directions than piece-goods, are justified. On the Bombay side the European Press welcomes the proposal for itself, and looks forward to its relieving the commercial depression which has so long held Bombay in its grip. The extremist papers on both sides have no reserves. *Forward*, with its usual illuminating ingenuousness, lectures "Indian business men" for their indifference to politics and politicians, in which it sees a real tribute to the unreality of the Reforms. It claims the removal of the duty as a triumph for the Swarajists, and points a moral. The *Servant* is equally ingenuous as to the means which have been taken to secure the abolition. It says, "Executive stubbornness continued protest-proof as is its wont. The millowners were driven to reduce the workers' wages, and this put the fat on the fire. The resulting protracted strike caused, for the first time, serious attention to be drawn to the gravity of the situation." The depresssion of the cotton mill industry in Bombay was real, but well-informed opinion was inclined to doubt the necessity of the proposed wage cuts which produced the Bombay mill strike. The Bombay millowners have now learned something of the power of a strike as a political weapon, but on lines which are rather associated with American politics than English. This is not the only side on which political development in this country is proceeding more on far-Western lines.

Steel Bounties Indeed.

The list of increased duties and bounties, which forms an annexure to this letter, is of vital importance to the British steel trade as well as to the exporter of British and foreign steel goods and tin-plates. There may be a doubt as to whether it will be hit more hardly than the Indian consumer, but there is no doubt as to who is benefited. Tata's have discovered a new speagle in steel making, and their appetite increases the more it is fed by a bounteous Government. Other industries are doing

Digitized by Google

more than sitting up and taking notice: and well-informed opinion already has it that, if the Tariff Board recommend protection or bounties for the coal industry, the Assembly will accept the proposals, in spite of the fact that the only effect that can be foreseen is that coal will increase in price in Bombay and Karachi. The railway interest, however, effectually entrenched behind official barbed wire entanglements, still refuses to consider the vital handicap of the coal industry, the cost of freight. Sir Clement Hindley, the Chief Commissioner of Railways, ascended to his present throne through the realms of Railway and Port Trust finance; he should be well equipped for considering whether rebates would not be a good business proposition.

Pagett Johnston, M.P.

The reality of the impressions, that Mr. Thomas Johnston, M.P., will take away with him from Calcutta, will be appreciated by everyone who has fallen into the hands of the Howrah porters. Their inefficiency and ignorance are equal, and the greater part of their working day is spent in sleeping, spitting, chewing and fighting; but they garlanded Mr. Johnston when he left. No travelling M.P., Labour or otherwise, has ever been offered more courtesy and greater facilities for making inquiries for himself from the source; but he has been perfectly frank in refusing the utilise any of them, preferring to confine his source of information to the leading Swarajists. It would not be fair to follow his example and quote his private conversations as to his "instructions"; but his speeches in the Parks—where the only people who could understand him are of the class that he professes to despise in his own country—show that the crop of Asian myths which will result from this November trip will not be confined to solar ones. The Labour Party includes many men of courtesy and education. Will not one of these come to the East and see for himself?

A Centre Party.

The promise of a meeting, that was held last week, has already been shaken by personal jealousies; and once again this factor, so important in Indian public affairs, threatens to wreck a promising movement. The extremists hold the whole scheme up to ridicule; but there is little doubt that all the thinking politicial classes see that, if there is any hope for democracy in India's Government, it must work upon constructive lines. The only path open is by way of working the Reforms: and this is clearly realised, even by extremists, over the greater part of the country. Bengal, however, lags behind: and, although the Swaraj Party is practically impotent, there appears to be every likelihood that it will again sweep the board at the next elections, in the absence of any other organised party. It is not only the opponents of the Reforms scheme who are asking whether there is something in the blood which makes democratic rule impossible in Bengal.

Bombs.

Once again the familiar items of a bomb trial are appearing in the Press. A tribunal set up under the provisions of the Special Act is now sitting, to try a number of young men who have been arrested in possession not only of inflammatory literature of a well-known type, but of an extremely efficient collection of materials and apparatus for the preparation of high explosive bombs. The pamphlets and books, which are being read at the trial, contain the usual references to the connexion between highly charged minds and explosives. In the minds of all thinking people, the whole sorry business excites principally a feeling of pity for the misguided youths. However, society must protect itself: and trials of this kind are unavoidable when bomb factories are discovered.

The Trivial Round.

There is no denying the impression produced by the fact that the day of the funeral of the late Queen saw rain falling throughout Bengal, an unprecedented occurrence at the end of November. This impression was added to when it was learned that snow fell in England on the same day. This cold weather sees the return of the days when there were two Courts in Calcutta, but now both of them are in mourning; the foot of the A.D.C. is still, even when the gramophone plays a fox trot in a private verandah. Everyone who admires courage and charm is delighted to know that Lady Reading is making a good recovery. It is understood that the Viceroy will be in Calcutta until near the end of January; but most official functions, both at Belvedere and Government House, have been cancelled.

"Everybody," however, is coming to Calcutta for the Races and the Christmas season as usual; the Baronets, the Knights, and the merely well off, have been filling the mail boats, and it is getting more difficult than ever to find a seat at the clubs. Meanwhile, the weather is perfect. At last cold storage has been started on a small scale, to the benefit of menus. The "bloods" are getting up steam for the paper chases. It is good to be alive.

Markets.

A very steady tone has characterised both the jute and gunny markets during the past week, and prices have been fully maintained. Heavy goods especially have been in demand, and a large business has been put through at advancing prices. The piece-goods market remains quiet. In sympathy with the somewhat irregular tendency of the tea market in London at the beginning of the week, prices here have been slightly easier; but the opinion is that this condition is only temporary, and that a further upward movement is likely in the near future. Stocks for November are expected to show a decline of about fourteen million maunds on those of the same month last year.

The increased activity in the Stock Exchange, reported last week, has continued, with a tendency towards spreading into other markets; as a result, a large general business has been completed. Tea and rubber shares, however, still attract the most attention, although, at the close, the former have eased slightly on account of profit taking. In the rubber share market, prices have again advanced, but transactions have been few in number owing to the scarcity of sellers, who are confident in their opinion of higher prices in the future. Jute shares have ruled steady, but the turnover has been on a smaller scale, with most of the inquiry directed towards the more speculative issues. A certain amount of quiet buying of cotton shares has taken place, without any material alteration in prices; advices from Bombay indicate little chance of the mills reopening for some time. Inquiry for coal shares shows signs of broadening, mainly owing to the opinion of a certain section that the shares are worth averaging at the current rates. Investment securities generally continue to be well supported at enhancing prices, but Government stocks have been in less demand. The Money Market remains steady with Exchange unchanged.

Annexure.

The recommendations made by the Tariff Board are:—

(1) Payment of a bounty at the rate of Rs.18 per ton on 70 per cent. of the weight of steel ingots produced in India between October 1 1925 and March 31 1927. The bounty payments to be subject to a limit of Rs.90 lakhs.

(2) Grant to the Tinplate Company of India of a rebate of the Customs duty paid by them on tin imported for the manufacture of tinplate. The consumption of tin per ton of tinplate to be determined, and the amount of the rebate to be regulated by this ratio and by the actual output of tinplate.

(3) Increase in the protective duty on imported tinplate from Rs.60 to Rs.89 per ton.

(4) Increase of the protective duty on fabricated steel, other than the kinds specified under heads (5) and (6), from 25 to 32½ per cent. *ad valorem.*

(5) Protective duty on such component parts of steamers, launches and other vessels for harbour and inland navigation as are made of fabricated steel, to remain at 25 per cent. *ad valorem.*

(6) Increases of the protective duties on:—(a) tipping wagons, (b) coal tubs and (c) switches and crossings adapted for use with rails under 30 lb. per yard, from 25 to 40 per cent. *ad valorem.*

Digitized by Google

(7) Amendment of the Steel Industry (Protection) Act, to empower the Government of India to sanction the payment of bounties on railway wagons and carriage underframes, subject to a maximum limit of Rs.24 lakhs in 1925-26 and Rs.20 lakhs in 1926-27. The bounties sanctioned in either year to be payable in that year or in any succeeding year.

(8) Cessation of the payment, under section 4 of the Steel Industry (Protection) Act, of bounties on railway wagons, with effect from April 1 1926.

(9) A public announcement to be made of all bounties sanctioned on wagons and under-frames.

(10) The conditions, under which the Indian and European prices of wagons and under-frames will be compared, to be announced at the time of calling for tenders.

The kinds of steel, covered by the recommendations, include the varieties of rolled steel manufactured at Jamshedpur by the Tata Iron and Steel Company (with the exception of tinplate bars and rails and fishplates sold under long term contracts), tinplate, fabricated steel of all kinds and railway wagons.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, December 4.

The Excise Duty.

The excise duty was suspended on Tuesday morning, and, the cut in wages having been restored, the mills will resume work as soon as the labour is back from the districts. The *Bombay Chronicle* on Wednesday established a new record by having two leading articles, both complimentary to the Governor: one on the Excise and the other on the subject of his hospital campaign. There is no doubt whatever that Bombay owes much to the quiet and tactful persistency of His Excellency in putting the claims of the Mill industry before Simla. He has not published his doings abroad, and he has done it without putting anyone's back up, but his work has had its reward in due course. And so ends a form of duty, which has probably caused more dissatisfaction and unrest than any since the tea chests were thrown into Boston Harbour. Readers of these letters will know that the writer does not consider that the abolition of the Excise will have any serious effect on the trade in fine goods with Lancashire. On the contrary, it is in the interests of Lancashire, and of all England, that Indian should be prosperous and contented, and the more money that is made and that comes into circulation in India, the better for the prospects of employment in England.

Apart from the *Manchester Guardian*, the news seems to have been received in the right spirit in England: and it is almost incredible that the summary of the views of that paper can have been rightly cabled to India. We are told that the paper remarks: "It seems strange to outsiders that they (the people of India) see a substantial advantage in subjecting their working people to the extreme hardships of factory life in a hot climate, but they have no misgivings in this regard." This appears to me to be the most extraordinary comment that has ever been put forward by a serious paper. The theory that work of all kinds is the primary curse of man, and that it should be abolished as soon as possible, has seemed a perfectly tenable proposition to most of us at different times, ever since we were first introduced to that unpleasant necessity at our private schools. But the moment one departs from that broad and simple principle, one is apt to find oneself in difficulties; and the attitude of the *Manchester Guardian* appears to be, that work of precisely the same nature is to be encouraged as the greatest possible good in Lancashire, and suppressed as a form of inhuman cruelty in India. Conditions of life are by no means so vastly in favour of Lancashire as the *Manchester Guardian* would have us believe; and, as regards climate, which seems to be the point at issue, very few people would exchange the open air establishment of a Bombay coolie for life in a Lancashire slum in winter—or, for the matter of that, in most of the summers that I have been able to spend in England in the last twenty-five years.

If the *Manchester Guardian* means that factory life is bad in itself, and that it is good for every country to have the largest possible percentage of its population on the land, that is an arguable proposition everywhere: but it is not a theory that comes well from Manchester, and its sudden adoption as a policy to be followed in India does not ring true: and the general satisfaction in Bombay, and our appreciation of the attitude of the great majority of the English Press, will be marred by the thought that a paper of the class of the *Manchester Guardian* should have descended to this sort of argument in its mistaken view of the interests of Lancashire.

Cricket.

This week has been given up to the great annual cricket festival of Bombay—the Quadrangular Tournament, when the educated classes of all communities are much more likely to be found on the cricket ground than in their offices. So far the Presidency—the English side—has beaten the Mohammedans, last year's winners, fairly comfortably, and they have to play the winners of the next tie, Parsis *v.* Hindus, on Monday. Talent is so equally distributed that each of the four sides has won in the last four years, and it is the turn of the English to win again. Incidents are always possible in games, even in the English County Championship or Test matches: but I do not think I have ever seen a more sporting game, or a more impartially appreciative crowd, than we have had on the Gymkhana ground during the last three days: and while, as a matter of course, each community is desperately keen on its own success, there is no trace whatever of any racial animosity on any side.

The Presidency is now rather a false name for the English side, as it has been agreed that all committees can draw on the whole of India for their men: and the English side is very strong in batting this year, with such well-known names as A. L. Hosie of Hampshire, I. P. F. Campbell of Oxford and Surrey, and M. G. Salter of Gloucester.

Bombay owes a different debt to all her Governors: and the enthusiasm for cricket, which is more obvious among small boys than in any town I know at Home, is a direct legacy from Lord Harris, who has done even more for the game in India than in any other of the many countries he has visited. And though I believe that Soccer is now the national game of Bengal, cricket is certainly firmly established as the game of all communities on this side of India.

INDIA IN 1924-25.

As an accompaniment to the issue of the annual statement on India, which is prepared in accordance with the requirements of the Government of India Act, under the authority and with the general approval of the Secretary of State: which, however, naturally do not extend to every particular expression of opinion by the author: the India Office have issued a summary of the more important subjects dealt with in the book, extracts from which are given below.

The author is Mr. Rushbrook Williams, Director of Public Information in India. He has, for some years past, undertaken the compilation of the report; which, in the form that he has given to it—before his time, it was an official and matter-of-fact compilation, of the nature of a blue book—has proved a valuable record of events, though the author's views on some of them have not always been of a kind to command general agreement, and has certainly been of assistance in arousing interest in Indian affairs among an important section of the reading public of England.

The early chapters of the book deal with the problems of the defence of India, by sea and land, and point out the difficulties which must be faced before India can be in a position to undertake it herself. Comments on India's relations with Afghanistan and the Frontier tribes follow: and on the attitude of India to the arrangements for main-

Digitized by Google

taining internal law and order, in particular as regards the popular disinclination to act in support of the police.

On the economic position, the author says that India, in common with other countries, suffered derangement in her economy from the aftermath of the War. This was reflected by five years of unbalanced budgets. Now financial equilibrium has been restored; by the end of last financial year a steady revival in trade had taken place and the prospects of commercial and industrial expansion were extremely favourable.

In 1924 there was ample work and good wages for the agricultural labourer, and in many parts of the country field and ordinary labour commanded higher prices than in 1923. There was, too, comparatively little unemployment among farm labourers during the year.

"Unfortunately, this statement does not hold true of the middle classes. With their small fixed incomes, their large families and their increasing expenditure, they have of late years passed through a very disadvantageous epoch. Fortunately, the decline in the cost of living since 1923 has deprived them of much of the painful anxiety characterising their attitude throughout the previous period. The year 1924 has not, however, been favourable for them. The cost of food, clothing, and lighting has tended either to remain steady or to decline; but the middle classes have had to pay heavy rates for such labour as they happen to employ. This hits them hard; for they are usually debarred by social status from undertaking work of certain kinds. Worse still, the market in which they themselves compete for employment is chronically overstocked. In general, it may be said that the middle classes are in a far less favourable position to adapt themselves to a change in the economic situation than other workers. Their traditions do not allow them to look beyond a very restricted number of professions, in all of which at present the vacancies are far exceeded by the applicants. Moreover, the same tradition, which compels them to maintain, at whatever cost to themselves, an appearance of respectability, prevents them from combining like the labourers for the improvement of their prospects. There can be little doubt that middle-class unemployment is among the most serious problems which confront the administration in India to-day; and the rigidity of the social and economic tradition preserved by these classes seems likely to make its solution a matter of infinite difficulty."

After weighing evidence the author comes to the conclusion that it seems quite possible to maintain with fair degree of certainty that the masses of the Indian population, at least in some parts of the country, are gradually improving in their economic conditions. But a very large proportion of Indians are still beset with poverty of a kind which finds no parallel in the more exigent climates of the West. The problem is staggering in its dimensions. It has its roots in certain long-standing customs and deficiencies, which inevitably make for distress as the population increases, since the available resources are confined within traditional limits by a hide-bound precedent.

In a review of industrial labour throughout the year it is stated that the most important event was the coming into force of the Workmen's Compensation Act on July 1.

"This measure includes practically all the emloyees in factories and mines and on railways. It also extends to a number of other occupations, covering upwards of three million workers. There are several factors which render the operation of a measure of this kind difficult. In the first place, industrial labour is largely migratory, being agriculturist at heart. The workmen serve industry for only a portion of their lives and expect ultimately to return to their villages, which may be hundreds of miles away. Secondly, the ordinary workman is not in a position to enter into expensive litigation, nor has he any organisation to assist him in carrying through a protracted case. In spite of this, the tendency to litigation is far more pronounced in India than in Western countries. Thirdly, there is a paucity of qualified medical men. All these difficulties have been realised in the framing of the Act, which in some of its details differs widely from typical European measures designed for the same purpose. But the introduction appears to have been effected smoothly; and the measure is generally recognised as one for which there was a real need. The Workmen's Compensation Act, together with other measures, demonstrates the importance which the Government of India now attach to labour legislation."

Of a large part of the volume given to the subject of social reform, education rightly occupies the most prominent position, for the problem in India is a vast one, and complicated by factors peculiar to the country. Among them are poverty, the inadequacy of communications (though these have vastly improved in modern times), the persistence of certain traditional ideals tending to confine education to hereditary literary castes, the conflict of communal interests and the chasm between rural and urban life. These factors have operated to prevent the growth of a desire for education among the people at large. Another serious difficulty is finance, and, given adequate finance, the difficulties of laying out money to the best advantage are enhanced by certain peculiarities of Indian life. For example, no Western country has found it possible to carry through a mass programme of popular education without the employment of a large proportion of women teachers. But in India the assistance of women is not usually available. Again, villages do not offer any attraction to the educated man. Yet an appreciable amount of progress has been made: between the years 1922-23 and 1923-24, the number of pupils under instruction in India rose from 8.79 to 9.32 millions, the most notable advance being in Madras. Until recently, educational efforts were confined to persons of a school-going age; but it has now been widely realised that a very large proportion of the education now needed in India is that of adults: particularly of a kind that will supply the new electorates with some guidance in the use of the suffrage which constitutional reforms have placed in their hands. The main problem is that of reaching the country districts: but a beginning has been made by the organisation of lectures on matters directly affecting the welfare of the people; and promising results are being achieved by Night Schools in the Punjab, Madras, and Bombay.

The last chapter of the book is on parties and politics, and recites in some detail the political events of the year. The general conclusions reached are that the period was one of political apathy.

"A series of prosperous years and a steady return towards economic stability have tended to divert in other directions the interest which the masses, only a few years ago, began to exhibit in political questions. The vast majority of the Indian people have experienced a sense of disappointment at the failure of their political leaders to attain the promised millennium. In consequence, they have withdrawn more and more into the circle of their own immediate affairs, and have turned a deaf ear to the appeals frequently directed to their address. They have shown themselves unwilling to subscribe to political funds: to join in political demonstrations; to sacrifice their time and their enegy on behalf of causes which they but vaguely comprehend. Corresponding to this apathy on the part of the masses of the population, we must notice a general sense of discouragement pervading those sections of the educated classes which are interested in politics. The majority of the Indian intelligentsia are still suffering from emotional exhaustion, induced by the non-co-operation campaign. They are depressed by its failure; they are disconcerted by the stagnation which has lately overtaken the political life of the country."

AN INDIAN FEAST OF LIGHTS.

DIPAVALI.—The prettiest festival of the Hindu year: perhaps the nearest Indian equivalent to Christmas.

By Rosemar.

Lamps and lanterns play a great part in various festivals throughout the East. The prettiest festival of the Hindu year is the Divali, or Dipavali, which falls about the end of November. It lasts five days, and houses are swept and garnished, while the inmates don new clothes and ornaments. Often a geometrical design is drawn outside the dwelling and filled in with coloured chalks. All the household gods are blessed by the Brahmin priest, and many other household rites performed. It is a festive

Digitized by Google

time, and there is a great deal of visiting and entertaining between members of the same caste and family.

The feast brings great delight to the children, for not only are they decked out in pretty new clothes and ornaments, but they wear necklaces of sweets. Every shop and wayside stall too is gay with coloured toys and sweetmeats which take the form of fishes, elephants, the Taj, and so on. Even English children love these Dipavali sweets and, since they are made of the purest white sugar, and well-boiled, they may be eaten with impunity. There is also much letting off of squibs and crackers in the streets, in which the Hindu schoolboy participates with as much delight as his English brother who celebrates the fifth of November at home.

Dipavali marks the end of the financial year, and much honour is then paid to Lakshmi, the goddess of good fortune. All the old account books are closed and new ones opened. To ensure good luck, these must always begin with a small amount on the credit side, and clerks are sent round to the various business houses to pay in small sums with which to start the year. The account books and ledgers are also solemnly blessed by the priest, and this custom is observed by others of the merchant class like Parsees and Mahommedans, in spite of the fact that Divali is a Hindu festival. In the country the forces of nature are likewise propitiated. The cultivators prostrate themselves before the dung-heap, offering flowers, fruit, boiled rice, and even sacrifice, begging it to fertilise their crops.

But the chief feature of the feast is the illumination—for Dipavali signifies a row of lamps. Thousands of tiny coconut oil lamps outline Hindu houses and buildings, which give a beautiful effect, especially when the stately architecture of some Rajah's palace is seen picked out in lines of light against the sapphire sky of night. Poles are set up and arches thrown across the streets, from which hang coloured paper lanterns, reminiscent of carnival-time abroad. On rivers and tanks little lights are set afloat on rafts adorned with flowers. In the villages lights are set outside the humblest huts, and quaint clay figures, representing human beings, placed beside the door. Some say that the souls of the dead revisit the haunts of their lifetime at this season, and that the lights are set out to guide them home.

To give some idea of the beauty of the Dipavali illuminations, after seeing the festival from year to year in Bombay, we happened to arrive home at a time of national rejoicing. Yet, though the streets were magnificently ablaze with electric light, to us the effect was not nearly so haunting and dream-like as the myriad soft twinkling lamps of this Indian Feast of Lights.

CORRESPONDENCE

ENGLISH SURNAMES.

To the Editor of THE NEAR EAST AND INDIA.

Sir, With reference to your article, "English Surnames" in your "Indian Mail" published in THE NEAR EAST AND INDIA of the 10th instant.

The natives of India, and especially the Sepoys, have great difficulty in pronouncing English names. The most interesting case which I know of is this: we had an officer named Freeland, known in the lines as Fairyland Sahib. Another is where an officer named Inglis was called English Sahib.

Officers in Indian Regiments are often referred to in the lines by nicknames. Whether these nicknames are given to surmount difficulties of pronunciation, or following the general rule of giving names among themselves, I do not know. The giving of these nicknames is often controlled by an officers's physical or mental qualities; or by any actions of his. We had an officer in my regiment, there is no need to give his name, who was very tall and thin, and unfortunately not very popular, who was known as the Oont (camel). Another officer in the regiment who was short, with black shaggy hair and eyebrows, and who walked with a rolling gait, was known as Balu (bear). An officer who was supposed by the men to be lacking in brains, was known as Pagal (mad). The Inglis referred to above, who was one of the bravest men, and was on two separate occasions recommended for the V.C., was dearly known as Rajah Sahib.

The nicknames are most carefully guarded. Though a Sepoy will tell his officer his private affairs he will never disclose to any officer his nickname. This is probably due to respect; but is also due to his unwillingness that too much should be known. Nicknames are exclusively used in private conversations in the lines, but never by an Indian Officer or N.C.O. when performing his duties.

This may be of interest to many of your readers.—I am, etc.,

GHAZI.

Manchester, December 12.

THE INDIAN MAIL.

Politicians and Peasants.

The mail papers announce that Sir Gunga Ram, a distinguished Punjabi, has given 25,000 rupees as a prize fund, from which awards will be made, from time to time, for any new invention or the devising of any new practical method towards the improvement of agricultural production in the Punjab. This is an example which, it may be hoped, will be followed by other patriotic persons, of the class from which the Indian "Country Party," the formation of which is so much to be desired, will, if it ever materialises, be recruited. Agricultural progress in India depends at present almost entirely on Government assistance: and it is of good augury that rural magnates should be beginning to show, in practical shape, a belief that assistance from themselves is also called for; since, when they come to realise that, it should be but a short step to the forming of an organisation whose object will be not only the material improvement of the condition of the peasant, but also his political education in the direction which will best serve his own interests.

At present, the only political adviser who has made any attempt to appeal to the peasants is the extremist politician, whose activities in that respect are wholly destructive. What he is pleased to call "village work" is the inculcation of theoretical schemes of self government in which he himself is to play the leading part; that of the peasants being merely to provide him with the necessary votes to enable him to do so. The real attitude of the Swarajist politician towards the peasantry is to be found in a recent pronouncement of Pandit Motilal Nehru, the official party leader; who said that the Viceroy was attempting to draw a red hearring across the trail leading to Swaraj by producing "some agricultural scheme" in the hope of diverting the attention of the people of India from "their real object." That the real object of the peasants of India should be the improvement of their own condition, and not merely the acquisition of place and power by the professional politician, is a suggestion that would doubtless strike the latter as absurd: his own "real object" is to create political discontent among the peasantry, instead of the "generous discontent" that drives men to strive for the improvement of their lot.

Motilal Nehru's contemptuous reference to "some agricultural scheme" is an excellent index of the professional politician's real attitude towards the Indian peasant: and his attitude towards the Indian manual worker is summed up by Mr. Johnston, the Labour-Socialist Member of Parliament for Dundee, who, on completion of his recent tour in India, stated, as his deliberate opinion, that "the Swaraj Party is not interested in the economic conditions of the workers." By far the most important matter in India to-day is the improvement of the economic conditions of the toiling masses: and the only political party, that is at present interested in that, is the Government itself. It is obvious that the time is more than ripe for the formation of a new political party which will devote itself to this pressing need, and bring to bear on the problem the experience gained by close personal association of a kind that is not open to the official. What is wanted is the man. Sir Gunga Ram has given a lead in the Punjab: it remains for others to follow, towards an association of influential members of the landholding and commercial

Digitized by Google

classes, which will form the nucleus of a political party that will serve the real needs of the peoples of India, and not only those of the small but vocal class that now claims to represent them.

Telegraphists' Grievances.

In India, telegraph offices and post offices are usually separate: and one of the main recommendations of a Committee that recently reported to the Government of India was that steps should be taken to increase the number of combined offices, where this could be done without detriment to the working of the telegraphs. This recommendation was accepted in principle, and action was begun to give effect to it in the case of some of the less important telegraph offices, the separate existence of which seemed no longer necessary. The Indian Telegraph Association objected to these orders, and memorialised Government, in rather truculent terms, against them: demanding that the Committee's report should be considered by a fresh Committee, specially appointed for the purpose, to include representatives from the Association: and that, in the meantime, all action on the report should be suspended as "the only means of terminating the present deadlock."

What the Association called "the present deadlock" was a great congestion of telegrams at all the large offices, which the authorities believed to be due to the adoption, by the operators, of a policy of "ca' canny": a suggestion that was strongly denied by the Association in words which amounted to admitting its accuracy—"with the wave of discontent prevailing in the Department, it is but a natural sequence that, when an accumulation takes place, a discontented staff cannot be expected to rise to the occasion to work off arrears."

The Government issued a communiqué explaining the situation, and this was reinforced by a statement made by the Industries Member, to a deputation from the Association which waited on him in Calcutta. It was pointed out that conversion was proceeding slowly, and only after full consideration in each case; that the interests of the men now in the service would not be worsened in any way, as Government had already undertaken to secure to them continuity of position and prospects in any case where conversion might otherwise affect them adversely; but that if, as appeared to be the fact, they were apprehensive about the position of new recruits who might enter the service in future, that was a matter that could not be considered: if there were any alteration in the conditions under which their successors were recruited, that was, after all, a matter for the latter, who need not enter the service unless they were prepared to accept what Government had to offer.

The result of this explanation was the immediate removal of the "wave of discontent": and, as a further indication of the accuracy of Government's belief in the existence of a "ca' canny" campaign, the disappearance of the congestion of messages: and affairs are now proceeding smoothly. But the tenderness for those who are to come after—who would, in most cases, probably be relations of the men already in the service—is a rather engaging trait which is so "distinctively Indian" that no one familiar with India will be surprised at its having been seriously voiced, or will fail to congratulate the authorities in having refused to give way to it. One remembers a similar idea that manifested itself when it was proposed to introduce aluminium cooking pots in an Indian regiment. A Committee of Indian officers was assembled, and the advantages of the new departure were fully explained. They all agreed that the idea was an excellent one, but said they would like time to consider the matter before accepting it. The next day they reported that they had unanimously decided to retain the existing copper cooking pots. Pressed for their reason, they said that the copper pots required to be tinned every month, while the aluminium pots did not—"and, if everyone takes to aluminium, what will become of the tin-man? He will lose his job."

INDIAN EXCHANGE.

London, December 21.

The near approach of the Christmas holiday is apparently having the usual effect upon business in India, as all markets there report very little doing. It is not unusual to see more pressure for money at this time of the year, but so far the only movements of importance in the money market consist of the transfer of a fair supply of funds from Calcutta which is now being sent to Bombay to finance cotton. In both markets rupee exchange has been quoted all the week at 1s. 6 5-32d. T.T., with buyers looking for 1s. 6 3-16d. The higher rate, however, has been difficult to obtain unless for cash and near delivery. Government has again been called upon to provide funds to a moderate extent, and their purchases amount to about £400,000 at 1s. 6d 3-16d. T.T. for immediate delivery.

Forward T.T. rates are quieter and may be called 1s. 6 5-32d. between now and the end of February, 1s. 6⅛d. March to April, with 1s. 6 3-32d. May and June, but we hear of no fixtures whatever even at 1-32nd higher.

Commercial bills have not been plentiful at 1s. 6 15-32d. three months sight, for delivery within a month, with no possible chance of shippers obtaining anything better.

The London market has been perfectly steady at 1s. 6 7-32d. T.T., although off and on it has been possible to obtain 1-64th lower, but the only business reported at this quotation has been a few inter-bank transactions.

NOTES AND NEWS.

170, *Strand, London, W.C.2.*
Tuesday Morning.

Retrospect and Prospect.

As one comes to the end of another year it is natural to review the course of events in the past twelve months and to look forward, wishing that one was gifted with second sight, wondering what is to be the story of the coming year. It would be futile to deny that 1925 has been disappointing in the fulfilment of its early promises. But then we have had so many of these disappointments since 1918 that we are becoming quite accustomed to them. But if the year has not come up to expectations it has at any rate had its good features, and, if one takes a broad view, it cannot but be admitted that 1925 has been another and a decided landmark on the weary progress towards world reconstruction. We have at long last arrived at a European settlement which promises to have notable consequences on trade development, and besides that other events of the year may ultimately loom very small. In the purely economic sphere the oustanding event has been the rubber revival, among the important results of which may be mentioned the effect it is having in restoring the balance of trade with America in our favour and its incidence on our income-tax returns, the full fruits of which will not be apparent until the close of the next financial year. Truly the Chancellor may have every reason to be thankful for the salvation of this great Imperial industry. Unfortunately it has to be chronicled that the trade depression continued, though its incidence has grown less pronounced with the passage of the months. It had been expected that there would be a very pronounced revival, but sight was lost of the fact that last year's harvests were bad and so the world's purchasing power was inadequate to render possible the expansion of trade. So much for this year.

The Outlook.

This time it can be said with absolute confidence that the outlook is much brighter than it was a year ago. Europe has on the whole had good harvests, with the result that there will be a notable increase in purchasing power which should show itself in a marked increase in the demand for commodities, and it may be hoped that in this development of trade British goods will have their full part. No one looks now for a "boom," that is in the near future at any rate, nor would anything of the kind be desirable, for it would only be followed by renewed depression, but it is reasonable to anticipate the steady revival of trade which will bring relief to our sorely-pressed industries. Except with regard to shipping the indications in most of the important directions have of late been distinctly encouraging. The iron and steel trade has shown signs of improvement, while Lancashire has been able to report in recent months an increased demand for cotton goods. But while on the whole an optimistic view is justified, the outlook is not free from elements of difficulty. As far as the position abroad is concerned the chief element of uncertainty is China, where the situation seems to go from bad to worse, and so long as that great market for British goods is largely closed the prospects of a real trade revival must be seriously prejudiced. At home the solution of the coal question has yet to be found, and this is indeed the uncertain element in the equation as far as this country is concerned.

A City Appointment.

We refer in another column to Mr. H. E. Garle's resignation from his position as representative of Great Britain in Paris on the Commission for the Assessment of Damage suffered in Turkey. He will thus bring to a close four years of service on behalf of British claimants who suffered damage at the hands of the Turks during the War. Mr. Garle has, we understand, taken this step for the purpose of associating himself with the Rock Investment Company, Ltd., and its allied Trust Companies. His twenty years' experience in Egypt and the Near East should prove of considerable value in the City of London, where an intimate knowledge of local conditions is so much required at the present time for the fostering of British trade and the maintenance of our commercial prestige in the Near East.

Sir Adam Block's Report.

The report of the Council of Administration of the Ottoman Public Debt, which covers the period down to last March, has been delayed, Sir Adam Block tells us, because it was hoped that it would be possible to announce the negotiation of some temporary arrangement. Unfortunately little progress has been made, and the position is described by Sir Adam Block as "most unsatisfactory." The Council is still without its revenues, and of all the States among whom the capital of the Turkish Debt was repartitioned annuities have only been forthcoming from Palestine, and even in that case not to the full amount. Fresh steps are to be taken to induce Turkey and the detached States to carry out their obligations, and it is to be hoped that when the next report makes its appearance a different story will have to be told.

Turkey as a Borrower.

It would be difficult to find terms strong enough for the cynical indifference with which Turkey has treated her obligations. All along it has been self-evident, despite the repeated denials that have been forthcoming, that Turkey would sooner or later require fresh financial accommodation, but there could be no chance of a favourable hearing in the City failing a definite arrangement in regard to existing debts. Included in the report in question is a table showing the debt charges and military expenditure of Turkey compared with the revenue and expenditure, and it deserves the closest examination. For 1925-26 the revenue is estimated at £T153,047,000, and the expenditure, allowing for the external debt charges calculated with the exchange at the rate of £1=PT900, amounts to £T217,872,000, and of this total military expenditure accounts for £T52,489,000. So that leaving out the external debt charges totalling £T54,560,000, there is an estimated small adverse balance. But, as the table shows, if the exchange improved by 50 per cent. the debt charges would fall to £T27,280,000, and the charge

would grow correspondingly less as the exchange appreciated, and while it would be an easy matter for Turkey to economise on her miltary expenditure, it is obvious that a debt settlement would have an immediate effect on the exchange and, indeed, is an essential preliminary to its recovery.

Cotton Restriction in Egypt.

It appears that after all the acreage under cotton in Egypt is to be restricted in 1926. As I have already said, I consider such a measure most unwise for it must endanger the position the country at present holds in the cotton market. No doubt the decreased output of Egyptian cotton will have some temporary effect on prices, but it will only be very temporary because of the rapid extension of cotton growing in the Sudan, Uganda and elsewhere. The step could only be justified if Egypt has some remunerative crop to replace cotton. As it is she is likely to find that for a transient advantage she has simply given an impetus to cotton growing elsewhere. I would emphasise once again that it was impossible for cotton to be maintained for long at the absurdly high level at which it has stood in recent years. With relatively cheap cotton there will be a great expansion in the demand for cotton goods and the corresponding demand for cotton will give growers a larger market for the raw material.

Egypt and India Air Service.

The interesting announcement was made in the House of Commons last week that an agreement had been signed between the Air Ministry and Imperial Airways, Ltd., for a regular air service between Egypt and India, following a consideration of the results of a detailed survey of the route. The Air Minister, Sir Samuel Hoare, in making this statement said that the most important new point emphasised by the survey was the great advantage that would result from the use of three-engined machines which however, means increased cost and the number of machines used and the frequency of the services will accordingly be below what was indicated last year. The company is being granted a subsidy on the basis of a fortnightly service each way between Egypt and India by way of Baghdad and Basrah, and it is anticipated that the service will be in operation towards the end of next year. The route is of so great importance as a vital link in the communications between this country and the East that it will be surprising if the utilisation of the service by commercial interests does not speedily bring about a need for more frequent services. The Indian terminal will be at Karachi and it is anticipated by Sir Sefton Brancker that India will be almost forced to extend the service to Calcutta, after which will come the service from Rangoon to Singapore bringing within reach through communication with Australia.

COMMENTATOR.

The Bulgarian Government will shortly lay before Parliament a number of Bills designed to assist foreign trade (says a Reuter message). A Bill abolishing the export duty on tobacco is to be tabled immediately.

A Reuter message from Cairo states that a law has been promulgated prohibiting the planting of more than one-third of the arable land with cotton in 1926, under penalty of fine or imprisonment, or both.

The Zagreb Spring Motor Show will be held from March 21 to 28, 1926. In addition to motor-cars and motor-cycles there will be sections for wines, agricultural machinery, wireless apparatus and an international poster exhibition.

The Ionian Co., Ltd., has been registered as a private company with a capital of £15,000 in £1 shares. The objects are to carry on the business of shipbrokers, shipowners, insurance brokers, managers of shipping property, freight contractors, and ice merchants, refrigerating storekeepers, pitwood importers, etc. The first directors are A. G. Vlassopulos, J. M. Karavias, and G. P. Calinicos.

CYPRUS LETTER.

(From Our Own Correspondent.)

Nicosia, December 8.

Agricultural Depression.

It is satisfactory to note that during the last meetings of the Legislative Council the Greek members avoided political allusions almost entirely, and that there is a desire on the part of both Greeks and Turks to devote serious attention to the needs of the agricultural classes, and to measures of relief. Their indebtedness, and the depreciation of land values, are serious, and need of cheaper and longer credit is obvious. If nothing further can be done at present for increased water supplies, the introduction of air-worked elevators should be largely encouraged. It is to be hoped that in the next session the Council will settle down to a thorough consideration of the various matters and grievances in respect of which legislation is required for the benefit of the rural and working classes.

Queen Alexandra.

The announcement of the passing away of the Queen was received with manifestations of genuine grief by all communities. Both on the day when the news was received and on November 27 Government offices were closed. Flags were lowered to half-mast on churches, at Consulates, banks, clubs, and many other buildings. Services were held at St. Paul's Church, at Nicosia, and others. Telegrams were sent to the Greek Archbishop, expressing the sorrow and condolence by the Greek Community, by ex-King Hussein, and by various bodies. Telegrams in reply were received, expressing the deep appreciation of His Majesty. There were unmistakable signs of real sorrow in all the towns.

Church Properties.

Among the principal subjects which occupy the attention of the Greek Community is that—as already said—of a radical reform in the management of all ecclesiastical properties, which is desired throughout the island. Government assistance would be of paramount importance, if invoked; and it would not be the first time that it has stepped in to help the Church. It did so a few years ago, when a deadlock occurred in connexion with the election of two Bishops for one see: and when the division of the whole Greek Community into two parties caused much heartburning and ill-feeling. If Government aid were given, it would no doubt only be if the Holy Synod were unanimously to give its full approval to approaching the Government.

The "National Council."

Another event which should take place is the immediate dissolution of the "National Council," the existence of which is quite incompatible with any real co-operation on the part of Greek members with the Government. It came into being when the Greeks declined to sit in the Legislative Council. It has held periodical meetings and passed resolutions; but its members can hardly, on reflection, feel very proud of its achievements, or, indeed, that it has done the slightest good. That at any rate has come to be the prevalent opinion of most persons of sense, who recognise how futile have been the tactics of the party of agitation.

Fashions in Cyprus.

Greek ladies have not been slow in following all the latest fashions in dress and adornment: and those who strongly disapproved of many innovations are resigned to the inevitable. One paper speaks of a likelihood that an up-to-date hairdresser from London will shortly set up an establishment in Nicosia. If so, it suggests that the art should be promptly mastered by Cypriots, and the profits reaped by themselves, and not only by foreigners—a very wise, and perhaps superfluous, view.

Ex-King Hussein.

Friendly visits have been exchanged between the ex-King and the Greek Archbishop, and the latter recently entertained both the Archbishop, and the Bishop of Papho.

Monthly Supplement of "The Near East and India" : No. 11.

YUGOSLAVIA'S FINANCIAL POLICY.

The debate on the proposed Budgetary twelfths for December, January and February was opened by Dr. Stoyadinovitch, Minister of Finance, in a speech of which the following is a summary:—

The Financial Bill now proposed makes the Budgetary twelfths for December, January, February and March of practically the same amounts as the twelfths for the earlier months of the year. The expenses of these twelfths amount to 4 milliard 85 million dinars. Those for the period from August to November amounted to 4 milliard 65 million, and those for April-to-June to 4 milliard 101 million. This gives a total expenditure of 12 milliard, 251 million dinars.

A comparison with the Budget for 1924-1925, amounting to 10 milliard 405 million dinars, shows this year's Budget to be larger by 1 milliard 846 million dinars, or one-sixth.

This increase is justified by greater State needs. Better railways, roads, hospitals and schools and better paid civil servants must mean greater expenditure. The greatest individual increase in expenses is for State pensioners. While last year's Budget allowed for them 283 million dinars, the allowance this year is 560 million, or 277 million more. This is such a large item and maintains so many healthy and capable persons that the Government has in the twelfths now proposed, raised the 10 necessary years of service to 15.

The second increased item is the expenditure on Civil Servants, under the new law, which makes an addition in this year's Budget of 115 million dinars.

The third is for the disabled, for whom the Ministerial Council decided to increase the allowance by 100 millions, thus making this year's expenditure 390 millions as against last year's 290.

Of material expenses only those have been increased which can be described as capital expenditure. Thus, the Budget of the Ministry of Communications has been increased from 1,782 million in 1924-25 to 2,218 million dinars: that of the Ministry of Construction from 396 to 494 million, of which increase 66 million are for new roads: and that of the Ministry of Agriculture from 214 million to 267, chiefly for agricultural credits. Another increase is from 60 million to 150 million dinars for the repayment of old debts.

But although expenses are greater, receipts have also increased. Omitting the considerable increase in the receipts from the Ministeries of Communications, Posts and Telegraphs, and Forests and Mines, chief attention should be given to greater revenue from direct and indirect taxation. Thus, during the first nine months of 1924 and 1925 tolls have yielded respectively 505 and 586 million dinars, i.e., an increase of 81 million dinars. Taxes during the same periods have yielded 890 and 907 million dinars respectively, i.e., an increase this year of 17 million dinars. Direct taxation and super-taxation yielded for 9 months of this year 1,160 million dinars, as compared with 866 million last year, or 294 million more. Again for nine months, Customs gave 1,285 million dinars as against 985 last year, i.e., 300 million more. Finally, monopolies during nine months brought in 1,765 million as compared with 1,734 million, i.e., 31 million more. Thus, these

Dr. Stoyadinovitch, Yugoslav Minister of Finance.

five groups of State revenue had a total increase in nine months of 700 million dinars.

We cannot, however, remain satisfied with this, because this represents the maximum which the nation can pay in taxation. We have decided to lower and finally to rescind taxes proportionately with the fall in agricultural prices. Thus, we have abolished the last export duties on corn and cattle. Our import tariff also represents a maximum and will be lowered on the conclusion of commercial treaties with other countries. Hitherto we have concluded treaties with Italy and Austria, and we hope soon to open negotiations with Czecho-Slovakia, France, Great Britain and Germany. We intend to lower

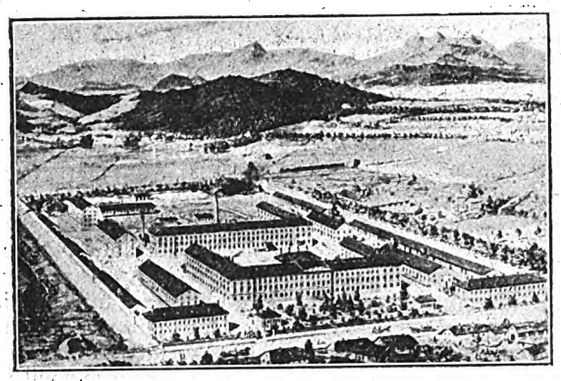
State Monopoly Administration of the Kingdom of Serbs Croats & Slovenes



State Tobacco Factory in Liubliana.

Tobacco Culture

The 1924 harvest will yield about 27.000.000 kgs. of leaf. Of this amount about 10.000.000 kgs. will be set aside for export. The tobacco is from Serbia, Macedonia, Herzegovina and Voivodina.

Fermentation and preparation of the crop will be completed in October, when negotiations for sale will begin.

All information can be obtained from:—

The State Monopoly Administration, — BELGRADE —

import tariffs in the same proportion as other States give facilities to our exports.

Direct taxation in Voivodina, Croatia and Slavonia is a great difficulty, because with these provinces has been inherited the old complicated direct taxation system of Hungary. The Government has, therefore, prepared a new system of taxation for the whole country, according to which every citizen will pay equally. Another difficulty in Voivodina is the accumulation of taxation arrears, for which allowance will be made both in time and in the reduction of the interest rate from 12 to 8 per cent. A number also of the burdensome dues in Voivodina have been abolished. Finally, all exceptionally difficult cases will be separately investigated by a special committee.

Our future policy will be that of saving on expenditure. Only thus can we expect a reduction of taxation.

Finally, as to our monetary policy. The Ministerial Council have given legal authorisation for the conclusion of an agreement with the National Bank by which the latter shall buy and sell foreign currency in such a way as to prevent any fluctuation of the dinar. Our policy is to aim at a relatively stabilised exchange, as a sound basis for trade and commercial calculations.

AGRICULTURAL OVER-PRODUCTION.

In the countries which now form the Kingdom of the Serbs, Croats and Slovenes, there were before the War these more or less permanent agrarian crises:—

(1) The crisis of agrarian unemployment or of the agrarian proletariat.

(2) The crisis of the low prices of agrarian products, i.e., relative over-production.

From these, the more important, there resulted a third:—

(3) The crisis of the indebtedness of peasant holdings.

The moral conditions for agrarian reform were, therefore, prepared before the War by these relatively constant crises.

I have noticed that Englishmen who come to the S.H.S. Kingdom pay much attention to the question whether and to what extent agrarian reform has affected the conditions of agrarian production.

A summary glance at statistics will show in answer to this question that in 1924 there was a crisis of over-production of sugar beet in the S.H.S. Kingdom, and in 1925 one of over-production of hemp and corn. But such a summary answer cannot give a real idea of the consequences of agrarian reform, because many influences have been playing a part which were not the direct consequences of agrarian reform at all. These influences must, therefore, be analysed, if a correct idea is to be obtained of the changes wrought by agrarian reform in Yugoslavia. Such an analysis will be clearest, if the agrarian crisis before the War is first investigated, and only afterwards its post-War modifications.

There were two aspects which complicated the crisis of agrarian unemployment before the War. First of all, this unemployment was relative. In districts of large estates there was a relative lack of agricultural labourers, while at the same time in the thickly populated districts of small holdings there was a surplus of labour. A second complication lay in the fact that the lack of agricultural credits prevented the proper intensification of agriculture, which would have given opportunity of work to the unemployed land workers.

Most of the large estates were devoted to corn growing. But the low prices of their products, as a result of overseas competition, gave very small profits, so that the small wages paid did not attract labourers to work on them. In this period of poor profitability many of the large holders parcelled up their estates. Some even went in for actual speculation, parcelling up their estates in the densely populated districts and buying new estates in the thinly peopled parts, in the hope of carrying out profitable parcellation there also later on. This process naturally resulted in usury on land. The poor peasants could not earn enough with their small wage either for the purchase

Digitized by Google

of land from the large holder, or for capital expenditure for more intensive work on their small holdings. They, therefore, preferably went to America or to other industrial centres (e.g. Bremen-Eberfeld) where wages were better, and where in a few years the necessary funds could be saved. This happened in the districts which were formerly part of the Austro-Hungarian Monarchy.

In Serbia circumstances were rather different, because there were no large estates. Nevertheless, even in Serbia unemployment was becoming more and more prevalent among the peasants, because of the lack of the necessary capital for intensification of cultivation. The Serbian peasant did not emigrate to America, but with great pains gradually intensified his cultivation with his small earnings. But since this intensification went on much more slowly than the multiplication of families, the Serbian peasant was only able to advance by keeping his standard of life lower than his cultural progress, and even to depress it lower and lower, if he wished to save himself from ruin.

Some large owners whose circumstances were not suitable for parcellation of their land, sought a way out of the unprofitable production of corn by partial transition to the production of commercial and industrial plants. Thus in the former Austro-Hungarian provinces there came into existence five sugar factories on large estates. These were almost entirely supplied with beet from the large estates. Besides sugar beet, the large estates also grew hemp on a large scale, and, to a smaller extent, chicory. There were no very critical disputes over prices between the large growers of beet and the manufacturers, because many of the former were also shareholders of the factories, and because at that time there was no over-production of raw material (sugar beet, hemp, etc.). Naturally this growth of industritl plants was regarded as a great advance, because the income of the large owners improved and this had a beneficial effect on the trade balance of the State. It was even estimated more highly than the advance of stock-raising among small holders, which also meant a better income from land and an improvement of the trade balance. The reason for this was that with it went the building-up of industry and manufactures which was the favourite item of the economic programme of the politicians of the day.

The coming of agrarian reform meant the ruin of the adherents of this economic policy. In order to prevent its introduction they painted in darkest colours the ruin of home industries of sugar, hemp, chicory, etc., and even worse, the ruin of corn production also, for in spite of the partial introduction of the growing of industrial plants, corn production was primarily in the hands of the large owners. Among those who had such a pessimistic outlook on affairs were several eminent University professors, who were honoured as experts on the system and management of land culture and plant production.

There was only a very small minority of agricultural experts (among them the writer of this article) who asserted that the small owners in a very short time after agrarian reform would produce as much sugar beet and other industrial plants as had been formerly produced by the large owners. These reinforced their arguments by examples of production on small holdings in Moravia and Serbia. In Serbia, which unlike the other parts of the S.H.S. Kingdom, was always a land of small holdings, there were before the War two sugar factories, at Belgrade and Chupriya, which were supplied with their beet from small holdings. This favourable example encouraged the agrarian reformers not to be frightened by the black pictures drawn by the eminent experts.

And as events turned out, in 1924, i.e., three to four years after the accomplishment of agrarian reform, there was such a large production of sugar beet from the small holdings that there was a crisis of over-production, the very opposite crisis to that predicted by the experts and large owners.

Over-production resulted from the economic circumstances already explained in the following manner. As soon as war conditions in agriculture ceased there immediately recurred the pre-War crisis of the non-profitability of corn growing, which was felt now by the small owners just as it had been formerly felt by the large owners, because they too were primarily corn growers. This pre-War crisis was accentuated constantly by the following influences. The improvement of the dinar currency made the costs of wheat production steadily greater than its selling price, because the costs of production were met with a dinar of less value, i.e., at a greater price, while the produced article was sold for a dinar of better value, i.e., for a smaller nominal selling price. Moreover, the small holder had lost most of his cattle during the War, and consequently could not make up the deficiency in his income from stock-raising.

In these critical circumstances the small holder gladly accepted the offers of the agents of the sugar factories, who, having lost the large owners as a result of the reform, were seeking new supplies from the small holders. Since the agents gave some advance payment for future produce, the small holders, unversed in the question, agreed, pleased only to have found a more profitable product than corn, giving quicker results than stock-raising, which would want years of patient toil. Among the conditions was one which regulated prices by the Bourse prices of the S.H.S. Kingdom. When then in 1924 there occurred great over-production of sugar beet, the sugar factories formed themselves into a cartel, and offered the beet producers very low prices which were supposed to represent the internal Bourse price. This was the cause of the first great crisis of beet over-production in 1924, and in spite of the mediation of the Ministry of Agriculture to reconcile the conflicting points of view of the producers and manufacturers, the demands of the former could not be satisfied. As a result, the producers formed a producers' association in order by co-operation better to protect their own interests. The only success of this association so far has been that in 1925 many of the small holders gave up beet production in favour of hemp. This new change of production brought about in 1925 a new crisis of over-production of hemp, which finished in the same way as that of beet. By means of a cartel, the hemp manufacturers brought down the price of hemp, and again brought about discontent among the growers.

Symptoms are appearing this year that many of the small holders will take up hop production and see what luck they have with this. And in spite of the fact that the capital needed for hop growing is larger than for hemp, it is to be feared that too many small holders will take up hop growing suddenly, with the result of a new crisis of over-production of hops.

These crises of over-production have shown without doubt that the small holder is capable of producing as much as the large holder before the War, and even more, of course, on condition that he is given prospects of better profitability.

Together with over-production of hemp in 1925, there occurred similar crises in wheat and maize. This was, however, a normal phenomenon before the War, and statistics of before and after the War show that even in so-called bad years, the S.H.S. Kingdom produces a sufficiency for export. In respect of these crises, agrarian reform has not worsened the situation. On the contrary, it has improved it, because the small holders will tend increasingly to more profitable stock-raising, and thus by the change decrease the crisis of unprofitable corn growing. In this country's conditions, the large estate is not so suited for the quantitative improvement of stock-raising as the small holding, because it lacks the necessary number of careful labourers to look after the animals.

Very soon the figures will be published of the production of agricultural colonisation in the S.H.S. Kingdom. These statistics will show how much more cattle and other products have been produced by the small holder than on the same area by the large holder.

The remarkable progress of the small holder in the S.H.S. Kingdom has been due to his industry, which became manifest immediately he came into possession of soil, however barren.

It is true that agrarian reform was introduced very suddenly into the S.H.S. Kingdom, and therefore unsystematically, with the consequence that the new small holder did not gain any other assistance than the mere possession of the bare soil.

DR. LJUDEVIT PROHASKA.

ECONOMIC NOTES AND NEWS.

Comparative Survey of Imports and Exports.

Imports of the S.H.S. Kingdom during the third quarter of 1925 amounted to 373,497 tons of a value of 197,821,626 gold dinars, an increase of 61,717 tons and 51,869,291 gold dinars on the imports for the corresponding period in 1924. Cotton and woollen textiles figure in this quarter's imports as 15.3 per cent. and 10.8 per cent respectively of the total imports.

Divided according to countries of origin the imports are :—

	Mill. dinars	Percentage
Czechoslovakia ...	424.5	19.7
Austria	398.5	18.5
Italy	375.9	17.4
Germany	224.9	10.4
Great Britain ...	151.6	7.0
Hungary	104.5	4.8
France	88.8	4.1
Roumania	72.7	3.4
Greece	69.2	3.2
U.S.A	69.0	3.2
Other Countries ...	178.6	8.3
	2,158.2	100.0

Imports during the first three quarters of this year were :—

	Tons.	Dinars (paper).	Dinars (gold).
First quarter, 1925	305,765	2,128,395,294	177,959,472
Second „ „	495,720	2,474,546,267	210,599,682
Third „ „	373,497	2,158,238,945	197,821,626
Total	1,174,982	6,761,175,508	586,380,780

Exports during October amounted to 437,084 tons of a value of 77,431,635 gold dinars, an increase of 21,358 tons and 2,500,282 gold dinars on the figures for the corresponding month in 1924.

The following shows a comparison of exports for 10 months of this and last year's :—

	Tons	Gold Dinars
1924 ...	3,110.875 ...	530,975,182
1925 ...	3,666,907 ...	658,866,737
Increase 1925	556,032 (17.87 %)	127,891,555 (24.09 %)

Commercial Agreement with Albania.

A special commission composed of representatives of the Ministries of Commerce and Foreign Affairs has undertaken the study of a new commercial treaty to be concluded with Albania. As soon as the investigation of the Customs section is complete negotiations are likely to begin.

Monopoly Receipts.

Monopolies yielded the following revenue from April 1 to August 31, 1925 :—

	Million Dinars, 1925	Million Dinars, 1924
Tobacco	703.5 ...	704.5
Salt	143.4 ...	120.4
Petroleum	44.3 ...	32.9
Matches	57.3 ...	60.6
Cigarette Paper ...	57.8 ...	54.5
Various Receipts ...	3.6 ...	4.7
Total	1,009.9 ...	977.7

The Budgetary estimates were 964.8 million dinars, so that the surplus over estimates was 45.1 million dinars.

Export of Maize.

During October of this year 2,570 trucks of maize were exported as compared with 992 trucks in the same month last year. Between November 1, 1924, and November 1, 1925, Yugoslavia exported 104,392 trucks of maize worth 2,191,8 million dinars. Between January 1, and November 1, 1925, maize export amounted to 89,727 trucks, worth 1,880.5 million dinars.

Niksitch-Trebinye Railway.

The survey of this line is now completed. The help of the army has been necessary for the completion of the railway, and it is expected that it will be ready and opened for traffic at the beginning of March.

Traffic in Yugoslav Ports.

The report of the Shipping Directory gives the traffic in goods in Yugoslav ports for the first six months of 1925 in quintals, as follows :—

	Export	Import	Total
Split ...	1,930,880	605,563	2,536,444
Sushak ...	784,700	202,176	986,876
Shibenik ...	617,962	195,784	813,764
Gruzh ..	495,762	250,573	746,335

Tunnel under the Ivan Range.

The railway connexion of Bosnia with the Adriatic Sea encounters a great obstacle in the Ivan Range. The steep gradient and the funicular which surmounts it make communication on the section of the Bosnian railways slow and complicated, especially since railway communication has begun to be more normal with a steady tendency to increase. Moreover, the construction of the Belgrade-Obrenovatz line will add still more to the traffic on this route.

The boring of a tunnel under the Ivan Range would not only ease communciations with the sea, but would also mean a saving of 75 per cent in expenses.

Preliminary work on the tunnel is completed and credits have been granted. All that is needed now is the Government's consent for the beginning of boring operations.

Aluminium Mine in Montenegro.

Some time ago large deposits of aluminium were found in the Mrkoyevitch district near Bar. This was taken into exploitation by the coastal mining and industrial company "Prirud" at Split. This company has begun the survey of 12 kms. of railway line and the erection of huts for the staff and workers. In accordance with its obligations to a foreign firm, the company will execute an order next spring for several hundred thousands tons of ore.

The 1925 Trade Balance?

In the first nine months of this year imports amounted to 586,380,780 gold dinars, and exports to 581,435,102, an adverse balance of only 4,945,678 gold dinars. Expressed in percentages, the value of exports as compared with imports was 99.18 per cent. : 100 per cent. This means that in the first nine months the balance was practically achieved, since exports were only less than imports by under 1 per cent. As exports have always been greater than imports in the fourth quarter of the year, it may safely be concluded that the balance for the year will be favourable.

Czecho-Slovakia and Yugoslav Imports.

Last year Czecho-Slovakia succeeded in taking the first place among countries importing into Yugoslavia. This supremacy was really achieved during the first two quarters of 1924. This year she has again gained predominance, but only in the third quarter. During the three quarters she was responsible for 18.4 per cent. of the total imports, while Yugoslav exports to Czecho-Slovakia were only 9.02 per cent. In the general import records for nine months of 1925, Italy takes first place with 19.8 per cent., Czecho-Slovakia being second. Great Britain comes fifth with 8.7 per cent. and France only eighth with with 3.3 per cent.

Sea Fisheries in 1924.

For the twelve months of 1924 fisheries along the whole of the Yugoslav Adriatic coast gave a total catch of 4,153,735 kgs., valued at 38,446,836 dinars.

Of this quantity 2,721,771 kgs. were sold along the coast, and 1,008,212 kgs. sent inland or exported abroad. Sardine fisheries in 1925 yielded 1,058,309 kgs., worth 7,408,163 dinars—an average of 7 dinars per kg.

CREDIT CONDITIONS IN YUGOSLAVIA.

With the improvement of wheat prices on the world markets, commercial life in Yugoslavia has suddenly become enlivened. During the last three months, when in the usual way the export campaign in this country reaches its maximum, there has been practically a standstill in the sale of export goods, either present or advance. The stagnation on the corn market has completely baffled

Digitized by Google

the great exporters, and the others without guidance have also abstained from business. The liquid capital has been lying as cash on call at the banks. For many, however, this time of waiting on the corn market has been a veritable blessing, for the exchange rate of the dinar has considerably improved, and they have reaped good profits by simply keeping their money passive. Some, even the more impatient, invested their idle capital in home securities, and thereby brought about temporary chaos in the rates of the latter, from which many profited. The banks in the meantime were glutted with cash, which they were unable to place at short term. Yugoslavia has undertaken too much building and the foundations of too many enterprises in the last three or four years. As this was done mainly with home capital, the result has been an acute lack of home capital and of credits on the home markets, which has meant the stoppage of many buildings and factories already begun. The demand for credit for these unfinished enterprises became so keen, and was often concealed by roundabout manœuvring that the banks have had to exercise much prudence to avoid tying up their ready capital for investment purposes of this kind. So for some months there has been the difficulty of an over-abundance of ready money, and the National Bank, the Postal Savings Bank and the large private banks have really suffered from too great deposits.

At the same time, however, the process of digestion recommenced in economic life, many unfortunate enterprises ended in liquidation; many amalgamations took place in order that united effort might accomplish what was too much for individual strength; yet even with this united effort the necessity remained in some cases for still wider financial basis. This is certainly a healthy process of straightening and strengthening. Our great banks must be praised for having been so resolutely strict in their investigation of credit demands, thereby not giving excuse for further inflation, but on the contrary, insisting on settlement.

Ten days ago the corn market began to pick up, and immediately all those unused reserves of cash came into play. At the Postal Savings Bank and the National Bank, as well as at the large private banks, deposits were withdrawn, and earlier granted but unused credits were drained. Cash in hand returned to its normal amount. The banks, relieved of a heavy burden, breathed with relief. Further, although it seemed at the first glance as though the flood of cash into commercial life would entail a crisis for lack of money, the exact opposite happened, and more money has been in circulation as a result of lively transactions.

The Minister of Finance, Dr. Stoyadinovitch, is leaving for the U.S.A. where he has been invited to undertake the settlement of the problem of War debts. In connexion with this is rumoured the question of large loans for capital expenditure for State needs, and in the first place for railway construction. The investment of foreign capital in State undertakings would give an impetus to home industry, and this would make the process of settlement more rapid and easy. It would also help to settle the question of private credit, by the larger circulation of capital in the country. Finally the meeting of State capital expenditure by means of loans would be a great relief to the Budget, which is now heavily burdened with the expenses of these investment needs. That taxation has reached its limit, and that it must be lightened to some extent has been acknowledged by the Minister of Finance himself in the Parliamentary debate on the new financial law. The Minister's admission of this fact is of great significance.

PROF. DR. MILORAD NEDELJKOVITCH.
General Director, Postal Savings Bank.

YUGOSLAVIA'S FOREIGN TRADE.

The Customs statistics of Yugoslavia give imports during the third quarter of last year and of this year as follows:—

	Tons	Gold dinars (Sw. Francs)
3rd quarter 1924	311,780	145,959,335
„ „ 1925	373,497	197,891,626
Increase in 1925	61,715	51,869,291

The chief imported articles during the third quarter of this year are:—

Article	Tons	Paper Dinars (millions)	Per cent.
Cotton textiles ...	3,852	330 6	15.3
Woollen textiles	1,372	232.4	10.8
Machinery and apparatus	6 408	100 3	4.7
Cotton yarn	1,872	94.7	4.4
Various manufactured iron goods	7,047	78 9	3.7
Raw Coffee ...	2 437	65.9	3 0
Coal of all kinds ...	129 538	65.3	3 0
Untanned skins dom. animals	2.068	48 6	2 2
Flour all kinds	12 413	43.2	2.0
Transport goods	1,746	39.9	1.8
Woollen ready-made goods	123	37.2	1 7
Raw Cotton	1,284	33.7	1.6
Shelled rice	5,232	29.4	1.4
Iron unwrought and semi-wrought	11,419	29 1	1 3
Common salt ...	15,526	27.3	1.3
Rails: railway materials for bridges, roofs, workshops ...	5 382	26.7	1.2
Electro-technical goods ...	747	26.6	1.2
Sheet iron ...	6.147	24 9	1.1
Sacks	1,410	23.3	1 1
All vegetable oils ...	1,900	23.2	1.1
Wool	867	21 2	1.0
Woollen yarn	177	18.7	0.9
Petroleum ...	5.288	18.6	0.9
Footwear (not sandals, etc.) ...	64	17.7	0 8
Woollen goods not made up ...	99	14.5	0.7
Others	149.079	686.3	31.8
	373,497	2,158.2	100 %

These goods were imported in practically the same proportions as in earlier periods.

Foreign countries participated in Yugoslav imports as follows:—

Country	3rd quarter	1st 9 months
Italy	17.4 %	... 19.8 %
Czechoslovakia	19 7	... 18.4
Austria	18 5	... 17 6
Germany	10 4	... 9 6
Great Britain	7.0	... 8.7
Hungary	4.8	... 5.1
U.S.A.	3.2	... 3.9
France	4 1	.. 3.4
Roumania	3.4	... 3.3
Greece	3 2	... 3 1
Other countries	8.3	... 7.1
Total	100	100 %

Shown quarterly, Yugoslavia's imports moved in 1925 thus:—

	Tons	Gold dinars
1st quarter 1925	305,763	... 177,959,472
2nd quarter „ ...	495,720	... 210,599,682
3rd quarter „	373,497	... 197,821,626
Altogether, 9 months	1,174,980	586 380,780

Imports during the first and second quarters of this year were abnormally large. This was due to the fact that importers wished to make as much use as possible of the more favourable customs duties in force before the coming into operation of the new tariff on June 20.

II. EXPORTS DURING OCTOBER AND TEN MONTHS OF 1925.

The figures for Yugoslav exports were:—

	Tons	Gold dinars (Sw. Francs)
In October 1924 ...	415 726	74,931,353
In October 1 25	437.084	77,431,635
Increase in October 1925	21,358 (5.14 %)	2,500,282 (3.34%)
	Tons	Gold dinars (Sw. Francs)
For 1st 10 months 1924 ...	3,110.875	530,975,182
For 1st 1 months 1925 ...	3,666.907	568,866,737
Increase in 1915	556,032 (17.87 %)	127,891,555 (24.09%

The chief articles of export during October of this year were:—

Article	Tons	Amount	Mill. dinars
Prunes ...	..	18,466	99 7
Corn: a/wheat ...	..	30:503	83.8
b/other ...	..	7,577	14 0
Wood: a/for building	..	98 323	88.0
b/for fuel ...	..	12 436	8 9
Maize ...	..	25 760	47 5
Eggs	..	1,589	14 5
Hops ...	..	571	42.9
Live horned cattle	Head	11 768	41 2
Wheat flour ...	Tons	7.2:9	31 7
Fruit: fresh ...	..	5 663	28 3
Meat: a/fresh	Tons	1,494	25 4
b/meat products...	..	52	1.5
Hemp ...	..	2,209	25 3
Beans	..	6,222	15 5
Small cattle ...	Head	78.676	14 2
Cement	Tons	34,078	13 6
Raw Copper	..	509	12 4
Kachkavalj cheese	..	429	12.0
Live pigs ..	Head	7,490	11 9
Live horses ...	..	3,040	10.6
Opium ...	Tons	20	10.9
Calcium carbide ...	..	3 488	10 5
All other ...	..	141 713	148 0
Total	Tons	437.084	842 3

The chief goods in the above list went to the following countries, the figures representing millions of dinars.

Meat.—(a) *Fresh:* Austria 15.6, Germany 3.8, Italy 3.4. (b) *Meat Products:* Austria 1.1.

Yugoslavia's chief export article, therefore, during October was prunes. For practically the whole of the previous twelve months, the chief export had been maize. The amount of last year's maize crop exported between November 1 last year and November 1 this year was 104,392 trucks, worth 2,191.8 million paper dinars. Between January 1 and November 1, this year, the amount of maize exported was 89.727 trucks, worth 1,880.3 million paper dinars.

M. Pashitch, Prime Minister of Yugoslavia, who was born on December 19, 1845, celebrated his eightieth birthday last Saturday. He entered the Skupshtina at the age of thirty-three, and was forty-five when he became Prime Minister for the first time.

Under the heading "Cash" a gold dinar is reckoned as a dinar, an English pound as 25 dinars, a dollar as 5 dinars, an Italian lira as one dinar, a Swiss or French franc as a dinar, a coined silver dinar as one dinar, etc.

Discount rate: 6 per cent. Loans on securities: 8 per cent.

SUDAN RAILWAYS IN 1924.

The annual report of the Sudan Government Railways and Steamers Department for 1924, which has just been issued, throws a most interesting light on the improvement of the economic position of the Sudan. The gross revenues rose from £E1,743,750 for 1923 to £E1,914,322, and while £E50,000 of this total was due to abnormal movements of troops it may be pointed out that the total has only been surpassed in the exceptional years 1921 and 1922. Railway receipts increased by £E126,005. The earnings per train mile have declined from 21s. 3.6d. to 19s. 8.1d., but the earnings per kilometre open have risen from £E.542 to £E.594, showing the growing density and volume of traffic. The total expenditure of the department was £E1,227,783 as compared with £E1,277,782.

The receipts from passenger traffic amounted to £E339,076, the number of journeys being 499,535. The corresponding figures for 1923 were £E301,329 and 420,151. It is pointed out that this expansion was mainly due to an increase of over 23 per cent. in the number of fourth class journeys, thus justifying the reduction in surtax. During the year the surtax on parcels and perishable traffic was reduced by 50 per cent. There was a marked increase in goods traffic. The average earnings per ton-mile, excluding the Sennar Dam traffic, were 1.365d. as against 1.485d. in 1923. It is interesting to note that during the few months of 1924 that the railway to Kassala was open there were 5,108 passengers, while 5,391 tons of goods were transported, the receipts amounting to £E23,471. A slight falling off is reported in the revenue from steamer services south of Khartoum, the gross receipts being £E167,992 as against £E178,136. This was more than balanced by reduced expenditure and the net profits rose by £E3,300.

Comment is made in the report on the record year experienced at Port Sudan both as regards the number of ships dealt with and the tonnage handled at the quays. Six hundred and sixty-nine vessels entered the port as compared with 609 in 1923, an increase of 14.6 per cent., while 481,226 tons of cargo were landed and shipped. The cargo figures represent 235 tons per foot-run of quay length. Including the tonnage of goods forwarded and received by rail, transported locally, etc., the total tonnage handled on the quays amounted to 871,342 as against 857,841 tons in 1923. The exports shipped amounted to 101,283 tons as against 86,598 tons, the increase being mainly due to cotton, cotton seed, dura, and ground-nuts. The imports landed amounted to 187,093 tons as against 196,305 tons. Allowing for the reduction in railway material consequent on the completion of the Kassala railway, there was actually a considerable increase in imports. Owing to the additional number of ships and consequent congestion of the quays it is pointed that it was not always possible to dispatch consignments in exact order of arrival, and a certain amount of delay was unavoidable. Reference is made to the urgent need for extended warehouse space. There was an increase of 25,74 per cent. in the amount of import cargo placed into sheds, and great difficulty was experienced in finding space for imports.

PALESTINE CROP PROSPECTS.

The Director of Agriculture and Forests of Palestine, in his report for November, states:—Early sown maize in the Huleh area has been threshed and excellent yields are reported. Weather conditions have been generally favourable to winter ploughing and seeding. "Afir" sowings of wheat and barley have been made on an extensive scale and seed has germinated at a number of places. Picking of tobacco has been completed. The lack of demand for imported seed indicates that the area to be sown next season will be considerably reduced. The olive harvest continues with prospects of a poor crop.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended November 30 amounted to £E13,917, making the total from April 1 £E227,179.

ROUMANIAN NOTES.

(From Our Own Correspondent.)

Bucharest, December 9.

A Tramway Loan?

According to the daily Press the Bucharest Tramway Company is in negotiation with a British group for a loan of £300,000, to be paid partly in cash and partly in materials. If these negotiations are successful they will perhaps pave the way for the other and more important loans required.

In his speech introducing the Budget the Minister of Finance, M. V. Bratianu, for the first time abandoned his opposition to the contracting of a foreign loan, and stated that now that the position of Roumania was clear in regard to the payment of her war debts to England and America, and as sufficient sums were provided in the Budget to cover the annual payments due on these debts, the Government was in a position to negotiate for a foreign loan. This, he said, was primarily needed for the organisation of the railways.

So much has been written on the necessity for this reorganisation in the interests of trade especially that it seems superfluous to enlarge upon this subject. The passenger trains now run fairly well up to time, but they are very slow, appallingly overcrowded (with the exception of the sleeping cars), and incredibly dirty; and the goods train service is still inadequate, though considerable progress has been made in this direction.

The Budget of the railways for 1926 amounts to 10 million lei. The railway administration has been established on an independent commercial basis and the revenues are to be made to cover expenditure. We may therefore expect some increases in railway traffic in the course of the coming year.

SUDAN CHAMBER OF COMMERCE.

(From Our Khartoum Correspondent.)

Up to 1908 when the Sudan Chamber of Commerce became a definite effective body, many efforts had been made by local business men to form a Chamber in Khartoum, but the greatest difficulty was experienced in securing the co-operation of all nationalities. Every step in this direction was viewed with distrust by certain classes of the community, and it seemed impossible to get the native merchant especially to recognise the desirability of any combination of business interests. This can be said no longer, as an enthusiastic branch of the Chamber exists in Omdurman in close collaboration with the parent body in Khartoum, with a President, officers and committee of its own.

The Chamber is an organisation member of the International Chamber of Commerce, and has evinced great interest in the question of international arbitration. It has drawn up rules, on similar lines to the international rules, for the settlement of local trade disputes without recourse to the law, and many such have been amicably adjusted. Its arbitration courts have been granted by the Sudan Government the privilege of taking evidence on oath.

The objects of the Chamber are to improve trade conditions, make representations to the Government when taxation or particular freight rates bear too heavily on any particular section of the community, collect and distribute information of value to trade or industry, make the wants of the population known to foreign manufacturers, encourage research, and secure not business advantage to individuals but the highest development of trade for the common good by discouraging all forms of dishonest trading and giving organised assistance to firms seeking legitimate means of expansion. No part is taken in politics, but questions of education, research, general welfare, and transportation can always command investigation.

The Yugoslav Ministry of Posts and Telegraphs has authorised the erection of a wireless transmitting station at Zagreb. The station will probably be opened by March 1.

OTTOMAN PUBLIC DEBT.

The report of the Council of Administration of the Ottoman Public Debt for the forty-second financial year to February 28, 1925, has now been issued. Sir Adam Block, K.C.M.G., representative of the British and Dutch bondholders, in his special report says:—

The situation is frankly most unsatisfacory. As the bondholders are aware, the Council has been deprived of all its revenues, and neither Turkey nor the Detached States, with the exception of Palestine, have paid the annuities which they are called upon to pay by the Treaty from the date of its ratification, August 6, 1924. Nor have any of the States as yet furnished the guarantees required by the Treaty, although the French Government on behalf of Syria and the Lebanon has notified to the Debt Council that it is proposed to give as guarantee the receipts of the customs.

Negotiations are proceeding with Italy regarding the guarantees for the contributive part of the Ægean Islands (Dodecanese), and with Greece and Palestine regarding the guarantees for their shares. The other States have made no proposals, whilst Turkey has made no payment, and has, as stated above, deprived the bondholders of the revenues already ceded by the Decree of Moharrem, without making any proposal to replace them by others.

Negotiations have from time to time taken place between the British and French bondholders on the one hand, and Turkey on the other, with a view to the resumption of the service of the loans. I have delayed the issue of these reports in the hope that it would be possible to announce the conclusion of some satisfactory temporary arrangement with Turkey. I regret to have to state that little progress has been made.

Turkey and the Detached States have been informed of the amount of the annuities they are called upon to pay under the Treaty, but, as stated above, no payments have been made, except certain partial payments by Palestine (one annuity and an annuity on account of arrears), although the Treaty declared that no delay is admissible.

Now that the repartition of the capital of the Debt has been fixed by the Commission constituted under Article 49 of the Treaty of Lausanne, fresh steps will be taken to induce Turkey and the Detached States to carry out their obligations, (1) by providing acceptable guarantees, and (2) by the regular payment of their contributive parts.

It is to be noted that it has been agreed in principle that Turkey and the Detached States shall deliver a "General Bond" for each loan defining its obligations. The form in which this "bond" shall be drawn up is under consideration.

H.M. Stationery Office has issued a White Paper (Cmd. 2,563, price 2d.) the Memorandum to the League of Nations on the inquiry conducted by MM. Ortega-Nunez, Markas, and Charrère into the deportation of Christians in the neighbourhood of the Brussels line (Iraq frontier).

COMPANY NOTES AND REPORTS.

INDO-BURMA OILFIELDS.

The report of the Indo-Burma Oilfields for the year to March 31, 1925, shows revenue in Burma from the sale of crude oil and from rents, royalties, etc., amounting to £29,073. The working expenditure was £22,035, leaving an actual working profit of £7,037. The accounts have been debited with the balance of the loss on the Yenangyaung properties and certain bad debts in Burma amounting together to £26,481, with interest on Debenture stock and directors' and trustees' fees all accrued and unpaid £30,068, and with London expenditure £2,368, making a total of £58,918. Deducting the working profit of £7,036 leaves a debit for the year of £51,881. Drilling has been carried on continuously. Production for the year ended October 31, 1925, totalled 42,826 barrels, or 6,583 tons, and the whole of the output of crude is being sold to the Burmah Oil Company. On the Yenanma area pumping has continued regularly. Development work was restricted to the drilling of intermediate wells on producing area with a view of keeping up production, and since March 1924, 27 of such wells have been drilled, giving the initial daily production of from two to eight barrels. Drilling of intermediate wells has meantime been stopped and the production from this field has recently shown a small decline. On Padaukin producing wells have also been kept in commission during the year. Two new wells, Nos. 14 and 15 were sited and drilling commenced early this year. Drilling progress has been slow, and to date the footage completed has been 1,262 ft. in the case of well No. 14, and 1,609 ft. in the case of well No. 15. Work is proceeding, and from geological reports it is anticipated that satisfactory production may be obtained early in the New Year. Work on Okpon area has been concentrated on well No. 1, which at the date has reached a depth of 2,850 ft. It is proposed to continue drilling to a depth of 3,000 ft. No work has been done on the Mindegyi and Mawku-Mawlaik areas.

BRITISH INDUSTRIES FAIR.

Rapid progress is being made with the organisation of the British Industries Fair which opens concurrently in London and Birmingham in February next.

Allocation of the numerous halls at the White City to the various trades is now taking place and the Department of Overseas Trade, which is organising the London section, has decided to allocate at least two of the main halls to exhibits of china, earthenware and glass and of toys and games. In other halls, amongst other exhibits, will be shown musical instruments, fancy goods, stationery, leather and leather goods, sports goods, chemicals, silver and plate, furniture, foodstuffs, cutlery, brushes, paper, printing, clothing, jewellery and wireless. In addition to these a separate section will be allotted to the Dominions and Colonies.

The Birmingham Chamber of Commerce which, with the support of the Department, is organising the Birmingham section of the Fair has already booked 10,000 feet in excess of the 1925 Exhibition when, owing to the continuance of Wembley, both the London and Birmingham sections were held in Birmingham. Two of the large Exhibition Buildings at Castle Bromwich will be devoted to metals, engineering, agricultural and mining machinery, brewing and distilling plant and fittings for the catering trade. Other buildings will be allocated to brassfoundry, hardware and ironmongery, building materials, power, lighting, heating and cooking plant, motors, motor cycles, guns, saddlery and harness, fishing tackle and the various services.

The demand for space in the various sections both in London and Birmingham is such that it is expected that before the end of the year all the available space will be allocated. This is very gratifying as from reports already to hand exceptional interest has been aroused abroad and indications point to a record attendance of buyers.

TRADE OF PALESTINE INCREASING.

For the three months ended September 30, Palestine imported goods, excluding specie and bullion, to the value of £E2,118110 as against £E1,432,892 for the corresponding period of 1924. There were increased imports of machinery, building materials, wood and timber, clothing, cereals, flour, cement and oils. The value of exports, excluding specie and bullion, was £E285,909, as against £E253,804 in the corresponding period of 1924. As compared with the June quarter there was an increase of £E462,369 in imports and £E10,279 in exports.

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co. report as follows for the week ended December 5:—

The arrivals of sultanas are estimated at 19,945 tons, and the sales to date are put at 18,570 tons.

Closing prices Smyrna, per cwt. c.i.f. London/Liverpool: Type 12, 51s.; type 13, 53s.; type 14, 55s.; type 15, 57s.; type 16, 60s.; type 17, 66s.

Under the influence of the stormy weather prevailing, interruption in communications, reduced demand, and a sharper advance in foreign exchanges, the sultana market has weakened to some extent and prices reflect a decline of about 3s. on all grades mainly due to the higher rates of exchange.

Figs are completely exhausted and business is over for the year.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Circassia for Bombay (Liverpool, January 8). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahout for Port Said, Colombo, Madras, and Calcutta (London, January 9.)

Bibby Line.—S.s. Leicestershire for Port Said, Colombo, and Rangoon (Birkenhead, December 30).

British India Line.—S.s. Golconda for Bombay and Karachi (London, January 2); s.s. Manora for Colombo, Madras, and Calcutta (London, January 2).

Cunard Line.—S.s. Phrygia for Patras, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, and Sulina (Glasgow, January 21.)

Ellerman "City" Line.—S.s. City of Canterbury for Calcutta (Birkenhead, January 12.)

Johnston Line.—S.s. Wigmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, December 26); s.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, January 2).

P. and O. Line.—S.s. Ranpura for Bombay (London, January 8): s.s. Nagoya for Colombo, Madras, and Calcutta (Liverpool, January 9).

Prince Line.—S.s. Merchant Prince for Malta, Alexandria, Jaffa, Haifa, and Beyrout (Manchester, January 7).

The Customs duty leviable on timber and wood, including firewood, imported into Cyprus has been reduced from 25 to 20 per cent. *ad valorem*.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

Motors and Motoring.

By G. B. B.

My recent remarks as to the great market which exists in India, as well as in the Middle and Near East, for British cars have attracted a considerable amount of attention, and I have every reason to believe that efforts are to be made by British manufacturers to popularise their products in the Indian market. I can assure any firms interested that any efforts they may make in the direction will be amply rewarded. As I have shown in preceding articles, there are many miles of good roads in India, and the British car is held there in high esteem, and as soon as our latest developments are made known to the Indian motorng public our sales of cars in that country will increase at a rate that will be little short of amazing to those who, for some reason or other, have regarded India as a country in which it was impossible to sell cars.

It is not only in connexion with the sale of private cars that there is a certainty of good business in the near future. There is a large and waiting market for the light commercial lorry, the delivery van and the light passenger carrying vehicle. Quite a big business could be built up in the neighbourhood of Calcutta by running a series of services to meet the requirements of peasants and farmers in the vicinity. Take, for example, the Sir Stuart Hogg Market, better known locally, perhaps as the New Market. This is the largest market in Calcutta, and produce is brought into it from every part of the district. Most of the country produce has to be in the market at a very early hour of the morning, and existing arrangements are quite inadequate to ensure a sufficient quantity being in place to meet the demand. Light motor services between the sources of supply and the market would be well patronised, and there are many firms who could and would arrange for such services if they could get hold of cheap, reliable British light lorries and vans to carry out the work. At present, as every one is aware, most of the produce comes in by boat or ferry steamer, which means a long and tedious journey for most of the goods. The cost of labour, in paying coolies to carry the produce, is high, and the time taken is a serious item. The saving would be considerable, were motor delivery services substituted for the the present methods, and many firms organising motor services would find no difficulty in obtaining loads. This is a line of business which could be profitably explored and what is true of the Calcutta district is equally true of almost every other part of India.

A Remarkable Journey.

A remarkable journey has been made recently in Australia by Mr. C. M. Reid in his 23-60 h.p. Vauxhall. In a letter to the manufacturers of the car Mr. Reid, writing from Mooliba, Cairns, North Queensland, gives the following brief account of his experiences:—"I have just returned after an 8,000 miles tour in my '23-60.' Included in this trip is the run from the Gulf of Carpentaria in the North of Australia to Adelaide in the south. I had no car trouble of any kind, averaged almost 17 miles to the gallon with the car loaded, weighing almost three tons. Still have two of the tyres which you put on in England; they have done in all 9,600 miles, which includes over 4,000 miles of unmade roads, and crossing every mountain range of any note from north to south. During the whole trip I had one blow-out and two punctures. I do not think it would be possible to get more satisfaction from any machine."

Passenger Service.

I was referring recently to the possibilities of running profitable passenger services in India and a friend of mine has sent me the specification of a 30-seater saloon omnibus, fitted with an engine which is nominally a 30 h.p., but which will develop thrice that power. I note, as a preliminary, that the petrol consumption over a give and take route of about 1,000 miles worked out at nearly 11½ miles to the gallon, which is extremely good for a vehicle weighing, unloaded, over five tons.

The engine is a four-cylinder type of monobloc construction, but with a detachable cylinder head in two parts. Side-by-side valves are fitted; there is free access to the tappets, lubrication is by means of oil mist, and I note that the magneto is held by a vernier coupling and a strap, and that the make-and-break is easily seen for tuning purposes. The engine starter is of C.V.A. make, and consequently can be relied upon to do its work well and thoroughly. The exhaust and inlet manifolds are readily accessible, and there is a hot spot which is controllable as to temperature by a handle. The radiator, of the gilled tube type, is filled with two separate water tanks, and to ease vibration heavy rubber blocks are filled between the engine frame and the chassis. The engine design is for a straight line drive and all arrangements of parts are in accordance. There is a vacuum tank on the dash and the main petrol reservoir is carried along the chassis outside the box. The clutch spigot bearing is on rollers, and is sent out already lubricated in a way that ensures many thousands of miles travel before further lubrication is needed. The clutch pedal shaft is held to a cross member that supports the engine and a metal universal joint is interposed before the gearbox—which has side-by-side shafts—and two other similar joints are on the after sections of the propellor rod. The whole design seems to me to be on the soundest of lines, and I should say that this vehicle would be specially suitable for Indian use.

Detachable Heads.

There is a tendency amongst designers to follow successful leads, and as the detachable cylinder head has certain advantages where large engines are concerned there has been a tendency to adopt them for small engines, in connexion with which the advantages are not so marked. Rather, one might consider them to be in the class of unnecessary refinements. I suppose that the only real advantage there is about a detachable cylinder head is that it allows an easy and rapid decarbonising when such a procedure is necessary. I know of no other real benefit that can be desired for their use. And so far as this matter of decarbonisation is concerned, I would point out that with the present comparatively high-grade of motor spirit, with the comparatively pure oil used, with the highly im-

proved design of pistons, cylinders require decarbonising at very infrequent intervals and, chiefly due to the first two factors mentioned, the carbon deposit that has to be removed is much softer and easy to remove than it was in the days of crude spirit and coarse and unrefined oils.

Shock Absorbers.

Everyone who has had experience in motoring along roads in the Near East will agree that not only is good springing essential, but that shock absorbers should be fitted to all light cars, designed for service in that part of the globe. Even in England I consider that they ought to be fitted as a matter of course, and if they are necessary here, how much more essential are they in countries where, to say the least, the road surfaces are far from ideal. It may be mentioned that shock absorbers are as necessary on light delivery vans and light commercial lorries designed for Eastern roads as they are on private vehicles, as such vehicles are frequently overloaded, or unscientifically loaded, and a big strain is often put on the springing. It might be mentioned here that there would appear to be a future for a really good shock absorber. Many of those at present on the market might be improved in many ways, and could also, I should say, be reduced in price were they designed on more robust lines and made of somewhat heavier material.

Cotton and Cotton Goods.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company, in their report for the week ended December 10, state:—

The futures market has been very dull since our last report and values are again lower. The net changes on the week are the following:—Sakellaridis: 1.65 dollars down for January, 1.55 dollars down for March, 1.45 dollars down for May, 1.45 dollars down for July, 1.20 dollars down for November. Ashmouni: 0.85 dollars down for December, 0.80 dollars down for February, 0.70 dollars down for April, 0.65 dollars down for October.

The volume of business has been moderate but to a great extent purely professional. The week has not been marked by heavy fluctuations; a tone of depression exists and the trend of prices has been almost uninterruptedly downward.

Sentiment remains bearish as a result of the continued lack of interest shown by the consuming markets. The short interest in this market must be very large but speculators seem confident that the very large supplies held up-country are sufficient to prevent any real upward movement. This argument has much in its favour but one must remember that Sakel at 33 dollars is rather a different proposition from Sakel at 45 dollars, as it was less than three months back, and it would not be surprising to see a sudden revival of trade interest, in which case there would probably be a rush to cover, resulting in a sharp reaction. Prices have dropped to levels which seem reasonable in spite of the big supplies, and unless we get a serious break in American it would be imprudent to look for much further decline.

The Government have not been buyers during the week. The much-talked-of Decree for the restriction of the acreage has not yet appeared and there is no definite news as to when it will be published; until it is published it is advisable to think of it as a project only.

The movement in the Interior continues to be very slow and the season will be a long one for the ginning factories. The factory compounds are full of cotton but while the present lack of demand continues, the Interior merchants prefer to leave the cotton unginned and thus save rent and insurance charges.

The week's receipts amount to 323,192 krs. against exports 243,472 krs.; the stock stands at 1,961,130 krs.

Spot: We have had a fairly active week at Minet el Bassal and sales amount to about 25,900 bales, of which we estimate 15,200 bales Sakel, 8,800 bales Upper, 1,200 bales Zagora, 250 bales Brown, 250 bales Pilion, and 200 bales White.

Sakellaridis: Has been in fairly good demand and all styles have been dealt in. Spot differences are rather easier for Good and better, steady and unchanged for Good Fair and Fully Good Fair, and somewhat dearer for the lower grades.

Ashmouni and Zagora: Have been in fair demand. All styles have changed hands but medium grades have been in most demand. With the exception of Fully Fair, which is slightly stiffer, spot differences are without change.

Brown: A fair business has been done. Spot differences are considerably cheaper for the top grades, unchanged for medium qualities, and inclined to harden for the lower styles.

Pilion: Has been in fair demand. Spot differences are slightly dearer for Good Fair, unchanged for Fully Good Fair, and cheaper for the better qualities.

White: A fair business has been done in Fathy and Casulli. Spot differences are generally rather dearer.

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Ottoman Bank for the week ended December 10, states:—

The past week has been even quieter than its predecessors and, in fact, has probably been the worst experienced for a considerable time. There has been continued weakness in raw cotton and consequently a general disposition on the part of buyers to postpone operations. The proximity of the Christmas and New Year holidays renders it extremely unlikely that there will be any revival during the next fortnight. Apparently the only thing that would stimulate business would be an unexpected stiffening in raw cotton values to frighten buyers into making purchases lest they should miss the opportunity of buying at the rates now ruling, which are, undoubtedly, very low.

Yarn.—Sellers have had a discouraging time and the amount of business booked must be small. There has been no activity in any quality of yarn. Quotations are reduced to the full extent of the fall in raw cotton.

Cloth.—The Indian demand for dhooties has fallen off and for no outlet has there been any business worthy of special mention. Operations have been for small quantities and of a hand-to-mouth nature.

Raw cotton.—Neither American nor Egyptian cotton yet shows signs of stability and the price of both continues to fall with only slight interruptions. As regards American the principal feature of interest is the large exports from the United States, the total for this season to date being 4,342,000 bales as compared with 3,964,000 bales at the same time last year. There has been nothing fresh in the reports regarding the prospects for the new crop. The latter remark applies also to Egypt, but the position in Alexandria seems still to be somewhat abnormal and there has again been a heavy fall in values. Closing quotations yesterday were as follows:—American Middling 9.81, Egyptian Fully Good Fair 17.00.

The output of the Anglo-Egyptian Oilfields for the week ended December 11 was:—Gemsah, 20 tons (previous week 8 tons); Hurghada, 3,295 tons (previous week 3,261 tons).

The Italian Transatlantic Line is reported to be negotiating with the Ukranian authorities with regard to the institution of a direct service between the United States and Odessa.

TURKEY'S TRADE IN JANUARY.

Turkey's imports during January last amounted in value to £T18,579,233, while the exports totalled £T17,671,704. The chief imports were cotton and cotton goods, £T4,293,099; grain and flour, £T4,228,355; Colonial goods £T2,345,700; and metals and metal goods, £T1,369,599; while the principal exports were tobacco, £T6,869,246, fruit and vegetables, £T2,997,901, cotton and cotton goods, £T1,919,208, and colours, dyes, etc., £T1,014,382.

Imports from America amounted to 24,301 tons, valued at £T4,014,288, principally grain to the value of £T3,527,056, while those from Italy amounted to £T3,305,767. Other leading countries in the import list were the United Kingdom, with £T2,100,512, Germany, with £T1,886,759, and France, with £T1,766,392. As regards exports, Italy was first with £T5,952,602, while the other principal countries importing from Turkey included France, £T3,086,845; Germany, £T2,800,312; United Kingdom, £T1,302,914, and the United States, £T1,184,240.

THE MOTORBUS IN EGYPT.

Motorbus transportation began in Egypt about five years ago, and its progress has been rapid but unsystematic throughout the thickly populated Delta region (says an American report). There are between 800 and 900 buses now in operation, half of which serve the urban population of Cairo and Alexandria. About 95 per cent. of the buses employ standard one-ton truck chassis. Buses, because of more frequent service and lower fares than railroads, are very popular among all classes. Two-class, 16-passenger bodies are favoured in Alexandria, while elsewhere 1-class, 16 to 20 passenger bodies are generally used. Most bus bodies are built locally. The highway improvement problem being formulated should boom bus development. All conditions existing obviate a present demand for heavier or special bus chassis.

RAILWAY CONSTRUCTION IN MONTENEGRO.

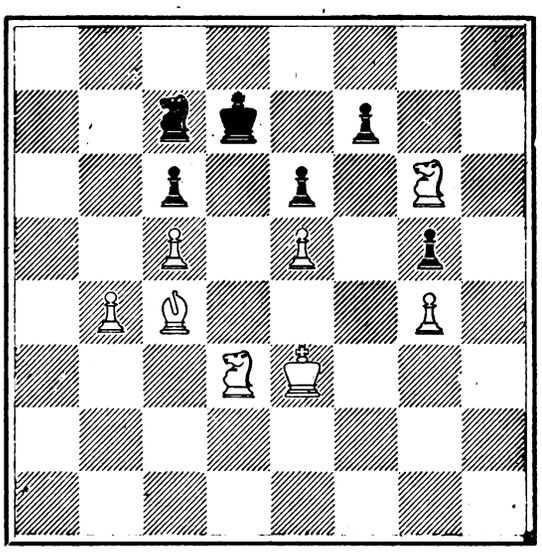
The need for a railway in Montenegro is emphasised by M. Zdrashko Vaskovitch in an article in a recent issue of the *Economic and Financial Review* of Belgrade. He points out that Montenegro, the neighbouring provinces of Herzegovina, the old Sanjak, Metohia and part of South Serbia—an area of 45,000 square miles—is altogether without railways, and continues:

"This rail-less region lies between the Adriatic Sea and the richest districts of the Sava and Danube basin. People and goods from the Banat, parts of Batchka and Srem, eastern Bosnia-Herzegovina, South Serbia, and North Serbia including Belgrade, have to cross it in order to reach the sea. The economic importance of this route is increased by the fact that the Bay of Cattaro, which is such an excellent natural harbour, lies on the Montenegrin Coast. This part of the coast possesses all the advantages necessary to make it a great port. It lies just where the Adriatic coast bends to form the curve of St. Jean de Medua and cuts further into the Balkan peninsula. The shortest natural connexion with the Adriatic for the central Balkan countries crosses this curve of St. Jean de Medua in which lies the best natural harbour of the whole coast."

M. Vaskovitch stresses the effect on the economic life of North and South Serbia, the Voivodina and Eastern Bosnia of the lack of an outlet to the sea, and says that the construction of a railway across Montenegro and the neighbouring districts will provide an outlet for these districts and will also serve the rich plains of the Sava, Danube, Morava, and Vardar. "A railway plan . . . . has been long in preparation because the task involves two different railway systems, one narrow and one normal gauge . . . . Since a narrow gauge system exists in Bosnia, the province adjacent to Montenegro, it is proposed to extend this into Montenegro from the West. Thus without any necessity of transloading, Montenegro would be linked to Bosnia-Herzegovina, i.e., with the Adriatic Coast, Gruzh and Metkovitch on the one side and with Belgrade via Serbia on the East. There is in Montenegro one small railway branch line of narrow gauge which joins the old pre-War Montenegro port of Bar with the lake of Skadar (Scutari). Joining this to the narrow gauge systems of Bosnia and Serbia would give a relatively direct connexion of all parts with the port of Bar." A number of narrow gauge lines would have to be constructed, he adds, to carry out this solution to the problem.

CHESS.

By "CARO-KANN."



PROBLEM No. 27.

White to play. What result?

Solution to Problem No. 26.—1, P—B5, PxP; 2, P—B4, K—Q3; 3, K—B4, K—K3; 4, P—Kt4, K—Q3; 5, K—B5, K—B5; K—K2 and draws. If 1 . . . . P—Kt4; 2, K—B4, K—Q; 3, K—B5, K—K2; P—Kt4 and wins.

It is announced that Lord Colwyn, P.C., will join the board of the Dunlop Rubber Company as from January 1.
